The Nation.

NEW YORK, THURSDAY, JANUARY 4, 1872.

The Week.

THE *Times* has maintained that the attempt of Mr. Trumbull to revive the Retrenchment Committee in the Senate was a "Schurz-Fenton trick"—or, in other words, we suppose, that these two gentlemen got up the movement between them with the view of annoying and injuring the President, and diminishing his chances of renomination. In support of this view, it not only abused Schurz, Fenton, and Trumbull, but went so far as to abuse the Patterson Committee who enquired into the condition of the New York Custom-house last winter, and took that institution under its wing, and gave us to understand in plain terms that anybody who said there was anything wrong with it, or with the eminent man who lately presided over it, was a "rascal." It likewise threatened to "expose" both Trumbull and Schurz, and made several unpleasant allusions to Fenton's early career. It has since "exposed" Schurz, and we suppose will before long perform the same office on Trumbull. In the interest of public morality, we hereby sum up conscientiously its charges against Schurz: 1. That he emigrated from Germany in 1852, and was naturalized in 1857, at the age of 27. 2. That two years later he tried to get the nomination for Governor in Wisconsin, but failed, and, being offered the Lieutenant-Governorship, "spurned it contemptuously," and refused to support the ticket. 3. That having contracted with the Republican party to stump the West in the canvass of 1860 for $250 a week and his expenses, when he got out there "he struck for higher wages," and refused to go on unless the local committees paid him an additional sum, *which they did.* 4. That when Lincoln was elected, he asked for a foreign mission, and *got the Spanish one.* 5. That he resigned it in a year and came home, and demanded a brigadier-general's commission with a major-general's command, and *got them.* 6. That he participated in the battles of Bull Run (the second), Chancellorsville, and Gettysburg, "without manifesting any striking evidences of military genius." 7. That he got himself retained in the service after the war longer than there was any use for him. 8. That he then edited the Detroit *Post*, and, in the opinion of the *Times*, by "no means favorably distinguished himself in that position." 9. That he drove Henderson out of the Missouri senatorial canvass, by persuading the people that he was unfit to represent them, and got himself elected senator in his place. 10. That he was elected temporary chairman of the Chicago Convention, but had to have the aid of two "prompters" in parliamentary law. 11. That he got his brother-in-law appointed internal revenue collector of the Chicago district, an office which that depraved ruffian held for two years.

We have here omitted nothing, and have, we admit, as we have often defended Schurz, softened nothing that told against him. But we fear that after this we must give him up. We believe he has no family, and, if so, his case has not those pathetic features about it which mark the case of Paymaster Hodge and others. His participation in the battles of Bull Run, Chancellorsville, and Gettysburg, without manifesting any striking evidences of military genius, and his editing the Detroit *Post* without favorably distinguishing himself, will strike everybody as perhaps as remarkable displays of mingled depravity, ferocity, and corruption as even our times have afforded. The *Times*, somewhat cruelly, perhaps, but not altogether unjustifiably, darkens its picture of poor Schurz's career by an occasional fond mention of that eminent citizen, and good and pure man, and faithful friend of the President, Mr. Tom Murphy, late of the Custom-house. Tom, unlike the guilty Schurz, did not display any want of genius either at Bull Run, Chancellorsville, or Gettysburg, because he was not present in those actions, being engaged in saving the Union in the hat and blanket line; nor did he edit the Detroit *Post* or any other journal in an efficient manner, being protected against such follies by a want of familiarity with the rudiments of a plain English education. Happy is the country in which the chief magistrate hates the like of Schurz and loves the like of Murphy—in which the government organ "exposes" Schurz and praises Murphy.

Now for Trumbull: and we trust the *Times* will not spare him. We venture to assert that if the truth were known, it would appear—1. That the *Times* thinks Trumbull is not so wise or learned as Trumbull thinks he is himself. 2. That he was born in the United States, of Protestant parents, attained his majority at the age of twenty-one, *and voted the same year.* 3. That, being admitted to the bar, he induced large numbers of persons to entrust causes to him, and obtained money from them in this way for his personal use. 4. That he persuaded the Illinois Legislature to elect him twice to the United States Senate, well knowing that other respectable men were willing and ready to accept the place, and that somebody else would have got it if he had not. 5. That he has obtained places for two clerks in the civil service, by personal oslicitation, one of whom was named Bull, the *Trum* having been evidently dropped to cover up his connection with the senator. 6. That he has advocated a searching investigation into the condition of the civil service, with the malignant design and expectation of discovering abuses therein, whereas a proper respect for the President and proper regard for the party prescribed an investigation with the design and expectation of not discovering any abuses whatever.

Mr. Boutwell has issued a circular addressed to all Collectors of Customs, ordering them hereafter to make appointments and promotions as far as practicable under the new rules, and directing them to select three persons from among their subordinates to form an examining board, who are to discharge the duties until some other committee shall have been provided, and until Congress shall have made appropriations to pay its expenses. We hope that in the meantime the Supervising Board will look sharply after these gentlemen, and see that the examinations are not a farce. We think they strangely misunderstand the situation. The President, we are glad to say, has given additional proof of his sincerity by appointing the Commission, which made the report and drafted the rules, to be the Advisory Board which is to superintend their execution. This makes it certain as can be that after the new system begins to work, it will not be a sham. All we ask for now is that the manners and excesses of actual office-holders be in some manner corrected.

Tweed's resignation of his position as head of the Department of Public Works clears the administrative branch of the city government of all members of the Ring except Hall, the Mayor. Tweed was apparently driven into this last step by his having to hide himself for two or three days from the Sheriff, in consequence of one of his bondsmen in the civil suit having withdrawn; and, perhaps, the ingratitude of the bondsman, Terence Farley by name, who has risen in the world as one of Tweed's creatures, did more to vanquish the Boss and convince him that he was a ruined man than any of the preceding events. His new bondsman is his own son, who confesses that he is owner of over a million and a half dollars, received from his fond parent since August last, in consideration of "natural love and affection." Tweed has now nothing more to resign except his seat in the Senate. Hall holds on gallantly to the mayoralty, but is a mere wreck. He had to resign his membership of the Union Club this week to avoid expulsion, and his paper, the *Leader*, one of the rascally Ring organs, supported largely with stolen money and filled with Hall's own contributions and those of the "literary circles" in which he moves, died on the last day of the old year, the stoppage of the municipal supplies being fatal to it.

The closing days of the old Common Council were very amusing. The term for which that body was elected expired on the 30th ult., but the Ring last winter got their term prolonged for another year by statute, and provided likewise that vacancies in that body should be filled by the Mayor. The prolongation was clearly unconstitutional, but they, nevertheless, determined to hold over, and, if the courts declared their places vacant, to get the Mayor to reappoint them, and so bid defiance to the new board elected in November by the Reformers. The Mayor was preparing to play his part in the emergency when he was served with a writ of prohibition, forbidding him to recognize them; and while in this dilemma, the old Board, under some strange impulse, prepared to impeach him for malfeasance in office. While thus engaged, officers armed with writs of prohibition from the Supreme Court made their way into the room, and the aldermen took to flight, pursued round the room and over the desks by the messengers, discharging writs at them, and finally the whole body made their escape into the streets, and the new Board took possession. Hall, overcome by this treachery of the old Board, at once recognized the new one.

The Albany Legislature has opened auspiciously by the election of a Speaker of whom everybody speaks well, and Attorney-General Barlow is making preparations for the impeachment of the judges and for legislative operations against Erie. Abundant evidence against the judges is said to have been accumulated by the Bar Association, and the culprits have engaged a great array of counsel, many of whom, curiously enough, have a reputation which may be best described by saying that they are "gentlemen of easy virtue." The two Republican factions—the "Custom-house Ruffians" and "Tammany Thieves"—had a desperate fight at Albany over the speakership, the Custom-house coming off victorious. There was on the ground directing the operations, according to the *Tribune*, the surveyor and naval officer of this port, one United States marshal, two United States district attorneys, four deputy collectors of this port and one Buffalo collector, and no end of weighers, appraisers, and inspectors, which may be a sign that the civil service is being reformed, but it requires some education to understand it. Does not *Harper's Weekly* think that a general order forbidding these gentlemen to leave their posts to "engineer" party politics would be a good thing? *Harper's Weekly* says, in reply to suggestions made on this subject, that "to prohibit all persons in the employment of the Government from such an interest in politics as their feelings dictate, would stigmatize the service so as to defeat one of the objects of the reform—namely, that a higher class of persons should be attracted to the service." This is quite true; we do not ask for any such prohibition. We do ask, however, that custom-house and other officers may be forbidden to quit their duties and go off to a place one hundred and fifty miles away to take part in electing the speaker of a legislature of which not one of them is a member. Any official whose feelings would be hurt by such a restriction, certainly does not belong to any "high class of persons." The thing is ridiculous on its face and dishonest in its substance. Is it not cheating the public to apply taxes to paying the salary of a New York collector or weigher while he is passing his time at Albany helping the State Legislature to select its own officers?

The proposal to impeach Governor Scott and Treasurer Parker of South Carolina has been thrown over in a curious way. The Legislature wanted to adjourn for the holidays, after having resolved on the impeachment, but the Governor convened them again for December 23, and, when the prospect of spending Christmas over the matter fairly presented itself, the courage of the body gave way, and the resolving clause of the resolutions both in Parker and Scott's case was stricken out by a vote of 63 to 32 and 63 to 27 respectively. The proceedings were, according to the correspondent of the *World*, not inappropriately closed by one of the majority asking one Byas, who led the forces of the Ring, "if he had not at that moment in his pocket a check for $12,203, given him last year for reporting the bill for fitting up the State House," to which solemn enquiry Byas made no reply.

Of the distinguished dead of the year just gone (and a more distinguished necrology is seldom recorded in the same space of time), we may say that, so far as man can judge, hardly one passed away with his work unfinished or left his life apparently incomplete. The death of Don Juan Prim, which occurred on the last day of 1870, and which may be counted as in our list of the deaths of 1871, still seems, in view of the political condition of Spain, the untimely ending of a career which promised great usefulness. Perhaps equally influential in European politics was the death, also violent, of the unfortunate Henry of Bourbon, whose life could not have been so injurious to his cousin, Montpensier, perhaps the most over-prudent of the prudent Orleans princes, as his death has been. The other names of military celebrities who appear in the necrology of 1871 are the once famous name of Omar Pacha, who fought the Russians so well; that of Marshal Benedek, whose last campaign was so Pompeian in its ruin of a hard-earned reputation; that of General Anderson, who has a sure place in history, and honorable mention while the story of the American rebellion is told; and that of Schamyl, the intrepid, skilful, and indefatigable Circassian warrior. Besides these, there died also General Thomas Rodman and General James Totten, of our service, General Sir James Scarlett, of the British service, and Rossel, the general of the Communist army. Among the naval officers deceased, the most distinguished was Baron von Tegethoff, the Austrian admiral; less distinguished was Commodore Tatnall, who, indeed, was held in some of that undeserved contempt in which we of the North were accustomed to hold our adversaries when we got the better of them, and with less reason when they got the better of us.

The literary world has lost Dumas, Grote, Gervinus, Eötvös, Afanasieff, George Ticknor, Henry L. Mansel. Of less importance are the names of Prosper Mérimée; Charles Hugo, the son of Victor Hugo, and, as they say, "the son of his father"; Alice and Phœbe Cary, much and justly regretted by a large circle of personal friends; Dean Alford; Mr. Charles Buxton; John George Kohl, the traveller; De Gasparin; Mr. Tuckerman; Mrs. Nathaniel (Sophia) Hawthorne; the Princess Belgiojoso; and Charles Paul de Kock. Among the men of science, as distinguished from the men of letters, whom literature has lost within the year, we count Murchison, Herschel, De Morgan, Babbage, Keith Johnston, and William Wilson, the botanist—a roll honorable to England, but one the full measure of whose honors diminishes, as we have suggested, the regret which the death of great men inspires; they had worked their work. France adds to these names of savans that of Becquerel, the electrician; Germany that of Schultzenstein, the botanist; and Italy that of Claparedi, the zoölogist. As allied to the followers of literature, her ministers the publishers and booksellers may properly be placed next in order; and first among them, as having been bookmakers as well as booksellers, and as having done very much for the promotion of intelligence among their countrymen, we may properly place Robert Chambers, of Edinburgh, who excellently exemplified that common Scottish union of hearty goodness as a man and as a man of business. American publishers and authors sincerely regret the death of Mr. Charles Scribner, a man who deserved success and had it in large measure, and ungrudged by any one. Mr. Richard Bentley, of London, who died at the age of eighty, was another widely-known and widely-respected publisher. The victim of the Communists, Archbishop Darboy, is the principal clergyman deceased in 1871, if eminence in the church is to be measured by position in her hierarchy of offices. In this country the Rev. Albert Barnes, "Father" Taylor of Boston, and the Rev.

S. J. May were the best known of the clergy who have died within the twelvemonth.

The political world misses most Mr. Vallandigham, but perhaps the two figures of politicians most likely to become historical who died in 1871 are those of Slidell and Mason. Of these, the one was a low and thoroughly bad politician; the other was no bad representative of a political system which was infinitely worse than many of the men who upheld it, and personally was a man who had much of the respect of his opponents. Mr. Howard, of Michigan, ex-Senator; Mr. Thomas Ewing; Mr. John Covode, to whom some people gave the epithet of "honest"; and Louis Joseph Papineau, the once famous Canadian rebel, are the other politicians in our list. Among the names of men for one reason or another celebrated or noted or notorious, we find that of Mirès, the French "operator," who was one of the characteristic glories of the Second Empire; that of Mr. Hackett, the comedian, and doubtless *the* Falstaff of the last half century; those of Mr. Henry Steinway and Mr. Thomas Chickering, each so closely associated with the history of the piano, and who finally laid aside their rivalry within a week of each other, the one dying on the seventh and the other on the fourteenth day of February last; Delsarte, the accomplished French instructor in elocution and acting; Mr. T. W. Robertson, the dramatist; Mr. Sigismund Thalberg, the pianist; Mercadante, the composer; and Auber, who died in the enjoyment of a cheerful old age.

The new system of education in England, with all its valuable features, is by no means working smoothly. The power which it gave localities to establish denominational schools, under rigid restrictions as to religious instruction, has been taken advantage of by the Established Church, owing to its enormous wealth, to set up a great number, so great, indeed, that through a great portion of the country the new schools are virtually in the hands of its clergy. This has infuriated the Dissenters, who are everywhere up in arms against it, and have been holding a great conference at Manchester with the view of forcing the Government into some sort of a compromise; and their hostility is so great that it is believed a general election would now be a dangerous experiment for Mr. Gladstone. Mr. Lowe has made a pacificatory speech in which he says he sympathizes with the Dissenters, but that the Government did all it was possible for them to do without running the risk of leaving another whole generation uneducated.

The English papers, of all shades of opinion, concur in treating the popular anxiety about the Prince of Wales as genuine and widespread. The exact truth of the matter, as of all similar matters, such as the interest, for instance, of the Northern people in the war of the rebellion, would be impossible to get at. Every observer is most struck by those indications of popular feeling which best accord with his own notions of what it ought to be. Everybody who is disgusted by a public demonstration can find some reason for believing that it is all humbug, and has been got up by a few designing persons. In fact, anybody who wants to know what widely different views may be taken of such phenomena has only to read the Democratic and Republican accounts of a political mass-meeting. But unless all ordinary signs fail, the Prince's illness did produce a profound sensation in England, though to what proportions anxiety, sympathy, political curiosity, and loyalty entered into it it would be impossible to say. The Queen has been stirred by it into writing a letter of thanks, and is going to open Parliament in person, her failure to do so through so many years having become a standing grievance. The most interesting subject of speculation arising out of it now will be the probable effect on the Prince himself. He has been down in depths from which many a man comes up very much sadder and wiser, but then what a man brings out of such crises depends very much on what he takes in. The *Economist*, which is not given to sentimental views of any subject, and discusses the future of royalty very much as it discusses the cotton crop, and has at its head one of the coolest and clearest political observers in England, says "that no sooner was there any fear of losing the heir to the throne than the whole people gave, with one accord, signs of sorrow and even of grief."

The repudiation by Austria of a portion of the bonded debt, in 1868, by compelling its creditors to submit to conversion at a loss, has been punished in a curious way by the London Stock Exchange. All Austrian Government securities were struck from the lists and their quotation prohibited. The Hungarian Government now wishes to negotiate a loan of $15,000,000 on the London market, and on making proposals is met by the prohibition, and told that, though not perhaps directly responsible for Austrian bad faith, Hungary was in 1868 part of the Austrian Empire, and must take the consequences. It has accordingly offered, in order to have the ban taken off its credit, to pay five per cent. on $25,000,000 of Austrian bonds, or about one-third of the loss suffered by the creditors, and on these terms has been allowed to come again upon the market, but Austria remains in the same position as ever, and the effect is such that it is difficult or impossible to get money for any Austrian enterprise.

Count Andrássy is firmly seated at the head of the Austro-Hungarian Cabinet, as the successor of the Imperial Chancellor Beust, now ambassador at the Court of St. James; and the official and semi-official journals of Europe vie with each other in extolling the character and talents of the once proscribed Hungarian, and the excellence of his peaceable professions, as set forth in his inaugural circular. In fact, both the man and his circular deserve a great deal of praise, and if he succeeds in managing the external affairs of the empire half as successfully as he managed the internal affairs of its Hungarian division in the five years of his premiership there, he will have done a greater work than many a student of Austrian contemporaneous history is inclined to expect, or many a foreign journal, such as those of St. Petersburg and Moscow, will be glad to discover. His successor in the Hungarian Ministry, Lónyay, has also, as it seems, successfully entered upon his new duties, supported by the Deák party and the strong common sense of the Magyar people, which is almost regularly displayed in critical situations.

Francis Joseph seems actually to have finished his experimental swinging around the circle—a kind of *circulus viciosus* of the great nationality and constitutionality problem of Cisleithania. In the speech from the throne, delivered last Thursday at the opening of the Reichsrath, he solemnly reasserts his determination to uphold the constitution and the laws, and to make no further concessions to the single states, except through the constitutional activity of the Reichsrath itself, "where alone the attainment of an understanding is possible"; his readiness "to grant extreme concessions," he is sorry to say, has not been productive of internal harmony. This, of course, refers to the late futile transactions with the Czechs, the failure of which leaves Bohemia unrepresented in the central parliament. He promises a continuation of the attempt to bring about a constitutional settlement with the Poles of Galicia—who, by refusing to appear at the late federalistic convention convoked by the Czechs at Prague, have, on their part, evinced a similar readiness for a compromise. He also promises measures of reform intended to render the Reichsrath "a completely representative body," which probably refers to changes in the election laws calculated to prevent the absence of entire provincial delegations from that assembly. Various other reforms, of a liberal character, are also to be proposed by the Cisleithan government, in special bills. The Emperor closes with the declaration that Austria, weary of conflicts, desires harmony and order within, and that the European combinations entitle her to expect peace and friendly relations without. Her material situation is represented as highly prosperous—a fact now generally accepted, but undoubtedly exaggerated in the flattering exhibit of the Minister of Finance.

WHO WILL ELECT THE NEXT PRESIDENT?

We by no means contend that the following figures, facts, and views afford a conclusive answer to the above question. Political mathematics is a very inexact science. Figures based upon past political results are proverbial for playing tricks upon those who too confidently use them to forecast future events, as is well known even to the eminent scientific man who has charge of the arithmetical department of our esteemed contemporary the *World*. It is always well to bear this fact in mind, and it is particularly desirable to bear it in mind in examining the present political situation. We may not succeed in what we are about to say in satisfying anybody that we know who will be the next President or who will not, but we think we can satisfy all candid readers that the contest will be a close one, and that indeed the parties are so nearly balanced that very trifling agencies may turn the scale.

There are two methods in vogue of marshalling political statistics for purposes of prophecy. One mode is to present the returns of the elections at which were chosen the members of the existing House of Representatives. Another mode is to adduce the results of the last State elections. Political prophets resort to one or the other of these, as shall seem most likely to put the prospects of their respective parties in a favorable light. We shall not attempt to decide which is the better method, but shall use both. First, then, we give a comparative statement based upon the election of the present House of Representatives. The number of electoral votes set opposite each State in the table is the number to which the State will be entitled under the new Apportionment Bill, which we presume will become a law:

States in which a Democratic majority of the popular vote was cast for present Representatives.	Electoral Vote	States in which a Republican majority of the popular vote was cast for present Representatives.	Electoral Vote
Alabama	9	Arkansas	6
Delaware	3	California	6
Georgia	11	Connecticut	6
Kentucky	12	Florida	3
Maryland	8	Illinois	21
Missouri	15	Indiana	14
Nevada	3	Iowa	1
New Hampshire	4	Kansas	7
New York	34	Louisiana	15
North Carolina	10	Maine	7
Oregon	3	Massachusetts	13
Pennsylvania	28	Michigan	11
Tennessee	11	Minnesota	5
Texas	8	Mississippi	8
Virginia	11	Nebraska	3
West Virginia	5	New Jersey	9
		Ohio	22
Total	175	Rhode Island	4
		South Carolina	7
		Vermont	4
		Wisconsin	10
		Total	182
			175
		Republican Majority	7

The majorities indicated on one side of the above table, under the head of "Democratic," ranged in round numbers from 300 in Nevada to 47,000 in Missouri. Those indicated as "Republican" ranged in round numbers from 500 in Connecticut to 38,000 in Massachusetts. The whole vote cast was over 5,500,000, and the aggregate Republican majority about 40,000. It will be seen that, could these figures be taken as a reliable guide, the Republican candidate would, out of the whole number of 357 electoral votes, receive a majority of only seven. But if we suppose that either South Carolina, Arkansas, Connecticut, Louisiana, New Hampshire, or California will cast its vote against the candidate of the Republican party, his opponent would have a clear majority. Under the old apportionment, the above table would show a Democratic majority of the electoral vote.

We now give a comparative statement of the strength of the two parties, as indicated by the result of the last State elections, thus:

States giving Democratic Majorities in the last State Election.	Electoral Vote	States giving Republican Majorities in the last State Election.	Electoral Vote
Alabama	9	California	6
Arkansas	6	Connecticut	6
Delaware	3	Illinois	21
Florida	3	Indiana	14
Georgia	11	Iowa	11
Kentucky	12	Kansas	5
Maryland	8	Louisiana	7
Missouri	15	Maine	7
Nevada	3	Massachusetts	13
New Hampshire	4	Michigan	11
New Jersey	9	Minnesota	5
North Carolina	10	Mississippi	8
Oregon	3	New York	34
Tennessee	11	Nebraska	3
Texas	8	Ohio	22
Virginia	11	Pennsylvania	28
W. Virginia	5	Rhode Island	4
		South Carolina	7
Total	131	Vermont	4
		Wisconsin	10
		Total	226
			131
		Republican Majority	95

According to this statement (in which the position assigned New Jersey may be objected to), it will be seen that the Republican candidate would receive a majority of 95 electoral votes. But a glance at the table is sufficient to convince the candid that several States put down as Republican can by no means be relied upon to cast a Republican electoral vote in 1872. Among such States may reasonably be counted New York, Pennsylvania, California, Connecticut, together with Louisiana, South Carolina, and, perhaps, Mississippi. Should New York, together with California, Connecticut, and Louisiana or South Carolina, pronounce against the Republican candidate, his opponent would have a majority of eleven electoral votes. Should the four last-named States, together with Pennsylvania, prove Democratic, and New York Republican, the Democratic candidate would have a majority of twelve electoral votes.

It is worth noting, for the comfort of desponding Democrats, that if the two senators in each State were not used in determining the number of electoral votes, the popular strength of the Democratic party would be more evident. Thus, in the first of the above tables, the Republican party is credited with a majority in twenty-one States, giving 182 electoral votes. Two of these votes in each State do not represent the popular vote, but are added to make the whole number equal to the representatives and the two senators. Deducting 42 electoral votes from the Republican vote of 182 leaves 140. Making a corresponding deduction of 32 on account of the sixteen States in which the Democracy had majorities, we have left 143, a majority of three popular votes for the Democracy.

So much for the relative strength of Democrats and Republicans. We now advance a step further. Present appearances indicate that the opposing forces in the next Presidential campaign will, whether ostensibly or not, really be arrayed against each other as Administration and Anti-administration men. This may not be proclaimed by the inscriptions upon the opposing banners, but such will be virtually the case. We do not see how it can well be otherwise. When the party in power proclaims the watchword by which it will be governed in a Presidential contest, the natural, if not the only, course of its opponent is to accept the challenge, and, whether announcing a positive and aggressive policy of its own or not, must mainly fight on the field chosen by the challenger. Now, it is undeniable that for some time past a large proportion of the Republican press, and particularly that portion of it which a Frenchman would call "inspired" from the White House, have been proclaiming defiantly that General Grant and nobody else shall be their candidate. This is neither more nor less than a challenge to the opposition, of whatever elements it may be composed, to meet not the Republican party and its principles, but General Grant and his personal following; we say "personal following" because his failure to identify himself with any policy (unless we give that name to the San Domingo Annexation scheme), or with any particular set of ideas, restricts the number of his warm supporters to those who have confidence in his personal character. But the disadvantages of this position are obvious. By putting forward an individual in the forefront of its battle, as the primary and great object of its devotion, the party proclaims itself a "personal party"; and, we may add, it deprives of all its force the taunt so often thrown out against the Democrats, that they have nothing better to rally on than personal hostility to the President. What should they attack except what the Republicans declare to be the key of their position? and what better encouragement could they have to make the President the object of their onslaught than such declarations as this which appeared in the New York *Times* the other day: "The truth is, that the Democracy see plainly enough that, if they can only succeed in breaking down General Grant, they have made a pretty easy course for themselves"? We might furnish hundreds of other extracts like this from Republican papers, showing the strong tendency there is in certain quarters to convert the next election into a great contest over the number of Grant's relatives in office, over his investments, his presents, his cigars and horses—in other words, into one of the most ignoble contests in which any people ever engaged.

The *Times*, whose course occasionally makes one fear that its recent success may prove too much for its judgment, was bold enough to insinuate, the other day, that the *Nation* had given circulation to the same class of stories about the President as the *Sun*. The fact is, that not a line has ever appeared in our columns saying or insinuating that he ever took a present or gave a place to a relative with an improper motive. We have criticised freely, frequently, and, in our opinion, none too often, his course with regard to the civil service, but we never noticed his difficulties about his investments and his "relations," until we found him giving a long semi-official explanation about them in one of his organs. We then, and then only, took the liberty of stating how far, in our opinion, that explanation was successful, and had no hesitation in saying that he had made a complete answer with regard to the presents and investments. But we look upon the discussion which has raged on this subject as paltry to the last degree. One of its bad effects has been the betrayal of the "friends of the Administration" into the delusion that, if they can beat their assailants on the great questions, Who gave General Grant his house at Long Branch? and who gave him his stock in the Seneca Stone Company? and how many relatives has he in office, whether twelve or twenty-five? they clear the course for him at the next election. The *Sun* says he has twenty-five "relations" in office; the *Times* demonstrates that he has only twelve, and two or three of them appointees of Andrew Johnson, and forthwith concludes, this being true, that he is sure to be the people's choice. Relying, too, on the effect of these small triumphs on the popular mind, his champions in Congress think they may venture to oppose investigation into the condition of the civil service, on the avowed ground that the result might damage his prospects, and his newspapers even go so far as to take the New York Custom-house under their wing, and violently denounce the persons who sought to expose the iniquities of that establishment last winter; a fortnight of "victory" of this sort ending, not inappropriately, with a "serenade" to that eminent personage, "Tom" Murphy, who was actually introduced to the crowd by Republican politicians as a distinguished and creditable representative of the Administration.

Now, we think the figures we have given above prove at least that it will not do to make this campaign a personal one, and that the Republican party cannot safely identify either its fortunes or its reputation with those of any individual in its ranks. General Grant may be a much-abused and much-maligned man, but it will hardly do to make him a champion on the simple ground that he is a victim. The country begins to sigh more and more every day for positive qualities or views in the conduct of the Administration. It wants a President who, when he talks about revenue reform, knows what he means; who has, on the great questions of the day, the fixed opinions of a man who has studied them and enjoys the study of them, and who, when he attempts a reform, attempts it in such a fashion that half the nation shall not look on, doubting whether he really means to have any reform after all. If this be true, it will readily be seen that General Grant may easily overthrow all comers in the Seneca Stone matter and the "relations" matter, and yet not have the power of retaining on the Republican side that small but powerful force of the lukewarm or discontented who really hold the Presidency in their gift.

SOME QUESTIONS FOR THE LABOR COMMISSION.

THE labor question has, as events in Europe have shown, and as events in this country may yet show, been involved in new and dangerous complications by what may be called the unpopularity of political economy, and, in fact, the unpopularity of science generally. Science is frequently a very disagreeable thing. That two and two make four only, and not five; that two straight lines cannot enclose a space; that a part is less than the whole; and that something cannot be made out of nothing, are all truths which in actual life are far oftener found unpleasant than pleasant. Now, side by side with the increasing faith in the government of the material universe by laws, there has grown up an increasing dislike to admit that the relations of men in society, and especially the operations of human industry, are governed by law. This is the result partly of the breakdown of the old social organization, in which authority decided everything and accounted for nothing, and in which contentment was one of the virtues, and partly owing to the appearance in the arena of legislation and speculation of a large and powerful body of persons of small experience, of limited training, laboring under a strong sense of wrong; and their appearance is contemporaneous with a great extension and activity in the regulation of human affairs of what is called the "principle of love," or of "the brotherhood of man." These are welcomed on their arrival by a large body of philanthropists, who are profoundly impressed with the misery of human life, and eager, as many have never been before, to do something to make the lot of the majority more tolerable. Indeed, it may be said that nearly every decent man is now a humanitarian, and wishes to be thought one. Indifference to the sufferings and privations of others is one of the worst charges that can be made against any one, either in public or private life: made against a politician, writer, or lecturer, it is almost ruinous unless refuted, and every such person spares no pains to ward it off from him. This state of feeling, of course, produces a vast amount of good, develops a great deal of active public and private charity, and is beginning to make social improvement the first object of the legislator.

But it has, as is not unnatural, begun to produce also a sentiment closely akin in its nature and results to the "loyalty" to the king which exercised so powerful an influence on Christendom during nearly six centuries. That kind of unreasoning reverence, without reference to the mental or moral character of the object of it; that profound respect for his whims and caprices; that horror of gainsaying him, or of doubting the feasibility of anything he desires to have done, which once made death welcome if only met under the king's eye and in his service, now begins to be lavished on the Workingman. That the tide would rise when the king wanted to sit below high-water mark, that gold could leave the kingdom if the king wanted it to stay, were things which no loyal subject would, in old times, openly admit. When the Dauphin asked his tutor if kings died, the most the latter would acknowledge was that they died "sometimes"; and everybody is familiar with the court lady's reply to the Abbé, who was afraid that a certain prince of the blood might depart without the viaticum, "that God Almighty would think twice before damning a man of the Prince's rank." Of course, if any of these people were questioned closely in private as to their beliefs regarding the king's person, they would probably have owned that in their secret souls their views about him were strictly rationalistic; but they none the less sedulously, and even religiously, cultivated a habit of mind about him which took him, though perhaps only imperfectly, out of the category of human beings, and made him a demigod or hero.

Now, the Workingman is beginning to play a part somewhat similar in our day, and exercise a similar influence on people's imaginations. We are all cultivating, with care and deliberation, in our literature, schools, churches, and legislation, a habit of considering him as a peculiar being, who is not to be gainsaid, or even reasoned with, and who must be saved at any cost from the hearing of unpleasant truths, and on whom it is almost wicked to hold that the laws of the universe act injuriously or disagreeably. The Workingman's courtiers, we grant, are better men and women than those who throng royal ante-chambers, but they are not one whit more sincere or less superstitious. Whether one worships a man because he is his brother or because he is "his king" makes little difference in the position which the reasoning faculty holds in the worshipper's mind. If, for instance, we take up almost any of the papers which profess to devote themselves to progress in a peculiar degree, or any of the lectures that are delivered in the service of humanity, we shall find in nine cases out of ten that the fact that discontent exists among the working classes is of itself a sign that "something is wrong," and that, unless society or the government does something speedily (they nearly always cautiously abstain from saying *what*), something dreadful will happen, the facts of human nature to the contrary notwithstanding. We have had, apropos of the proposed Labor Commission, one of the usual outbursts of this kind of talk, even from ordinarily calm, moderate, and considerate writers, and we have half a dozen lecturers who make a profession of preaching that whatever the Workingman wants he must have.

Consider the question of capital. Everybody knows, at least in a general way, what capital is. It is the product of past labor, saved and put away for the support of the laborer while engaged in other work. There is not much of it in the world. The whole accumulations of the race would, if it stopped working, probably not keep it alive for three years. But the essential characteristic of capital is, that it is created by somebody's doing more work than is actually necessary for his support, and denying himself the pleasure of consuming all he has produced. Is it possible to conceive of a better title to a thing in the forum of morals than that which a man has to what he has created by his labor and refrained from consuming? Is there any habit which a civilized society ought more carefully to encourage than that of producing more than we consume, and saving it? Does not everything that is precious in civilization depend on its strength and prevalence? And yet, who that reads the average article, or lecture, or speech on the labor problem would not imagine that it was a deleterious practice which ought to be suppressed by law—that the saving man (the capitalist) was an enemy of the state, who ought in some manner to be prevented from ever having more than the men who do not save? And if we ask why, we are solemnly told that the workingmen who have no capital do not like capitalists, and want all to be on the same level—that is, nobody to have any savings.

Take, again, the employment of capital. As soon as capital begins to exist in a community—that is, as soon as it finds that it possesses more than is sufficient for the support of the producers of food, it begins to ask itself the question: "What shall we do with these savings?" The answer is always the same: Use them in the production of other things than common food and clothing: that is, of articles which will gratify the higher class of human wants. Now, when a community finds itself in a position thus to diversify its industry and gratify the higher wants which always make themselves felt as soon as the lower wants are satisfied, its capital or savings—by one of the most beautiful and effective of all the arrangements by which the world is governed—flows into the hands of those members of the community whose talents best fit them to discover what the strongest wants of the community are, and by what process of manufacture they may be most economically, that is, with least waste, be met; or, in other words, into the hands of good investors. To this class of persons, all those who feel that they have not these peculiar talents lend their money, if they have any to lend. Those who have none profit by the skill, and foresight, and sagacity with which this class finds out the prevailing needs and satisfies them; and in this way the great capitalists grow up. They could not be great capitalists if they were not prudent managers of the savings of the community. You may give a man as much money as you please, say ten millions, and yet, if he be not a natural capitalist, he will not have a cent left in ten years. He will have wasted most of it in producing articles nobody wishes to consume, or making roads on which nobody wishes to travel, and what he has not wasted will have flowed silently but surely away into the hands of men who possess the faculties in which he has shown himself wanting. If we go into Mr. Stewart's dry-goods store in this city, we shall in nearly every room see men employed by him in subordinate positions who have tried to be capitalists, that is, to use a portion of the savings of the community in providing for its wants, and have failed. Now, what has happened in their case is, that under the operation of this law of which we are speaking, the community has dismissed them from the position of investors and sent them back to do mere ministerial work, while their capital has been transferred to Stewart and others like him who know how to use it.

This process is perfectly familiar to every man who has ever saved and tried to invest, or who has seen anybody do it. He knows that a large proportion of those who try to invest on their own judgment lose all they possess; and he knows that it is a perfect godsend to the mass of men to get one of the great business men to take his savings and put them where they will produce more. But who ventures to say this to the workingman when he comes along denouncing capitalists as tyrants and monopolists, and asking to have them dismissed, and the capital divided between Tom, Dick, and Harry, to be spent as they see fit, or to have it taken charge of by philanthropists and popular politicians? Capitalists, of course, have great power, and often abuse it; but by what law or regulation are they to be prevented from abusing their power without limiting the play of their judgment? This is the problem which society really has to deal with; but the task to which the workingman is setting himself, with the timid connivance or encouragement of people who ought to know better, is the discovery of some means of preventing capital from flowing into the hands of the only class in the community which is competent to use it, and he talks of the money in the hands of capitalists as if it were a simple means of personal gratification, the fact being that hardly any capitalist appropriates more to personal uses than any co-operative society would have to pay as a salary to a competent manager. There is no way under heaven in which the work of production will cease to need superintendence, or, in other words, can ever become a pure democracy. If we have co-operative societies, each one must have its business manager, in whose judgment it must confide, and whose orders it must obey, if the concern is to escape ruin in the competition with other societies. If we abolish competition, and convert the nation into one vast co-operative association, as the socialists would have it, who is to direct the machine? Who is to decide in what industry each man shall engage, and how much he shall produce, to give him out the raw materials and distribute the finished product? Are human faculties equal to any such task, to say nothing of the regulation of all the other social relations? Would it not need a board of archangels to discharge it, and is there not something melancholy as well as ludicrous in huge bodies of civilized men dreaming of a happy time in which these vast and complex duties should be performed by a general council or such other body, composed of voluble politicians such as now figure at labor reform conventions? Fancy the work of production going on under the perspicacious eye of Alexander Troup or General Cluseret or Vermesch, while Moses Taylor and H. B. Claflin or E. B. Bigelow stood idly by, or was put to digging or sweeping floors!

There is one other question to be considered on this subject, and it is that which lies below them all. Is it or is it not true that the condition of the Workingman in this country, like that of every other man, is made up in large part of the result of the free working of his own will, and of the operation of agencies which are among the mysteries of the universe? Can a workingman eat his cake and have it? Can a workingman, any more than any other man, spend all he earns and yet have something for a rainy day? If not, why should he, more than any other man, be saved from the direct consequences of improvidence? If he is lazy and idle, should he share in the gains of the active and industrious? What would be the effect, we will not say on industry, but on human character, of any system in which there was no visible relation between what a man did and what he enjoyed or suffered? Is there any class of the community any more content or happy than the Workingman, and is there any mode of dividing happiness equally among all, or of rooting out from the human heart the envy with which misery, however caused, is sure to look on comfort, however won? How much of the sorrow of the world comes from death and disease? Why do children inherit bad constitutions and bad natures, and why does the sun shine on the just and the unjust? Why does the honest laborer fall from the scaffold and break his neck, leaving his family to destitution or charity? If the Commission knows of anybody who can answer all these questions, we trust it will summon him at an early day; if it does not, we trust that it, and all who counsel it, will give up pretending that there is a key to this labor problem, as some other people pretend there is a key to the marriage problem which human hands can find, and a single turn of which will take the bitterness out of toil and pain, and the sting out of unrequited love. What we need in the regulation of society, as well as in getting at the secrets of society, is facts, and the greatest fact of the labor problem, and the one of which the laborer and all of us should be constantly kept in mind, is that he is a man living among men. Of course there are things to be done for him by legislation. He is entitled to education and to security, and to the careful removal of all laws, whether affecting currency or taxation, which in any manner affect the distribution of products so as to disturb the natural relation between industry and high wages, frugality and savings, honesty and independence, peaceableness and peace, skill and talent and social elevation; in other words, the business of the state is simply to help him to train his faculties, and then to see that they have free play—this, and nothing more.

ENGLAND.

London, December 15, 1871.

TO-DAY for the first time we have news which seems to imply the probability of the Prince of Wales's recovery. We are, of course, very much pleased and relieved. For the last fortnight we have all been following the fluctuations of his health, and, two or three days ago, hope had been almost abandoned. It was the general expectation of the lower classes, and it is an odd instance of that superstitious feeling which is always ready to break out on the slightest provocation, that the Prince would die yesterday, because it was the anniversary of his father's death just ten years previously. He has, however, survived that critical period, and, though I presume that he is far from being out of danger, it seems that his good constitution is likely to get the best of the struggle. In any case, the excitement of being all but spectators of such a fight for life by a strong young man would be considerable; and it is safe to say that the prestige which still attaches to royalty in England has given us an unusually keen interest in the case. In short, the nation at large has been moved in an unusual degree, and there will be very sincere rejoicings should the Prince be finally restored to health.

I will not enlarge upon a feeling which is sufficiently intelligible without further comment. Moreover, I refrain from doing so, for a reason which I can freely express in writing to you, though I should have some difficulty in obtaining a hearing elsewhere. Nothing, I should say, could be more right and proper than the genuine popular sentiment on the subject. There has been an outburst of sincere loyalty, which is, on the whole, becoming and creditable. But it must be added that, side by side with this, there has been an outburst of flunkeyism—I do not like the word, but I know no other equally appropriate—which has really gone near to turn one's stomach. If anything could have damped one's desire for the Prince's recovery, it would have been the unctuous and bombastic eloquence which has been overflowing from nearly all the newspapers. I do not think, in spite of some things that have been said on the subject, that Englishmen are much more given to the vice of foolishness than other people; and I am inclined to hope that it is simply the necessity of writing an article on the same subject every day which has led our journalists to imitate for a time the worst vices of popular preachers. Stronger language could hardly have been used if some fearful epidemic was decimating every household, or if we were in danger of losing some great and good man upon whom the national prosperity might be supposed to depend in good earnest. We hear of the general happiness being overclouded, of a people cast into the profoundest gloom by a terrible suspense, of an agony of anxiety suspending all ordinary occupations, of a whole nation wrestling in prayer with God for the life of its dearest member. When I have had to attend a funeral, I have generally found that the most saddening part of the proceedings was the ghastly mockery of grief affected by the mutes and undertaker's men. I have something of the same feeling now. This ostentation of sorrow, trying to conceal its emptiness by preposterous exaggeration, affects me with genuine melancholy. Cannot a poor young man be allowed to die or to recover without having his deathbed surrounded by an army of officious mourners, howling and gashing themselves with knives (I speak metaphorically), and probably congratulating themselves in private on having such a good job? There has been a little army of reporters lounging about the outskirts of Sandringham, holding confidential conferences with persons, presumably footmen, whom, in their letters, they describe as "authoritative quarters," and spreading a variety of reports, to be contradicted in their next. Their eloquence is disgusting enough, and yet it is fairly surpassed by the leading articles in respectable newspapers. Well, indignation is out of place. It is the curse of kings, and has been so time out of mind, according to various moralists, that they are the objects of a sham adoration which conceals all genuine feeling. Weak as our monarchy has become in many ways, it seems to have as large a court of flatterers as ever, and, by the help of cheap newspapers, they have, perhaps, become more offensively blatant than of old.

The *Times* assures us that the illness of the Prince has quenched all party spirit—which is so far true that, having something else to talk about, we shall probably not begin to abuse each other as vigorously as usual for the next nine days. However, some very pretty quarrels are preparing, and I must venture to trouble you with an account of one incident which is likely to produce no small excitement on the meeting of Parliament. The Ministry have contrived to get themselves into a difficulty which was perfectly gratuitous, and for which it is really difficult to account. The history of the affair is as follows: For some time past it had been thought desirable to strengthen the Judicial Committee of the Privy Council, which is, as you are aware, the highest court of appeal in many cases, and which, for example, has to deal with ecclesiastical matters, and with an enormous mass of Indian and Colonial business. For this purpose, Government proposed in the session before last to appoint three judges, with the usual salary of £5,000 a year. The radical wing of the Liberal party objected to this plan, as offering a chance for jobbery, and succeeded in throwing it out in the pressure of business at the end of the session. A similar bill was introduced last session, and it was threatened with the same fate. Government thereupon expressed their readiness to insert any provision which would satisfy the virtuous scruples of its opponents. It was accordingly agreed that a clause should be introduced declaring that the new appointments should be given only to men who had already held certain high judicial stations. This, it was suggested, would prevent Government from making the new judgeships rewards for supporters of their own, whom it might be convenient to remove from the House of Commons. The bill was then allowed to pass, expressly on the strength of this concession. When it came to making the necessary appointments, there arose a petty difficulty. It is usual for judges to be allowed a clerk, with a salary of £500 or £600 a year, paid by the public. Government refused to make this allowance for the new judges, and the old judges and others qualified for appointment were more or less reluctant in consequence to accept the post offered to them with what they thought an ungracious reduction. Mr. Gladstone, and the Chancellor, Lord Hatherley, proceeded to evade the law by a very simple device. They made Sir R. Collier, the Attorney-General, judge in the Court of Common Pleas, and, having thus given him the necessary qualification, merely in order to qualify him, immediately transferred him to the Judicial Committee. Obviously, the effect of this was to make the clause I have described altogether nugatory. By thus colorably complying with the act, they could appoint any one they pleased, simply by giving him an ordinary judgeship as a first step. Nor could it seriously be urged that it was the only way out of the difficulty. The matter might well have waited for a month or two longer till the opening of next session, when, if none of the qualified persons had been willing to accept the appointments, Parliament could have introduced such changes as were necessary into the act.

A very strong feeling has been excited in the bar by this piece of sharp practice. The Chief-Justice, Sir A. Cockburn, wrote a strong protest to Mr. Gladstone, before the transaction was completed, saying, amongst other things, that the proceeding thus contemplated was one which he should have felt bound to stigmatize in the strongest language, if it had been brought before him as the act of a town-council. In spite of this protest, the appointment was carried out, and Mr. Gladstone and Lord Hatherley wrote very brief and rather supercilious replies to the Chief-Justice, accepting the responsibility of the whole proceeding. These letters have since been published, and it is the general opinion that the letter of the Chief-Justice is absolutely conclusive. Indeed, none of the papers which generally defend the Government have said a word in its defence, with the exception, of course, of Mr. Gladstone's faithful jackal, the *Daily Telegraph*. It would probably say that he had done quite right if he made himself emperor by a *coup d'état* to-morrow. The position is one of great difficulty; for it seems almost certain that a vote of censure will be passed in the House of Lords, and it will be extremely difficult, even with the help of the strongest party discipline, to obtain the approval of the House of Commons. I speak, of course, without having heard what may possibly be said by Mr. Gladstone and his reasonable supporters. But at present the case looks as bad as it well can; Government seems to have cut off all possibility of retreat; and the Chief-Justice assures us, with every appearance of accuracy, that not a single lawyer could be found to defend the course adopted. Poor Mr. Gladstone had difficulties enough on his hands, what with the dissenters showing symptoms of mutiny, and the Catholic bishops bullying him to make concessions in Ireland, and prohibitionists and public-house keepers threatening him from different sides, and a general demand arising for careful legislation, with a body of legislators daily growing more disorganized and quarrelsome; and it seems to have been by a singular infelicity that he should have wantonly stirred up this hornets' nest of lawyers. Indeed, the question, though it sounds rather technical in its nature, is one of great importance; for the imputation made is that Government have disregarded that honorable observance of the spirit as well as the letter of an agreement which is essential to the satisfactory working of our constitution. Nobody, indeed, would accuse Mr. Gladstone of intentionally dishonorable conduct, but he is apt to be at once impulsive and dictatorial; and, having entirely overlooked considerations which ought to have occurred to any wary politician, he is forced to maintain an indefensible position. Opposition, of course, will make a vigorous assault upon his weak place at an early period, and, as it seems at present, with very good chances of success.

Notes.

ONE result of the Chicago fire has been to bring about a consolidation of the *Congregational Quarterly*, lately published in that city, with the *New Englander*, whose editorial board will be enlarged by the accession of President A. L. Chapin, of Beloit College, and Prof. Samuel C. Bartlett, of the Chicago Theological Seminary. The new arrangement takes effect with the commencement of the present year.

—A summary of the losses sustained by the Chicago Academy of Sciences in the memorable fire may not be without interest to the readers of the *Nation*, since among such are many of the class to whom it is important, in the words of a recent communication to its friends and correspondents, "to know what has become of scientific material known to have been in existence, if for no other reason than to save time which might otherwise be spent in its search." The accumulations, during the five years since the reorganization of the Academy, were of such magnitude that any enumeration or catalogue had been impracticable; and it will excite both surprise and regret to learn that the collections thus destroyed had actually cost, either by purchase or expenses of collection, not less than $200,000. Among the more important were the following: The Audubon Club collection of game birds and mammals of this country, Europe, and Asia; the Walsh entomological collection, of great scientific value from its large number of types; the Cooper-Walker cabinet of marine shells, "one of the most complete in this country"; the Blatchford collection, fully illustrating the zoölogy of the Florida coast; the Hughes cabinet of minerals; the series of specimens of the collections of Bischoff and other naturalists of the Western Union Telegraph expedition, 1865-69, illustrating the natural history of Alaska; the Smithsonian collection of crustacea, "the largest alcoholic collection in the world," and containing, besides the types of species described by Dana and others, hundreds of new species undescribed except in MSS. destroyed at the same time; the invertebrates of the United States North Pacific exploring expedition, 1853–56, collected by Dr. Wm. Stimpson, and in great part undescribed, except in MSS., also lost; marine shells of the Atlantic coast of the United States (8,000 sets of specimens), the results of twenty years' dredgings and general research by Mr. Stimpson and his correspondents, and further enriched by illustrative specimens from the shores of Europe and the Arctic Sea, and from the tertiary and quaternary formations; the Gulf-stream deep-sea crustacea and mollusca, dredged by the Count de Pourtales, United States Coast Survey, 1867–69; tertiary fossils (miocene and eocene) of the United States; mineralogical collections, including the best ever made of Galena minerals; the Scammon herbarium, 6,000 species, with duplicates; the exceedingly interesting results of the deep-water dredgings in Lake Michigan, conducted by the Academy in 1870–71; the Scammon collection of ancient Central American pottery; and, finally, the Kennicott collections, made by the late Director of the Academy, Robert Kennicott, in British and Russian America, 1859–61, one of the most important features of the institution. While, of course, many of these collections are duplicated in other scientific museums, some of the most valuable were unique, and consisted of entirely new material, either undescribed, except in the destroyed MSS., or else not at all worked up. In some respects, both as to material and literature, the Chicago Academy possessed the best working facilities in existence; as, for instance, in the marine invertebrata, the literature of which, particularly in the class Crustacea, was especially full and complete. Among the manuscripts destroyed were some which had been in course of preparation since 1849; others since 1853–56, illustrated by nearly 3,000 drawings, many of them colored; while for others the engravings had been made, as, for instance, for a work on the shells of the East Coast of North America, by Dr. Stimpson, for which about 200 illustrations had been engraved. One set of manuscripts comprised a series of "dredging papers," containing an abstract of explorations by the Secretary along the Atlantic coast from Nova Scotia to Florida, and in the Gulf of Mexico, a perusal of which would have been interesting at this time, when Agassiz has assumed the rôle of prophet in bathymetrical zoölogy. We are advised that the trustees of the Academy, notwithstanding their personal losses, have determined to rebuild, to resume the publication of the *Transactions*, and to re-establish, as soon as may be, the institution upon its former basis. Before the prevailing fashion of contributing to the rehabilitation of Chicago passes away, we bespeak attention to her scientific interests, and especially to this, their most creditable representative.

—The old maxim that bids physicians heal themselves is always more honored in the breach than in the observance; but a notable exception to the rule is manifesting itself in that most unlikely quarter, the legal profession in England. Everybody knows that, by time-honored prescription, four private bodies (for they disclaim the name of corporations), known as the "Inns of Court," exercise the exclusive right of "calling" their members to the English Bar. The position of a barrister is attended with various privileges and some social repute. But what are the necessary qualifications for it? Simply these: To have eaten six-and-thirty dinners in the hall of an Inn of Court, to have attended *at*, not *to*, a course of lectures, or the practice in some barrister's chambers, for a twelvemonth, and to have paid about £150 in fees. Fulfil these conditions, and you may write "Barrister-at-Law, Esquire," after your name without having read a page of Blackstone. In these irreverent days, however, so glaring an abuse and sham could hardly, however venerable, pass unquestioned; and happily the stir for reform comes from within. Under the presidency of Sir Roundell Palmer, the admitted leader of the Bar, the Legal Education Association has appeared before the public with a weight of professional support that compels attention to its programme. The Association was constituted over a year ago, an outline of its objects was introduced to the notice of the House of Commons towards the close of last year's session, and a few weeks ago it met to review the progress of its work. The aims of the Association may be stated in few words. They are, first, to establish an efficient central School of Law; and then to bring about that no person be admitted to practise either at the Bar or as an attorney without a certificate of legal proficiency, to be granted after proper examination by the Central School. Such requirements are not only recommended by common sense—their principle is practically recognized in France, Spain, Belgium, Italy, and in Scotland, in all which countries some systematic study of law, tested by examination, is an indispensable preliminary to the status of a lawyer. That the work of legal education in England must be taken out of the hands of the Inns of Court, Sir R. Palmer soundly and unmistakably insists. Those rich and ancient institutions (he says), governed by excellent men, whose misfortune it is to have inherited a worn-out system, have had five centuries, from Edward I. to Victoria, in which to show what they could do; and, to-day, they are clearly found wanting. The Association does not aim at any such amalgamation of the two branches of the profession as exists in the United States; but it would throw open every lecture in its school of law to students for both branches without distinction, and trust to each man following the studies specially bearing on his intended line of practice. Sir R. Palmer distinctly pledges himself to bring the question before the House of Commons early this spring, and his advocacy alone is sufficient to ensure it serious consideration and discussion.

— In the division "Belles-Lettres" of the general survey of "Contemporary Literature" in the *Westminster Review* for October, there is a valuable notice of Ellis's "Early English Pronunciation," from which we extract the following:

> "In a former number of this *Review* we suggested, in noticing Messrs. Clark and Wright's edition of Shakespeare, that the lines should be numbered as in a Greek play. We are indeed glad to find that our suggestion is supported by Mr. Ellis's authority, who has himself adopted the plan in his phonetic edition of 'Macbeth' and 'The Tempest.' 'Those,' he writes, 'who have been in the habit of using Mrs. Cowden Clarke's 'Concordance to Shakespeare,' where the reference is to act and scene only, will readily acknowledge the great convenience of having only to count the speeches to find the passage with tolerable certainty, instead of having to read through a whole long scene. It would be a great boon if subsequent publishers of Shakespeare would adopt this plan of numbering the speeches, which would give a means of reference independent of the size of the page, and serving for the prose portion as well as for the verses (pp. 919, 920).' We believe that if any publisher were to venture upon such an undertaking, which involves not the slightest cost, as the work might be performed by any intelligent clerk, he would make a fortune. As all references would naturally be made to such a handy edition, its sale would probably be larger than all the others put together."

—We do not quote this passage to call attention to its slovenly English—and that of Mr. Ellis appears to be little less careless than his reviewers—but in order to point out the fact that the late Professor George Craik made, more than fifteen years ago, a much more useful suggestion than that made by the *Westminster Reviewer*, and approved and followed by Mr. Ellis. In that excellent little book, "The English of Shakespeare illustrated in a Philological Commentary on his 'Julius Cæsar,'" published by Professor Craik in 1857, he says, in the preface, which bears date October, 1856:

> "A merely mechanical innovation in the typographical exhibition of the text will at once catch the eye. The present is, I suppose, the first edition of a play, in any language, with the speeches numbered. Possibly it may be the first time that any one has thought of counting the speeches in a play. . . . At any rate, such a method as I have adopted seems to afford the only available means for distinct and expeditious reference. It has a double advantage over the mere pagination: first, inasmuch as a speech is usually much shorter than a page; and, secondly, inasmuch as the division into speeches is the same for all editions. The only other plan that has been, or that, apparently, can be taken, is to make shift with the ordinary division into acts and scenes."

After discussing this latter mode of reference, and giving good reason for its rejection, he goes on to speak of Mrs. Cowden Clarke's "Concordance to Shakespeare," and, having given the highest praise to the work as a noble monument of that lady's patience and carefulness—"it would be hard," he says, "to name a printed volume either of more difficult or more faultless execution; it is rare to find a single figure or letter wrong; it may be questioned if any equally elaborate work, literary or of any other kind, so remarkable for exactness and freedom from error, ever before proceeded from the female head or hand; even as it stands it is invaluable, and in a manner indispensable, for critical purposes"—he draws this conclusion: "But it is much to be wished that, before it was undertaken, there had existed an edition of the plays with the speeches numbered throughout, as in the present edition of 'Julius Cæsar,' to which it might have been accommodated. We should in that case have found whatever we might seek, by its assistance, in about a fiftieth part of the average time that it now takes us."

—We remark, in passing, that Mr. W. J. Rolfe, who has made an American edition of Professor Craik's "English of Shakespeare," has adopted a plan for numbering the speeches which seems to us a poor thing, though his own. He numbers the speeches from the beginning to the end of the play, but puts a number against those only to which the notes in the "philological commentary," which follow the play, refer. Although the notion of numbering the speeches at all must have been suggested to his mind by the editor he was editing, he not only makes no acknowledgment of the fact, but omits from Professor Craik's preface the paragraphs in which he introduces and explains his very useful innovation. We are quite willing to lay to the charge of the printer the way in which these omissions are indicated, which is not by the usual asterisks making a line across the page between the paragraphs, so that the fact of an omission cannot be overlooked, but by four small points at the end of the last line in the paragraph. This may be thought a small matter, but we like to see justice done, and, individually, we wish to see justice done to Professor Craik, who was a most careful and judicious scholar, and, moreover, a most modest one, considering the usefulness of his literary work. We think that Mr. Rolfe should have printed Professor Craik's preface exactly as he wrote it, and, if he chose to adopt another way of numbering the speeches, he was at liberty to do so, giving his reasons for the change. We do not see that he could have given good reasons for the change, but he should at least have let his readers know who suggested to him the numbering of the speeches at all. As it is, between Mr. Rolfe, the *Westminster Reviewer*, and Mr. Ellis, the inventor of a most simple but at the same time most useful device is deprived of the credit which is his due.

—Among the various periodicals called into life by the creation of the new German Empire, the "Jahrbuch für Gesetzgebung, Verwaltung und Rechtspflege des Deutschen Reichs" ("Yearbook devoted to the Legislative, Administrative, and Judicial Affairs of the German Empire"), started and edited by Dr. Franz von Holtzendorff, the distinguished professor of jurisprudence at Berlin, is sure to hold a prominent place. To justify this expectation, it suffices to indicate the main contents of the first number—first part of the "year 1871"—now before the public, together with the names of the contributors. Dr. Thudichum, of Tübingen, contributes the "Constitution of the German Empire, of April 16, 1871," with comments, documents, and an historical introduction; Dr. Metzel, of Berlin, a minute chronicle of the "Doings of the German Reichstag (first period, first session)"; Dr. Ludwig Bamberger, the well-known representative of Mentz in that assembly, a more popular and equally interesting and suggestive review of the same session; the editor, a critical essay on the spirit and the principal legislative acts of the new parliament; August Lammers, of Bremen, two thorough-going treatises on the "Commercial, Customs, and Consular Affairs" and the "Economical Legislation" of the Empire; and Dr. Bluntschli, of Heidelberg, a series of "Observations on Points of International Law, in reference to the Franco-German War of 1870–71," treating, among other things, of the origin of the war, of explosive bullets, bombardments, African troops in European wars, *francs-tireurs*, balloons, capitulations, requisitions and contributions, and the expulsion of the German inhabitants from France. The last-named contribution cannot fail to interest in a high degree every student of international law, as well as every thinking mind, while most of the others must be welcome to all close observers of the wonderful advance of Germany in our day. The "Jahrbuch" is published in Leipsic, by Duncker & Humblot.

—The December number of *Blackwood* has a second article on "French Home Life," which will be found well worth reading as the judgment of a critic as friendly as he is well informed. His conclusion is that the French system of education makes better women than it does men, and that it is eminently successful in cultivating the family affections. On the latter point he remarks:

> "The fact is—and it is a fact, however prodigious it may appear to people who have always believed the contrary—that the family bond is extraordinarily powerful in France. What we call 'united families' are the rule there, and the unity goes far beyond our usual interpretation of the word. It means not only affection and mutual devotion, but it affects the instincts of the nation to such a point that colonizing, and even, to a certain degree, foreign travel, are rendered impossible by it. Neither sons nor daughters will consent to leave their parents; the shortest absence is regarded as a calamity; and the population, as a whole, shrinks from expatriation, not because it is unfit to create new positions for itself (on the contrary, its adaptability is notorious), but because it cannot face a rupture of habits and attachments which date from childhood."

"Where French home life," continues the writer, "puts on a character of its own which distinguishes it from that of most other countries, and especially from England, is in the astonishing power which certain children exercise over their parents—a power almost as great as that which the parents themselves ought to possess over their children." And he gives the following extreme illustration:

> "At a dinner-party of twenty people, two guests, man and wife, did not appear at the appointed hour; after wondering and waiting, the mistress of the house commenced her banquet. At ten o'clock in walked the absentees, looking somewhat foolish, but candidly confessing the motive of their absence as if it were quite natural. Their child, a girl of three, had been put to bed just as they were starting for the dinner; but when they went to fondly wish it good-night, the child said, 'Mamma, I won't let you go out.' The mother argued, but in vain. The child would not give way. The father came and tried his eloquence, with no better success. Then the small creature, seeing her advantage, increased her demands; not only did she insist that neither father nor mother should leave the house, but called upon them to immediately undress and go to bed. They faintly resisted; the baby grew imperious, and threatened to cry forthwith. That beat them, as the mother deprecatingly observed to her astounded listeners. 'Of course, when the sweet child told us she was going to cry, we were forced to yield; it would have been monstrous to cause her pain simply for our pleasure; so I begged Henri to cease his efforts to persuade her, and we both took off our clothes and went to bed. As soon as she was asleep we got up again, redressed, and here we are, with a thousand apologies for being so late.'"

—We learn by a letter written from Rome to the *Athenæum*, by Mr. C. J. Hemans, that a statue in marble of Thorwaldsen is to be set up before the Barberini Palace by the prince of that house. Two studios formerly occupied by the artist are in the immediate vicinity, one on each side of the palace. The marble has been executed by Herr Wolff, one of Thorwaldsen's pupils, from a cast of the portrait statue which the artist made of himself, and which was left in Rome in the possession of his daughter. Herr Wolff's copy is of a larger size than the original, being seven feet high. It represents the Danish master at the age of sixty-five, in his studio dress, with a mallet and chisel in his hand, and leaning upon the model of his own statue of Hope, which now adorns the monument of William Humboldt, near Berlin.

— The *Athenæum* informs us also of the death of Canon Rock, well known as an antiquarian, and for his zeal in promoting art studies in England. He prepared the excellent catalogue of embroideries styled "Textile Fabrics," at South Kensington, for the Art Department. The *Athenæum* says that his knowledge of this recondite subject resembled that of the erudite Dr. Bock, Canon of Aix-la-Chapelle, whose writings deserve translating into English. Canon Rock deserves to be remembered as one of the most ardent promoters of that superb collection of antiquities, "The Loan Collection" of 1862—a collection never to be forgotten by those who had the good fortune to study it.

— A very excellent serial publication for a family where some of the members speak French is "Le Tour du Monde: Nouveau Journal des Voyages." It is published by the enterprising house of L. Hachette & Co., and is edited by M. Edouard Charton. There are already many subscribers for it in this country, and Christern has it always in stock. It is wholly devoted, as its title shows, to voyages, and every now and then a valuable volume devoted to some one country or city is made up from its numbers. Thus we have "Le Japon Illustré," by Aimé-Humbert—taken altogether, the most complete book we have about Japan — and, more recently, "Rome," by Francis Wey, which, to young people, is worth all the guide-books and descriptions of Rome that have been published. These books are carefully written in an interesting style, and filled with the most varied illustrations, very truthful, and beautifully engraved. Every subscriber to the periodical during the ten years that it has been in existence has become the possessor of these volumes and of many others, and has been able to make better acquaintance with them, perhaps, by reading the successive numbers, than if he had waited until they were collected into separate works. Either of these two books, the "Japan" of M. Aimé-Humbert, or the "Rome" of M. Francis Wey, would make a present of lasting value to any intelligent boy or girl.

TAINE'S ENGLISH LITERATURE.*

THERE are two ways in vogue of writing the history of a literature. One is to give in detail the main facts in the lives of authors, the titles of books, the dates of their publication, and the success they met with, together with their influence upon their own and upon succeeding times. This forms the principal part of the work—the part upon which the labor of preparation is chiefly expended. Facts are everything, principles nothing. There is criticism, to be sure, but usually very little, and that little of a kind that leads the intelligent reader to wish there were none at all. The other method is entirely different. If it deal at all with names and dates, it is with the single purpose of setting in a clearer light the history of ideas. It is a scientific exposition of the changes that have taken place in the intellectual development of a people, the causes which have led to them, the results that have sprung from them. Its chief aim is to trace those principles of thought and action which, ruling the lives of men, have found expression in their literature. In this view, the subject leaves the province of annals, and passes into that of philosophy. Literature is in it bound up with the national life, and, in order to know the characteristic of the one, it is essential to study closely the other. Race, climate, political institutions, manners, and customs, all become of importance; for these all affect the man, and necessarily leave their impress upon the work he produces.

It is by the combination of both methods that the perfect history of literature will be written, if ever written at all; but up to the present time the former has been the one usually followed. Especially is this true in the case of works of this kind produced by members of our race, with its fondness for detail, its patient accumulation of facts, its aversion to general principles. But, even in the particular field chosen, with us the work has not been well done. Our histories of literature are full of information, but of information ill arranged, ill expressed, utterly undigested. Masses of fact are heaped together without any logical sequence, without any thread of connection save that of time—an important one, certainly, but by no means the most important. Men are treated of together solely because they happened to be born in the same period, just as words are placed together in a dictionary because they happen to begin with the same letter. These works are, in many cases, eminently useful; in nearly all cases they are pre-eminently stupid. Nowhere, indeed, has the ancient realm of dulness held its own more tenaciously, nowhere has it suffered less from even the semblance of invasion, than in the province of English literary history as written by Englishmen. It is doubtful if, under any circumstances, more successful efforts have ever been made to disgust the human mind with literature itself.

The present work, which, originally published in 1864, has just been translated into English, is of an entirely different cast. It follows the second method so closely that, in the sense in which words have come to have a meaning with us, its very title is a misnomer. It is one of the last books on the subject that any one would take up with the hope of finding any definite information on any point in the history of English literature. Details, so far as they are brought in at all, are the common ones that can be found anywhere and everywhere. They are, for the most part, accurate, because they rarely go outside of matters well known. From one end to the other of these two bulky volumes scarcely a score of dates can be met with in the text. Numbers of inferior writers are not even spoken of at all. You may find them in Warton, the author tells us in one place—these good people who speak without having anything to say. Names high in the world of letters frequently fare no better. What are we to think of a history of English literature, as it is commonly understood, which, in an account of the great revival which followed the intellectual collapse of the eighteenth century, disposes of Coleridge in a few lines, mentions Keats once, and that casually, and does not even do so much as that for other prominent writers? Evidently, indeed, some of these authors have not been spoken of because they have never been read; it is equally clear in other cases that some have been read so slightly and superficially that there has been no independent criticism. Whenever, in fact, he comes to treat of inferior writers, Taine's opinions of them and their works vary little from the regular stock ideas. He generally does the correct thing, praises where everybody else praises, blames where everybody else blames. He looks upon Sterne as a sentimental scamp, finds Richardson very much of a bore, and even falls in with the fashionable denunciation of Pope, the representative of his classical age, in quite the style of modern English criticism. Yet, with all these deficiencies, if one is pleased to call them so, the work is not simply entertaining throughout; it is instructive. It is little praise to the author to say that he has written the best history of English literature that has yet been produced; he could not well have written one worse than those already existing; and the surprise which men have felt at finding a book on this subject which they could read without yawning has apparently led some of them to ascribe to it merits which its composer would not be likely to claim for it himself. For the work is really a criticism of English literature, as it appears in a few of its greatest authors, about whom the others, so far as they are mentioned at all, are grouped. In the fifth and last book, which treats of modern writers, Taine takes six as representatives of the tendencies now existing. What, in this place, he has done avowedly and with design for the representation of tendencies, he has practically done everywhere else for the illustration of the history of results. This is, without doubt, an incomplete way of giving an account of literature, but it is much the most attractive way; nor is it, in certain points of view, the worst as regards details of the highest importance. For the mass of men will not read books of this kind at all if they are compelled to wade through accounts of obscure authors, of whose names they have never heard, and whose writings they have neither the time nor the inclination to read.

To the production of a work written in this manner Taine has brought several qualifications—one qualification in particular, the highest of all; for clearly the first and most essential requisite for the critical treatment of literary history is a catholic sympathy. Important as is fulness and accuracy of knowledge, still more important is the spirit with which one undertakes and carries through such a task. He who sets out to write the history of a literature must not only be free from the prejudices and prepossessions of his own age, but must be prepared to share fully in the feelings and ideas which have touched the hearts and moulded the manners of the men of every age. Obviously a most difficult thing for any man to do; for some natures, probably, an impossible thing. It is hard for the most broad-minded one of us to keep himself from being swayed by his surroundings, yet an absolutely necessary thing for him who aspires to the position of judge. He cannot afford to forget that a literary work which has pleased any generation must have in it some qualities to command respect, however difficult it may be to the men of another generation to find them. Still more certainly must it have such qualities if it continues to be held in high esteem by the men of several generations, even though these may be comparatively few in number. The man who fails to appreciate the peculiar power of an author who has impressed himself upon his time may not be lacking in literary taste—for in that the time itself may have been deficient—but he is clearly lacking in literary sympathy. He has no right to criticise, or rather his criticism is of no value, because there is one class of sentiments and ideas with which he has not succeeded in placing himself *en rapport*. The student of literature who cannot appreciate both Byron and Wordsworth, who admires Tennyson, but denies merit to Pope, may have depth of culture in certain directions, but he lacks breadth. The mere man of letters may consult and gratify the peculiar bent of his mind, may have his favorite authors, may indulge in capricious dislikes; but the critical historian of literature has no business whatever with preferences or aversions.

---

* "History of English Literature. By H. A. Taine. Translated by H. Van Laun." Two volumes. New York: Holt & Williams. 1871.

It is here that Taine's crowning merit lies. The literary information he furnishes is none of it new, and as regards amount is scanty. His philosophic views, his generalizations, his opinions of particular men, be they right or wrong, are likely to find many opposers. But the spirit with which he has discharged his task is not simply admirable on its own account. It has enabled him to do for English literature as a whole what no Englishman has as yet done save in part. "The tirade of calumny," he says, "was in vogue fifty years ago; in fifty more it will probably have altogether ceased. The French are beginning to comprehend the gravity of the Puritans; perhaps the English will end by comprehending the gaiety of Voltaire: the first are laboring to appreciate Shakespeare; the second will doubtless attempt to appreciate Racine." It is, accordingly, little wonder that a man of ability who writes in such a spirit should have been enabled, though a foreigner, to present the most vivid and attractive picture of English literature that has yet been drawn. This wide-embracing sympathy which enables him to see how the men of every age felt, and to point out the source of every writer's power, fails him nowhere—at least to any marked extent—save in his criticism of Butler, whose "Hudibras" is, in his eyes, not merely mean and malignant, but, what in a literary point of view is far worse, is also awkward and dull. Here he forgets his own principles. He forgets that a work which is not only mean and malignant, but likewise awkward and dull, does not continue to be read for two centuries. But this is a solitary exception. It is not, indeed, meant to be asserted that his views are always just or his conclusions always sound. It is that they are uniformly legitimate and fair. They are just and true in the light in which the facts upon which they are based appear to an acute observer, who looks at the whole subject from a standpoint altogether different from that occupied by a member of our race. Given his premises, you can hardly fail to accept his conclusions. It matters not that they are different from ours, that in some cases they may be unpalatable. Certain fundamental differences of opinion between the two peoples, perhaps between the two races, must be taken for granted, and for them the requisite allowance must be made. Thus, "The Campaign" of Addison, a fair specimen of the poetry of the prize-medal order, which to the English is generally so distasteful, receives his praise as "an excellent model of a becoming and classical style." True, he recognizes thoroughly that it is poor of its kind; but then each verse is full and perfect in itself, the epithets are well-chosen, the countries have noble names, and there are pretty turns of oratorical address. All the beauties which the Frenchman sees plainly are hardly visible to the Englishman, who simply feels that outside of half a dozen lines the poem is lifeless and insipid. Coming down to modern times, the very words with which he closes the work, "I prefer Alfred de Musset to Tennyson," make us conscious of the wide difference in tastes and sentiments between the two peoples. But it is a thing that has only to be recognized. There is no need of our quarrelling with it.

At the same time, there is always a tendency to push the doctrine of race too far, and Taine has strained it to its extremest limits. It is in race and climate, indeed, that he finds the origin of the leading characteristics of English literature. To him the Englishman has always been a barbarian—in no mean sense, be it understood. A barbarian he continues to be. Modified by centuries of cultivation, he is still, under the surface, the genuine representatives of those fierce warriors whose chief pleasures were to be found in fighting, gorging, and guzzling; who, with the hearts of lions and the stomachs of ostriches, were never happy save in slaughtering foes or washing down half-cooked pieces of boar's meat with huge bumpers of mead, quaffed from drinking-cups made of the horns of wild bulls. A lineal descendant of the Vikings, he, like them, loves the battle and the storm, as well in literature as in life. Civilize him, and place him in a country where the skies are sombre and the climate cold, where it is often dark in the middle of the day, where, when it is not rainy, it is foggy, where comfort is only attained by labor, where the struggle for existence is so fierce that large numbers must nearly work themselves to death to save themselves from dying—place him where he has such surroundings, and life seems to him a constant battle. Hence arises in him melancholy, the idea of duty, lofty contempt for outward show, stern and heroic courage. Seriousness becomes habitual. It enters into his character so completely that he even amuses himself in a melancholy manner. When the Protestant religion comes along with its contemptuous rejection of external forms, he takes to it naturally. Its enthronement of conscience as the supreme guide, its exaltation of moral over physical or intellectual beauty, its belief in an ever-present, perfect God, seeing all things, judging all things, still further intensify the native seriousness of his disposition, deepen it often into gloom. Thus thoroughly ingrained into the character, it manifests itself everywhere in the literature. This, in a few words, is Taine's idea. Again and again he returns to it. That there is truth in it not many will deny; that it is the whole truth, that it has even half the influence which he imputes to it, few close students of our literature will admit. One cannot help feeling, in reading many brilliant but highly-drawn passages in this work which treat of the effect of race, that Calvin, with his stern creed, his deification of duty, his lofty conception of personal purity, was only saved from being Taine's typical Englishman by the unaccommodating fact of his being a Frenchman. Writing an account of English literature in accordance with a preconceived theory, the author has not only exaggerated English seriousness up almost to the point of caricature, but he has been led by it to ascribe to the men of the race what is true only of the men of a particular period. The same characteristics, for instance, which the modern Frenchman finds in Addison are found also by the modern Englishman. To the former Addison's ideas are commonplace; so they are to the latter. Taine assures us that Johnson's essays are a "national food," though to a Frenchman they would seem dull and insipid. Whether they were ever a national food or not, they certainly seem dull and insipid to Englishmen now, who accordingly never read them. Race and climate are great influences. It is the extravagant estimate put upon them which will ultimately lead to a denial of their having any influence at all.

As regards the details of his criticisms, the subject is too vast to admit of much remark. But in it the author is at his best. If there is little that is original in what he says of inferior writers, with the leading ones the case is different. There he is always fresh, suggestive, striking, and, what is even better, fully appreciative both of merits and defects. To be sure, there must always be differences of opinion. There are not likely to be many who will agree with the high estimate placed upon Ben Jonson, as compared with other dramatists of his age, particularly with Beaumont and Fletcher. Outside of lyric composition, in which his genius stood on a level with Shakespeare's, Jonson could hardly claim any such conspicuous superiority as is here accorded him; and the general neglect into which he has fallen shows strongly how little it is that traditional reputation can do for a man, save with critics, commentators, and historians of literature. It matters not that he was the literary autocrat of his own time, that his age rated him full as high as Shakespeare, if not much higher. His pre-eminent position then was due largely to extraneous causes, in no small measure to his vast acquirements. For learning is always apt to impress one's contemporaries far more than wisdom, or even genius—a providentially blessed arrangement in a world where it is so hard to counterfeit the former, and so easy to counterfeit the latter; where, indeed, it takes usually a century to find out definitely whether a given individual has been a wise man or a fool. But, singularly enough, there has nowhere been drawn so satisfactory a picture of our great epic poet, with whom of all men a Frenchman might be supposed to have little in common. After the deluge of indiscriminate eulogy that has been poured upon Milton, it is refreshing to come across a writer who sees clearly the special characteristics of his genius, and points out plainly wherein his strength and weakness lay; above all, one who is not afraid to set forth sharply the truth in regard to that wonderful compound of sublime verse and prosy metaphysics which make up the "Paradise Lost." Perhaps it is only a foreigner who would have ventured to express so bluntly the feeling we all secretly entertain that Milton's Adam is very much of a prig; who would assure us so strongly that, in a literary point of view, there is full justification for that carnal sympathy we all have with the fallen archangel, a sympathy so profound that only an ample supply of grace can enable the most orthodox reader to wish success to his opponents. In the criticism of later writers, it will seem to most men that Wordsworth has not received that justice to which he is entitled by his ability and the influence which, in spite of absurd theories and insular narrowness, he has exerted. It is noticeable here that Taine holds steadily to the view, generally entertained by the poet's contemporaries both in England and on the Continent, that Byron was the greatest product of the literary revival that began with the close of the last century; and that he follows Goethe, and, for that matter, Byron himself, in regarding Don Juan as his masterpiece—both being views to which the English, after years of depreciation, seem on the point of returning.

Of this work there is one thing more to be said in conclusion. Whatever other faults it has, it is not dull. The reader may dissent; he may be irritated; he may, if of a certain class, be disgusted; but he will never be bored. The marvellous vivacity and grace which make French prose the most attractive of reading have not evaporated by transfusion into a foreign tongue. The translation, as a whole, is well executed. We have the author's own certificate as to its faithfulness; and, in spite of some expressions and idioms that are not yet known to classic English, and are never likely to be, it also justifies his additional testimony as to its elegance.

THE HISTORY OF THE INTERNATIONAL ASSOCIATION.*

WHEN Mr. Hoar produced, in the House of Representatives the other day, the Constitution and By-laws of the International as "the work of the leading minds of all civilized countries," and proceeded to base on them a proposal that the United States Government should institute an investigation into the condition of the laborer, with the view, we presume, to legislating for its amelioration, we could hardly avoid the conclusion that he did not know much about the International. We retain that suspicion still. In fact, we doubt very much whether many of its admirers in the United States know much about it, and their ignorance of it will go far to account for the widespread faith in the power and extent of the organization. M. Villetard's book will, therefore, prove very useful, and would prove still more useful if translated, by furnishing a very clear and succinct account, carefully supported at every step by documentary evidence, of the origin, rise, and real character of this attempt to transform society. He writes, it is true, avowedly as a partisan—that is, he does not conceal his dislike for the Association, and, indeed, acknowledges his book to be an "exposure"; but he writes with the restraint and moderation of an educated man, and, as we have said, is very cautious not to assert without proof.

He devotes four interesting introductory chapters to a sketch of the various attempts at social reform which have been made within the present century, and which have finally, obviously, and not unnaturally prepared the way for the foundation of the International. The earliest of these attempts in France, those of Saint-Simon and Fourier, like those of Owen, the Brook Farmers, and the Oneida Communists, and others in this country, were commendable in this, that they were the work of voluntary associations, whose members began the business of reform in their own persons, and sought to carry it on by their own labor and self-denial, and those of such persons as they could persuade into sharing their faith. In other words, they did not seek to destroy or weaken any of the natural motives to exertion, or any of the ordinary restraints on indolence or selfishness, or to make anybody share the cost of their experiments who did not choose to do so.

Louis Blanc was the first to propound the doctrine that competition, on which society is now based, and on which it relies to keep its members at work, and to keep their energies stimulated, and to determine the reward of their labors, should be abolished by governmental force, and the principle of co-operation substituted. Shame, and love, and the might of the individual conscience were, under his plan for the "organization of labor," to keep men from skulking, or taking more than an equal share of the good things of this life. The indolent were to be terrified into industry by the inscription over the door of the workshop—"The Lazy Man is a Thief." Society was to keep all producers fully employed, whether it wanted their products or not. He made a bold attempt, when he got into the Provisional Government in 1848, to put these ideas into practice, with what result everybody knows. His failure did not, however, kill the ideas. They took root, and grew, and grew all the more steadily because it was part of the policy of the Second Empire to let socialism work freely enough to terrify the middle-classes, and yet not freely enough to expose it to free discussion. The gagging of the press, combined with the debauchery and extravagance of the court circles, stimulated to the highest degree the fierce, malignant, and anti-social passions which burst forth so savagely last year.

Nevertheless, it was under the Empire that the International was founded. It took its origin from a visit paid by a large body of French workmen to the London Exhibition of 1862, where they were cordially received by their English brethren, who presented them with an address, in which the germ of the Association is to be found, and the contents of which deserve careful attention, not only because it is really the first document in the archives of the organization, or, as M. Villetard calls it, "its certificate of birth," but because it furnishes a ready means of determining the later tendencies of the association, and the justice of the reproaches heaped upon it by its enemies. The address, after the usual commonplace congratulations on the advent of the reign of industry and moral force, declares that as long as there are employers and employed, and disputes between them about wages, the workmen can only find safety in union; "that concord between masters and workmen was the sole means of diminishing the difficulties by which they are surrounded"; that the introduction of steam machinery on a great scale into industry "had made the proper remuneration of labor a problem of immense difficulty." It raised the questions—"Should the need of human labor diminish in proportion as the power of machinery increased? What is to become of those who have no work to do? Should they remain unproducers and elements of competition? Should they be allowed to die of hunger, or be supported by those who work?" These questions the English workmen did not, they said, pretend to be able to answer; but answered they would have to be, and in the task of answering them "the co-operation of all—philosophers, statesmen, historians, masters, and workmen of all countries—was needed; it was every man's duty to take part in it." They then went on to say that, "in exchanging ideas and observations with the workmen of different nationalties, they would be able to discover more rapidly the economic secrets of different societies." Committees of the workmen of the two nations were, thereupon, appointed to keep up "a correspondence on questions of international industry," and, as a good many of the French workmen settled in London, the correspondence went on actively. So far, nothing could be more harmless or healthy than the aims and ideas of the new combination.

In the following year, 1863, the French workmen who had taken part in the fraternization in London, to the number of sixty, issued a manifesto after the general election of that year, asking that one of the two seats for Paris left vacant by a double election of the candidates should be reserved for a workingman—and they incorporated in their manifesto a declaration of their principles, in which, apart from the usual tirade against "the domination of capital," there was little that was objectionable. They asked, first of all, for the repeal of the law against workingmen's combinations for strikes or other purposes, and then said: "The middle classes, our elder brothers, were able, in 1789, to absorb the nobility and abolish unjust privileges. We seek not to destroy the rights which the middle class justly enjoys, but to conquer the same liberty of action. Let no one accuse us of dreaming of agrarian laws or of a chimerical equality which would put everybody on a Procrustean bed, equal division, maximum of wealth, forced loans, etc. No; it is high time to have an end of these calumnies, propagated by our enemies, and adopted by the ignorant. The liberty of labor, credit, solidarity—these are our dreams." Their candidate, however, was badly beaten; but in the Corps Législatif, in the spring of 1864, the law against combinations was repealed under the auspices of Emile Ollivier, who had just begun to coquet with the Empire. In September of the same year, the French workmen being now at liberty, the International Association was founded at a great meeting in London, at which delegates from both countries were present, and the "Declaration of Principles," which we published in last week's *Nation*, and which is chiefly remarkable for its vagueness, was drawn up, and a general plan of organization framed, and arrangements made for the holding of the first "General Congress" at Brussels, in the following year. In the interval, the work of propagandism, enrolling members, and raising funds, was carried on vigorously both in France and England, and the most startling stories of its success published in the newspapers. Nevertheless, the leaders did not feel sufficiently assured of their success to hold the proposed public Congress at Brussels; so a "conference" in London was instituted for it, the proceedings of which were strictly secret, and arrangements were made to hold the Congress at Geneva, in 1866. The organization, as now completed, consisted of (1) "Sections," forming, when sufficiently numerous in one locality, a (2) "Federation" (or if not sufficiently numerous, a "Local Committee"), while the various federations sent delegates to a (3) "Federal Council," which reported (monthly) to a (4) "General Council," which sat (and sits) in London, and directs the whole body. The "General Congress," a public and general reunion, is held in various places at varying intervals. When we say that the mass of the members are poor and ignorant workmen, and that the managers of the Federations and Federal Councils and General Council are largely composed of old agitators, conspirators, and revolutionists, we give some idea of the extent to which the organization can be called democratic. The privates in the army contribute towards the "reorganization of society" and the destruction of the old civilization from twenty-five to fifty cents a year; but even at this rate there have been serious complaints at headquarters about money.

At the Congress at Geneva, the discussion was confined within very safe limits. The topics were working-class associations, strikes, popular education, labor of women and children, hours of labor, relation of labor and capital, taxation, currency, weights and measures, the necessity of re-establishing Poland, standing armies, religious ideas, benefit societies. There was a great deal of queer stuff talked on all these matters, but nothing at all alarming; but it was evident that the English and the Continental delegates had already begun to take widely differing views of the work before them. The English were disposed to confine themselves to the simple question of wages, while the French were in favor of war against the whole "capitalist system," as they called it, and, in other words, wanted to enter at once on the great work of "reorganizing society."

Another Congress was held at Lausanne the following year, at which it was evident that decided progress had been made in the French direction. One of the first things done was to denounce co-operative societies, as tending to improve the condition of a portion of the working-class, while leaving the rest "out in the cold," instead of using radical methods and operating on the whole social system (*l'ensemble de la société*). There was, however, no open attack on property, beyond a resolution calling on the state to take possession of "the means of transportation and travel, in order to annihilate the powerful monopoly of the great companies, who, in subjecting the working-classes to their arbitrary laws, assail both human dignity and individual liberty."

---

* "Histoire de l'Internationale. Par Edmond Villetard, Rédacteur du *Journal des Débats*." Paris: Garnier Frères. 1872.

The third Congress was held at Brussels in 1868, and here resolutions were reported and adopted by thirty votes to four, fifteen out of the forty-nine delegates not voting, declaring that all machinery ought to belong to the workingmen exclusively, and that all quarries, coal and other mines, as well as railroads, should belong to the "Social Collectivity"—that is, the state, but not the state as the unregenerate know it, but the "state regenerated and subjected to the law of justice"—and should then be granted to companies of workingmen, who should guarantee "the rational and scientific working" of them, while the state should examine the accounts and see that there was no "reconstitution of monopoly," and that all the members got their due. This was not all, however. The Congress also resolved that the land ought to belong to "the Social Collectivity" also, in virtue of what it called the "economical evolution," and should be by it leased out to other companies of workingmen, who should work it under the same system as the mines and quarries and railroads. There was not after this much left to individuals, but what little there was, was by other resolutions also handed over to the "Social Collectivity"—the canals, high-roads, and telegraphs, and forests. It will be readily perceived that anybody who could not get into one of the "companies," or could not make himself agreeable to the "Social Collectivity," would probably find himself in a very bad plight. And let us tell Mr. Hoar that this work of his "leading minds" is recorded in the official reports of their third Congress. What does he think of the "Social Collectivity" and the "economical evolution"? How would he like to be drafted into a "mining company" or an "agricultural company," with nothing in the world he could call his own but his clothes, and with his title even to these clouded by uncertainty as to the views of the "General Council" on the subject of the best form of covering for the human frame?

At Bâle, however, in 1869, another Congress was held, in which "the advance" in ideas was very marked indeed. There had by this time a division arisen in the ranks. Some members were not prepared to hand everything over to the "Social Collectivity"; but at the same time could not bear the odious name of "Individualists" which the "Collectivists" applied to them, so they provided themselves with a new name, "Mutualists," and they brought before the Congress their method of "emancipating the laborer"—which was to treat all leases, and hirings of houses, farms, and other property, and all loans, as absolute sales or transfers, or treat the rent and interest as part of the purchase-money or repayment. In this way, if a man hired a house worth $20,000 for $1,000 a year, he would in twenty years be its sole proprietor, or in ten would own half of it; or, if he borrowed $1,000, he would, by paying the interest, reduce his debt by $70 annually. Attractive as this plan was, however, it did not take very well, a large portion of the Congress being "Collectivists," and not willing to let the "Mutualists," or anybody else, acquire property even by this fascinating method. The Congress, under the auspices of M. Eccarius, a tailor, then took up the question of inheritance, this gentleman proposing to levy an enormous legacy duty, to be applied to "social amelioration," and the committee reported that "the complete and radical abolition of the right of inheritance was one of the essential conditions of the emancipation of labor." M. de Paepe, a Belgian "leading mind," defended the right, and said its destruction would do nothing for "social liquidation"; but M. Bakunin, the Russian nihilist, who was one of the delegates, stoutly maintained that "their clothes were all that parents should be allowed to transmit to their children," and he explained what was meant by "social liquidation" by saying that it was the confiscation of all property by the abolition of the state considered "as a political and juridical body."

There was to be another Congress held at Paris in 1870, had not the war broken out, but we have the programme laid down for it by the "General Council," and we may form from the nature of the topics presented for discussion an idea of what the nature of its proceedings would have been. These are "the necessity of abolishing the public debt; the relations between the political action and the social movement of the working-classes; practical means for converting property in land into social property; the conversion of banks of circulation into national banks; the condition of coöperative production on a national scale."

Of the part played by the International in the siege and in the war of the Commune, nothing very definite seems to be known, and, indeed, its connection with these events in any way seems to be inferred from the appearance of leading members of the International in prominent positions in the various tumults, émeutes, mutinies, and revolutions which attended and followed the fall of the Empire. They entered largely into the National Guard in Paris, but the objective point of their battalions throughout the great siege seems to have been the Hôtel de Ville, and the unfortunate Clement Thomas probably doomed himself by his vigorous exposure of their cowardice and insubordination when led against the Prussians. In the troubles of the South, International chiefs figured prominently also. The fact is, however, that the Association, far from repudiating connection with the Commune, has shown itself anxious to assume as much of the responsibility of that body as possible. The International periodicals throughout Europe published impassioned defences of it, and the sections and federal councils in various places, both in France, Germany, and Italy, passed resolutions in the same sense. But at last the General Council sitting in London removed all doubts on the subject by issuing a long official address on "the civil war in France," containing an elaborate apology for the Commune and for all its doings, from first to last, and a fierce personal attack, teeming with charges of the vilest nature, on all the members of the French Government, justifying the massacre of the hostages, and indulging in the wildest denunciations of the existing social order, of capitalists, ministers, lawyers, and courts. What is, perhaps, most remarkable in this document, and what shows the real position of the Association towards society as at present constituted, is the way in which it defends the murder of the hostages. Among these hostages there were no fighting men. They were all, or nearly all, priests, and the Archbishop of Paris and President Bonjean—the chief-justice of one of the highest courts, an old man, who had passed a blameless life, absorbed in the duties of his calling, and had never been mixed up in politics—headed the list, and it must be remembered they were all carefully selected beforehand. The Commune executed them at the last moment, when the resistance was nearly over; Ferré, and others like him, for whom no civilized community has, in the present social order, any better place than the penitentiary, doing the bloody deed. Now, the International might readily have excused this atrocity on the ground that it took place in the confusion of the final assault, or was the work of irresponsible zealots; and it might have condemned it outright, without in any way retarding thereby the "emancipation of the laborer." It boldly declared, however, that the massacre was justifiable, on the ground that it was "the only means of putting bounds to the savage ferocity of the bourgeois government," referring to the ferocity with which the Versaillists treated their prisoners. The Versaillists, however, executed nobody but fighting men or women, taken with arms in their hands, and the proper retaliation—if retaliation were proper—for this would have been the execution of Versaillist prisoners. The killing of the priests and lawyers—that is, men of the most peaceful professions—showed that the Communists sought to strike (and the Internationals, indeed, almost avow it) not at Thiers and his army simply, but at the society behind Thiers and his army, that is, at modern civilization and all its works and ways. The burning of Paris had the same object in view, though the Internationals talk of it as a measure of strategy, for it was committed when the fighting was nearly over. Indeed, it was foreshadowed in a letter which one of the Communal generals, our own Cluseret, wrote from New York in February, 1870, to a leading International, Varlin, in Paris. Referring to the probable downfall of Louis Napoleon, he says: "When that day comes, we must be ready, physically and morally. On that day—we or nothing! . . . On that day—and I never say yes when I mean no—*Paris shall be ours, or Paris shall cease to exist.*" It is easy to see, in short, that we are here dealing with barbarians compared to whom the Goths of Alaric were peaceable and reclaimable. We have left ourselves no space to speak of M. Villetard's suggestions as to the manner in which the International should be met and combated, though this is a very interesting branch of the subject, to which we shall shortly return.

THE MAGAZINES FOR JANUARY.

WE note that the Scrooge and Marley, Tiny Tim and Bob Cratchit, variety of Christmas makes rather less of a figure in the January magazines than it has made in some years. Perhaps the authority and example of its inventor, with his effusiveness of sentiment, were needed to keep in countenance the kind-hearted writers whose milk of human kindness it must have been a somewhat discouraging business to set out in such quantities before the uneffusive American. Be that as it may, in one of the magazines before us we even find a writer presenting us with a cold, cynical view of Mr. Scrooge: In the solemn woods, under an adamantine sky, stands a cottage, which you would hardly notice in the gathering twilight but for a little wisp of smoke curling from the chimney, and growing feebler and feebler, as if it intended in a minute to draw up its attenuated tail, and disappear altogether. Within sits Arthur Tyrrell, and beside him, gathered around the chilly hearth, sit his wife and his little boy and little girl. It is Christmas Eve. A cold wind rushing from the recesses of the forest finds entrance through many a crevice into the Tyrrell cottage, where the last stick from the wood-pile alone defies its challenge, and sits, damp and cold, on every chair, and lies down on every bed, and embraces with a cold embrace every member of the Tyrrell family. The father's fate and heart alike are hard; he gazes moodily out of the window, while the children cower closer to the fire, their innocent questions about Santa Claus piercing their mother's bosom. By-and-by the father rises, and draws about him his threadbare but scrupulously neat coat, which is scant, indeed, as a protection to his form—never robust, and once, in better times, daintily nurtured. He sighs as he looks towards the hearth, and then, hastily taking from the nail his well-brushed straw hat, he leaves the cottage. He passes by the shops where the light from the evergreen-wreathed gas-burners falls on bowls of mince-meat, on heaps of luscious citron, on piled-up boxes of layer raisins, all open, on barrels of Philadelphia apple-butter, on enormous geese, which the jolly butchers are knuckling to show how fat they are, on festoons of sausages, on ribs of streaky pork, on whole flocks of featherless turkeys, swinging themselves by their feet, and reaching down to whisper with the mallard ducks and the canvas-backs about the forest of tame celery in the back part of the bay-window seat. All these Arthur Tyrrell passes, and the warehouses, too, with the heaps of marbles, the toy drums, the jumping-jacks, the Christmas-trees, the boxes of paints, the galloping rocking-horses, the creeping dolls for Aggie, the magnifying-glasses that might be so useful to little Arthur, now that he has to learn his lessons at home, his shoes being unfit for the long walk to the schoolhouse. The straw hat being pressed down over his eyes, as he strides on Tyrrell does not see that he is followed. His landlord, Stephen Skarridge, to whom he is in arrears, is dogging him to see how much he expends in holiday purchases. But he keeps on his way, leaving behind him the markets and the toy-bazaars, and old Stephen follows him into the poorest quarter of the town, where the only sign of wares that could be thought of in connection with Santa Claus is a little magenta-colored pop-corn in some small huckster's window, or, even less tempting, the display of shiny apples, rubbed into daily brightness by the handkerchief of the old Irish lady at the corner, whom Stephen Skarridge, as he passes her, sees with malicious satisfaction to be shaking, not alone with cold and the palsy, but with terror also, for she, too, is his tenant, and she knows well that, unless the month's rent is paid within the week, the miser will distrain and the apples be seized. Arthur Tyrrell at last pauses and enters a poverty-stricken den, where he buys a mackerel for the Christmas dinner, and a little lard in which to fry it. But his marketing he has hardly taken home, and shown to his wife and children, when the landlord, entering, demands the rent, and, failing to get it, takes possession of the mackerel, and walks off amid the outcries of the children and the stifled weeping of Mrs. Tyrrell. We need not relate how Mr. Skarridge goes home and falls into a dream; nor need we say how black his conduct as a landlord appears to him after he has heard it commented on by the dwarf who sits on the ledger and reads off to the fairy, the giant, and the mackerel, the amounts which, in his opinion, Stephen owes to his various tenants; nor will anybody need to be informed that next morning, when the Christmas carols wake up somebody in old Skarridge's bed, it is not old Skarridge that it wakes, but an entirely new Skarridge, who at once rises and goes down-town, with a wallet which is full of checks when he arrives at the tenement-houses, but nearly empty when he comes back, and who, after coming back amid the cheers of the children, pays a visit to the cottage of the Tyrrells, and, instead of taking away the lard as well as the mackerel—which the Tyrrell children forbode that he intends to do—makes Arthur Tyrrell a present of the Hillsdale Farm, with a house in good repair, and an orchard well stocked with young trees, and gives to Mrs. Tyrrell shares of New York Central and other roads, and bonds of the Delaware, Lackawanna, and Western, to the amount, in the joint total, of nearly ten thousand dollars, to say nothing of a Christmas dinner, and a thousand dollars in greenbacks for immediate wants.

But if in the story of "Stephen Skarridge's Christmas"—which is written by Mr. F. R. Stockton—*Scribner's Monthly* admits some not wholly unnecessary satire upon the magazine writer's habitual exaggeration of the sentiment proper to Christmas times—an exaggeration necessary doubtless, but which must be managed with more care than is usual, if it is not to leave the sentiment in danger of seeming altogether factitious—the editors have nevertheless taken care that due recognition shall be given to the natural kindliness which the season calls forth. They give, as a set-off to Mr. Stockton's gibing, no less than five articles, which are generously devoted to the manger at Bethlehem, the yule-log, and the mistletoe. None of the five is of particular value apart from its opportuneness, the best being a translation by Mr. Bayard Taylor from the German of Rückert. It was hardly worth while to translate it, as it is much the same thing as a poem quite well known, we should say, in which a little match-girl, wandering about the streets on Christmas night, and seeking everywhere the lights in merrymaking households, sits down in the snow, and makes a Christmas for herself by lighting all her matches one after another, which, being done, she perishes of cold. The maker of the English poem may, to be sure, have borrowed from Rückert and improved upon him.

Mr. Joaquin Miller contributes to *Scribner's* a fairly good California sketch, of a kind not unfamiliar, entitled "The Last Man of Mexican Camp." We cannot speak from our own knowledge of such places as Mexican Camp, but we have a notion that Mr. Miller's sketch may be nearer the reality than most similar pieces of work, though we do not know of any one of the noted writers who have used this California material, who equals an old miner or Pacific Coast pioneer either in the vividness or apparent life-likeness of his picture of the strange life of that region. California is also in part the subject of the opening article of this magazine, which gives an account of a visit to the Yo-Semite Valley, made by a party apparently composed of politicians and journalists, who apparently enjoyed themselves thoroughly. The account has so much liveliness and jocoseness that its writer, Mr. Isaac H. Bromley, must, we fancy, have been what is known as "the life of the party." This article has better things in it, too, than the jokes and good nature of which Mr. Bromley is prodigal, and shows sincere enjoyment of the grand and beautiful sights of the wonderful valley, and an ability not to be disregarded in the matter of setting down his impressions. *Scribner's* contains much other matter which no doubt its readers will find acceptable, but we believe we need mention only the editorial notes entitled "Culture and Progress at Home," and Rev. George B. Bacon's essay on "Spiritual Quackery." In the former the editor takes for granted the right of the theatres to exist, and offers his readers regular criticisms of the drama as enacted on our New York stage. This is worth remarking when it is remembered that among the readers of *Scribner's* a very large number of church members are counted, and that no long time ago such readers would probably have withdrawn their subscriptions if the editor had mentioned the stage without denouncing it. Mr. Bacon objects, in forcible language, to certain practices which have more or less vogue in the churches. What it is that Mr. Bacon condemns those of our readers will know who have had opportunity to observe the conduct of revivals, especially when an "Evangelist" or So-and-so, "the boy preacher," has been called over into Macedonia. Those who have not had such opportunities will understand, when they read an announcement or two like these, why Mr. Bacon does well to be angry: "We hope for a crowning season of power to-night. Doors open at seven." "There will be a meeting at such a place, on such an evening, with preaching by Mr. So-and-so. We expect the Master to be present to baptize with the Holy Ghost and with fire." This way of thinking and speaking, like the denunciation of the opera and the dramatic stage, has a good deal gone out of late years; but Mr. Bacon is doing good service in attacking it, as formerly he has done good service in attacking other church practices which are the children, and the fruitful parents also, of presumptuous ignorance and a needless intolerance.

Lippincott's Magazine as well as *Scribner's Monthly* feels the influences of the season, and comes out with a quantity of poetry and prose calculated for New Year's and Christmas. We do not see, however, that Miss Carpenter, in *Lippincott's*, any more than Miss Rossetti, in *Scribner's*, disabuses us of our belief that the Christmas carol is a sort of composition that nobody now should attempt. "Brown's Christmas Bundles," too, will not make any of us sorry that there are to be no holiday magazines next month, nor occasion regrets because the end of the Poker Flat literature is—must be—near at hand. Such numbers of murderers with their hearts in the right place, and district judges who shoot quick, make one after a while almost homesick for Anthony Trollope and justice of the quorum, who shoots nothing bigger than partridges, and the parsonage tea-tables, and the tepid young woman with the croquet-mallet.

"The Story of Noel," by "Ouida," is best worth reading, we believe, of all the holiday stories in the magazines. It has a bad ending, as both a good story teller and a good story reader would say; but, taking us into Flanders as it does, among the peasantry, and telling its tale of domestic affection and boyish aspiration in art and in love, it pleases the reader by the goodness of feeling which pervades it, and by the comparative freshness of the scenery in some of the incidents. So, also, for its freshness, "A Russian Family Wolf Hunt" will be liked; and Mr. Whymper's scrambles and escapes, and careless, chaffing good nature or self-satisfaction are perennially fresh and entertaining, though persons familiar with Alpine topography will find Mr. Whymper more interesting than the average magazine reader will find him. For the rest, we can recommend in the January *Lippincott's* some verses entitled "In Good Time" as being thoughtful, and giving at the end an unexpected turn to the thought; an article on "Types of Castilian Vagrancy" which is agreeable; some lauds and praises of "The Coming Woman," who we are, for several reasons, gratified to see is, apparently, not coming after any husband; a jocose and rather amusing story about a family cat; and another of Professor T. B. Maury's articles about the storm-signal system.

In "The Editor's Easy Chair" in *Harper's* Mr. Curtis has something to say about the capital, the statuary in Washington, the Hall of Representatives, and the representatives themselves; and on all these topics he talks more respectfully and doubtless more justly than is nowadays common. For some years now the oldtime fashion of glorying in the Federal Congress has been superseded by a habit of regarding that body as rather a joke than otherwise. Some part of the change from the days when a place in Congress was the goal of the highest and most active ambition, to these days, may very likely be due to the long agitation against slavery which, while it habituated great numbers of persons to hearing the Constitution denounced as a covenant with Death and an agreement with Hell, habituated them for a long time to hear of congressmen as being inspired by small doughfaced devils and others of the meaner emissaries of the pit. Mr. Hosea Biglow, for instance, did not encourage his neighbors to regard honorable gentlemen from Connecticut and Louisiana as venerable names; and there were plenty like him and his neighbors before the agitation was over. The war undoubtedly increased the actual power of Congress very greatly, but the popular respect for it certainly was not increased in equal proportion, and its history after the war, during the impeachment days and while the long process of reconstruction went on, did not raise it in the opinion of a public accustomed to the effectiveness and promptness of military measures and to the free use of common sense which business affairs necessarily teach. A great deal, too, of the change of which we speak has been brought about by the irreverence taught us by the graceless newspaper press, to which for a good while nothing on earth has been really sacred, and whose conductors, indeed, have some time since persuaded themselves that they are of more weight than many congressmen, as indeed they are, in many respects, so long as they can sell their papers. Mr. Curtis does not say yes or no to this estimate of the power of the press as compared with Congress; indeed he has nothing to say about it, the question not being raised or discussed by him; but he makes some remarks worthy the attention of the scoffers who, when House or Senate is mentioned, are apt to think of Mr. B. F. Whittemore, or Mr. Zachariah Chandler, or Mr. Boutwell's impeachment eloquence, or the financial policy of Mr. Morton, or the broad views of Mr. Edmunds, or the simpler faith of Mr. Pomeroy. Mr. Curtis points out the difficulties of the congressional arena, and shows how mistaken a notion it is that power of some kind is not absolutely necessary to the man who would be of any weight on the floor of either house. No doubt he might have shown, too, that on the whole and in the long run not even personal force, readiness, and parliamentary knowledge are a match for sound sense, sound morality, and courage. Mr. Curtis's comments on some other things at the capital, as Greenough's statue of Washington, are abundantly kind; and it is being superabundantly kind, and perhaps far kinder than any one who is an accepted public teacher has any right to be, to speak of Miss Ream's statue of Lincoln, as it is called, in the mild words of condemnatory criticism which Mr. Curtis employs. It is outside of the vocabulary of art criticism that one goes when one speaks as one should concerning such pieces of national property as that is, bought and sold as that was, and standing where it does.

Other articles in *Harper's* for January which we have read with some pleasure are two illustrated articles, the one about Holland, the other about the Danish West Indies, which figure so in so creditable a chapter of American history and the history of the old Senate Committee for Foreign Affairs. There are, besides, an illustrated article about the Kemble family; another about Greenland; another entitled "The Poetry of the Zodiac," which is instructive, and a discussion, by Mr. W. H. Dall, on the question whether or not "Alaska is a Paying Investment," which Mr. Dall answers to his own satisfaction in the affirmative. As Mr. Dall remarks, his method of computing the value of given portions of the national territory is not one that leads to very conclusive results, a great part of the value of a State or Territory to the amount at large being not directly ponderable in commercial scales. Probably it was not because we thought we were making money by the transaction that we bought Alaska.

The *Galaxy* promises that it will publish during 1872 several papers by prominent public men, which, in view of the approaching Presidential contest, will be more important and of more engrossing interest than the similar papers by Mr. Welles, Mr. Black, Mr. Weed, and others, which have already appeared in its pages. There is nothing the public would like better than the setting up of some such public confessional or witness-box, and it is to be hoped for the publisher's sake and everybody's else that the *Galaxy* may more than keep its promise. These articles have not yet begun, but the present number has a promising paper by General Custer—the first of a series called "My Life on the Plains"—and a good article by Mr. W. M. Rosenblatt on the religious attitude of the Jews in America. We detect no errors in it, and recommend it as being, so far as it goes, correct in its statement of facts and in its inferences. This number of the magazine contains also the beginning of a series of articles by a lady who for fifteen years lived among the Shakers, holding their faith and practising their observances. Her story is another chapter of the interminable record of human folly committed in the name of religion and in defiance of reason; but it has its special interest, and bids fair to be worth reading. We do not say as much for Mr. Justin McCarthy's "Archbishop Manning," in which there is so much "liberality" that the reader finds himself wondering where all the enemies are gone to out of this world, and if the blessed time has come when it makes no difference how great our differences may be, and when a good hater is a contradiction in terms. And we dare say that a good many readers who know something about Archbishop Manning and the state of his mind will find themselves, as they read Mr. McCarthy's essay, desiring somebody to say that, as a matter of fact, the Archbishop is not at all a man of great intellectual gifts, acute, penetrating judgment, and so on, but that, on the contrary, were his grace's entire contributions to the world's present stock of ideas and of sound sense to be removed and disappear, the subtraction would be very much the same thing as the subtraction of a minus quantity.

The *Atlantic* for January is a number which is throughout thoroughly readable, though—if the heavens must fall—there is more in it to be taken for good as coming from good quarters than as being especially good in itself. For example, Mr. Longfellow, Mr. Bret Harte, Mr. T. W. Parsons, Mr. E. C. Stedman, Mr. Bayard Taylor, and Mrs. Celia Thaxter, all and several of them contribute poetry, which would not altogether have made any one of them as much of a reputation as is owned by many people a good deal less considerable than the least of them. Perhaps Mrs. Thaxter's and Mr. Harte's verses have as much in them as any of their companions, Mr. Harte's being a more perfect union of his Eastern manner and his Western than he has before succeeded in making. The return of the sailor is quite after Mr. Harte's old dramatic fashion, and there is some of his old subtlety in the jealous hardness of the mother-in-law, so unconscious of it herself, and so clearly perceiving as she does "the hard, cold Edward's blood" of the more sensitive wife. We wish that "Grandmother Tenterden," besides showing Mr. Harte's own two methods in better union than hitherto, had lacked the admixture of Jean Ingelow also. Poetry at least fully as good as any contained in this poem is required to make up for such a blemish.

Mr. Parton's writing we always rather dislike to read, partly because we do not find that we have that confidence in his statements which he himself would concede to be desirable, and partly because we do not enjoy such utterances as this, for example, which closes a question we should keep open: "The world would never have heard of the Palmerstons if the second Lord had not married the admirable daughter of a Dublin tradesman"; or, take this statement concerning Chatham and King George the Third: "Fauquier could tell the student [Jefferson] something of the mighty genius who found his country an island and left it an empire," and in the student's first year at college, Mr. Parton goes on to remark, though he has no occasion to say anything about it, young Jefferson might have read in the papers "the account of the accession to the throne of George the Third, who found his country an empire and left it an island." The credit of such felicities as these should almost be divided between Mr. Parton and the proof-reader who does not expunge them. It would puzzle either of them to say in what respect the Britain of the Napoleonic wars, mistress of India, of a third of North America, of the seas and their islands, of colonies and posts under every sun, was less imperial, standing the acknowledged leader of Europe, than she was in 1760. However, although Mr. Parton's prejudices and the curious temerity—almost, one would say, indicative of a certain moral obtuseness—with which he hazards assertions of the most dogmatical character, make him a disagreeable companion; nevertheless, he is industrious in collecting his facts, and he sets them forth clearly, so that it is reasonable to expect a wide perusal for his "College Days of Thomas Jefferson."

Doctor Holmes's "Poet at the Breakfast-Table" has for its best part some pleasant reminiscences of the time when the Doctor was a child in his father's house at Cambridge. The article contains, also, plenty of bright talk which will be welcomed by the admirers of the "Autocrat" and the "Professor," and it ends with a poem which, theologically, is all kinds of things, and which the casual understanding also will find baffling when it tries to construct a heaven of any sort worth the name out of the heaven posited by the poet, but which, in spite of its confusion, has much tenderness and truth of human feeling in it; and, at the close, an unexpected turn that will strike the reader as no less probable, so to say, than skilful. The first stanza, we may remark, hardly carries its meaning on its face.

Another good article in the *Atlantic* is that by Mr. John Fiske, who concludes with this instalment an instructive and entertaining series of articles on subjects which have far oftener awakened intelligent curiosity than called forth judicious exposition. "The Myths of the Barbaric World" seems to us noticeable, even among the other papers of the series, for its weight of sense and its lucidity; but all contain work of a high character, and will extend Mr. Fiske's reputation as one of the clearest-minded, conscientiously laborious, and well-trained students in this country.

The rest of the *Atlantic* is filled up with Hawthorne's posthumous romance —"Septimius Felton; or, The Elixir of Life"; the absurdities of the beginning of Mr. De Mille's comic story; Mr. H. James's "Change of Heart"; an unknown author's "Diversions of the Echo Club," which is rather trivial, but embodies some sound criticism, and more than usually good imitations of Browning and William Morris; and, finally, some thirty pages devoted to science, art, politics, and criticism of books, both foreign and domestic. A greater scope, with consequent increase in variety and weight, is to be desired for each of these departments, and doubtless will in good time be had. Each is good this month. The art critic has under consideration a small collection of pictures recently exhibited in Boston by Messrs. Doll & Richards, and representing Delacroix, Decamps, Troyon, Rousseau, Jules Duprez, Daubigny, Diaz, and, among American artists, Lafarge, R. C. Porter, and Vedder. The scientific reporter takes up the recent experiments of Dr. Bastian, the best known of the advocates of the theory of "spontaneous generation," and is very clear and moderate. The musical critic discusses Nilsson and Mrs. Moulton. The politician, who needs the attention of Colonel Forney, thinks that the President exceeded his constitutional powers when he made war on the sister Republic of Hayti, and is not sure that he must be re-elected. The literary critics do some exceedingly pleasant book-noticing, and, like their brethren, need more room. Altogether, we expect to see this critical department of the *Atlantic* very popular with the *Atlantic's* public, and we imagine that it might with advantage be so enlarged as to become a favorite vehicle for such Bostonian wisdom as it may be advisable to reveal to exoterical nations.

Lady Judith. A Tale of Two Continents. By Justin McCarthy. (New York: Sheldon & Co. 1871.)—We fancy that the fact that this novel is a "tale of two continents" has much more to do with its success than any more legitimate merit of the story. Not that the plot is one of ordinary interest; but then it owes its intricacy to nothing in human experience, being simply an exaggeration of the conventional complexity of the sensational novel. Quarrels and mysterious separations do their best to chill the ardor of young lovers, who meet in one continent to glance at one another, and in that glance to become deeply enamored, when they are sundered by angry seas, and further complications must take place before love gets its own. It is hardly fair to criticise too sharply the machinery of a novel which so evidently depends for its interest on such artificial aids. We want to be amused wherever the hero is transported, and are willing to humor any geographical whims that may enter the author's head if he can manage them fairly, and especially if he can also give us in his characters studies of human beings. In this novel we get a taste of English life, of life in this city, in San Francisco, in a free-love community, and we have also a glimpse of the Paris Exposition of 1867. But no matter with what accuracy these scenes are described, we require something more, for the book is a novel and not a gazetteer.

The domestic habits of this country are carefully observed and recorded. Judge Atheling, for instance, travels through Europe with an American rocking-chair, and the bill-of-fare of his breakfast is given—and the reader will please notice what an intensely American breakfast it is: "hominy and succotash," which the Judge liked; "milk toast," in which his wife delighted; buckwheat cakes, stewed apples, preserved peaches—the fresh peaches were gone with the summer; "scrambled" eggs; potatoes done in various ways—the sweet potato and our old familiar mealy friend; apple sauce; and several varieties of bread, besides tea (which only Isolind drank); chocolate, which pleased Mrs. Atheling; and a great bowl of milk, to be swallowed by the Judge, who never touched tea, coffee, or any such beverages. "It is almost needless to say to any one who knows New York, that great glasses of ice-water stood beside each plate." This is a fair breakfast for three—two of whom are women. Perhaps Mr. McCarthy is saving for another novel the other peculiarly American dishes which our fellow-countrymen are fond of calling for at breakfast, either at home or in Europe. We miss the familiar pie, the large oysters generally so impressive to the stranger, pork and beans, waffles, desiccated cod-fish, beef-steak (though perhaps that is not American enough), pork-scraps, Lake Erie teal, buffalo and antelope steaks, Boston brown-bread, doughnuts, hoe-cake, crackers (this is a serious omission), baked Indian pudding, hominy and molasses, pickles, tea-biscuit, cookies, and glasses of molasses and water, it is almost needless to say to any one who knows America, to be swallowed by all at the end of the breakfast. But while the book is crowded with the results of the author's observations of streets, breakfast-tables, and hotels in the course of his travels, they are but the frame in which the picture of society is set.

The characters of the tale are many and various. There is the haughty English aristocrat, Lady Judith; the affable American gentleman, Judge Atheling; the American swindler—of English birth, however, that no one may take offence—Chesterfield Jocelyn; the warm-hearted lover, Angelo; the intellectual young woman, Isolind; the poet, Eric Walraven; and the ill-trained Alexia—we need not go through the list; they are all very different from one another, and, we believe, from any human being that ever lived. Even those which are most evidently copies from well-known people of the day are the most unreal. They are all described with care. We have a long description of Isolind's bed-room, and a list of the books on her table; among others we find "Mill's 'Essay on Liberty'—with daily draughts of which latter Isolind refreshed her convictions as to the supreme human need of individuality, and the bane of mere conventionality." She wore a dress that showed "a good deal of a very neat, picturesque little boot of buff-colored leather, coming high above the ankle, and fastened with a row of buttons." Then we have a disquisition on the relative merits of short and long dresses in hiding the ankles, and we are told that Isolind's "limbs were straight, firm, and shapely." It is disagreeable to have to mention a blemish of this kind, which cloaks itself under the pretence of avoiding prudery, but it is simply prurient. It runs through the book, reminding one of Balzac at his worst, while we get very little that reminds us of Balzac at his best. The villains bite their nails, enraptured lovers tear their hair and swear fidelity, when misfortune comes the young girl weeps, the haughty dame is always imperious, the affected poet never forgets that he is playing a part, the poetess soliloquizes—but all as coldly as if they were actors reading off their parts from printed pages, and taking especial care not to omit the stage directions. Thus, we have the poetess soliloquizing in this fashion: "What a world of thought, of rapture, of hope, of passion and joy, is in fragrance! The scent of this flower opens up a whole new world to the senses and the soul, as the microscope and the telescope do to the eye and the intellect! I have only to smell this leaf, and I pass into a land of magic, where everything is rich, aromatic, and delightful; where every yearning finds an answer, and every dreamy hope becomes a reality. . . . Poor little flower! Poor little talisman that opens the wonder-world! it seems a pity to throw it away, even though it already wilts and droops." And, indeed, we need not wonder that "a publisher brought out an English edition of her poems, and that they were quite a success," nor that "Isolind became, to her own great surprise, a celebrity of the season in London," and that "West End drawing-rooms were delighted to welcome her." Mr. McCarthy here comes very near the borderline of facts.

If the poetess soliloquizes with a certain amount of deadness, in the same way we find a great deal of coldness in all the would-be passionate part of the story. Notwithstanding this fault, however, it should be said that there is a great deal of cleverness shown in the management of the plot. It is, in fact, a good imitation of a good story. That is at once the merit and the fault of the book.

In every Library, Private or Public, one of the first necessities is a standard work on the Literature represented. In its department, the critics unanimously and enthusiastically accord the first place to

The Nation.

NEW YORK, THURSDAY, JANUARY 11, 1872.

The Week.

THE Custom-house investigation has been going on vigorously during the week, the principal point of it being the "general order" system, of which there was so much talk in Congress. This system, we may explain for the benefit of the uninitiated, is one under which imported goods, for whose removal to the Government bonded warehouses or the owner's store a permit has not been obtained by payment of the duties or otherwise within forty-eight hours after the arrival of the cargo, are transferred to a general order warehouse kept by a private individual with the authorization of the Government. The interest of this individual is to get as many goods landed before the owners can get permits for them as possible, and when they are placed in his store to charge as much as possible for keeping them. The control of this business, or of a great portion of it, was obtained soon after General Grant came into power by a person named Leet, whose case has excited a great deal of comment in and out of Congress, and has been used freely against the President. It was examined by the Congressional Committee last year, and has now been examined again. We shall attempt a brief summary of the evidence about it, setting down nothing which seems doubtful.

Leet, a Pennsylvanian, served on General Grant's staff, and in 1868 was still in the army, and a clerk in the War Department. In that year he came to Mr. Grinnell, with a letter of introduction and of warm *general* recommendation—not recommendation for anything in particular—from the President, and, on presenting it, informed Mr. Grinnell, what that gentleman did not then know, that he was to be collector at New York. The announcement and the letter, coming at the same time, seem to have made Mr. Grinnell deferential, and he asked Leet what he could do for a person in whom the President took so much interest; whereupon Leet frankly informed him that he must have the general order business, or, in other words, the keeping of the stores in which the class of goods above mentioned was deposited, from which Leet acknowledged that he expected to make $60,000 a year. Mr. Grinnell forthwith gave him a portion of it, and this Leet farmed out to a man named Bixby, under an agreement by which Bixby paid him $5,000 a year certain, and half of all profits over $10,000. During the year 1869–70, this went on, Leet continuing in the army, residing at Washington, and drawing his pay in the War Department, but complaining bitterly all the while of his not having more of the general order business than Mr. Grinnell had given him, and threatening him with removal if he did not give him more, but at the same time concealing his connection with it by having himself represented in New York by Mr. Lindsay, a friend of Mr. Grinnell's. These threats against Mr. Grinnell appear to have continued throughout the year, though the gains of Bixby and Leet were large. Finally, Mr. Grinnell was removed, in a little over one year after he had taken office, he never knew exactly why; and then Leet moved into New York, and openly took charge of the general order business under Collector Murphy, and still holds it. It is right to add that it appeared that, during the first year, he was living in the same house and "messing" with Generals Babcock and Porter, of the President's staff. The unfavorable inferences which might be and have been drawn from the President's share in the transaction with him are met by General Porter's testimony, which Leet corroborated in communications made to Lindsay, that General Grant gave the letter to Mr. Grinnell, not as a recommendation for a place, but as a general commendation to Mr. Grinnell's kind offices, and in the belief that Leet was going to settle in New York in business, as a private individual, and that he (the President) also told Leet of his unwillingness to have him take any office, after having served on his staff, on grounds of "propriety." This testimony would have more weight if, when the scandal was first brought to light, Leet had been dismissed, or had retired, or ever given any signs of uneasiness.

In the matter of "assessments for political purposes" there has been a good deal of evidence. They were levied in Mr. Grinnell's time, but against his will, by a mysterious power, to which the witnesses all referred vaguely and darkly. "A paper" would come to the Custom-house assessing the officials at so much, left, if one might judge by the evidence, by an invisible hand, but which we with our carnal eye have no hesitation in declaring to have been brought by a common two-legged messenger from the chairman of the National or State Committee. It was then "passed round," and every man put down his name. It was once passed round in aid of an election in Connecticut or New Hampshire, the free and enlightened citizens of that State being apparently unable to select their governor or legislature without getting a small pecuniary help from a parcel of poor clerks in this city. Mr. Grinnell could not stand this, but he could not allow "the paper" to go back unfilled, lest the Mysterious Power should be vexed, so he paid the whole sum, $7,000, out of his own pocket, a portion being refunded to him afterwards by other high officials. There is plenty of testimony that the practice still continues. In one case, which came to our own knowledge the other day, the victim, an elderly man with a family, was not asked coarsely for money, but was "advised" by his superior as "a friend" to join a certain Republican organization, which he did, and then the organization levied on him, not as a Custom-house officer, but as a member. Mr. Greeley testified, on information and belief, that the "serenade" to Tom Murphy the other night was paid for by assessment. We hope it was well paid for, for we can hardly imagine a more trying *rôle* for a musician than fiddling and blowing away on a cold night in the street in front of a window or balcony presenting nothing more inspiring than the dark outlines of "Tom's" graceful form, and those of two or three politicians of the same age.

Mr. Greeley testified at some length on the subject of the interference of Custom-house officials in State politics. He knew very few things positively and of his own knowledge; but he brought out pretty clearly that there were sixty Custom-house officers at Albany helping to elect the Speaker of the Assembly. Mr. Greeley is, however, almost disabled in this controversy by his deep sense, which he cannot conceal, of the wrongs of the Fenton wing of the Republican party. He hardly disguises that he is troubled above all by the use of the Federal patronage to proscribe and discourage the Fentonites; and the *Times*, of course, uses his avowed sympathy with the Fentonites to support its theory that the *Tribune's* efforts in the direction of reform are mere outbursts of Fentonite spleen. Now, there is only one difference between a Fentonite and a Conklingite known to finite intelligence, and it is simply this—that a Fentonite thinks highly of Fenton and lowly of Conkling; while a Conklingite thinks highly of Conkling and lowly of Fenton. On questions of public policy, except the question of the proper distribution of offices in this State, there is absolutely no difference of opinion between the two factions. In fact, no fight in an Irish fair was ever more senseless and ridiculous, and the possession by each faction of one of the principal Republican papers makes the quarrel a serious impediment to all reform. The *Times* is now not simply a thick-and-thin Administration paper, denying whatever the Administration needs to have denied, and affirming whatever it needs to have affirmed; but it is a thick-and-thin Murphy-and-Custom-house paper, and the sworn foe of all enquiries or investigations likely to damage Murphy or the Custom-house, his most powerful stronghold, from which large bands of retainers sally out every now and then and make raids on the Fentonites. We think we are only expressing the general opinion—and it is an opinion which all past experience of "Administration organs" justifies—that the *Times* is not simply leading people to distrust reformers, but is seriously injuring General Grant. If he is wise, he will direct it not to display too much zeal—at least, to affect moderation of statement, and, above all, to avoid personal attacks on his opponents. It is pleasant to make these attacks, but it is bad policy.

Fisk was shot on Saturday afternoon by his old rival in the affections of Mrs. Mansfield, as he ascended the stairs of the Grand Central Hotel, and died the next morning, having created by his decease a genuine sensation, greater, probably, than he ever created in his life, and which it is almost a pity he could not have enjoyed before his departure. The news flew about the city, and was telegraphed all over the country considerably faster than wildfire, and his condition and prospects were, as long as he lived, the principal topic of conversation. Some of the papers—by way, we suppose, of making the best of a bad job—try to see a certain retributive appropriateness in the manner of his death, but we doubt very much whether this will be the impression made on those whom his career has dazzled. Any man may be murdered, and the moral of his murder, to his admirers, is that one should avoid getting into scrapes about women. The only end that would have made his career a warning, instead of a model, would be his death in old clothes, and in penury and neglect. But to be struck down in a "Grand Central Hotel," in his velvet and his diamonds, and with his gorgeous coach at the door, and to die with a dozen physicians round his bed, and a hundred reporters outside, and leave an enormous amount of property in a will drawn by a leading member of the bar, was not, to the children of mammon, a very dreadful way of quitting the world; nay, we should say that the majority of them think, in their hearts, it was a very fine way. He died a little early, to be sure, but if he had tarried longer, his figure would have grown more corpulent, and his digestion feebler. There is only one thing wanting to make the disgrace which Fisk's life and death have inflicted on the community complete, and that is that Stokes, the murderer, should escape justice. That the courts and newspapers should have been occupied for months with the quarrels of the two scoundrels about a common strumpet, and that the helpless stockholders whom Fisk had swindled should, after vain appeals to legislatures and courts, have at last been reduced to hoping for succor from Mansfield's production of Fisk's "love letters" to her, was humiliating enough, in all conscience; but the lowest depth would be reached if Fisk's rival—a blackguard of the same tribe as himself—should be allowed to end their quarrel by ambushing and murdering him in broad daylight, in a great city, on the staircase of a crowded hotel, and escape punishment, either through legal quibbles or jurymen's stupidity.

Mr. Schurz has taken up the *Times* "exposure" of him in the Senate, and, we are sorry to say, accuses that paper of "cumulative, intrepid, and shameless lying." The charge of "spurning with contempt" the nomination for the Lieutenant-Governorship of Wisconsin in 1859 he says is false; he declined it. The charge of not supporting the ticket he says is "false"; he did support it, and stumped the State for three weeks in its favor. He did take $250 a week from the Republican Committee in the Presidential canvass of 1860, but it went to pay the expenses of incessant travel, between July 1 and Nov. 6, through five States, during which he made 160 speeches. Moreover, he says, he has spent just seventy-two weeks, or one year and five months, since 1856, in public speaking for the Republican party, and has received less for it than a popular lecturer receives in three weeks. The charge that he asked for a brigadier-generalship, with a major-general's command, he says is false; Mr. Lincoln offered him a brigadiership. The charge that he used his influence with "the German element" to secure his stay in the army after the war was over longer than there was any use for him, he says is false, and indeed it appears to be curiously and boldly false. Johnston surrendered April 26, 1865; Schurz was then with Sherman's army in North Carolina, and he immediately got leave of absence and went to Washington, for the purpose of resigning, and the first major-general's resignation recorded in the War Department was Sigel's, May 4, and the second, Schurz's, May 5. The charge about getting the collectorship for his brother-in-law has this foundation—that the appointment was proposed and urged by the Illinois delegation; that Schurz was asked to urge it in person, and refused; and finally, after pressure, endorsed the recommendation, with the remark that the Chicago Germans were entitled to some consideration. The charge that he pestered General Grant for offices is met by the fact that General Grant politely reproached him after he took office for not coming to see him. We are sorry to add that the *Times* returns to the subject in a second article, and does not notice one of these corrections, though it publishes the speech in full, but walks up and down in front of them, cursing and calling names and throwing out insinuations, in the style of Oakey Hall's *Leader*.

Mr. John Sherman has been put in nomination by the Republican caucus of the Ohio Legislature without much difficulty, his opponents, on the whole, making a poor show, but apparently foreseeing the fate that awaited them if they went into the caucus. Mr. Ashley's and Mr. Bingham's denunciations of the caucus have furnished, and not unjustifiably, much matter for merry-making to the Cincinnati *Commercial*, which thinks they have been rather slow in becoming virtuous. Sherman's "record" did not appear to hurt him in the least, though not one of the facts which we recently brought against him, and which show him to be a base politician and ridiculous chairman of a finance committee, can be or has been denied. Indeed, we may mention as an illustration of the widely different ways in which different people look at things, that the Chicago *Evening Journal*, after mentioning these charges, and gainsaying none of them, declares that the triumph of Sherman is a "cause of national rejoicing"; "that every citizen who has the best interests of the country at heart . . . sees in the success of Sherman an assurance of national prosperity," and it adds that "he is one of the few great statesmen of the country." It ought to have said "the only great statesman in the country," which would be as much as any respectable party paper could be expected to say.

It is rather difficult to tell the story of the Louisiana troubles in a comprehensible way, and in small compass; but the main facts are these: The Republican party is divided into two factions, as in this State—a Custom-house faction, headed by the United States Packard, and Collector Casey, the President's brother-in-law, who has, the New York *Times* says, "taken the Custom-house out of politics," and a Warmoth faction, headed by the Governor. There are no differences of opinion between them, any more than between our factions; but they hate each other, and struggle fiercely for the control of the Federal patronage. Last summer, Casey got the better of the Warmothites by holding the Republican Convention in the Custom-house, and overawing the enemy with United States troops and Gatling guns. The quarrel has raged fiercely ever since, and now Dunn, the Lieutenant-Governor, who was a Custom-house man, and a very dark-colored man, has died. The Governor got the Senate, which is on his side, to elect Pinchback, who is a light mulatto, in his place, thus infuriating the dark party among the negroes. Hereupon arose disputes, into which we shall not enter, as to Warmoth's power to convene one branch of the Legislature without the other. Anyhow, an extra session is called, and the Custom-house men do all they can to prevent a quorum, and for this purpose send some Senators down the river in the revenue cutter, while Carter, the Speaker of the

House, gets some Representatives indicted by the Grand Jury, and then has them arrested and expelled, and then the Governor and others are arrested by Packard, under United States warrants, for violating the Force Act—and so the wretched quarrel goes on, each party having collected armed forces and keeping the city in hourly fear of a bloody riot. Casey, the Collector, has, however, been rebuked by Secretary Boutwell, and ordered to land his cargo from the revenue cutter, and refrain from interference. We may mention that, according to most accounts, at the bottom of this fierce struggle is the desire by each side to control the delegation to the next National Convention. We think *Harper's Weekly* will agree with us that down in New Orleans, too, a little reforming, anticipatory of the operation of the new rules, would not come amiss.

It is certain that none of the carpet-bag governments at the South, not even the South Carolina Ring, is more corrupt and debased than that of Louisiana. Under it the taxes have risen from thirty-seven and a half cents on the $100 in 1866, to two dollars in 1871, and it has raised the State debt from $14,500 in 1868, to nearly $49,000,000 in 1871. Before the war, a sixty days' session of the Legislature cost from $100,000 to $200,000; the regular and extra session of the Legislature cost $750,000 in 1870, and the regular session alone of 1871 cost over $900,000. The modes of stealing, too, adopted by these rascals bear the most striking resemblance to the operations of the New York Ring, from which they have doubtless been copied. We have before us the report on the accounts of the Legislature for 1871, made by order of the District Court in New Orleans, in proceedings instituted against the State Auditor. The Commissioner only got hold of the books with great difficulty, and he found enormous frauds of five kinds: alteration and erasure of warrants; forgery of names on warrants; issue of warrants by unauthorized persons, for purposes forbidden by law, or in payment of services not rendered. We cannot give illustrations of all this knavery, but we will cite one or two. The Legislature appropriated for the expenses of the General Assembly $647,440 for 1871. Under this the Thieves forthwith issued warrants for $888,128; and when enquiry is made, it is found that the books of the Warrant Clerk and of the Chairman of the Committee on Contingent Expenses have been lost! The Committee on Charitable Institutions stole $7,420, by drawing "mileage" for tours of inspection which they never made. The Committee on Railroads stole $13,356 in a similar manner. The Committee on Banks stole $6,200 in the same way, and the Committee on Canals and Drainage followed their example.

We have never yet read the platform of a "Labor Reform" Convention without finding in it somewhere, wrapped up in the fustian of which these documents are usually composed, a little scheme for enabling people to get money without working for it. All else is apt to be mere verbiage or humanitarian platitudes. It is into this that the reformers put their whole minds. There was one of these conventions held at Bridgeport, Conn., the other day, which drew up one of the biggest platforms of the year; but we had not to run very far through it before we came on what the thimble-riggers call "the little joker," in the shape of a demand that the Government should issue a "national paper currency, which should be a full legal tender, based on the wealth of the nation and not on gold, and issued by the Government directly to the people at a low rate of interest." This idea frequently finds expression on these occasions, and it is due to the irritation caused in the minds of large numbers of persons by discovering that they cannot have capital without saving, and cannot borrow without satisfying the lenders that they are likely to repay. The "credit" which frugal and industrious persons of good character rapidly create for themselves, the reformers always regard as an "odious monopoly." Indeed, they are not very far from regarding a good character as an "unjust privilege." The difficulty which the honest, hard-working, and thrifty poor men frequently experience, at the outset of their careers, in borrowing money to be used in carrying on or extending their trades, the Schultze-Delitzsch plan, which is attaining enormous proportions in Germany, meets exactly, and, while doing so, stimulates instead of weakening energy, and rewards instead of discouraging probity. Under that plan, a man has only to save a little from his wages regularly in order to join one of the co-operative banks, and then he has only to establish a character for integrity and punctuality to be able to borrow at low rates of interest.

Although the steady decline in prices in most articles of merchandise throughout 1871 has left the year's business unsatisfactory in its general results, the recent upward reaction in many leading staples causes a good feeling among the commercial classes, and the markets are generally buoyant. Cotton, under the influence of declining receipts and an excited speculation, has again advanced sharply, and our market is generally higher than that of England, our chief consumer. The exports are consequently light, and stocks are rapidly accumulating at our ports, to the great delight of warehousemen, who for the first time in some years see their stores well filled. The insurance companies are likewise reaping a temporary though dangerous harvest from this accumulation of combustibles. Breadstuffs are firm and advancing, also in a measure influenced by speculation. The deficiency in England's crop last year is shown by the increase in her imports of wheat, which were nearly a third larger in 1871 than in 1870. But of this increase the United States furnished only an insignificant portion, owing to our high prices, the chief increase coming from Russia, which sent to England alone nearly sixty per cent. more wheat in 1871 than in 1870—a striking illustration of the extraordinary fluctuations in the respective production of cereals in the same country in different years. Groceries continue to advance, but meats of every description have once more declined. Dry-goods are quiet; coal declining, with an ugly-looking strike in Wilkesbarre, which it is hoped may be adjusted before it spreads.

The money markets of the world are now presenting some extraordinary features. France has for the time being abandoned specie payments, and is flooding England and Germany with her useless coin. France has always had the largest metallic currency, estimated by her best statisticians at from 800 to 1,200 millions of dollars, or from three to five times as much as the United States held prior to the war. Of this enormous circulation, about 400 millions have disappeared from the channels of commerce, probably largely hoarded, but, at the lowest estimate, 100 millions have been exported to England and Germany, in payment of the Prussian war indemnity. The result is equal to more than doubling the total annual production of gold, and confining the use of that product to these two countries. As England and Germany together have not probably heretofore received more than one-fourth the total production, it is not unreasonable to assert that their usual receipts have, since the French war, been quadrupled. The effect is magical. Credit, which, according to the present ideas of commerce, is based not upon the wants of commerce, but on the casual or accidental abundance or scarcity of gold, has received an enormous impetus. The stolid Germans are more crazy with the speculative fever than ever were the mercurial Yankees. Banks, credit companies, and corporative enterprises of every description are springing up like mushrooms over-night. In England, railroads, mines, and manufacturing companies are the prevailing form of the mania; and before long we may expect to see both countries alike suffering the unexpected calamities inevitably to result from the blunder and folly of the indemnity proceeding. Strange to tell, while money in Germany and England goes a-begging at two and three per cent. per annum, we here are not able to derive any material relief from the abundance. All that Europe can lend us in the shape of money is gold coin, and for that we have no use. Our greenbacks have for the last three weeks been worth, on an average, certainly not less than twenty per cent. per annum, but of these Europe has no surplus supply to send us.

SOME REASONS WHY CIVIL-SERVICE REFORMERS ARE NOT ALL SATISFIED.

A NUMBER of friends of the Administration will have it that the course of those who are not satisfied with the President's relations to civil-service reform is captious and unreasonable. *Harper's Weekly*, which is the most respectable of the President's defenders—inasmuch as it is not capable of playing the part of a common "henchman," and standing by the Administration "right or wrong"—is even of opinion that those who twitted members of Congress with being in favor of civil-service reform in the abstract, but always opposed "to this particular measure," are now guilty of this same inconsistency themselves in refusing to be content with the President's recent action. As we believe we originated this joke against Congressmen ourselves, and made a good deal of use of it, we are, if anybody is, exposed to the reproach thrown out by the *Weekly*. We shall now, in self-justification, say one or two things which the *Weekly* has apparently, in the not unnatural interest it takes in the success of the new measure, overlooked in judging those observers who still complain. Nobody, let us say, who has made up his mind that General Grant's re-election is necessary to the salvation of the country can see this matter from all sides, and there is one important side which the *Weekly* has not seen.

General Grant went into office as a civil-service reformer. He tried the plan of making appointments for fitness solely, during his first year, and surrounded himself with excellent men. He found, however, that it did not work well. Politicians persuaded him that he was estranging the party, and that unless he fairly and frankly allowed "claims" to tell in the distribution of the higher places and in the general discharge of his duties, his Administration would prove a failure; and there was, in fact, a good deal of truth in what they said. We thought, and still think, that a President who did not care for re-election, and had enough fire in his composition to throw himself on the people for support, might have overwhelmed the politicians, frightened Congress into submission, and have had his way. General Grant had, however, to act according to his light and his temperament, and he succumbed. Cox, Hoar, Wells, and the like were speedily got rid of, and Cameron, Morton, Forney, and their like took their places around his chair, and a total change of policy was entered on. The worst abuses of the civil service were deliberately taken up, as instruments of government. To mention but a few illustrations—the Federal patronage was used openly and wholesale to influence the State election in Missouri. Mr. Grinnell, a respectable New York merchant, who was as much of a politician as was consistent with honesty and decency, was summarily dismissed from the New York Collectorship, and a mere politician of the lowest class—as close an approach, perhaps, to a Tammany politician as could be found in the Republican ranks—was put in his place, and, as this worthy confessed himself, for the express purpose of "running it" as a party machine. To oblige B. F. Butler, the Consulate-General at Alexandria was filled, in the place of Mr. Charles Hale, with the curious animal whose public orgies have been described in the *Independent* by the Rev. Dr. Strang. The Government banking business abroad, which had for ninety years been transacted with probity and honor by the great house of Barings, was taken from them and given to rich New York politicians who had supplied money freely to "the party," on the pretence that it was desirable to have it in the hands of "Americans"—the fact being that the new firm was composed of a Swede and an Englishman.

Now all this was rather mortifying, especially to those who had indulged in as much enthusiasm over General Grant as we had. But still, it was possible to excuse it on the ground that no single man could overthrow the old system; that it was unfair to expect any single man to do it; that the President meant well, but could not resist the force of circumstances; and that we must prepare for a better state of things by working on the public mind, so as to force Congress into legislating for reform. So, after dropping a tear or two over the dimness which the cares and temptations of office had brought on General Grant's reputation, we turned ourselves to public opinion. We hammered away at the abuses of the civil service, in season and out of season, and, finally, so much ability and energy was enlisted in the work that caucuses and conventions began to feel the pressure, and civil-service reform began to crop out in platforms and to be mentioned in campaign speeches, and at last Congress gave to the President an authorization to appoint a Commission to frame rules and regulations; and the Attorney-General gave his opinion—all lawyers of eminence, we believe, concurring—that the President could in his discretion carry these rules out without the aid of Congress. The Commission made its report, and it was an excellent one. It drafted rules, and they were very good. It left the power of removal untouched; and we thought it did right, because we believed that if this power were taken away, in the existing condition of the service and of political morality, great abuses were sure to present themselves, and high officials, and especially the enemies of the reform, would endeavor to break it down, by denying all responsibility for them. We are not aware that any other serious fault was found with the new regulations.

Now, at this point, what is the duty of all honest civil-service reformers? That is really the question of the hour. To this question there could be but one answer, if the President had shown by his general use of his discretionary power that he had the reform really at heart, and had it at heart more than all else, and would allow nothing to interfere with it, and had no personal ends to serve by slighting it: Support him with all our might, and bear patiently with his delays, mistakes, and shortcomings. The new measure being not a law, but the discretionary act of the chief executive officer, of course our estimate of its value must largely depend on his character and aims, as displayed in his conduct; and, indeed, an estimate of its value in which no count of these things is taken is utterly worthless. Our own fears that the work of reform would not be heartily carried on, and that, indeed, there might be only enough done to make "capital" out of it, but not enough to displease politicians, were excited by a number of circumstances, which were either contemporaneous with or subsequent to the organization of the Civil Service Commission. One was the pertinacity with which "Tom" Murphy was kept in control of the most important Government office. Murphy may be a spotless contractor; but his best friends will not deny that he is the very type of the scheming, managing, "rotating," "decapitating," jobbing, bellowing politician, who feels about civil-service reform very much as the devil feels about holy water. Another was the appointment, a month after Congress had authorized the Civil Service Commission, of Colonel Forney as collector at Philadelphia. We might find plenty of things in Colonel Forney's career as a politician to warrant us in characterizing this as, under the circumstances, an amazing appointment for a reformer to make; but we shall not refer to his career as a politician for the purposes of our argument. All we say, and all we need say, is that Mr. Forney has been from the very first, in his paper, the most outspoken reviler and ridiculer of the reform movement anywhere to be found. He has denounced it in the most unmeasured terms, both as a humbug and as a covert attack on American institutions; and, indeed, he has spoken, apropos of the Lincoln monument at Philadelphia, of Lincoln's not being a civil-service reformer, or exacting any qualifications except party fidelity for admission to the civil service, as one of his greatest claims on the gratitude and admiration of his countrymen.

Last, but not least, our distrust has been excited by finding that the President has been growing, within the last year and a half, out of the character of a possible candidate for re-election, through that of a probable candidate, into that of the only candidate to be thought of by any good Republican; and that the same men and newspapers who were most clamorous in their praises of his civil-service reform steps are also most clamorous against all interference with existing abuses in this and other custom-houses, and the most malignant in their vituperation of those who ask for enquiry. Now, his appearance in this way and under these circumstances as a full-blown candidate, suggested to our minds what seems a natural and obvious reflection, and it was this: The two great sources of civil-service abuses are the desire of candidates to secure their *re*-election, and their obligation to those who have helped in it. If the President, to whose "discretion" we are now told to look for reform, be really a candidate, it is hardly likely that he will throw away the tools others in his situation have found so useful. If he does throw them away, it will be a crowning proof of his sincerity; if he does not, it may not prove that he is insincere, but it does prove that the time for vigilance and criticism has not gone by, and it seriously lessens the chance of the reform proving permanent—for nothing will ever sanctify it and give it a root in the popular heart and the political traditions of the country except the self-sacrifice of a president or a party in its behalf.

Now, on raising our eyes, with the history of the last two years in our mind, what do we see?—the President a candidate for re-election; a reform of the civil service going into operation, but certain to produce no sensible effect on the service for two or three years; the great seats of civil-service abuses, the custom-houses, in the hands of old political jobbers of the most degraded type; the minor custom-house officials scouring the country, while receiving the people's pay, helping to pack legislatures and conventions with partisans, without an attempt at repression or any sign of disapproval at Washington; the ablest and purest men of the Republican party savagely denounced by the Administration papers for asking for investigation; the reports of a damaging enquiry into custom-house abuses carefully cut down by Government organs, the bad parts left out, and the rest stuck away in small type in a remote corner of their columns, and all of it pooh-poohed; and, in fact, the whole of the wretched party machine grinding away for dear life in preparation for the nominating convention. Now, we may not be saying exactly the thing we ought to say; but we are right well assured that neither we nor any other honest paper ought, in the presence of these facts, to keep silent and smile. It is a time for vigilance, and not for applause; a time to question, and not to rest and be thankful.

To this long array of suspicious circumstances the President's friends have nothing to offer by way of reply but reports of conversations with him, at which he said he meant well. We need hardly explain to our readers how impolitic it would be, even if it were not absurd, to permit any officer to escape in this fashion the operation of such inferences from his conduct as one's experience of human nature and of the course of human affairs would justify. We stand ready to note carefully and report fully all improvements in the civil service which the new code may effect; but as long as beside it abuses of the worst kind are being perpetrated, and perpetrated apparently in the personal interest of the President, we shall not be restrained by any consideration of the incivility or hardheartedness of doubting him from saying our say about them. Nor shall we, as far as our small influence goes, help to encourage the practice, so much loved by politicians, of taking men's own account of the state of their hearts, either as a substitute for good deeds or a palliative of bad ones. To that well-known old argument—"He has made mistakes, as who has not?" there is always the conclusive reply: "Let him stop his mistakes, then. A mistake repeated is no longer a mistake, but an offence."

THE USE OF FISK.

THERE remains very little to be said about Fisk's career which has not been said already in the way of doctrine or reproof. The very most has been made out of him as a warning and example. All are agreed that he was a most abominable and disheartening product of commercial civilization. He lied, and cheated, and stole, and was lewd, and gloried in his vices, and loved to parade them, and, in spite of all, he was an eminently successful man. He got everything in life that he set his heart upon. He loved luxury, and lived like a prince. He was licentious, and kept a harem with even less concealment than the Sultan. He loved power, and he had perhaps as much as it is possible for any man to have in a community like ours. He heard much talk of honesty, but perhaps rarely encountered it. He found little or no difficulty, in the course of his career, in getting the service or co-operation of any man of whose service or co-operation he had need. During the last two or three years, too, he was evidently rising in popular estimation. He commanded a regiment of volunteers, one thousand strong, and was swelling the number of his retainers every day by his "goodness of heart." If he could have lost his riches, and died in want, it would have been well. But there was great danger that, had he lived twenty years longer, the errors of his "hot youth" would have been forgotten, and we should have seen him quietly received into the rank of respectable "operators" and politicians, and, perhaps, finally rewarded for a large contribution to a campaign fund with a foreign mission. Things nearly as strange as this have been witnessed among us. Rascals as great as Fisk, though less notorious and brilliant, have outlived their infamy, and occupied, under the eyes of their own generation, positions which, we tell our Sunday-school children and our newsboys, the Lord reserves for the honest, industrious, and thrifty. The Sunday-school children and the newsboys are apt to find us out by degrees; but let us be thankful that Fisk has been removed before his honored old age aided them in their investigations into our pious little frauds. He was too conspicuous a scoundrel to be covered up or explained away.

We are not going to add anything, therefore, to the mass of moral reflections which his assassination has called forth. We do not believe anything more is needed to deepen the pain and humiliation with which all decent men and women among us think of him and of his works and ways. Most of them, too, we have no doubt, he has filled with much useful anxiety about the condition of our commercial morals, and about the necessity for greater care in the education of children, greater scrupulousness in the manner of doing business, and greater fastidiousness about the company we keep. What we should, however, like to impress on the public, and not the public of this State only, but of all the States, is that the one practical consideration suggested by Fisk's career is the danger of a corrupt judiciary. People as eager for money, and as unscrupulous about the means of getting it, will always show themselves in commercial communities, as long as human nature remains unchanged, and we would remind our Sentimentalist friends that an early change in human nature is not likely. Various systems of philosophy, and, finally, the Christian religion, have been trying to bring about such a change for three thousand years, and with but a very moderate degree of success. Fisk's heart, carefully examined, would not have been found very unlike the heart of Sardanapalus or Caligula. The disappearance of Fisks from the earth may yet be achieved, but it will be in the remote future, although there is no doubt that every man who is taking heed to his own ways, and to the ways of his children, is hastening that most desirable consummation.

In the meantime, however, the main and pressing business of society is to take care that, when Fisks appear, they do not succeed in getting what they strive for. Fisk, as a ruined broker in Wall Street, with a silver watch as his sole possession, was just as noxious a beast as Fisk, the colonel, and admiral, and opera manager, and railroad proprietor, but he need not have been dangerous. There are hundreds like him, as far as cupidity and want of principle go, and possibly even ability, in Wall Street now, thirsting for the good things which he enjoyed, and there will always be hundreds. We can never prevent that. What we can do is to put insurmountable obstacles between them and their prey in the shape of honest courts. We prepared the way for Fisk and Gould, and all their tribe, when we, under the guidance of the Sentimentalists, made judges elective for short terms, and still more when, knowing the bench had been corrupt, we made no attempt to purify it. We are, therefore, as much responsible for his crimes as a general who gave his sentinels permission to sleep at their posts would be for the surprise of his army. He and Gould could not have got possession of the Erie Railroad, or, having got it, could not have kept it, if they had not found judges ready to aid them. There is not a single stage in the Erie swindle, except the passage of the Classification Act, in which judicial connivance was not necessary; and without the Erie swindle Fisk would have been a nameless and unhonored rogue. Its success gave him his wealth, and produced or supported his other scandalous enterprises. His fleet of steamboats, and his opera, and his express company, were none of them profitable in themselves; they were all supported by the profits of the Erie road. Moreover, there is no doubt that the success and expansion of the municipal Ring, until it overshadowed the State and began to threaten the nation, were in a very large degree the result of Erie co-operation. To produce the amount of popular indignation and effort necessary to overthrow the Ring, we had to submit to the theft of $50,000,000, and to witness the city handed over, bound hand and foot by a venal Legislature, to a little clique of men whom very few decent citizens would have allowed to enter their houses, and whom everybody believed to be dishonest. Now, we do not think we exaggerate when we say that from all this loss, and shame, and disgrace an upright and independent judiciary might have saved us. Had Fisk in his first bold attempt at robbery been met with the hand of an incorruptible judge, not only would his depredations have been stayed, but the courage would have been taken out of him. Nothing, we may be sure, did more to inflame his imagination than his discovery that, in planning any raid or speculation, he could set down judicial decisions among the purchasable things as much as stock, or carriages, or hotel accommodation.

We hear a great deal every day about the wrongs the workingman suffers from the capitalists, about the rapacity of speculators and monopolists and great corporations. There is much truth in it; but when we come to enquire what is going to be done about it, we find that the grumblers generally propose to pass some law or other—they are never very clear what—and leave it to Providence to execute it; for your labor reformer is almost invariably the enemy of honest human tribunals. He hates the "legal mind," and would fain extirpate it; so that it is almost impossible to convince him that laws are not worth the paper on which they are written, unless you can get upright men to put them in force. The satisfaction of getting a favorite theory embodied in a statute is to him so great, that his mind does not care to descend to such details as the method of securing obedience to it, so that he contemplates the spectacle of timid, servile, corrupt judges with perfect equanimity. Nevertheless, it is literally true that the very first step in "labor reform," as in all reforms, should be a vigorous effort, in all parts of the country, to restore the judiciary to the position of independence, dignity, and security it once occupied. There cannot be too much money paid to secure this end, and the more the power of great capitalists increases, the more necessary it becomes. A cheap judge is about as dangerous an article as a cheap gun: you can rely on a cheap gun's going off, but you can never tell at which end; and you may rely on a cheap judge's deciding cases, but whether the rogues or honest men will profit by his decisions nobody knows. We might, if we had space, fortify our argument by reference to the great loosening of the bonds of habit and tradition which we are witnessing in all parts of the country—the declining influence of the church; the growing love of aleatory modes of getting a livelihood, the dislike of steady, meritorious industry—as additional reasons for strengthening the institution through which society at large applies its morality to the relations of its members in daily life. Out of the moral confusion which we are witnessing, we have no doubt a better state of things will arise. We shall yet see a general consensus, or a near approach to it, about the foundations of society and government, but there can be no more valuable aid in crossing the troubled sea called the "transition period" than a pure judiciary. We do not need to be told, as we probably shall be, that, as men go, an absolutely pure judiciary is not to be looked for, just as we are told that no civil-service reform will make all Government officers honest. We know all this very well, brethren. We are as much depressed as you by the scarcity of perfectly holy men; all we ask is that you do not give way to despair, but go on trying to find them, and get them to take office; and in the meantime, knowing the weakness of human nature, that you remove from the path of such unworthy instruments as you employ all removable temptations.

Correspondence.

CRAIK'S SHAKESPEARE.

TO THE EDITOR OF THE NATION:

SIR: The remarks in your paper of January 4 upon my edition of Prof. Craik's "English of Shakespeare" were apparently written without reading the book or comparing it with the English edition. When a critic indulges in that way of reviewing, he ought to be discreetly vague in his praise or blame. If he makes specific charges against his victim—of meanness or dishonesty, for instance—he should at least see that he has some grounds for the accusation.

After commending Prof. Craik's way of numbering the speeches of the play, you assert that I have adopted a substitute, which is "a poor thing, though his [my] own." It may be a poor thing, but it is none of mine. It is no modification of Prof. C.'s method, but *an exact reprint* of what I found in his book, as any one will see who will take the trouble to compare the two. In his third edition, on which mine is based, *he* "numbers the speeches from the beginning to the end of the play, but puts a number against those only to which the notes in the 'philological commentary,' which follow the play, refer." For purposes of reference, this is an improvement on his *first* edition, in which he numbers only every *fifth* speech—the 5th, 10th, 15th, etc. I cannot at this moment refer to the *second* edition, but, if I remember right, the system of numbering is the same as in the third edition.

In editing the book, I wished to avoid making it larger, and therefore omitted what I thought could be spared as well as not. From the preface I struck out several pages, including the reference to the author's system of numbering the speeches. The latter I should certainly have retained, if it had occurred to me that anybody would suppose the method to be mine. But no one who reads as far as the end of the "Prolegomena" (p. 58) will be in danger of making that mistake, for there he will find a note, which states that the numbering is Prof. Craik's, and that his accidental misstatement of an error in his figures had led me astray in an attempt to correct the error.

You will see, then, that I neither modified Prof. C.'s method of numbering, nor deprived him of a credit which is his due.

I may add that I have not adopted Prof. C.'s numbering in my editions of "The Merchant of Venice" and "The Tempest," recently published by the Harpers, nor in the "Henry VIII." and "Julius Cæsar" of the same series, now in press. If the *speeches* are to be numbered, Mr. Ellis's plan of numbering each scene separately appears to be the better one. Prof. C.'s is of no use to those who have not the numbered edition, while Mr. Ellis's will be of more or less service to all Shakesperian students. "Julius Cæsar, 721," or "J. C., v. 3, 721," is an example of the one; "J. C., v. 3, 7," of the other. The former does not help us unless we have Prof. C.'s edition; the latter directs us at once to the *seventh* speech in the scene, which is readily found in any edition. In the case of very long scenes, the number of the speech (5, 78, or 142, for example) would at least suffice to show whether the passage is near the beginning, middle, or end of the scene; and that, in the majority of cases, would be all the help one would need for finding it.

In the "Globe" edition, the *lines* in each scene are numbered, and the references in Abbott's "Shakesperian Grammar," in Clark and Wright's "Select Plays" (Clarendon Press edition), in the privately printed "Notes on 'The Tempest,'" by the Shakespeare Society of Philadelphia, and a few other books, are added to that edition. The chief objection to the general adoption of this device is that the number of lines in the *prose* portions of the plays will vary with the size of page, the type, etc., in different editions.

On the whole, Mr. Ellis's plan is the best that has yet been suggested, and numbering the *lines* may be placed next. Prof. Craik's way is the worst of the three; and I am not surprised that, in the fifteen years that have elapsed since he proposed it and filled three whole pages of the preface to his "English of Shakespeare" with its praises, no editor has been led to adopt it. So far as I am aware, it has not been commended by any critic or reviewer except the one in the *Nation*, who considers it a "most useful device" in the English edition of a book, but "a poor thing" when reproduced without alteration in the American reprint of that book.

W. J. ROLFE.

CAMBRIDGE, Mass., Jan. 6, 1871.

[Had our critic been able to procure the third edition of Craik instead of the first, he would not have been guilty of the error into which he has certainly fallen, and for which we are heartily sorry. —ED. NATION.]

Notes.

A LITERARY announcement made by Mr. J. W. Bouton will, we are sure, give great pleasure to some of our readers. He has almost ready for publication "Gesta Romanorum; or, Entertaining Moral Stories. Translated from the Latin with Preliminary Observations and Copious Notes by the Rev. Charles Swan, late of Catharine Hall, Cambridge. A new edition, with an Introduction by Thomas Wright. In two vols." Mr. Wright's introduction has been written expressly for Mr. Bouton's edition, and the book is beautifully printed on handsome paper. We are sorry that Mr. Bouton has thought it best to print only a small edition, for it is a book that must please a great many people—it well deserves its fame—and it has hitherto been difficult to get. Many years ago, Mr. Putnam of this city published a selection from the "Gesta Romanorum" in that admirable series, "The Library of Choice Reading"; but the books of this series have been some years out of print, and, so far as we know, there is no other edition of the "Gesta Romanorum" in the market. We may refer in passing to Mr. Bouton's quaint and attractive business card, which the venerable George Cruikshank designed and etched for him during Mr. Bouton's recent visit to England. It represents an old book-worm seated at a table poring with delight over a huge and ancient tome. On a parchment scroll hanging over the table is written: "Designed and etched by George Cruikshank in September, 1871, who was born on the 27th September, 1792."

—A correspondent asks us to lend our influence in favor of a "national notice" of Mr. Samuel A. Goddard, of Birmingham, England, "the persistent writer of some well-known letters during the slaveholders' rebellion, and vigorously kept up, without flagging, under peculiar difficulties, from the commencement to the end." We have already done what we could to make Mr. Goddard's services known in connection with the published collection of his "Letters on the American Rebellion"; and we improve the opportunity to say again that they are highly creditable to Mr. Goddard's sympathies and to his familiarity with the subjects discussed, and that we hope the few copies yet remaining unsold in the hands of Messrs. Noyes, Holmes & Co., Boston, may soon find purchasers and a place in public or private libraries. But the number of persons abroad who defended the American cause with all the resources at their command is too great, we fear, to admit of singling out one for "national notice," and one, too, whose relations to America were such as to make his defence of her both natural and obligatory. We say this not to detract from Mr. Goddard's merit, but to show the impracticability of our correspondent's suggestion.

—"Almost all other things in this world have been done one or more times; but surely the disbursement of over three millions of dollars among seventy-five thousand persons so as to give universal satisfaction, is a problem upon which experience throws but little light." All the light that can be thrown upon it, however, is reflected in the pamphlet from which we quote these words, the "First Special Report of the Chicago Relief and Aid Society." It is a singularly clear and interesting account of the efficient labors of this organization (which was incorporated in 1857 and was merely enlarged to meet the exigencies of the fire), and conveys a lesson in charitable management none the less valuable because operations on so vast a scale are, happily, seldom called for. One cannot help feeling, who reads this report, that the labors in behalf of the Sanitary Commission for which Chicago was distinguished, bore their fruit in this more terrible crisis, and that thus the calamity of war proved an invaluable preparation for the calamities of peaceful times. Perhaps no one item of the statistics here presented by the Relief Society is more striking than the number of isolated houses put up under its auspices in the interval from October 15 to November 18, on the plan already described in these columns by Mr. Olmsted. Most of these temporary structures were an outright gift; but on not a few an obligation was willingly given to refund part of the money within a year. All furnished, such a house cost $125, and 5,497 had been erected or were in process of completion, at a saving of rental to the occupants estimated at 60 per cent. of the cost of the mere building, in six months. The week's rations for a family of five (two adults and three children) have been brought down to the low figure of $1 98. The pay-rolls of the Society for the week ending November 18 amounted to $9,758 98—which would have been much greater but for the gratuitous service of the principal officers. The white and colored American families needing succor have numbered 1,965, out of a total of 18,478, divided among twenty nationalities, of which the three most numerously represented were as follows: German, 7,280; Irish, 5,512; Scandinavian, 2,104. Our space will not permit a more extended notice of this very suggestive report, which is infinitely creditable to the Society and the city of Chicago. We recommend it to all who would have some idea of the magnitude of the task which has been so courageously and successfully undertaken, and especially to those who may think that the need of contributions has passed. More than half a million dollars additional will be required to carry through the sufferers till the 1st of April.

—Some correspondence which has just been made public between the leading botanists of the country and the present head of the Department of Agriculture, will convince most people who are capable of judging, that the civil-service regulations, to be complete, will have to provide some examination for Commissioners. It appears from the *American Naturalist* for January, that a few months ago the late botanist of the Department, Dr. C. C. Parry, having been a good deal badgered by the new chief, made a simple request to be informed in writing how he should sign his answers to official communications addressed to him on botanical subjects—whether with his own name as botanist, or in the name of the Commissioner; and was abruptly notified by the latter that his services would be no longer required. Professors Torrey, Gray, Brewer, and Eaton having in a joint communication expressed their high opinion of Dr. Parry's character and scientific ability, "as well as of his peculiar qualifications for the position," and requested a reconsideration of his dismissal, Judge Watts replied that he could not in self-respect restore Dr. Parry, and would rather not assign reasons for his action, or say anything that "might disparage him [Dr. Parry] in the estimation of his friends." On behalf of these friends, however, Dr. Asa Gray insisted on having the Commissioner's reasons, all the more on account of the intimation, in his letter, of some moral delinquency on Dr. Parry's part; and asked leave to print the correspondence if it was to end there. Thus challenged, Judge Watts made a clean breast of it, from which it appeared that he was plainly jealous of his subordinate, and wished every function of the Department to be absorbed in himself. He charged Dr. Parry with the enormous offence of sending sealed letters away, without submitting them to him either for revision or signature—letters, in the elegant English of the Commissioner, "which I deemed objectionable because of his mode of expression, wanting in perspicuity and not creditable to the Department." His only other ground of complaint not growing out of the first is contained in the following choice excerpt:

> "This Department is designed to render the developments and deductions of science directly available to practice, that farmers and horticulturists may be benefited by them. The principles of vegetable physiology, their relations to climate, soils, and the food of plants, and the diseases of plants, which are principally of fungoid origin, it is clearly the duty of a botanist to investigate. If possible, he should throw some light upon the origin and condition of growth of the lower orders of cryptogamic botany. This is a domain into which I could not discover that Dr. Parry had ever entered, so far as his practical work here gave any indication. The routine operations of a mere herbarium botanist are practically unimportant."

—This sheds a fine light on the Commissioner's fitness for his place. Dr. Gray, in closing the correspondence, has the cruelty to remark that a "mode of expression wanting in perspicuity" is "a fault into which more practised writers may sometimes fall," and tells the Commissioner that he has solved for Dr. Parry's friends "the alternative of supposing either bad conduct on the part of one hitherto highly esteemed, or of very hard usage towards him." That the public, in judging of the hard usage, may also have a still further test of the Commissioner's capacity, there is appended to the printed correspondence some extracts from reports of the Board of Trustees of the Agricultural College of Pennsylvania, made by the Hon. Frederick Watts, 1865, 1868, as examples of "perspicuity," etc. It was not necessary for that to go back of the Commissioner's late report to Congress, one of the most fearfully and wonderfully written documents ever submitted to that body; but this extract would perhaps be hard to beat:

> "These farms will all differ essentially in the character of soil and situation, and will be conducted under the eye of a skilful Professor of Agriculture, for the purpose of testing and developing the thousand mysteries which now cloud the knowledge of the farmer. These experiments, carried on under the direction of a scientific observer, who will constantly keep note of the weather, *the signs of the Zodiac*, the application of manures, and all the various actual and supposed influences which affect the growth of plants, and this, too, at three different points of the State, and upon different soils, cannot fail to produce an amount of information exceedingly valuable, and which could never be collected by individual exertion."

—As it is clear that the abuse of the majority rule, and the facilities which it offers of being abused, are at the root of the evil personified in Tweed & Co., it is fitting that the revolution against the Ring should be followed by an experiment of some one of the numerous schemes of proportional representation now actually in practice or proposed by speculative writers on constitutional reform. The Committee of Seventy's advice that the new charter should provide for the cumulative vote is, therefore, a step in the right direction; but it may be doubted whether the choice of systems is the best one. We hope that the Legislature, and all persons who are interested in the right solution of the "great-city problem," will carefully examine an admirable paper on Proportional Representation, covering the whole ground, in the January number of the *American Law Review*, just issued. The writer justly remarks that "the discussion has gone about as far as it can profitably go without actual trial"—meaning, of course, in this country, where the trial can be made on a larger scale and with more decisive results than anywhere else. Evidently partial to the Hare system for universal application, he finds no difficulty in proving its theoretical superiority to any other scheme, and its practical superiority in non-partisan elections, such as those which take place within societies, stock companies, and other corporate bodies. But he inclines perhaps to the Swiss "Free List," which differs least from the Hare system, and which, if an ingenious suggestion of his were carried out, would differ still less, as most to be recommended to reformers who are bent on trying something. The Free List, or Free Ticket, is, as the writer points out, relieved of the suspicion of hocus-pocus with which the popular imagination would naturally invest the Hare system, on account not so much of the complexity of its mode of sorting and counting votes, as of the difficulty of making it perspicuous to those who do not actually take part in it. And in fact, a constituency accustomed to the Free List, and subsequently invited to adopt the Hare system, would find the gradation easy and almost imperceptible.

—The article in the *Law Review* has the merit of order and lucidity in a high degree, taking the reader from the simpler to the more elaborate forms of representation by stages which successively clear the way for a perfect understanding of the whole matter. As it also gives a chronological list of works relating to the subject, it has a double value, historically and for purposes of reference, and, indeed, furnishes a complete guide to the student who seriously wishes to inform himself. In general, treatises of this sort are to be regarded as rather solid reading, and we do not say that this one can be digested rapidly without previous preparation of any sort; but it is enlivened by a note on the "gerrymandering" of electoral districts, which, besides giving an account of the origin of this immortal Americanism, illustrates it with a reduced fac-simile of the gerrymander itself, not often seen nowadays. In like manner an engraved illustration is given of still more remarkable gerrymandering by which the Second Empire was enabled to keep up a show of popular support and retain its majority in the Corps Législatif. We presume it is betraying no confidence to say that the author of the article is Prof. William R. Ware, of Boston, well known for his connection with the Harvard College experiment of the Hare system.

—We find pleasure in remembering that the first mention, recommending its purchase in America, of the collection of "Hebraica" and "Judaica," which formerly belonged to Mr. Frederic Muller, bookseller, at Amsterdam, and is to-day opened to the public of this city as the Temple Emanu-El Library, was made, by Dr. Felsenthal, of Chicago, in the columns of the *Nation* (No. 288). That valuable collection well deserves its new title, though comprising but little more than three thousand volumes, and in more than one of its divisions presenting but outlines still to be developed into full departments by the zeal of the American purchasers. The divisions now introduced are the following: A, Bibles and parts of the Bible; B, exegetical and homiletical works; C, Midrash; D, Talmud; E, works on the Talmud; F, Halakhah; G, casuistical writings; H, philosophy, theology, ethics; J, Cabala; K, liturgical books; L, belles-lettres; M, grammar, Masora, rhetoric; N, dictionaries; O, periodicals; P, history, biography, bibliography, geography; Q, archæology, criticism; R, anti-Jewish writings; S, miscellaneous writings; T, dissertations. Divisions A, B, D, E, F, G, H, K, M, Q, and T are the fullest. Many of the divisions are subdivided into Semitic and non-Semitic parts, a considerable portion of the library consisting of works in Latin, German, Dutch, Spanish, French, Portuguese, Italian, and Greek.

—The editions most frequently met with in this, as in almost every other Hebrew library, are those of Venice and Amsterdam, besides which Italy is conspicuous through the publications of Mantua, Soncino, Ferrara, Naples, Parma, Rome, Sabionetta, Bologna, Pesaro, Fano, and Leghorn; and the Netherlands through Utrecht, Leyden, the Hague, Groningen, Franeker, Dort, and Rotterdam. Next come the German publications of Fürth, Augsburg, Frankfort-on-the-Main, Leipsic, Berlin, Göttingen, Dyhernfurt, Rödelheim, Frankfort-on-the-Oder, Vienna, Prague, Altdorf, Cologne, etc. Warsaw, Wilna, Lemberg, and the other Polish towns are less fully represented. Pressburg appears more frequently than either Pesth or Buda. The Hebrew issues of Basel vie in number and value with those of Paris, London, and Oxford. Portugal is better represented than Spain. The prints of Constantinople and Saloniki are very old, but poor. Smyrna and Jerusalem are the only representatives of Asia. Among the oldest prints of the library, some of which are quite remarkable productions of the first half-century after the invention of the printing art, we find those of Pieve di Sacco (1475); Mantua (1480, 1484, etc.); Soncino (1484, 1485, 1488, 1490, etc.); Ijar, in Spain (1485); Casal Maggiore (1486); Naples (1488, 1489, 1490, 1491, etc.); Brescia (1491); Constantinople (1505, 1506, etc.); Fano (1506); Pesaro (1508); and of some unknown Italian presses. The manuscripts of the library are chiefly remarkable as curious specimens of mediæval and modern Hebrew writing.

—A year or two ago the *Fortnightly Review* contained a valuable series of articles by Frederic Seebohm upon the "Land Question." They deserved and received great attention and commendation. It may not, however, be too late to point out one or two flaws in the argument, arising from an inadequate acquaintance with the authorities. The author undertook to determine from the statistics of Domesday Book the portion of the population from which the freeholders and copyholders were afterwards derived; and at first sight his argument is very plausible, and almost convincing. It rests, however, upon two fallacies, which a very cursory examination of the documents is enough to expose. In the first place, he arrives at the number of manors in England by adding together the tenants-in-chief and the mesne tenants in Sir Henry Ellis's analysis—making about 10,000 in all. Now it will readily appear that the number of tenants will afford hardly any clue, for almost all of them held more than one manor. For example, in Tollentrew Hundred, Kent, there were four manors held by three mesne tenants: in Aihorde Hundred there were 25 manors, held by 10 tenants, having from one to seven manors apiece. In all Norfolk there were 1,392 manors, but only 498 tenants of both classes. It would seem likely, therefore, that his number of manors, 10,000, can be hardly more than half the true number. Having thus obtained the number of manors, he proceeds to use it as a divisor, with the several classes of the population, and obtains by this process an average population of the manor, which one might accept as a very probable one if the mode of calculation were correct. But here comes in another error. There are in "Domesday Book" about 13,000 *liberi homines* and 23,000 *sochemanni*. Dividing these 36,000 by 10,000 we have 3 or 4, the average number of freeholders (socagers) for a manor. Next come 82,000 *bordarii* and 108,000 *villani*, from which numbers he gets an average number of 15 or 20, the class that afterwards were villeins, and became copyholders and laborers. Unfortunately for his theory, the *freemen* and *socmen* were, with insignificant exceptions, wholly in the north and east of England, so that no provision is made for the socage tenants in the south and west. We will not undertake here to propose a better theory than Mr. Seebohm's: it is enough, for the present, to show that his will not stand.

—The opportunities for the higher education of women in this country are now increased by the opening of the University of Vermont to students of both sexes, and it cannot be long before one or more of the Massachusetts colleges will follow this example. It may already be said, therefore, that all women who desire a liberal education can have it by paying for it, as men pay for it, though they have not as yet the same choice of colleges in which to get it. We observe that the catalogue of the University of Michigan for 1871–72 contains the names of sixty-five ladies, regularly enrolled and acknowledged members, of whom twenty-five are counted in the department of science, literature, and art—one of these being a candidate for the degree of B.A. with the present senior class.

—Bolivia, with its population of two and a half millions, is now the objective point of three railroad enterprises in which American engineers or capitalists take a leading part. There is, first, the line which Peru is building, under a contract with Mr. Harry Meiggs, from the port of Islay to Lake Titicaca, a distance of 125 miles in a direct line, but requiring 327 miles of rail; of this, 117 miles are now working to Arequipa. The second enterprise is Brazilian, and has in view the carriage of freight by water and rail from Pará to Vinchuta, on a tributary of the Madeira, a distance of 3,200 miles. To overcome rapids and falls in both these rivers, a railroad is projected 170 miles long, and Mr. George E. Church, the engineer, has been seeking support for it in England. The third scheme, however, seems to promise more useful results than either of the others, and has been laid before the Argentine Congress in a petition from our countryman Mr. Edward A. Hopkins, who has been for a quarter of a century closely identified with the material development of the Plate River region. This petition, originally published as a pamphlet ("Memorial sobre el mejor modo de abrir relaciones comerciales entre la República Argentina y la de Bolivia") has been translated into English and printed in successive issues of the *Weekly Standard* of Buenos Ayres (Aug. 30 to Oct. 11, 1871). Mr. Hopkins's plan and arguments for his chosen route appear quite reasonable, and, indeed, a glance at the map will satisfy any one that the natural outlet for the commerce of Bolivia is the Plate, and neither the Amazon nor a pass across the Andes. There is a gravity course to trade as surely as to water, and Europe counts in the scale on the side of the Plate. From Sucre and Potosi, by this route, to Cape St. Roque is no further than from Vinchuta to the same point; and, owing to prevailing winds and currents, says Mr. Hopkins, "a vessel can go from the river Plate to Europe as soon as from the mouth of the Amazon, and nearly as soon to the United States." He contemplates a road through the Chaco, in the valley of the Pilcomayo, for so much of its lower course (285 geographical miles) as it is unnavigable, starting from the present Villa Occidental, on the river Paraguay, and ending at the Puerto Magariños; the road to be narrow-gauge, and built, perhaps, of rails made of the indestructible wood of the country. Its completion would bring the silver mines of Potosi within four days of Buenos Ayres.

—A duller or more barren period of book-making than the present we have seldom experienced. It is not simply the reaction from the holiday activity, but is part of the long-continued stagnation which this activity hardly concealed for the moment. The absolutely new works are few, and the good ones fewer still. English publications of any worth have mostly been mentioned by us, and we believe the following are all that need to be added to our lists for the past year: The third volume of Lord Brougham's Autobiography; the first volume of Forster's Life of Dickens; "Voltaire," by John Morley—in biography. Among books of travel: "Chiploquorgan; or, Life by the Camp Fire in the Dominion of Canada and Newfoundland," by R. L. Dashwood; W. H. G. Kingston's "On the Banks of the Amazon," a boy's journal of adventure; "An Australian Parsonage; or, The Settler and the Savage in Western Australia," by Mrs. Edward Millett; "Letters from India," by Hon. Emily Eden; "At Home with the Patagonians," by C. G. Masters. To these we may add: Jonathan Couch's "History of Polperro: a Fishing Tour on the South Coast of Cornwall," and Thomas Bateman's "Ten Years' Diggings in Celtic and Saxon Grave Hills in Derby, etc." "Hungarian Celebrities," by Captain W. J. Wyatt, relates to the most recent phase of Hungary's connection with Austria; "Two Years in the Pontifical Zouaves," by J. Powell, is, we believe, not quite what it purports to be, though not devoid of interest. A first-rate work is Rev. W. W. Skeat's edition, with an essay on the Rowley Poems, of the Poetical Works of Thomas Chatterton; and Robert Cowtan's "Memories of the British Museum" is also a work of merit. Finally, we may note these two among Parliamentary blue-books: "East India. Papers relative to Forest Conservancy in India; showing the measures which have been adopted and the operations which are going on—with maps"; and the "Forty-ninth Annual Report of the Commissioners of Woods and Forests."

—Dr. Latham's studies would seem to have been particularly directed of late to "Hamlet." "At a recent meeting of the Royal Society of Literature (Nov. 22, 1871)," we quote from the *Athenæum*, "he read a paper on a German play called 'Der bestrafte Brudermord' which was acted at Dresden as early as 1627, and stated that there was also an English play on the subject of Hamlet at least as early as 1589. The German drama has usually passed for a translation of 'Hamlet,' though a mutilated and vulgarized one. Dr. Latham considered this judgment mistaken, and that the German play really represents the Shakespearian play in its rudiments rather than its fragments. It is probably a translation of the English play of 1589, the text of which is now lost. He further stated that scene for scene, and sometimes dialogue for dialogue, the two plays in many cases coincide, and that many of the incidents and events, even to their more minute details, coincide likewise. Nevertheless, the nature of their exhibition is wholly different. In the German version there is no imagery, no trace or germ of poetry, and it offers nothing but a mere skeleton situation. In its external form we find: 1st, a metrical prologue in which Night and the Three Furies act in chorus; 2d, a different list of *dramatis personæ*; 3d, a subdivision of scenes which points to an older stage of the drama. Dr. Latham also thought that an allusion to Portugal which fitted the year 1589, and two classical allusions, were not likely to have been made by Shakespeare."

—The *Contemporary Review*—which, by the way, will hereafter bear for the American market the imprint of J. B. Lippincott & Co.—has during the last few weeks invited the public to an amusing farce in which Mr. Strahan, the publisher of the *Review*, and Mr. Robert Buchanan, the Scottish poet, are the actors. In the number for October there appeared an article "On the Fleshly School of Poetry," written in the good old-fashioned "savage" style, recalling the *Quarterly* in its worst days. The reviewer's wrath was directed generally against the new men, Morris, Swinburne, Rossetti, Robert Lytton, Matthew Arnold, and, though he is hardly a "new" man, "Festus" Bailey. Buchanan is also mentioned, but slightly, and, as is evident, merely to avoid suspicion. All these writers are stigmatized as followers and imitators of Tennyson, but as followers and imitators of what is weak and sensual in him, "Maud" and "Vivien" being the particular poems that have set all this prurient young blood afire. Having mercilessly slaughtered all the brood in general terms, the reviewer selects one in particular to be drawn and quartered, and that one is Mr. Dante G. Rossetti, to whom the bulk of the article is devoted, and of whom, when "Thomas Maitland," the signer and presumed writer of the article in question, has wiped his sword and put it back in its scabbard, there would appear to have been very little left. A paragraph appeared in the *Athenæum* for Dec. 2, stating that it was understood that Mr. Sidney Colvin (a well-known contributor to the *Academy* and to Mr. Hamerton's *Portfolio*) "was preparing an answer in the pages of the *Contemporary Review* to an article which had appeared in that *Review* signed Thomas Maitland, a *nom de plume* assumed by Mr. Robert Buchanan." Next week out comes Mr. Sidney Colvin with a scornful denial of any intention to do so futile and unnecessary a thing as to "answer" Mr. Buchanan's masked attack upon his brother poets. And now, the actors in the farce having all taken their places, we have the play played out in the *Athenæum* for Dec. 16. First, there is a long article by Mr. D. G. Rossetti, in which he defends himself against the sly critic of the *Contemporary Review*, and his defence is very moderate and gentlemanly. Directly following it, the *Athenæum* prints the following note from Messrs. Strahan & Co.:

> "56 Ludgate Hill, December 6, 1871.
>
> "In your last issue, you associate the name of Mr. Robert Buchanan with the article, 'The Fleshly School of Poetry,' by Thomas Maitland, in a recent number of the *Contemporary Review*. You might, with equal propriety, associate with the article the name of Mr. Robert Browning, or of Mr. Robert Lytton, or of any other Robert. STRAHAN & Co."

Under this disclaimer the *Athenæum* has the barbarity to print the following note from Mr. Robert Buchanan:

> "Russell Square, W., December 12, 1871.
>
> "I cannot reply to the insolence of Mr. Sidney Colvin, whoever he is. My business is to answer the charge implied in the paragraph you published ten days ago, accusing me of having criticised Mr. D. G. Rossetti under a *nom de plume*. I certainly wrote the article on 'The Fleshly School of Poetry,' but I had nothing to do with the signature. Mr. Strahan, publisher of the *Contemporary Review*, can corroborate me thus far, as he is best aware of the inadvertence which led to the suppression of my own name. Permit me to say further that, although I should have preferred not to resuscitate so slight a thing, I have now requested Mr. Strahan to republish the criticism, with many additions, but no material alterations, and with my name in the title-page. The grave responsibility of not agreeing with Mr. Rossetti's friends as to the merits of his poetry will thus be transferred, with all fitting publicity, to my shoulders. ROBERT BUCHANAN."

—The paltry figure cut by M. Thiers's government in its treatment of the press, which has differed in almost no respect from that of the Second Empire, may properly be left to Frenchmen to rebuke, as else the retort would be effectual that France had all the liberty she wanted. Camille Desmoulins, whom one fancies too honest and humane to have edited the *Lanterne* of his successor Rochefort, or to have regarded the Commune with anything but loathing and horror, printed in his revolutionary papers words of criticism which are just as applicable now as then:

> "The Parisians," he says in the *Lanterne*, "are like those Athenians who were told by Socrates: 'I am a physician, and plead against a pastryman; you are children, and therefore I shall lose my case.' Athenians of the eighteenth century, will you never understand the necessity of the indefinite liberty of the press? What is the surest pledge of civil and political liberty? It is the liberty of the press. And again, what is the surest pledge of it? It is the liberty of the press. And again? It is still the liberty of the press."

This definition, too (from the *Vieux Cordelier*), is by no means stale:

> "What characterizes the republican is not the age or the government in which he lives, but freedom of speech."

—We borrow from No. 34 of the Journal of the Geographical Society at Berlin a list of indexes to that part of the world's literature which must be sought, with constantly increasing difficulty, in the transactions and journals of learned societies. The earliest of these was Reuss's, which took in the eighteenth and the first years of the nineteenth century. In 1845 was published Walther's systematic index to the papers of all the historical societies of Germany, followed and in a measure completed by Koner, who gave the contents of more than 1,200 journals, as well as of Academic transactions and societies' papers on history and its kindred sciences, for the half-century 1800-1850; and the geographical portion of his index has been continued since 1852 in the *Zeitschrift für allgemeine Erdkunde*. Schubarth's "Repertorium" of technical literature for the period 1823–53 was published in Berlin in 1856, and from 1847 to 1865 appeared half-yearly the alphabetical *Sachregister* of the most important technical periodicals. A guide to periodical literature relating to statistics in the broadest sense of the term has now been begun by Dr. Engel, the well-known statistician of Berlin, in the shape of supplements to the Journal of the Royal Prussian Statistical Bureau, of which two have already appeared—"Repertorium für die cameralistische, insbesondere statistische Journal-Literatur für die Bibliothek des k. statistischen Bureaus in Berlin." The number of the Geographical Society's Journal which contains this useful list has no articles of very general interest. Two of them, by the African travellers Dr. Nachtigal and Gerhard Rohlfs, will claim the attention of those who are given to following explorations in that part of the Old World. The latter's route from Cyrene to Alexandria is laid down on a copy of Captain Spratt's admiralty map of the Libyan coast.

HECTOR BERLIOZ.*

THE life of a true artist is almost always a struggle—against circumstances, against fate, against enemies—a continual fight for bread and for fame. Of none was this more true than of Hector Berlioz, and though a sympathy with his musical ideas would naturally lead one to read his memoirs, yet, even should the reader become indifferent or averse to the story of his struggles, it will be impossible for him to leave it for its interest, or to end it without coming under the influence of his indomitable energy, and being ready to listen favorably to the music he composed.

Hector Berlioz was born, December 11, 1803, at the little town of Côte-Saint-André, near Grenoble. His father was a physician, and devoted much of his time to the education of his son, giving him, among other things, a taste for the poetry of Virgil which lasted him through life. The young Hector had a particularly impressionable nature; he once burst into tears over the pathetic scene of Dido's love which he was translating, and was unable to go on; and, at twelve years old, was violently, hopelessly in love with a young lady many years older than himself—a passion which broke out again suddenly and singularly at several intervals of his life. He was allowed by his father to learn the flute and the guitar, the only instruments available, and, great composer as he was, to the end of his life he never played on other instruments, even the piano. But when he began to study harmony, and to compose, his father, who destined him to medicine, began to be alarmed, and, after vainly trying to combat his prejudices, made a bargain with him, for a fine new flute, that he should study anatomy. At the age of nineteen, he went up to Paris as a medical student, in company with a cousin, and, at first, kept his promise to devote himself to his studies. But the first horrible day at the dissecting-room, and the first night at the opera brought back all his old ideas, and he threw up the scalpel to launch himself into the study of music. In so doing, he quarrelled with his father and his whole family. The father was angry that Hector would not pursue the respectable profession he had chosen for him, while the rest of the family were swayed by more illiberal ideas. To them, and especially to his mother, who formally cursed him, he was losing his soul by associating with actors and wishing to write for theatres, which were, in their eyes, the abomination of desolation. His father at last yielded so far as to give him a small allowance, which he from time to time withdrew when the expected success at the Institute did not come. It was only his final success and his European reputation that made his father finally forgive him and be proud of him. Berlioz, in the meantime, had made friends with Lesueur, and had become one of his pupils, and wrote a mass which, after much trouble, he got executed by borrowing 1,200 francs from an ardent friend.

At last Berlioz entered the Conservatory, and supported himself partly by giving lessons on the flute and the guitar, partly by singing in the choruses at one of the theatres, and, finally, by writing musical criticisms—being in the utmost need, and often dining off a crust of bread. After years of struggling, he made his way, and took a second and then a first prize at the Institute, in the midst of the Revolution of July. This prize compelled him to go to Rome, much against his inclination, for three years. Meanwhile, he was composing. He wrote the "Ouverture des Francs-Juges," the "Waverley Overture," the "Symphonie Fantastique," eight scenes from "Faust," operas, cantatas, and masses, many of which he burned soon after. He even had the audacity to give two concerts, which won him the friendship of Liszt, and made his name known. With his aggressive and enthusiastic nature, it may be imagined that Berlioz's life was not a quiet one; he had quarrels everywhere—in the Institute, in the Conservatory, in the orchestras. He hated violently what was false, and was never able to restrain himself. He defended zealously Gluck and Weber and Beethoven, who were laughed at by the musical world of Paris, and with equal vigor attacked the gods of the day, and among others Rossini, whose music he detested, and agreed with Ingres in calling it "the music of a dishonest man." He even thought of trying to blow up the whole opera-house and all it contained. The new path in which he himself struck out so boldly alarmed the old-school musicians, and, jealous as they were of young rivals, they did their best to crush him. Cherubini, who was then at the head of the Conservatory, seems to have had a natural antipathy to Berlioz, and many were the battles they had, and many the ill turns which Berlioz received from him. In revenge, Berlioz made him "eat several snakes," to use his expression. Berlioz has been accused of irreverence towards a great musician on account of some of the expressions he has used about Cherubini, as well as about Fétis; but where is Cherubini now? The conduct of Berlioz was that of a young enthusiast, just such as we have seen in later days in an ardent Pre-Raphaelite towards an over-praised painter of the old school—if not laudable in itself, at least excusable. What Berlioz has told of it in his "Mémoires" makes one of the charms of the book, for it is neither a confession nor a defence, but a straightforward, amusing story. The most demonstrative features of this part of Berlioz's life were his evenings at the opera, which he says "were solemnities for which he prepared himself by reading and meditation." He and some chosen comrades were early in their seats, with a knowledge of every note of the score, ready to applaud or criticise, in a loud voice, too, and in such a way that managers began to be frightened, and it was seldom that a good work was twice unfaithfully rendered. Truth they insisted on. On some occasions they excited regular tumults, and once the audience rose in mass, invaded the orchestra, broke the instruments, and drove away the musicians. Sometimes, too, Berlioz wanted to make converts, succeeding once, at least, with a neighbor whom he least expected to persuade, and whose enthusiasm he had difficulty in quieting.

By an absurd arrangement, the laureates of the Institute in all the arts were obliged to spend at least two years at Rome, where Horace Vernet was then the resident director. Rome was then of all places the least musical, given over to the worst kind of modern Italian music, and to an adoration for Palestrina, and not knowing or caring about anything better. A learned abbé of the Sistine Chapel said one day to Mendelssohn (whom Berlioz knew there) that he had heard people speak of a young man of great promise called Mozart. Life at Rome, and even journeys to Florence and Naples, all had a depressing effect on Berlioz; he could hear no music, and could not even compose. During his whole stay he wrote but three or four pieces. He was given up to violent attacks of what he calls the "mal d'isolement," a malady which will almost be revived with those who have once felt it as they read the description and analysis of it given by Berlioz. Nothing but constant excursions into the Abruzzi made his life endurable. There he climbed, hunted, talked with the peasants, played the guitar for their dances, and brought away a souvenir which he has left to us in his symphonic poem of "Harold in Italy."

No sooner returned to Paris than he gave a concert, met there Miss Henrietta Smithson, an English actress who had created a great *furore* at Paris by her Shakesperian representations, and with whom he had long been desperately in love. The story of that love he wrote in the "Episode de la vie d'un artiste." Miss Smithson was now ruined, and had broken her leg, but the love was still powerful, his symphony vanquished her, and Berlioz at last married her in spite of the opposition of his family. His domestic happiness was marred by his wife's jealousy, and for some time before her death they lived in separation. Poor enough before, Berlioz now had his wife's debts to pay, and had to have recourse to many means, among others to writing in the *Journal des Débats* charming criticisms, which have delighted us in "A travers chants" and "Soirées d'orchestra," but which he says were a great task to him. He gave benefit concerts, and at one of them made the acquaintance of Paganini, who grew fanatical over him, and asked him to write a piece in which he could play a solo on the *alto*. This led to the composition of "Harold in Italy," and when Paganini heard it for the first time three years after, he fell on his knees and kissed his hand before all the orchestra, and the next day sent him a draft on Rothschild for 20,000 francs. Berlioz was ill and in despair, and it needed a noble act of munificence like this to bring him to life.

These years were all painful. The "Requiem" succeeded, but there was no end of trouble in getting paid for it; the opera of "Benvenuto Cellini" was a failure; "Romeo and Juliet" could not be properly performed; there were disputes and quarrels and enmities, but, above all, debts and family jars. These last finally drove Berlioz, in 1841, to Germany, to try his fortune at concert-giving. The plan succeeded not only pecuniarily but morally, for everywhere, and especially at Leipzig, Dresden, and Berlin, he was received with open arms, and listened to with enthusiasm. This new fame strengthened him for the struggle at Paris. After that there were con tinual journeys—through France to Germany again, Vienna, Pesth, and Prague, and even to Russia, and after that again and again to Germany and England. These journeys, as one may well suppose, were full of most amusing incidents. As Berlioz was leaving Vienna for Pesth, an amateur told him that if he wanted to please the Hungarians, he should compose something on one of their national airs. Berlioz followed his advice, and, choosing the air of Rákóczy, wrote, the night before his departure, the march which serves now as finale to the first part of his legend of “Faust.” The effect of the theme introduced *piano*, and then reappearing in broken fugues in a long *crescendo*, interrupted by the sound of distant cannon, and finally terminating in a furious *fortissimo*, was far beyond what had been expected, and the Hungarians became almost crazy with excitement. This was in 1846. The news of the exhibition of national feeling flew to Vienna, and Berlioz had hardly arrived there before he received a hasty visit from the same amateur, who was in a comical state of anxiety, and begged him not to let it be known that he had suggested the composition of the Rákóczy March, as he would be badly compromised, and might suffer from it. This was not the only time that Berlioz's concerts were suspected by the authorities. The introduction of a chorus from Halévy's “Charles VI.” in a concert at Paris led to the censorship of all future programmes; the language of the dead—mere incomprehensible words—in one of Berlioz's choruses gave great trouble to the Roman authorities, who called in German, English, Swedish, Russian, Irish, and Bohemian interpreters to try to explain it; the Latin student-song in “Faust” was prohibited by the censorship in Moscow as immoral.

---

* "Mémoires de Hector Berlioz, Membre de l'Institut de France, etc., etc." Paris: Michel Lévy Frères. 1871. 8vo, pp. 509.

A trouble of another kind befell Berlioz in Moscow. He applied to the marshal of the nobility for the use of the hall of the nobility assembly, the only good concert-hall in Moscow. The old man consented, on condition that Berlioz should play afterwards at a private reunion of the nobility. In vain Berlioz represented that he played on no instrument. “Impossible! how then give a concert?” A second and a third interview had no better result, even when the marshal's wife was brought in to aid, and Berlioz finally said that he would play a solo on the guitar, flute, or flageolet—instruments he had not touched for twenty-five years—or even on the bass-drum, if only he could have the hall. Fortunately, a general came in, and succeeded finally in getting an exception made, for once only, to the rules of the assembly. The concert was given, and brought Berlioz eight thousand francs, but he could not give another, though strongly urged by every one.

At Paris again there were new struggles. Berlioz organized monster concerts or festivals, brought out the “Enfance du Christ,” one of his very best works, “Romeo and Juliet,” and the opera of “The Trojans,” suggested by his early readings of Virgil, the receipts of which enabled him to give up his place on the *Journal des Débats*, and he finally won his chair at the Conservatory and his seat at the Institute. The deaths of his father, his sister, his only son, and of his second wife left him desolate and alone, and he had recourse to constant musical journeys. It was in one of these, in Moscow, in 1868, that the writer had the pleasure of seeing him direct a concert of the Musical Society, and also a monster concert in the immense Riding School. Berlioz was then feeble, but when he led there was a vigor in all his movements and a fire in his eyes, half-concealed as they sometimes were by his long white hair. As a conductor Berlioz was admirable—one of the few who knew everything about the glorious instrument on which he played, and could develop every part of it. In orchestration he was an acknowledged master, and all the latest musicians, save Mendelssohn, Meyerbeer, and Liszt, owe much to him. His work on instrumentation is the received authority. As a composer, Berlioz, like Wagner and Liszt, is the legitimate product of the ideas which inspired Beethoven, and, like each of them, is perfectly independent and has worked out his own way. His style and his genius are his own. The continual pressure of his life prevented him from writing much, and he never did what he might and what he ought to have done. As a critic and a writer, he possessed the faculty of expressing himself clearly, with vivacity and humor.

THE WANDERER.*

WE have heard of an intending contributor to an American periodical publication who, when his contribution was returned to him, sent a note to the editor, informing him that the verses declined with thanks had been much commended by a certain distinguished literary person; whereupon it was replied to the poet that his expostulatory remarks revealed a complete ignorance of the nature of the editorial mind, which in that instance, for example, was so far from being induced to revise its judgment of the verses in question on learning the opinion of the distinguished literary person, that, on the contrary, it reaffirmed its judgment, and simply was filled with contempt for the distinguished literary person's taste. We are reminded of this story by the action of Mr. Channing's editor in securing from Mr. Emerson a laudatory preface to the volume before us. “The Wanderer” requires “a good reader,” Mr. Emerson tells us, and such a reader “will find himself rewarded.” Very likely it will not be found “a sure prize to the circulating libraries,” but Mr. Emerson “confides that the lover of woods and hillsides and the true philosopher” will admire it greatly, and read it with pleasure. We, for our part, confess that we should be inclined to justify any one brought face to face with the dilemma presented by Mr. Emerson who should evade it, and decline to make Mr. Channing's acquaintance at all. It looks to us rather hard that the reader must either like “The Wanderer” or else sit down under the imputation of being no philosopher; or a false and incompetent philosopher. The preface appears to be a mistake. Not that most of us are unwilling to hear what Mr. Emerson has to say about a given person's poetry, but that few of us can be told without resenting it a little that the poem which we are about to read is so much above the common run of poems that we may very probably not like it, in which event we shall have shown that so far as our intellectual outfit is concerned we are no Platos, while as for our taste, that, it is clear, has become sophisticated and incapable of enjoying natural, unmeretricious beauty. “I can easily believe,” the preface says, “that many a reader, and perhaps writer, of popular poetry will, after brief experiment, turn away with disdain from this rude pamphlet, and thank his stars that his culture has made him incapable of pleasure from such charcoal sketching.” And then it is added, in substance, that there is so much of valuable thought in Mr. Channing's poetry, and so much that is beautiful in it, that the cultured person above mentioned must be very deficient in true cultivation. This being laid down as the state of the case, how is a person going to say that he desires to thank heaven that education and culture have so far refined and strengthened his native intelligence and taste that he for one would be extremely sorry to acknowledge as his own about three-fifths or two-thirds of Mr. Channing's poetry? The editor must own that he has made the task of so doing unnecessarily difficult, and, as we say, might better have let Mr. Channing speak for himself without prologue.

Take, for example, of the larger proportion of Mr. Channing's poetry, his philosophizing about a certain personage of whom our readers have heard a good deal and, indeed, “several of whom” they may have seen:

“Appropriate transcript of the natural man,
Hero of the old days! There he dreams—
The antique figure, carted from his bed,
Dreams of the time he shot the hippogriff
Trooping about his plains heavy with nightshade;
Or in his torrid swamps bestrode that beast,
The ichthyosaur, and listens to the yells
Of sharp hyena with the savans' talk,
As they debate his bones, and draw the plan
On which young nature laid his wide expanse.
Now drifted to the cities, he may hear
The swarm of pygmies buzzing at the door,
And, for the peal of ages on his case,
Remark the civic clock, politely tuned,
Shoot forth meridian time; the frantic crowd
That worry by his weight breathless to add
A blossom to their days, while his fell off
Or ever Adam gave the palm to Eve.
Fearing the myth, they ridicule his age;
Less credible, they deem a hero dead
Than insects scarce conceived.

“Far eras gone,
Magnificoes like this, old earth put forth,
That pave the brooks in Cardiff to this hour.
Races cropped out, and steady came the dream—
The giant; the Goliaths fought and fell;
Vain was the search, while every shape of beast
Reckoned incredible the soil produced.
The civil congregation fed and died
In war and peace conceiving; but no work
Of sculpture ere the flood, or man of mould
Twice in his stature topping o'er the kind,
Till that good farmer of the Cardiff vale
Flat in the boggy drain barely concealed,
The fossil creature found. Model the form;
Brow of Caucasian eminence and depth;
His figure average in Camper's scale;
And neck and skull right as a theory.

“Behold the entrance of a form in light,
From nations gone ere China or Japan
Baked clay pagodas, and, delightful gleam,
Bushels of Indian hatchets sank to please
Detective Lyell in the Amiens sand,
Or Switzer lake enjoyed the pile-built town.
Form water-worn; the mouth half eaten out,
And half the arm; the soles all honey-combed;
The stone of easy grain, and wrought with art.
More as some serious Roman looks it there
Than the brief creatures flitting on the streets
Bandaged in narrow garments fit to hide
Their scanty moulding. For that native drape
(Such as it is) outdoes the Roman baldness
Ere wig or peruke troubled the occiput.
And never in the brilliant forms of stone
That crowd the Vatican more royal shape
Of young Augustus, or Vespasian stern,
Or Sophocles—the tall, commanding Greek.”

---

* “The Wanderer. By W. E. Channing.” Boston: J. R. Osgood & Co. 1871.

Fairly on a level with this profitable scientific excursus upon "John Henry" Cardiff, as the newspapers christened him, are Mr. Channing's views as to "war," which, so coherent and radically sensible are they, would do credit to a Peace Society met to express sympathy with stricken France; and there are numerous other subjects which are not very differently handled by our author, as the rights of woman; wealth; certain ethnological theories; various religions; "the tiresome 'Hamlet'"; "the holy Puritan," of whom, as being a canter and an abater of the Indian, Mr. Channing is not fond.

In dealing with these and similar topics, the poet shows far more of that "talent for causing surprise" which Mr. Emerson mentions as an essential talent of poets in general, and far more of his "invincible personality"—or his uneasy need of self-assertion—than he shows of any really good essential qualities of the poet; more, for instance, than he shows of talent for causing that sort of surprise which is succeeded by the surprise at ourselves for not knowing, till we found the poet expressing them, that we already knew of this beauty and truth which in his words have found happy utterance. But it is true, too, that with all his affectations and perversities—as of deliberately crippled metre—and all his unjustified egotism and his unregulated thought, Mr. Channing's poem is worth the perusal of lovers of poetry, and will indeed give them, *et nobis judicibus*, a good deal of that pleasure which Mr. Emerson promises them. Often it seems to us to be very true to the chill, winter beauties of the New England side-hills, the cranberry swamps, the lonely, unmajestic woods where nature seems to speak her mystery the more plainly in that she never gives herself the fulness of definite expression that she uses in other lands. A good specimen of our author's successful manner is the passage beginning thus:

" . . . . Doth the wind
Blowing across the pasture where the bent,
Long frozen to its core, sighs through the ice.
Survey the landscape? Care if green or gray?"

The last part of it we will quote, and we suppose no one will like it the less on account of its reminding him of another chickadee who has been similarly moralized by another American poet. We may remark that to us the passage seems characteristic as well as good. We think it may serve not only to please as poetry, but also to indicate a trait of Mr. Channing's poetry by indicating a difference between him as a poet dealing with natural scenery, and another poet admirable in the same field. We mean Cowper, the recollection of whom, by the way, Mr. Channing too often calls up by the employment of a diction which we wish his "invincible personality" had prevented his borrowing from Cowper, and Cowper in the last stages of Latinity. One of the elder poet's pictures of nature Mr. Lowell has happily praised as being a good *human* bit of writing. In Mr. Channing's verse, on the other hand, his landscape usually retains all its bleakness, its bareness, its uncompassionate remoteness from the warmth of human sympathies. Or, if his landscape does give us more than its mere self, more than

" . . . . the wind
Blowing across the pasture where the bent,
Long frozen to its core, sighs through the ice";

or the hillside, once wooded, now covered

" . . . . with brush new risen;
Small saplings and thin bushes, where the leaves
Hang mournful through the winter";

or the winter swamp, where still lingers

"The pensile cranberry, redly bright";

or the stern January sunset:

" . . . . the unthinking cold,
The ruddy glare of sunshine in the west,
And the first flicker of the icy stars,
While the pale, freezing moon calmly assists
To point their rays more sharp; . . ."

or

" . . . . a savage air
Amid the ice-clad boulders on the snows";

or

"The russet fields, parched in the July sun";

—if, we say, Mr. Channing's landscape-painting does at any time give us more than the landscape itself—if it informs the scene with something of human interest, the thought or sentiment is rather more apt to be such as to increase the loneliness and the chill. This we say without forgetting that many pages of "The Wanderer" overflow with the noblest sentiments. Priesthoods, however, monarchical governments, the cruelties of War, the hard-heartedness of Opulence, and the sinfulness of other forms of wickedness may be reprobated with great vehemence, and the divinity of humanity asserted with zeal for pages together, without persuading the critics—

" . . . . a race distract,"

Mr. Channing says they are, for which we call on the fraternity to remember Mr. Channing—that the verses are warm with much of the soft blood-heat of friendliness and kindliness. However, *non omnes omnia;* and we were to quote a certain specimen of Mr. Channing's skill:

"Yet mark the titmice—
Smallest of the tribe, mere specks of feathers,
Bits of painted quill, so delicate, a flaw
From either pole would extirpate the race:
Such little twittering mites contemn the storm.
That wintry moth I never fail to find,
And the hard snows have spiders of their own.
Let any thaw ensue, how green the plants
That, mid the russet grass, put forth their leaves,
Spreading resigned their verdure! clovers bright
And veiny hawkweeds, and soft, drooping ferns;
And down the brook, the wild-cress moving free
Where'er the ice-chink lets the traveller's glance
Peruse the inward pages of the stream."

This certainly is much like being in the woods and pastures themselves, and beside the frozen brooks.

One other passage we had intended to quote, as containing better thought than most of Mr. Channing's verses—and yet thought at the same time characteristic of him and his school, while also it has the merit, already pointed out as Mr. Channing's chief merit—that, namely, of sharply and accurately transcribing noteworthy appearances in nature. But we prefer, on the whole, to quote another passage; one of the not large number which contradict our remarks about the lack of human sympathy in the landscape of "The Wanderer":

"Afar upon the sky the unmoving ship
Stands leaning, her place unchanged, still leaning;
And so she stands until below the line
Of that lone horizon she silent falls;
And some fond mother's heart watching her sail,
And children's prayers that guard a father's life.
He hears the billows grating on the keel.
With their gay sheets of foam and splashing lights,
The Gulf Stream past, where over Pico's cap
Sail the rich odors of the Western Isles,
And sweeping showers that cut like wings of steel;
And the long steady gale that never lulls,
Drawn through the rigging with its awful moan,
Most like the concert of the monarch pines
That line Katahdin's walls, when the nor'westers
Scourge that woodland brig: these sounds he hears,
These sights, unmoving, sees; Neptune forgot,
Thinks of his mother knitting by the fire
In his far-sheltered cot, his wife, who lists
As o'er his cottage-roof tears the wild gale,
And hears the children, 'Mother, the storm!
Will father feel the gale?'—'My child, my child!'
And folds them to her heart. O mother dear!"

DE VERE'S AMERICANISMS.*

OUR author was right in thinking some apology needed for the publication of this book after what he calls Mr. Bartlett's "admirable and exhausting [*sic*] work" in the same field. His excuse is, that the last ten years have greatly enriched the peculiar vocabulary of our Greater Britain, and that the additions made to it in that period seem to him worth recording before they pass either out of memory or out of common use. This would be a good reason for supplementing Mr. Bartlett's Dictionary, which was reasonably complete up to the year 1860; but it is not exactly the justification we might expect for compelling us to buy the Dictionary, as shuffled and worked over and mutilated by Professor De Vere, in addition to what the latter has new to offer, and for so mixing the two that a great deal of precious time must be wasted in separating them. Prof. De Vere doubtless felt that his own contribution was too meagre to make a book by itself, and doubtless, too, the consideration had weight with him that his borrowings from Bartlett would be less conspicuous and have more the air of an original compilation if he dispensed in the main with the dictionary form, and, taking his predecessor's vocabulary to pieces, distributed it under sundry heads according to the real or supposed origin of each Americanism. Not that he has not acknowledged his general, and even occasionally his special, indebtedness to Mr. Bartlett, but the two instances which we cite below will show how he has used him while affecting not to use him, as if he had in mind an infringement of copyright which could be avoided by recasting. Of the word to *snake*, we read, on p. 213 of "Americanisms":

"Major Downing, in his *Letters*, uses it as a political effort, when he says of his great hero, General Jackson: 'We *snaked* him out of the scrape as slick as a whistle.'"

The obscure phrase, "uses it as a political effort," is a characteristic attempt of our author to distinguish shades of meaning that do not exist; but this is what we find on p. 422 of Bartlett (3d ed.):

"Major Downing says, in speaking of a person who fell into the river: 'We *snaked* him *out* of that scrape as slick as a whistle.'—*Letters*, p. 14."

Again, p. 302 of "Americanisms":

"A broker from Wall Street was *on hand*, and tried to pray, but he broke down half-way in the Lord's prayer, and there seemed to be no one able to assist him (N. Y. *Express*, August 11, 1856)."

---

* "Americanisms: The English of the New World. By M. Schele De Vere, LL.D., Professor of Modern Languages in the University of Virginia, author of 'Studies in English,' etc." New York; Charles Scribner & Co. 1872.

P. 303 of Bartlett, where the first illustration of the word is taken from the N. Y. *Express* :

> "A broker from Wall Street was *on hand* at the meeting, and tried to pray, but, from want of practice, could only utter disjointed sentences about the money market, etc.—*Doesticks.*"

The Professor, however, is not more loose in his quotations than in his classifications, which overlap each other continually. Thus, "The Great West" has a chapter to itself, though no other section of the country is thus favored; and yet there are co-ordinate chapters entitled "The Church," "Politics," "Trade of all Kinds," "On the Rail," "Afloat," "Natural History," which of course embrace numbers of words either native to the West or else as much in use there as in any other part of the United States. And after all, the odds and ends have to be scraped together into chapters called "Old Friends with New Faces" and "Cant and Slang." The opening divisions are perhaps the best, viz.: "The Indian," "The Dutchman," "The Frenchman," etc., but even these are not strictly adhered to. Thus, under "The Indian" we have remarks on the *shagbark* and *butternut*—names anything but Indian, and which properly belong under the rubric "Natural History," where in fact the latter is repeated; also on *gumbo*—"a word which, Indian or not," says the Professor naïvely; also on *calico*, because it has an East Indian origin. Carelessness of this kind prepares us for recklessness in greater matters, and for such sweeping assertions as these, which might easily be multiplied :

> "To go *shopping* is perhaps the only phrase in which the humble word [*shop*] yet survives; everywhere else it is disdainfully put aside" (p. 302).
>
> "On the other hand, the English use of *beaver* for a hat has entirely ceased, giving way to 'gossamer,' or, in modern slang, 'goss,' while the term is still used in the South and among old-fashioned people" (p. 208).
>
> "The word 'spire' is hardly ever heard in America" (p. 233).
>
> "While this [*conductor*] is his official title, he is universally addressed as *captain*, for Americans insist upon carrying the analogy with the steamboat, with which they were universally familiar long before railroads existed, through all the details" (p. 358).

Nor is the habit different when, instead of usage, the question is of derivation. "Evidently borrowed from the ledger," he observes of the phrase *of no account*, and then gravely wonders "why the Southern States, which are naturally much more given to agriculture than to commerce, should so especially affect the phrase" (p. 309).

A good many of Prof. De Vere's blunders, among which we may include the foregoing, must be ascribed (and of course forgiven) to his being a foreigner, though we think this fact should have admonished him to narrow his field when dealing with such a subject as "Americanisms." From some of them, nevertheless, it would seem as if his long residence in this country should have kept him free; and good-breeding will not be able to repress a smile at finding "a checkered fabric of cotton" identified with the *checks* which Jim Bludsoe "passed in,"

"The night of the Prairie Belle."

It is no disgrace, certainly, to be unacquainted with the language of faro, but an adopted Southerner should hardly remain in doubt "whether the *buck negro* obtains his name from the animal or from the general meaning of *buck* as a slang term for strong or lusty," whereas the word simply denotes a male. And a Confederate sympathizer cannot readily be excused for confounding the *Stars and Stripes* with the *Stars and Bars*, as is done on p. 258. A reference to "Familiar Quotations," too, would have informed the Professor that *not* General Harrison but W. L. Marcy "is generally credited with having first used the phrase," though neither "first applied the principle, that *to the victors belong the spoils.*" A Northerner would not admit that Copperheads were "so-called from the *contempt* entertained for the snake that bears that name, or from the poor Redman, who used to be thus stigmatized." A Westerner would not pretend that "*to make tracks* is a metaphor drawn from Western life, and refers to the importance attached to trails, tracks, and signs of every kind in all regions where Indians and wild beasts have still to be encountered."

This last definition is a fair specimen of the padding with which the book under review abounds, and to which it would not be possible to do justice. At times it shows itself in amusing presumption of the reader's ignorance, as in this extract (p. 298): "A somewhat stronger term for the same operation [*chiselling*] is *gouging*, the figure of speech being evidently drawn from the carpenter's shop, where it means to scoop or chisel out with a hollow cylindrical tool"! At itmes the presumption is irresistibly the other way, as in the following bit of absurdity and bathos:

> "The almost boundless liberty with which Americans use the words of their language was recently shown with painful impressiveness. In a fearful catastrophe which happened in February, 1871, on the Hudson Rive Railway, all the horrors of the disaster and all the grief for the numerous victims could not efface the deep impression made of the useless but noble heroism of the engine-driver, who refused to escape, stood by his engine, and plunged with it into the abyss. It appeared afterwards that, in discussing with railroad-men the expediency of jumping from an engine in time of danger, Doc. Simmons had once said, 'I would squat!' He meant he would *squat* down behind the boiler, and trust to going through with whatever might obstruct the road, after having pulled the brakes, reversed the engine, and opened the throttle."

What with its padding, its false and entirely untrustworthy derivations, its slovenly citations, and its numerous and gross typographical errors, "Americanisms" is a work of very limited value to scholars, and of very great capacity for misleading those who are not, and especially foreigners, who could never pick out the current from the obsolete expressions. It would be much more worthless than it is but for the liberal co-operation of well-known philologists, whose contributions, however, have not wholly escaped the author's propensity to blunder. As a mere catalogue, it may be consulted for words or definitions not contained in Bartlett—*e.g.*, *filibuster*, in Congressional usage; *texas*, of a boat; *cavort*, etc.—but, on the other hand, it cannot be said to contain all that was important in Bartlett. For example. the word *saddy*, peculiar to Pennsylvania and the adjoining States southward, and a living Americanism, is unnoticed by Prof. De Vere, perhaps because he could throw no light upon it, though it is heard in Virginia. Following Bartlett, he makes no mention of "codfish aristocracy," or that indefinite intensive, "like Sam Hill." In defining *infare* as a minister's installation, he omits its other and broader meaning of a wedding festival; speaks of "eye skinned" but not "eye peeled," of "brevet-hell" but not of "brevet-horse" (*i.e.*, a mule), of "molasses stews" but not of "candy scrapes," of an "Indian giver" but not of an "Indian memory," of *fandango* as a dance but not as a swing, of "rake up the persimmons" but not "take the persimmons," of "Taunton turkey" but not of "Cape Cod turkey" (*i.e.*, codfish). "Up and dust," which appears incidentally in a quotation on p. 177, is not pointed out as an Americanism. "Spanking bays," p. 321, are so called not on account of their showiness, but for their speed, as we speak of a "spanking breeze." To "knock out the wedges," p. 320, is a remarkable instance of padding; the phrase is not an Americanism, it is not "used to express a painful embarrassment," and the passage cited from Lowell (in which it appears as an ordinary poetical metaphor) is no proof of either the one thing or the other.

An intelligent proof-reader could not have let pass very many of the errors which disfigure this volume. On p. 113, in the stanza from "La Belle Layotte," the last line but one appears thus distorted :

"Mo *pamor* ouar *grifforme* là,"

though *pancor* is printed correctly three lines above, and the masculine of *griffonne* on p. 107. The professor of modern languages may, perhaps, disclaim responsibility for this and similar errata, but the muddled poetical extracts and the mangled proper names must chiefly be charged upon him. A man of letters of his pretensions should not allow such misspelling as "Dale" for Dall, "Brett Harte" for Bret Harte, "Newalls" for Newell, "Howell" (twice) for Howells, "James Grant White" (twice) for Richard Grant White—an "acute and positive scholar," to whom he does the further injury of referring to his work on "Words and their Uses" as "Words and their Meaning," though also by its proper title, giving the reader his choice.

STIMULANTS AND NARCOTICS.*

VON BIBRA'S statistics of stimulants, given in "Die narkotischen Genussmittel und der Mensch," show that all nations, and nearly all adult persons, make daily use, in Dr. Anstie's phrase, "of some substance to which the term stimulant-narcotic may be applied in the strictest accordance with what we know of the nature of drugs." These statistics, quoted *passim* by Dr. Beard, are as follows:

"Coffee-leaves, in the form of infusion, are taken by two millions of people; Paraguay tea is taken by ten millions; coca by ten millions; chicory, either pure or mixed with coffee, by forty millions; cacao, as chocolate or in some other form, by fifty millions; hashish is eaten and smoked by three hundred millions, opium by four hundred millions; Chinese tea is drunk by five hundred millions. All the known nations in the world are addicted to the use of tobacco," and we may add that the same is true of alcohol. Tobacco is used by a larger number of the human race than any other article except salt; the use of wine is more general than that of bread; and whiskey is consumed by more persons than the potato.

Now this may be a very melancholy or a very hopeless account, but it is incontestably true; and it is also true that, in the words of the same author, the everyday use of these substances is no "outgrowth of modern corruption. There is absolutely no period of history, as there is absolutely no nation upon earth, in which we do not find evidence of this custom." But Dr. Beard, in addition to the favorable presumption based upon this general use of stimulants, argues also that their use grows more general with the progress of civilization, and that they are the most used by those nations which are foremost in power and in culture.

---

* "Stimulants and Narcotics, Medically, Philosophically, and Morally Considered. By George M. Beard, M.D." 16mo, pp. 155. New York: G. P. Putnam & Sons. 1871.

Dr. Beard adopts the distinction drawn in Dr. Anstie's valuable treatise upon the same subject. That distinction may be stated as follows: The effects of the substances we have named, which are all of the most important stimuli, are divisible into two classes—stimulation and narcotism. These are entirely different in their character: one is beneficial, the other hurtful; one physiological, the other pathological. Though the latter condition is produced, as a rule, by a larger dose of the same substance which produced the former one, yet the difference between the effects of the two doses is not one of degree, but one of kind. Stimulants are those agents which correct, economize, or intensify the forces of the system. Narcotics are those agents which produce a greater or less degree of paralysis of some portion of the nervous system. Stimulation is followed by no reaction; narcotism, unless fatal, has a reaction. The signs of stimulation are relief from fatigue, irritation, and pain, improvement in sleep and in nutrition, and increased capacity for mental and physical toil. The signs of narcotism are flushing of the face, dilatation of the pupil, mental disturbance, convulsions, delirium, and stupor, which may terminate in death. Each of these essentially different conditions, stimulation and narcosis, may be produced by the same agent. Whether the healthful or the morbid symptoms shall result is determined primarily by the amount of the dose; but its effect will vary with the age, the sex, the temperament, the habits, and the condition of health of the individual. Dr. Anstie in effect declares that the same substance which as a narcotic is poisonous, answers, when taken in properly stimulant doses, to the scientific definition of a food.

By means of this striking distinction, if it be well founded—and we can at least say that no destructive criticism of it has yet appeared—we may be able to reconcile the debate which rages around the question of the use of stimulants. It may become possible, in this way, to decide the practical question between temperance and total abstinence. Dr. Beard pursues the argument as follows: The sciences of chemistry and physiology cannot as yet tell us the precise functions which stimulants and narcotics play in the system. We are not able to build up any complete science of diet. Had we to wait for chemists to determine by experiment what we should eat and drink, we should starve before the simplest substances could be proved, beyond the possibility of a question, to be innoxious. To demonstrate by experiment the part that pure water plays in the human system would be the labor of years; and we need not wonder that science finds the enquiry into the functions of alcohol a difficult one. Scarcely a theory in physiological chemistry is secure from the danger of being superseded to-morrow by another theory. It is, therefore, unwise to postpone conclusions respecting the question of stimulants until full scientific demonstration can be made by means of experiment. We can only decide by studying the experience of the world; and we must lay aside our prepossessions in this as in the case of any other important enquiry.

Dr. Beard admits the fact that all stimulants and narcotics contain poisonous active principles, and that it is for the sake of these active principles that they are so eagerly sought. He points out that this does not affect the question of their use. Phosphorus, one of the most active of poisons, exists in fish and in meat, and carbonic acid in the purest atmospheric air. Poison lurks in the loaf of bread, and bursts out of the earth with the herbs and flowers. Of the fourteen elementary substances that enter into the structure of the human body, nearly all are poisons, "agents capable of producing a morbid, noxious, or dangerous effect upon anything endowed with life." We cannot eat an ordinary meal, or bathe in the sea, or drink a glass of water from the spring, without taking into the system more potent poisons than those which stimulants contain. The question, therefore, cannot be settled by this chemical argument. Again, stimulants have the power of sustaining the system, and, within certain limits, can take the place of ordinary food. Von Tschudi, a trustworthy observer, states that an Indian, sixty-two years old, worked for him five consecutive days and nights, with little sleep and no ordinary food, sustained by the coca that he chewed, and that at the end of this time he was well, and able to undertake a long journey. The instances of sustaining power derived from this stimulant are particularly striking; but they are as frequent in the case of nearly every other grand stimulant.

The influences of age, of sex, of race, of climate, of health, of temperament, of habit, of idiosyncrasy, as modifying the effects of stimulants, are next briefly discussed, and the author points out the causes of intemperance, as existing mainly either in bad organization or in disease of the brain. In another chapter, the relation of intemperance to forms of government and of religion, and to illiteracy, is examined. In this respect we are, according to Dr. Beard's showing, in a bad way. There are in this country four and a half millions of persons over ten years of age who cannot read or write, and this enormous illiteracy is increasing, even in New England. In the last chapter, Dr. Beard enquires whether stimulants and narcotics have been, on the whole, beneficial to the human race, and, by implication, whether temperance or total abstinence is the wiser doctrine. Few questions more delicate or important than this can be entertained by the physician. To its answer a certain degree of courage is necessary in the case of a writer who, seeing the ruin that intemperance works, sees also that the recommendation of total abstinence, in view of the facts that we have recited, is idle as a preventive means—idle, except in the case of confirmed habits of excess, where total abstinence, enforced if necessary, is often the only cure. That to recommend total abstinence as a prevention of drunkenness, is to recommend the impossible, is apparently the conviction of Dr. Beard, though he has not stated it so directly as this.

The mass of fact—in the legitimate sense, rather than in that in which Mr. Parton uses the word fact—is large and varied, though it is not arranged after the most logical method. There is, indeed, a scrappiness about the book, but it gathers together much information upon the subject. A little less of American timidity, a little more of German or English boldness in stating the author's convictions, would have given this work greater interest. We could wish, too, that Dr. Beard had made it better in point of style, and added some original researches to those which he has collected; as, for instance, into the precise nature of the stimulus afforded by the chicory root. Still, this handy volume, though in no sense an original work, is a well-advised compilation, and happily combines the scientific and the popular character; and we have so lately criticised, in Dr. Alonzo Calkins's book upon stimulants, what is probably the worst existing account of this subject, that we are not in the mood to complain that Dr. Beard's is not the best.

LUDWIG'S STUDIES OF SHAKESPEARE.*

IT is nothing new to find a good book on Shakespeare coming out of Germany. It is a fact that is often explained by the convenient theory of race. But if that were the solution, we should find more and better criticism of Shakespeare in English writers, who are more nearly related to Shakespeare, than in the Germans, who, as it is, have far surpassed the English-speaking people in acute criticism and genuine admiration. With us Shakespeare is more nearly the shadow of a great name than he is with them. We go to the theatre, not so much to see his plays as to admire some actor, or to be dazzled by some ingenious theatrical apparatus. He is read, of course, but much as Homer is read—honored more by our traditional respect than by our frequent resort to him. If in Germany it is very different, if he still holds his place on the stage, and exerts a living influence on nearly the whole people, there must be some sounder reason than mere kinship to explain this difference. A truer explanation would be the higher æsthetic cultivation of the German people. That this is widespread, the popularity of Shakespeare proves; that it is deep, is shown by the profoundity of German criticism. Mr. Lowell, who has himself written the best words in the language on Shakespeare, has already called attention to the merits of their criticism, and this book simply confirms us in our admiration.

The author was a playwright, but, being more critic than poet, he soon felt that his work was unsatisfactory, and sat calmly down to find the causes of his failure and the proper method of work. This volume, a collection of notes, often hastily written, at times as crude as remarks in conversation, is the result. The subjects that he discusses are various. They are tragedy, the real tragic interest, the delineation of character, the difference between what in our poverty of speech in æsthetical terms we must call the "naive" and the sentimental poet, between the realist and the idealist—or, to take the example most frequently used by him, Shakespeare and Schiller. No mere enumeration, however, can do justice to the variety and ingenuity of his remarks. Then, too, their brevity and lack of connection, the fact that this is more a note-book than a book, make it more difficult of analysis. He was a man determined to investigate for himself, to take nothing for granted because it had been often said, and, in consequence, his book is one of the most suggestive that we know. That is in general the quality of books of intelligent criticism, because they only show us what we are perfectly able to see of ourselves, though, perhaps, we should never have noticed it, just as the poet shows us only those feelings with which we are all familiar. Ludwig reminds one of Lessing, but with this advantage, that he needed only to investigate, not to destroy, while Lessing had to be always busy in attacking what now in Germany are forgotten idols.

---

* "Otto Ludwig: Shakespeare-Studien. Aus dem Nachlasse des Dichters herausgegeben von Moritz Heydrich." Leipzig. 1872.

To justify our praise it will be necessary to give some quotations from this work, and in so doing we must apologize to the reader, because selection is difficult where all is so good, and where, in spite of the lack of formality in the treatment, the real connection is so close. Moreover, æsthetical works are not easily translated from the German into the English, since in that language the terms connote so much more than they do with us. Take, for example, the word "ideal." In English, it is almost sentimental: the German "Ideal" is far richer in meaning. And that is but one instance out of many. Here are some remarks on poetical objectivity which we translate:

> "In fact, the poet can give us nothing but himself. The objectivity of the poet can only lie in the form of the representation. What he as a human being has himself experienced he represents as a poet, as existing outside of himself. If he is a genuine poet, he will make no copy of ordinary reality; he will be able, with but little difficulty, to transform it into poetry. If ardor is to be expressed, the poet can indeed only give a reflection of his own: the soul is on fire, but the hand is firm and cool. He expresses the symptoms of the sensation as he noticed them, by means of language. In treating of anger, the poet should especially remember that he has to represent this anger by the medium of an angry man. He has to give us not the material of anger, but this external appearance. The naïve poet appears objective on account of his apparent lack of intention, his apparent indifference to attaining his aim. Flowers in a secluded spot give us the impression of naïveté and objectivity, because their beauty does not seem intended for any observer. That is the charm of nature. What wonderful notes in the throat of a bird that perhaps no one ever hears! . . . On the other hand, one notices how the sentimental poet tries every means to make himself noticeable; how he lays on one side everything that might hide him from the spectator, in order to show all his charms, his fine feelings, his wonderful intelligence. His *self* is the medium. He says: 'See, this object seems beautiful to you because I, the beautiful, am the mirror of what is common. But just look, the thing is very common. I am what is really beautiful.' In the naïve poet is the genuine holiness of nature. He sings as one does at church—for himself; the sentimentalist is like a soloist in the choir. The naïve poet sings as the bird sings, the sentimental poet like a concert-singer—the one out of an inward impulse, the other in order to be admired; and, too, when he appears naïve, it is with this intention. This is the difference between Goethe and Schiller: one goes in his natural form, the other dresses himself very simply."

Here, again, is a description of the difference between Shakespeare and some of his successors:

> "Shakespeare is the mirror, not the reflected image, of his time. He shows us dramatically the passions of his time in the struggles of contending and suffering men; but never is he carried lyrically into the contest which he is representing. And this is true, no matter how wonderful the power with which he enters into his characters, so that, as Germans say, he thinks their thoughts and speaks their words. The public are his jury. The whole case lies before them; it takes place before their eyes; no motive is hidden from them; no attempt is made to spare or to deceive them. We see what the guilty one was before his error, the kernel when the destroying tree rises; the seed of passion we watch growing until it overcomes the reason. We see the hero beginning his error, struggling with its consequences, and thereby increasing his guilt, and finally succumbing to it. Pity for human weakness seizes us. But he understands how to lift us to the standpoint of his own true, moral (*sittlich*) judgment. It is not the so-called idea, the object of passion, but the passion itself which yearns, sins, and contends; the star remains unaltered, untarnished; but the man who sought to reach it through guilt plunges with broken wings into the abyss. It is not the beautiful that perishes, only the guilt. The truth is neither the good nor the bad, the beautiful nor the ugly—it includes both; the choice stands open to man, and his fate hangs upon his choice. In the modern drama, on the other hand, as in almost all more recent literature, the author is seldom the mirror, but rather the reflected image of his time. The passions of the time are not the objectively-treated material, but rather dictate to him subjectively the material. The modern author is no longer the judge of the case, he is rather the advocate of the beaten side; he makes the exception the rule; he transfers the blame from the accused to the situation, to the time, to the judge himself; he makes the hero the sport of circumstances in order to win our sympathy; he appeals to our human weaknesses, to the passions of the day, to interest us in behalf of his client. The hero perishes, not as one who deserves his fate, but as a sacrifice to the materially stronger opposite party. His fate is not the consequence of his fault, but the fate of everything beautiful on earth."

By the word "Schuld," which is translated above by *guilt*, is meant not necessarily moral turpitude, but the inadaptability of the character of the hero to the situation in which he is placed, or, in his own words, "Schuld, *i.e.*, the provocation of the suffering, an action relatively free, but yet his own, by means of which the hero excites a reaction that brings about his destruction, the beginning of the tragic action of which the end is the catastrophe." Elsewhere the author speaks of "this struggle in the hero's soul, this lack of a single quality while many others are present, this false note that disturbs the harmony, and prevents the whole man from reaching what he might otherwise attain, this contradiction."

We feel that we have offered but a glimpse of the merits of this book. It is one that cannot have justice done it by a page of extracts, so condensed is it already. But it is a book that will be of interest to every reader of Shakespeare, and, indeed, to every careful student of literature. It is full of suggestions, explanations, and keen remarks, so that the interest never flags. Then, too, it differs from many works on æsthetics by the simplicity of its style, which is but ill represented in the lame English of the translations above, and by the familiar nature of the examples that illustrate the author's meaning. The author everywhere keeps himself free from metaphysical vagueness. Even if the reader should not agree with our author's opinions, he will find himself obliged to look deep before he is able to controvert them; and whether he will be able to controvert them we seriously doubt.

Barbares et Bandits. La Prusse et la Commune. Par Paul de Saint-Victor. (Paris. 1871.)—This is a book that might make a Frenchman weep and any foreigner laugh. The author, nevertheless, declares that in writing it he was inspired by an ardent love of France and (of which there can be no doubt) by a profound hatred of her enemies. Every page is filled with grotesque imprecations against Prussia—wild declamations on her barbarity, and scurrilous abuse of all her great men. There is a lack of dignity, of self-respect in the book that we hope is more peculiar to the author than to the whole country in its present humiliation. He begins by quoting long extracts of abuse of Prussia from Heine's different writings—his "De la France" and the preface to the "Germania"—which are the best things in the book. Heine's hatred of Prussia was genuine, to be sure, but due more to the incongeniality he felt as a poet to that arid country, and to his poetical enthusiasm for France, than to anything else. The more charming his songs, the less reason would there be for letting him arrange boundary lines and questions of international law. Our author, however, is delighted with his support, and boasts that "France has now only Germany's hordes opposed to her." Let us see how he treats them. "L'armée française est une famille; l'armée prussienne est un troupeau fauve conduit par des belluaires menaçants." "Carthage était naïve, la 'perfide Albion' d'autrefois était magnanime auprès de ce gouvernement sans foi ni loi," etc., etc. This is the severe criticism that comes to the lot of the Emperor after a page of personal abuse: "There is something more horrible than the roar of lion or tiger—it is the tears of the crocodile weeping over the prey it holds crushed between its teeth." This is apropos of the annexation of Hanover—Bismarck, naturally, is not grossly flattered: He is "Prussia personified, . . . his uncovered face would make Hobbes recoil and would terrify Machiavelli, . . . he recalls the demons whom Milton shows us in Pandemonium, plotting the diplomacy of hell." M. de Saint-Victor, however, is impartial in his hates. He asks: "After all, what is this Germany, now so proud and dictatorial? Une race à peine décrassée de la barbarie; the last comer in Europe into the world of civilization and light. . . . In the eighteenth century this Prussia, that pretends to send us to school, learned of our philosophers. It was with the heat of Voltaire that this serpent grew warm. Then, it is true, under a conjunction of unforeseen stars, there arose in Germany a group of poets and thinkers—Goethe, Schiller, Herder, Kant, and Lessing." Literature and philosophy are both dead in Germany; "the only province left it is the cold and subterranean country of erudition."

So much for the country, now for the people. They throw off their romanticism and mysticism, their patriarchal crowns and contemplative spectacles; "they reappear as they are, the sons of the Huns and of the Vandals, the barbarians of Priscus, disciplined *à la Prussienne*, better armed, but as savage, only having exchanged their fossil hatchets for the needle-gun." The poor women who are left behind are thus complimented: "Those blonde maidens, sung by their poets, are changed into furies to incite their brothers and lovers to the despoiling of France; for pillage they stretch out the claws of harpies. Goethe's Margaret makes place for Margaret Schneider, the betrothed of John Dietrick, fusilier of the 7th company of the 88th regiment of the 42d brigade of the 21st division of the German army, who bids her lover enter some jeweller's shop where he could pillage. O house of Gretchen become a cavern of stolen goods and brigandage! From the dove's nest issues the thievish magpie, with ear-rings in his beak." "They are barbarians, and they are proud of it. . . . Remember the apocryphal telegram in which they spoke of themselves as 'those devils'—'visiblement ravis de poser en monstres, de jouer aux démons, de recourber en corne satanique la pointe de leur casque." The German colony in Paris does not escape. Wagner's music invaded the opera-house; German beer, "la lourde choppe," drove out the café which chats and the cabaret which sings. What there is good in Germany the author is willing to adopt, namely, its discipline, without its military pedantry, etc. Then, too, he proposes that all Frenchmen should learn German, "that obscure and inextricable language, behind which, knowing our ignorance, they concealed their plans of hatred and projects of ravaging, as they hide their armies behind a wood." That is to say, he denounces the Germans for speaking their own language, of which he says elsewhere, it "takes on, when it insults, the bestial accent of a savage idiom." The Emperor is bidden "to go recount his victories to his Augusta, who has become legendary like the ogre's wife in the fairy tale."

While the Germans are scourged in this way, the Commune gets off very lightly. One of the principal charges the author brings against it is that it may have the bad effect of making the French forget their holy hatred of Prussia. Before the Commune "leagues were forming, like sanitary cordons, against the return of the German spies. . . . The oath of Hannibal was engraved on every heart." And now the hatred, which had been diverted towards the Commune, must return against the older enemy. "The Commune was drilled by Prussia. Its bandits were the valets of the German hangmen, etc." A prompt and terrible vengeance is this writer's only hope for his country.

In reading these extracts, it is to be borne in mind that many of them were written during the siege, or shortly after, when few Frenchmen could have been able to take an unprejudiced view of German soldiers. To this fact we must ascribe much of their virulence; the author felt the bitterness of disappointment that it was not Germany that was invaded, the surprise at the defeat of the French armies, the agony of impotent patriotism. But that such writings, which are like cries uttered in the heat of combat, should be collected and republished as cool afterthought, is but a sad sign for the future of France, unless indeed they are there taken for no more than they are worth. To the real friends of France, be they Frenchmen or foreigners, there can be no more painful sight than this frenzied zeal, which, to quote once more, must "for ever sound the tocsin."

In every Library, Private or Public, one of the first necessities is a standard work on the Literature represented. In its department, the critics unanimously and enthusiastically accord the first place to

THE COMPREHENSIVE SPEAKER,

Designed for the Use of Schools, Academies, Lyceums' etc., carefully selected from the best authors, with notes by Henry T. Coates. Large 12mo, 672 pp., half bound, cloth sides, $1 75.

From the New York Daily Tribune.

"It contains a judicious selection of pieces from the best authors, omitting all of doubtful morality, of a sectarian or political character, and of transient literary value. Great care has been taken in the selection of extracts to give the genuine text of the author, without the errors in quotation and punctuation which are such a frequent blemish in this class of school-books. A large proportion of the contents are from American authors, furnishing the materials for a comparative survey of our native literature."

From the Christian Union. (Henry Ward Beecher, Editor.)

"Of course the work of compiling such a book as this is involves difficulties which do not appear to the superficial critic. The enormous mass of available matter has to be winnowed with great care and judgment; the hackneyed extracts, which in the days of the old United States Speaker were declaimed until every boy knew them by heart from simply hearing them, must be avoided; and yet it will not do to omit many of those thrilling passages in the Reply to Hayne, the Declaration of Independence, and a hundred others. Mr. Coates has certainly done his task well and faithfully, and the introductory remarks which precede the body of the work are characterized by good sense, and are evidently the result of considerable thought and observation. The plan of the volume is a natural subdivision of the selections first into prose and poetry, and then into narrative, historical, forensic, etc., the design evidently being that a reading class shall not go through, as it were, from Genesis to Revelations, but shall, in the judgment of the teacher, read 'Mrs. Caudle on Lending Umbrellas' on a rainy afternoon, or the 'Impeachment of Warren Hastings' when the public is excited about official corruptions. The selections are good so far as we have examined them—and we have done so with considerable care—being taken from the best current literature, as well as from that which will always be regarded as classical where the English tongue is spoken."

The Nation.

NEW YORK, THURSDAY, JANUARY 18, 1872.

The Week.

THERE are numerous indications that members of Congress already begin to be alarmed about the reform of the civil service—that is, begin to fear that it is really about to be attempted. Large numbers of them have been of late very anxious to have the service reformed, but have always been opposed to "any particular measure" proposed for that purpose. They were apparently reconciled to the scheme authorized at the close of the last session of Congress, and voted for it, but it was in the belief that it would not be carried out—the state of mind which leads so many legislators to vote for prohibitory laws. They were willing that the Administration should have the credit of talking of reform, but an actual attempt to reform they were not prepared for. Accordingly, Senator Carpenter has already begun to neigh against the Advisory Commission, and announces that he is not going to submit if he can help it to the transfer of the Government patronage to a knot of "schoolmasters," and Mr. Banks, who is now likely to have some little respite from his arduous labors in pacifying and regenerating Europe, is said to be laying back his ears and turning his tail in the same direction. The work of civil-service reform will not be complete till this opposition of the hack politicians has been fairly met and defeated, and, in meeting and defeating it, the President and the Commission are entitled to the hearty support of the public. There is a rumor from Washington, at this writing, that the President has determined to make a clean sweep at the New York Custom-house, turn out the whole of the unclean band who are now "running" it, and put it into the hands of respectable business men who *believe* in civil-service reform, and really desire to see it. If General Grant would do this in all the leading Custom-houses, we do not hesitate to say that he would enlist such enthusiastic support as no President has received for a long while, and it would be the support of men whom he would not have to pay. There never was a time when so bold and revolutionary a course could be entered upon with so much confidence, for the reforming spirit was never so strong. When we say all the leading Custom-houses, we include New Orleans. The best friends of the Administration will admit now that the performances of Collector Casey are an unsavory spectacle, and they are rendered all the more unsavory by his relationship to the President. The *Times* says Casey "has taken the Custom-house out of politics." This may be, but the result is so queer that it is plain that the next thing to do is to take *him* out of the Custom-house.

Mr. Freeman Clarke has introduced a bill providing for a return to specie payments which will probably not pass, and which with some good features has one which is fatally bad. It authorizes the President to order resumption by proclamation at thirty days' notice, on or before January, 1873, but permits the reissue of the notes so redeemed, and directs the national banks to provide an agent in New York to redeem their notes in "lawful money." The discretionary power given to the President, and the power of reissue given to the Treasury, give the whole scheme a speculative character, and give the Treasury through it a power over prices which must prevent the passage of the bill. What we need by way of legislation in this direction is most of all the removal from the greenbacks of their legal-tender character. This would gradually but steadily introduce contracts in gold, and public confidence would prevent any sensible depreciation of the paper. But it is useless to hope as some do that we shall ever get back to specie payments by a purely natural process. We might have greenbacks at par at the Gold Exchange for an indefinite period without having specie payments unless the Government and the banks were positively commanded to resume on a certain day.

The investigation into the affairs of the New York Custom-house has continued during the week, and the evidence is too voluminous to attempt any summary of it. The general result, thus far, may be said to show that the merchants are divided in opinion as to the merits of the general-order system; that there are abuses in it, as in all other departments, but of comparatively small magnitude, the greatest of all being the use of the business to bestow valuable sinecures on political partisans, who do no duties and pretend to do none. Think of a position in the gift of a Republican President which enables a man to pocket from $60,000 to $100,000 a year of money levied on New York merchants, while living in Washington, Europe, or where he pleases, without the performance of a single act, beyond the appointment of a deputy or partner, and which an army officer has held under General Grant while drawing Government pay as a clerk in the War Department. There was nothing more scandalous than this under the old régime in France. This $60,000 or $100,000 ought, of course, either to go into the Treasury or not be levied at all. There has also been an overwhelming amount of evidence as to the grossness of the corruption which prevails among the weighers, appraisers, and inspectors, and, indeed, all other officers who come into contact with passengers and importers, and can bestow favors or inflict annoyance and delay; also, as to the general employment of Custom-house officers in electioneering work, and as to the use of the patronage for political purposes, now to defeat the Democrats, then the Fentonites, and so on.

The testimony of one witness, Mr. Van Cleft, who was dismissed from the position of surveyor in the Brooklyn Navy Yard at Murphy's instance, showed that, as we have all along asserted, the President, while receiving with proper unction the report of the Civil Service Commission describing the shocking abuses of the service, was supporting Murphy, as "representative of the Administration" in this city, in "decapitating" such officers as Murphy selected for removal, either as his personal enemies, or as enemies of the Administration, and otherwise supporting that worthy man to the fullest extent in committing the very outrages which the Commission was denouncing. Van Cleft, though not a subordinate of Murphy's, was removed on his mere nod, because he opposed him in ward politics; and the President refused him a hearing. It is proved, moreover, that the levying of assessments for political purposes continued in full force under Murphy's rule, having reached in his day a pitch of efficiency and productiveness unknown before. We find, however, that we were in some degree mistaken as to the nature of the Mysterious Power which sent "the papers" levying the assessments to the Custom-house. Whatever it may have been in Mr. Grinnell's day, in Murphy's, it now appears, it was the illustrious "Tom" himself—flesh, blood, and bones. So late as November last he levied two per cent, on the salaries of the clerks, presumably for election purposes, but he did not deign to say for what, any more than the Grand-Duke of Mecklenburg-Schwerin deigns to tell his subjects what becomes of their taxes; and he levied by a common order, without the aid of an "invisible hand," nocturnal apparitions, or any other ghostly apparatus. This has been brought to light in a comical way, by the commencement of a suit against Murphy and Cornell, the surveyor, by one Shean, an ex-inspector, who paid the assessment, but was nevertheless dismissed, and would now like to have his money back.

The Catacazy affair has plainly ended in the rupture of the *entente cordiale* between this country and Russia. Prince Gortchakoff has published a note, couched in the strongest terms, in which he refuses to take the charges made against Catacazy as proved, complains almost with bitterness of the treatment bestowed on that person by Secretary Fish, and expresses his belief that Catacazy has a good defence. There is said, too, to be deep-seated dissatisfaction at St. Petersburg over the manner in which the Grand Duke was received by the President, and particularly over the failure of the latter to "tender" him a dinner, as the reporters say. On this point—which is a very delicate one—we think the President has a full and sufficient answer in the gross impropriety, to use a very mild word, of the Russian Government in keeping Catacazy here during the Grand Duke's visit. His presence was a source of embarrassment to everybody. He was not only of no service to the Grand Duke, but a serious hindrance. The President could not ask him to his table, and he could not, since the Russian Government chose deliberately to make him the Grand Duke's chaperon, ask the Grand Duke without asking him. We believe Catacazy began his diplomatic career as newspaper reader in Prince Gortchakoff's Cabinet, and had made himself obnoxious, and was recalled, for cause, from one European Court before he came here. His character and capacity were, therefore, perfectly well known to his employers, and they strongly suggest the inference that he was chosen deliberately, for the purpose of "manipulating the press," and otherwise laboring against the close of the *Alabama* difficulty with England, and that his failure has excited considerable chagrin at St. Petersburg, inasmuch as it marks the loss by Russia of one of her most valuable make-weights in her contentions with Western Europe.

Mr. Sherman is likely to have some trouble, after all, about his senatorship, owing to alleged irregularity in the conduct of the election in the joint session of the Ohio Legislature. The Democratic members began by voting for their own candidate, George W. Morgan, who never had any chance, but after the votes had all been taken, it appeared that, by transferring their votes to the second Republican candidate, Mr. J. D. Cox, they could, with the help of the independent Republicans, elect him. As soon as they came to this conclusion, they asked permission to change, and some did change, their votes, and after the chairman had begun to announce the result, other Democrats arose and demanded to be allowed to change also, but were told it was too late, and the Lieutenant-Governor, who is a German, and is said to possess but little knowledge of parliamentary usage, refused to allow an appeal. A scene of great confusion then followed, and the Democrats now declare, and a great many Republicans agree with them, that had they not been cut off in this way they could have elected Cox. There appears to be little doubt that it is settled usage to allow members to change their votes up to the moment at which the result has been actually announced by the presiding officer. Whether it is a good usage is a question on which there is room for difference of opinion. We think it is not, but then this was certainly not an appropriate occasion for beginning to overthrow it.

Civil-service reform, tariff reform, and all other reforms will gain by the election of Mr. Allison as one of the senators for Iowa in place of Mr. Harlan, who has been turned out for various reasons, but principally because he was found to be "on the make," like so many other eminent politicians. Mr. Harlan had in this struggle the advantage of eighteen years of political patronage as U. S. Senator and cabinet officer, besides his connection with the Methodist Church, of which he was formerly a clergyman, and which he has artfully used to raise himself to office and to sustain himself in it. He has habitually met all charges against his integrity by adducing his Christian character as a sufficient proof of their falsity, and by rousing sectarian prejudice in his behalf. For this purpose he has industriously availed himself of the franking privilege and the minutes of the three M. E. conferences of Iowa, and only a premature exposure prevented every minister of these conferences from receiving the lithographed letter in which that notorious intriguer, Dr. Newman, of Washington, urged his "dear brother" to work for Harlan's re-election, especially by attending the primary meetings. General Boynton, of the Cincinnati *Gazette*, has done excellent service in bringing to light the evidence, filed in the Interior Department, of Secretary Harlan's maladministration, and it is consonant with the latter's professions of piety that his frauds, or connivance with fraud, should have been discovered in his dealings with the Indians. In fact, though a good many links in the chain are missing, there can be no doubt that he was head of an Indian ring; and his successors have been and are still engaged in reversing his decisions in Indian affairs, and, as far as possible, unearthing and prosecuting the swindles perpetrated with his sanction. It is believed also that he has grown rich too suddenly during his public career, and he has been charged before a Congressional investigation committee with having defrayed his household expenses out of a fund appropriated by Congress for the Washington Aqueduct; while it is on record in the Interior Department that his son, for two years, drew an annual salary from its "contingent fund," though regularly attending school in the city. Of such a politician the Senate and the country are well rid.

Among the opponents of the civil-service reform rules, there has turned up, and, of all places in the world, at the last meeting of the National Republican Convention, Mr. George Gorham, of California, who introduced two resolutions, one declaring it to be the sense of the committee that "any test of fitness for office which might operate to exclude citizens because they had not received a classic or collegiate education" would be a violation of popular rights; the other, that "the exclusion of Democrats from office by Republicans was entirely consistent with good morals and good government," and so on. He did not press them to a vote, but ingeniously withdrew them, with the observation, which seems to have been entirely gratuitous, that "though the resolutions expressed the sense of the committee, there was a general desire that the subject should be left to the future." This performance is, however, made excusable by the fact that the new rules, whether intended or not to drive gentlemen like Mr. Gorham out of politics, and into some honest industry, will certainly, if faithfully enforced, before long have that effect, and he doubtless feels it in his very bones. He is a Connecticut man, who, emigrating to California, took to politics, and not mining, manufacturing, or agriculture, for a living, but made such a discreditable living by it that his getting the Republican nomination for the Governorship gave the State to the Democrats by a large majority. He then turned up in Washington, and got the clerkship of the Senate as the successor of Mr. Forney, that place being apparently reserved for the tribe, and there he now sits, but he evidently feels the ground shaking under him, and sees strange signs in the sky.

Judge Sharswood, of Philadelphia, has recently given judgment in a suit brought by a woman named Burnham against the election officers of one of the Philadelphia districts for refusing to receive her vote at the October election. The Judge decides very much as the Supreme Court of the District of Columbia decided, that the elective franchise is not one of the necessary privileges of a citizen under the State Constitution, many persons being excluded from it by reason of age, non-payment of taxes, or non-residence within the commonwealth or the election district for a certain length of time. He decides also, in opposition to Demosthenes and Woodhull, that the Fourteenth and Sixteenth Amendments to the Federal Constitution have no bearing on the question, as the provisions of the State Constitution do not violate them, the limitations imposed by it on the exercise of the suffrage not being based either on "race, color, or previous condition of servitude." He then passes on the simple question, which he says is the only one that presents itself in the case, whether the use of the word "freeman" in the State Constitution was intended to confine voting to the citizens of the male sex. He considers that it is well settled by contemporaneous interpretation of all the charters and constitutions of the State for two hundred years, that such was the intent and understanding of the legislator, so he gave judgment for the defendant. It is not in the least likely that any judge of any weight or character in the whole country will come to any other conclusion, so that it is safe to say that the attempt to evade, by the little trick known as the "New Idea," the sober judgment of the community, will prove a failure, as it richly deserves.

The Woodhull branch of the suffragists have held their annual convention in Washington, Woodhull herself being present and making a speech. There was nothing else that was remarkable in the proceedings, except the unmannerly refusal of the audience to listen to Dr. Mary E. Walker's defence of Congress, and an unmeasured eulogy on Woodhull by Susan B. Anthony. Miss Anthony (we follow the report in the *Tribune*) declared her readiness "to welcome to the stand by her side any number of prostitutes, and would use her efforts to train them on the right side." A deputation from the convention, headed by Mr. Hooker, afterwards addressed the Judiciary Committee of the Senate on the "New Idea." The report says Miss Anthony "presented a letter from Henry Ward Beecher to Woodhull, favoring the suffrage," but we think there must be some mistake about this. The proceedings in the convention were throughout of a slightly farcical character, the performances of "the great leader" evidently proving a little too much for the gravity of either audience or speaker. It is to be regretted, too, for the sake of the New York Association, and, indeed, it furnishes material for many unworthy sneers to "the Boston clique," that the Woodhull-Claflin household should be torn by broils calling for the interference of the police. Miss Tennie C. Claflin, very recently, had to apply to the police justice in open court for a warrant against her aged parents, who appear to have been engaged in what the boys call "cutting up," and making the institution uncomfortable for the "Pantarchists," who apparently need a house to themselves.

The New York *Times* has recently, by some remarks, drawn a fire of letters on the suffrage question from women, and it now reports that five-sixths of them express hostility to the movement. We have no doubt that a vote in almost any State would show that nineteen-twentieths of the women of the country were opposed to having the cares of politics imposed on them. The view of the woman-suffragists is, however, that these cares ought to be imposed on women against their will, because the New York and Boston Associations think they would be the better of having them, and that almost any dodge or device is allowable to bring about this result. All this comes of the ravages made by metaphysical views of human society upon the morals and manners of a small body of speculative ladies and gentlemen. They tap their breasts, think they hear "a something within them" which says women ought to play exactly the same part in regulating the affairs of society that men play—and then bid good-by to scruples about means. It may be well that women should vote, but whether it is or not is no more to be ascertained by Miss Anthony's deductions from the eternal fitness of things, or Mrs. Hooker's interpretation of the Bible, than whether husband or wife should go to market. Both are questions of exactly the same nature, and to be settled by the same processes. In the one case the family wants good meat and vegetables, in the other security in earning and eating them, and God has not decided how either want should be gratified. He has left it to sober human judgment, fortified and enlightened by human experience.

The London *Economist*, in an article opening with the remark "that Mr. Boutwell's third statement revives the impression that seldom has the Finance Minister of a great country been less competent than Mr. Boutwell has shown himself to be," and that "his report contains little else than a statement of his adherence to a policy of heavy taxes to reduce the debt, and a lame account and vindication of his operations to convert the debt," goes into an examination of the financial situation in the United States which explains the rapid and steady rise of American credit in Europe, and fully accounts for the recent reported offer of the Rothschilds to take the four per cent. loan if the interest is made payable in London. The first thing in American finances which impresses the European imagination is the size of the surpluses. These are something absolutely without precedent. By close management, and the most accurate and scientific adjustment of taxation, England is able, in peaceful years, to produce a surplus of from $5,000,000 to $10,000,000, while every other great state in Europe, except Prussia, makes a deficit as regularly as Christmas comes round. The United States, on the other hand, with nothing that can be called a *system* of taxation at all, and nothing that can be called even an attempt at scientific adjustment, turns out year after year surpluses ranging from $80,000,000 to $100,000,000, and, as the *Economist* remarks, "the whole of these vast sums are available for the reduction of the debt"; and what, perhaps, still more amazes the European financier is that even the loose estimates at the probable yield of the revenue made by such a Finance Minister as ours are actually surpassed, and considerably surpassed, by the result. All this is, of course, the consequence of the vigor of American industry and the rapidity of the national growth in spite of all mistakes, errors, and calamities. When material facts of this sort are backed up by even two years of abstinence from all talk of swindling the national creditors, of course our borrowing power soon knows no limit except such as is imposed by the fear of too rapid repayment.

The *Economist* speaks with justifiable warmth of Mr. Wells's reports "as among the most valuable contributions to the literature of political economy," and draws attention to the fact that all the modifications in the tariff recommended by the President and Mr. Boutwell, in the last message and report respectively, are really called for by Mr. Wells in his earliest essays. Indeed, the two creditable things in the history of the crisis in our finances produced by the war, are the energy and honesty with which the people have supported the national credit by their labor and their savings, and the accuracy and perspicacity with which Mr. Wells has unveiled the secret of American industrial strength. These alone will atone in the eyes of future generations for President Grant's and Mr. Boutwell's political economy, and the attempts of many members of Congress to swindle the national creditor. In short, if there be much shame, there is more glory.

The French news consists mainly of the struggles of the Government with the question of taxation, with which both M. Thiers and M. Pouyer-Quertier are ill fitted to deal, and both find themselves arrayed against the leading French economists on the plan of taxing raw materials, which is M. Pouyer-Quertier's hobby, and not taxing incomes, which is M. Thiers's. The income-tax has a large body of the ablest French opinion in its favor, on general grounds, but especially on the ground of its tendency to reconcile classes by exhibiting openly the imposition of the heavier burdens on the rich. M. Thiers, however, objects that, in a country in which revolutions are frequent and class hates prevail, it would be very dangerous to furnish the usurper or revolutionary committee with a machine ready to hand for levying forced loans on the rich. On the other hand, an income-tax would reach the enormous mass of annuities derived from the national debt, and which, owing to French habits of living, will probably not be reached in any other way. The Orleans princes have taken their seats in the Assembly, and are in a fair way to get back the property which Louis Philippe gave away before his accession to the throne, and which Louis Napoleon confiscated. The last of the heroes of the *coup d'état*, except Fleury, has disappeared by the death of the Duc de Persigny, whom Kinglake has so savagely pilloried as "Fialin." He was the least able but most open and unscrupulous of the band, and, like them all, made a handsome fortune. The feeling of uneasiness in France is not over, and it is increased by the passion with which M. Thiers, true to his traditions, is throwing himself into the reorganization of the army. Universal conscription may be said to be settled on, but the German military papers predict that it cannot be carried out, owing to the low character of the French officers, and the insubordination and indisposition to submit to authority of all classes.

"THE ONE-TERM PRINCIPLE."

MR. ROSCOE CONKLING made a speech in the Senate on Thursday on Mr. Sumner's proposed amendment to the Constitution making each President ineligible for more than one term, which, besides containing the usual profusion of imagery which Mr. Conkling puts into all his speeches, contained a good deal of very solid argument. The case against the proposal is a pretty strong one. It was fully discussed in the first Convention and rejected, for reasons which experience has certainly not weakened. The power of re-electing a President has not been in any case abused, and there is no one of the six cases in which it has been exercised in which it might not be said that the honor was well bestowed. If experience teaches us anything in the matter, in short, it teaches us that the people are very good judges whom to re-elect, and that the principle of re-eligibility may be safely left to them. It may be very well to restrict the area of popular choice in providing for the filling of subordinate offices, the duties of which are easily defined, and the qualifications necessary for which can be easily prescribed and the possession of them readily ascertained. But for the performance of duties which in their very nature allow of a wide discretion, and for the proper discharge of which judgment and experience of men and affairs count for far more than skill in any particular art or knowledge in any particular field, and which lie entirely in the upper regions of statesmanship, it is useless to try to select officers by set tests. The nation at large must be supposed to be a better judge of a man's fitness for such a place than any portion of the nation. Whether it is dangerous to elect A or B to the Presidency after he has served one term is a question which the voters of the United States are competent to decide if anybody is. Indeed, there is a certain absurdity in acknowledging that the people are the best judges who of all the native-born citizens except this particular one is best fitted to be President, while refusing to allow them to pass on *his* claims, he being the only person of them all of whose qualifications they have any practical knowledge. The inconvenience and possible danger of being bound to change the President at the end of each term, whether we wish or not, and the terrible temptation it would put in the way of both President and people to violate the Constitution if the term of an able and trusted man closed in the midst of some great national crisis, have been often pointed out, and received a practical illustration in Mr. Lincoln's case. It is safe to say that if the Constitution were once violated by somebody's holding over under such circumstances with the popular consent, there would not be much virtue left afterwards in any of its restrictions.

The bad effects on a President's conduct of the desire for renomination, taking the worst possible view of them, would, with a reformed civil service, be no worse than, if so bad as, the effects of the carelessness which would result from the knowledge that he had got everything the people had to bestow. A corrupt man or a man given to nepotism would certainly be under far stronger temptations to indulge his propensities if he knew he had nothing to lose by popular reprobation, and nothing to hope from popular approval, than if he had before him all through his first term the chance of such a distinguished mark of confidence as re-election. A man who is determined to feather his nest while in office is far more likely to be mischievous if told beforehand that his jobs must be finished up in four years than if he thinks he may possibly extend them over eight. As regards Presidential intrigues for re-election, if the present corrupt and corrupting system of filling the subordinate offices were destroyed, there would certainly be no more to be dreaded from it—indeed, not so much—as from the intrigues which senators now carry on for the same purpose, and to which no formal objection has yet been made, except in Governor Hoffman's proposal that senators should be elected by the popular vote. It is now part of the regular game of "the men inside politics" to pack the legislatures with a view to the senatorial election, and the men most successful in packing and corrupting begin to have a decided advantage in many States over the able and honest men who refuse to employ base arts. If the popular judgment needs to be put under constitutional restrictions with regard to Presidential re-eligibility, it certainly does in a tenfold greater degree with regard to senatorial re-eligibility, for while a bad President has never been re-elected, bad senators do somehow often get in for a second term.

But the argument that the promoters of the amendment should not introduce it now because it is simply a movement against General Grant, has not and ought not to have much weight. The only time when it is possible to secure public attention for propositions of this nature is when public events give them importance and interest. There is no great disposition to amend the Constitution under any circumstances, and none at all in the interest of abstract safety or fitness; so that if the proposed change is ever to be made, it must be brought up, discussed, and passed under the pressure of somebody's bad behavior in the Presidential chair, and it must, perforce, wear the appearance of hostility to that person. What its promoters now really mean, and what they might as well say, is this: "We have always been in favor of this change; so have hundreds of distinguished politicians who have gone before us. We have not urged it on you heretofore, because we know it is hard to interest you in reforms for which there seems to be no pressing necessity. We do urge it on you now, because you have before you, in the conduct of the present occupant of the White House, a striking illustration of its value and of the danger of postponing it. Nevertheless, we do not propose to apply it to him, because we do not want it to be or to seem a weapon of party warfare. We simply use him as an argument in its favor, and we bring it up on the eve of his renomination because it is only at this season that we can get you to consider it seriously."

We confess for ourselves that we do not consider General Grant's Administration of any particular value as a proof of the importance of any such change, but it is highly valuable as an illustration of the desirableness of civil-service reform. Nobody can call him a dangerous man or a designing man. Nay, we believe he entered on office meaning well, and that his impulses all carry him in the right direction, and it would be unfair to deny that his Administration has several solid claims on the popular gratitude. But, as a correspondent said in our columns the other day, "he likes the fun of being President," and has weakly allowed himself to be persuaded by a band of intriguers and jobbers like Murphy that the way to get a second term was to let them "run the machine." And he is still weak enough, while apparently sincerely desirous of promoting civil-service reform, to be seduced into postponing its practical operation till he has got all the benefit he needs out of the old system. This is the strongest charge we make against him. Those who believe this of him, or worse, can in no way so effectually prevent others from imitating what is mischievous in his career as by laboring now to give civil-service reform a firm foothold in legislation and in party usages. A constitutional amendment prohibiting a second term of office sounds very well, but, even if necessary, there is not the least present chance of its adoption. Had Grant never had anything to offer to secure the devotion of the Murphys, we do not hesitate to say that his Administration, if not brilliant, would have been respectable in the highest degree, and that he would probably have furnished a very marked example of what the hope of a second term can do to stimulate a President into relying constantly and steadfastly on the sober second thought of the American people, which has so often proved the highest wisdom, but in which so few politicians have the smallest faith.

THE CLOSE OF THE "ENTENTE CORDIALE" WITH RUSSIA.

AN article appeared in the *Tribune* on Monday last, suggested by Prince Gortchakoff's very acrid note on the Catacazy affair, which was remarkable in more respects than one. The writer frankly and fully acknowledged that the note probably marked the close of that intimacy between Russia and the United States which has reigned about twenty years (though he makes it only ten). That intimacy, though the *Tribune* pronounces it to have been a mere "flirtation," kept up on both sides for interested purposes—by Russia to overawe England, and, indeed, the rest of Europe, on the Eastern question, and by the United States to spite or overawe England with regard to the various differences on matters of fact and matters of feeling which have existed between the two countries ever since 1812—has, however, been steadily and persistently lauded and promoted both by politicians and journalists as the natural alliance of two peoples of similar aims and destiny. It was somewhat difficult for a long time to discover in the character or condition of either country any basis that would bear examination even in a stump speech for anything like cordial sympathy, so the alliance rested for many years on the precarious and unsubstantial foundation of common bigness and common expansiveness and common capacity to support three times as large a population as either country then possessed. When the late war broke out, however, it was greatly strengthened by the tremendous blunder committed by both France and England in countenancing the Confederacy. In dealing with the new situation, Russia enjoyed the immense advantage of having no *feeling* about the quarrel either way. All the knowledge of America, its history, people, language, literature, or government to be found in Russia, is confined to a few dozen persons connected with the Government, so that the imperial policy was not embarrassed by any pressure of popular sympathy either for North or South, and was thus free to shape itself to suit the circumstances, and that it was a masterly policy there is no denying. Compared with it, that of France and England looks like the blind rush of a mob. It is not difficult to guess at the considerations which probably governed it, particularly as they are considerations of which everybody in France and England now sees the force. If the North proved victorious, to have sympathized with the established government, or even to have abstained from all expressions of ill-will to it, or all expressions of sympathy with, or confidence in, the rebellion, would be a sure title to American gratitude and good-will. If the North did not prove victorious, its friends would still remain its friends, and they were by no means likely to have anything to fear from the enmity of the Confederacy, for the victors in a fight never hate those who did not help them to win it, but simply looked on. They are generally too much elated, and too proud of their prowess, to be inclined to malevolence, and, even if they feel a little chagrin, it is not likely to last long. So that to support the North morally was really the true course to follow, no matter what one's opinion might be as to the ultimate issue of the struggle. "Those dangerous guides, the feelings," blinded Western Europe to these considerations, while the close commercial, religious, and social relations existing between England and the United States really extended the civil war, in a certain sense, over English territory. As far as interest in the struggle, and the prejudice and passion born of conflicting moral and religious ideas, and social and political traditions, went, the war may be said to have raged as fiercely in Kent or Sussex as in New Hampshire. Russia looked on, however, with a perfectly cool head, and having no interests at stake, either moral or material, by simply writing a few letters and sending a fleet into American waters, obtained a place in the American imagination which bigness and expansiveness could never have given, and supported the position by a lavish expenditure of court civilities on American travellers and officers.

The master-stroke was, however, the emancipation of the serfs. The delay of this measure by Russia until the year 1861 was one of the disgraces of civilization, and yet there is little doubt that it was the result, in the main, of the frighful revelation of the economical weakness of her social organization made by the Crimean war. That struggle made it plain that all expansion to the southward, in the teeth of Western hostility, was out of the question without railroads and free labor. The slave system went down at Sebastopol under the cannon of the allies, and the first step in the process of "recueillement" to which, according to Prince Gortchakoff, Russia then betook herself, was the creation, on her soil, of free industrial society, as the only source from which, in modern times, really formidable and well-equipped armies could be drawn. Luckily, however, this measure was perfected and went into operation just as the American people were trembling in the throes of the excitement, partly patriotic, partly humanitarian, which led to and carried out the abolition of slavery. To them emancipation was the realization of a glorious dream by which three generations had been haunted—the termination of a struggle which for forty years had clouded the commercial and political future of the country, rent its society with feuds, and finally deluged it with fratricidal blood, and the final removal of a reproach under which every American man and woman had writhed for half a century. While in this susceptible frame of mind Russia appeared on the scene as an emancipator also, and it was by no means difficult to obtain for the Czar credit for the virtuous and tender emotions which warmed the heart of Lincoln. We were then treated for several years to the extraordinary spectacle of the union, on a basis of humanitarian sentiment, of two governments, one of which was forgiving all its enemies, laying aside all weapons of offence, proclaiming the largest liberty of speech, thought, and act, men of all races and conditions, while the other was pursuing unity throughout its dominions by processes which can hardly be called less than devilish, in which every one of the rights worshipped in America as inalienable were being extirpated with the bayonet. The process which has for the last seven years been going on in Poland and the Baltic provinces under the name of "Russification" probably surpasses in cruelty and brutality anything the modern world has ever seen, and there is perhaps no political phenomenon more curious and instructive than the way in which the American public has been seduced for some time back into refusing to look upon this "bloodiest picture in the book of Time." That this all but guilty connivance—or guilty silence—should have been terminated by the hand of a paltry intriguer like Catacazy, and that the immediate cause of his meddling should have been a desire on the part of Russia to prevent the close of a long-standing international quarrel by peaceful debate, has an appropriateness about it which one can hardly avoid calling providential.

That for this persistence in what the *Tribune* now acknowledges to have been a bit of prolonged humbug the press is largely responsible, there is no doubt. That the press is about to turn over a new leaf in such matters, the article in the *Tribune* leads us to hope. For improvements in national morality, it seems as if we should hereafter have to look to the press mainly, and the press contributes, in no small degree, to national *im*morality by the aid it affords politicians in spreading and perpetuating delusions and impositions. Whatever the value of its opinions may be, the facts, and especially the facts of foreign politics, it has wholly in its hands. Nearly all that the vast majority of the citizens of the United States know of the world outside their own town they know through the newspapers, and the extent to which distorted and deceptive news of the great movements of the day are implanted in their minds, by the reluctance of the press to fulfil the magnificent function of enabling men to see things as they are, will probably never be known. The evasion of this duty is performed, too, not simply or mainly in editorial articles, but in the practice of sending out correspondents not as observers, but as missionaries. A writer who would like to see a republic in England or France, and thinks there ought to be one, and thereupon collects all facts which support the theory that a republic is on the point of being established, and fails to seek out or refuses to report the facts which support the theory that there is not the least chance of a republic in either country for a long period, is not so plainly doing the devil's work as if he preached the folly of truthfulness, but he is still doing it, for he is fostering that inclination to see the pleasant side of things, and the pleasant side only, and that disinclination to face unpleasant facts, out of which nearly all national rottenness comes. A healthy public opinion about all things, and especially about our foreign relations, can only be built up on a knowledge of unvarnished facts and a sound morality. We are no friends of the "International Association of Workingmen," but there can be and ought to be an international association of good people, to promote the application to international relations of the standards and judgments which we use in regulating the relations of individuals in society. The world is fast emancipating itself from the influence of traditional hates and prejudices. Americans, Englishmen, Frenchmen, and Germans are learning, however slowly, not to detest each other as Americans, or Englishmen, or Frenchmen, or Germans. But we can hardly condemn the deceits, and subterfuges, and base compliances, and unholy alliances of the professional diplomatists, if whole peoples can be got to cultivate, or pretend to cultivate, international loves and friendships which are absolutely independent of the moral and intellectual condition of the object on which these feelings are lavished. It is time to give up hating foreign nations because our fathers hated or fought them; but it is also time to indicate in our foreign as in our social relations that what we most admire, and what most surely wins us, in nations as in men, is not power or loud professions, but justice, humanity, mercy, honesty, industry, and fair dealing and faith in moral force.

ENGLAND.

London, December 29, 1871.

THE health of the Prince of Wales continues to improve. The sympathy which has been called out by his illness, and the pleasure with which his convalescence has been greeted, have been noticed in all the papers as proofs of the ardent loyalty which still burns in English bosoms. The favorite mode of complimenting ourselves is by quoting passages from French newspapers to illustrate the admiration of so-called republicans not only for our loyalty but for our piety. The prayers which have been put up in all our churches are a conclusive proof of the latter virtue, as the interest displayed in the telegrams from Sandringham was of the first. I am afraid the conjunction is rather significant. We prayed, it is true, but it would not do to enquire too strictly how many people seriously believed that the prayers would improve the Prince's chance of recovery; and perhaps some of the loyalty was as little calculated to bear fruit in practice. Undoubtedly there has been a strong feeling of sympathy, as a man must have been a brute not to sympathize; and mixed with it has been something which the persons affected took to be loyalty; but I somehow do not fancy that it is, in commercial language, a very wearing article. After all, the fact that a prince has had a typhoid fever is not by itself a good reason for attachment to a constitutional monarchy; and about three months hence I fancy that we shall be scrutinizing any new proposal for endowing a member of the Royal family as if the Prince had been able to hunt all through the winter. Meanwhile, it must be confessed that our would-be republicans have a singular knack of putting themselves into awkward positions. Sir Charles Dilke has apparently made some very incorrect statements, and especially one to the effect that the Queen had not kept her engagement of paying income-tax. I do not know whether there is any sort of foundation for this statement, which he will doubtless have to defend or retract in Parliament; but at present he is generally supposed to have made an utterly unfounded imputation upon the Queen's character at a democratic meeting, and, though from no fault of his own, just at the wrong period. Then poor Mr. Odger, who is generally considered to be the pattern workingman, has succeeded in making himself ridiculous in the same cause. After holding a republican meeting at Reading, he was assaulted by certain loyal roughs at the railway station. According to his rather excited narrative, some two hundred people fell upon him with all the fury of "starving wolves"; two powerful men (Mr. Odger is of small stature) tried to strangle him; and the police did not come to his rescue. The result of this tremendous onslaught was that his coat was torn, and that he went off by the train when it arrived. Our republican champions have not distinguished themselves lately. The truth is that the republican feeling is of the faintest kind, and that, though we care little for our princes so long as they are in tolerably good health, the bulk of the nation is very indifferent to constitutional changes of any kind. Sir Charles Dilke's attack on the monarchy, for example, was apparently due to a change of tactics when he could not obtain sufficient attention to his exposure of the undoubted anomalies of our representative system. In spite of the last Reform Bill, that system is undoubtedly anomalous in the highest degree; but nobody cares very deeply for an absence of symmetry which is not felt as a practical injustice. The real political battle will be fought over different issues; and numerous questions are already beginning to occupy public attention which threaten to alter materially the old party combinations.

Of these it will be time enough to speak when the session approaches; for at present we are in the state of mind appropriate to Christmas. The general public is regaled by gratuitous exhibitions in butchers' shops of fat beasts fancifully decorated with sprigs of holly in various parts of their insides; children are spoiling their infant digestions with mince-pies; and the popular press beams with that kind of gushing, or, as it is called, "genial" sentimentality of which Dickens was the great master. Indeed, I sometimes wonder that our popular preachers do not take their texts from "Pickwick" instead of the Gospels; for their effusions about this period have that flavor as of cold milk-punch which pervades the former publication. It is appropriate enough for this season that Dickens's Life should be the only literary performance which is just now exciting much attention. It has been, I presume, published as early in America as in England, and you will have formed your own opinion as to its merits. I will merely say, therefore, that whilst Mr. Forster's part of the book can only be described as moderately good, Dickens's own letters and the fragment of autobiography which it includes are of great interest, and I think that few even of his own friends had any adequate conception of the extent to which some of his most striking passages are simple transcripts of his experience in early boyhood. As I have drifted into literary gossip, I may as well notice a rather amusing incident which has just occurred. A writer under the signature of Thomas Maitland recently made a bitter attack upon Mr. Rossetti's poems in an article in the *Contemporary Review* headed "The Fleshly School of Poetry." In the *Contemporary Review*, as in most of our recently founded magazines, the writers have pretty nearly abandoned the old system of anonymous authorship, although the *Contemporary* does not, like the *Fortnightly*, profess to reject the practice on principle. It soon became rumored, however, that Thomas Maitland was in fact a pseudonym for Robert Buchanan, in which there was a certain degree of piquancy, inasmuch as Thomas Maitland praised Robert Buchanan's poems. Hereupon two letters appeared in the same column of the *Athenæum*. The first, from Messrs. Strahan & Co., the proprietors of the magazine, was expressed in language which amounted to a denial of the report, saying that there was as much reason for attributing the article to Mr. Robert Browning or Mr. Robert Lytton or to any other Robert. The second was from Mr. Robert Buchanan, avowing the authorship of the article, and stating his intention of publishing it in his own name. I do not know that Mr. Buchanan or his publishers have been guilty of any really discreditable conduct in all this; but certainly they have succeeded in making themselves ridiculous. I am no great admirer of the clique to which Mr. Rossetti belongs, and which seems to me to think itself rather more exclusively in possession of the only orthodox views upon art and poetry than I should be prepared to admit. However, they have certainly had the best of this little encounter.

Another quarrel of an artistic kind, of considerably more importance, is raging in the columns of the *Times*. We determined, as you may know, some years ago to erect a new set of law courts, which were to cost a large sum of money, and to be one of the great architectural features of that new London which is rapidly rising. There was a competition amongst the ablest architects, and an elaborate investigation of the whole subject by an intelligent committee. Then came a desperate battle over the site of the proposed courts, a large party being anxious to erect them on the new Embankment. It was at length decided, however, to place them on the north of the Strand, and the ground has been bought and the foundations cleared for its erection. But now has arisen a still fiercer quarrel. The plans originally proposed by Mr. Street, the selected architect, have been cut down in obedience to Mr. Lowe's economical views, and a new and more modest design has been prepared by him. Modest as it may be, it has excited the indignation of a large body of architects, art critics, and other persons professing to have a taste. The discussion has widened and branched out into all manner of allied questions. The main objections, and they are tolerably sufficient if well established, are that the proposed building is extremely inconvenient and very ugly. Both of these faults are, it is urged, the natural consequence of the system on which the architect has proceeded. Mr. Street is popular amongst our modern High-Church restorers of mediævalism, and he has here applied their principles on a grand scale. His first object is to be picturesque, and, consequently, the building is broken up into irregular masses; no window resembles its neighbor; queer towers break out at unexpected places, and for no assignable reason; there is a great hall, which will be damp and dark and useless, and which is introduced simply for the sake of having a great hall; whilst anything approaching to symmetry and simplicity is systematically avoided. Mr. Street's justification for his vagaries is that some precedent may be discovered for each of them in mediæval architecture. He has, in fact, travelled over Europe, collected everything that has struck his fancy in the various cathedrals of the world, and piled them all together, so that the building will be a kind of archæological museum. I repeat what is said by his assailants, without professing to be a very good judge of the matter. I confess, however, that, so far as I can judge, my sympathies are very strongly in their favor; and yet I am tolerably confident that things have gone too far to be mended. We shall erect a large pile of architecture at which our grandchildren will stare, wondering what can have induced their respectable ancestors of the nineteenth century to masquerade in the costume of the thirteenth. But I fear that our grandchildren have a good many puzzles in store for them if they care to discover the rationale of our conduct. Meanwhile, I think I may promise any American visitors to this country that in a few years they will be able to see, within a few yards of the Thames Embankment, and in singular contrast to the mean outlines of an ordinary London street, a collection of pinnacles, arches, and buttresses, which may recall associations with the mediæval remains of every country in the civilized world. Whether the result will be beautiful, and, still more, whether it will suit the convenience of the eminently prosaic class of persons who are now engaged in investigating the Tichborne case, is more than I can say with any confidence.

THE FRENCH ACADEMY.

PARIS, Dec. 21, 1871.

AMONG the few institutions in France which have been allowed to survive the ancient régime, the French Academy stands foremost. There is often a confusion made abroad between the Academy and the Institute. The Institute, such as it was organized by the French Convention and reorganized by the Emperor Napoleon, comprises: (1) the Academy of Letters, or Academy proper, which never has more than forty members; (2) the Academy of Science, which has a much larger number of members, besides corresponding and foreign associates; (3) the Academy of Arts, which is chiefly composed of painters, sculptors, and composers; (4) the Academy of Inscriptions and Belles-lettres, which is made up of philologists, grammarians, Hellenists, and archæologists; and (5) the Academy of Moral and Political Sciences, devoted to philosophy, political economy, and matters of administration. There are, therefore, as you see, five academies, the collection of which forms the Institute; but the literary academy of the forty *immortals*, as they are often called, still goes generally under the name of *the* Academy. There are not less than 280 members and foreign associates in the five academies of the Institute. There is a singular idea of permanence and indestructibility attached to the organization of these academies. Each of them has a secretary who goes under the name of perpetual secretary. This function is assigned in the Academy of the Moral and Political Sciences to Mignet, who is also a member of the Academy of Letters (for the same person can belong to several of the academies: Claude Bernard, for instance, is now in the Academy of Letters as well as in that of Science). The perpetual secretary in the Academy of Arts is M. Beulé, who has written several volumes on the arts in Greece. There are two perpetual secretaries in the Academy of Sciences, where their work is the hardest—they are now Elie de Beaumont, the world-famous geologist, and Dumas, the celebrated chemist. The perpetual secretary of the Inscriptions and Belles-lettres Academy is Guigniaut. In the French Academy, Villemain has occupied for so many years the post of perpetual secretary that the title seemed almost justified for once; but he died last year, and he has been replaced by the Hellenist Patin, the translator of Sophocles.

It is very hard, even in the most cultivated country, to find forty men who would deserve, even with a very violent stretch of the truth, the name of immortals. In the list of the actual French Academicians, many a name occurs which is as little known on the shores of the Loire or even of the Seine as on those of the Thames or the Hudson. I doubt if the reputation of M. Lebrun has ever reached Boston or New York. His tragedies are as much forgotten in Paris as if they had never been played. M. Legouvé's glory, too, is very thin, and what may be called evanescent. He is the son of another Academician, who made himself famous in the time of the First Empire by a poem called "The Merit of Women," a didactic description of all the charms and virtues of womanhood. This production would be quite forgotten if it was not for a very ridiculous verse, which has become proverbial. Speaking to man, Legouvé, in a fit of enthusiasm, tells him:

> "Tombe aux pieds de ce sexe à qui tu dois ta mère."
> (Fall at the feet of this sex to which you owe a mother.)

Foreigners are often surprised when they hear that some French author, of great reputation, whose works they have been accustomed to read and to admire, does not belong to the French Academy. And here I must try to explain why a great writer is not necessarily an Academician. The Academy was not founded solely with the view to give a place to the most eminent authors: it has, or it thinks that it has, a sort of tradition to keep, not only the tradition of language, but the tradition of the French standard of manners and of general culture. An Academician ought to be a man of the world. Many *grands seigneurs* became Academicians in the last century, and even in this century, simply because they were representatives of the highest class in the country, types of gentlemen, patrons of arts, of literature. When the Academical fauteuil was offered to Marshal Saxe, who never wrote a line, and who was even suspected of not being very familiar with the rules of orthography, he replied: "L'Académie—cela m'ira comme une bague au doigt" (The Academy will fit me like a ring on my finger). Every man of great note, moving in the highest sphere of society, distinguished and above the average either in the church or in the state, belongs naturally, as it were, to the Academy. Such, at least, is the theory I have often heard maintained by Academicians among my friends, when defending themselves against those who were attacking some of their selections. During the Empire of Napoleon III., the Academy became one of the strongholds of the opposition. Prévost-Paradol was elected less as a fluent and eminent writer than as a journalist who was every day harassing the Empire with his wit and his irony. Jules Favre, who is a very poor writer, as you may see if you will read his account of his negotiations with Bismarck, was elected for his oratorical efforts in the Corps Législatif. By a curious phenomenon, literature proper had become more or less Imperialist. Mérimée was a senator, so was Nisard, so was Silvestre de Sacy; Augier was the personal friend of Prince Napoleon; Octave Feuillet the favorite novelist of the Empress Eugénie; Sandeau was also one of the guests at Compiègne; the novel-writers and the dramatists were all on the Imperial side, and, in the name of literature, were always advocating the theory that politics had nothing to do with the Academy. By this means they hoped to introduce into the sanctuary About, Taine, Renan, Alexandre Dumas *fils*, who were all friendly to the Empire. On the other side, Guizot, Rémusat, Bishop Dupanloup, the Duc de Broglie, maintained that the Academy must reserve its purity and its independence; the statesmen affected to despise the littérateurs, and they opened their ranks to men who had more force of character than of style, and who preferred the *salons* of the opposition to the Tuileries. During the whole Empire, every election had a political character. At the end, by a sort of compromise, M. Emile Ollivier was elected as a representative of Imperial liberalism; but we know what has become of Ollivier and his hopes—the war with Germany swept him away in an instant, and his *immortality* has had but a day.

There are now four vacant seats, and, even in the midst of the political excitement of the hour, there is much attention paid to the question of the next Academical elections. The Duc d'Aumale has been invited to present himself for the first seat, as the author of the "History of the House of Condé," of military essays, published in the *Revue des Deux Mondes*, on the Zouaves, the Chasseurs-à-pied, the "Military Institutions of France," on Alesia, the seat of the contest between Vercingetorix and Cæsar, and of the "Letter on the History of France," addressed to Prince Napoleon Bonaparte. The Duke will have no competitor; the great elector of the Academy, M. Guizot, whose influence is paramount, has invited him to present himself. M. Thiers, who is the second power in the Academy, has promised not to oppose his election; the Catholics, headed by Bishop Dupanloup and Father Gratry, will vote for him as well as the *libertins*, Augier, who was a schoolfellow of the Duke, and the other littérateurs. Etiquette obliges every candidate to make a visit to each Academician. Curiously enough, the first day of his visits the Duke only met Jules Favre, the Republican Minister of the 4th of September, and Victor Hugo. The great poet never goes to the Academy, and never gives a vote; the visit was, therefore, only one of courtesy. Victor Hugo is now almost a communist, but he was once named peer by King Louis Philippe, and in his "Misérables" there is a chapter in which he speaks in the highest terms of the citizen-king, of the king *de plein-jour*, as he calls him. The interview was very long and very friendly. Many a time had this Peer of France seen the Duc d'Aumale, then a child, at the Duc d'Orléans's; they had both been exiles during the Empire; they both returned on the same day from Belgium to France after the revolution of the 4th of September. The second day of his visits, the Duke, by a similar chance, only met the ex-senators of the Empire, Lebrun, Nisard, Sacy. In these visits, the candidate is not expected to ask formally for the vote of the Academician: he can talk about the weather, or about anything equally trivial. It has happened that the Academicians were sometimes completely ignorant who the candidates were. Royer-Collard, in his old age, said: "I read no more—I reread;" so he used to ask his visitors to give him a list of their works. He treated candidates very much as a schoolmaster would young boys.

The second seat, now vacant, will probably be given to Littré. The Academy does not much approve of the doctrines of this great prophet of positivism, but he will be very useful as a grammarian. His dictionary of the French language is just what the Academy itself ought to have written. Nobody at the present time has a better knowledge of the history, the origin, and development of every French word. Strangely enough, the greatest grammarian of the day has a very bad French style; his language has a dryness, an oddity, which make his works very disagreeable to read. The third candidate elected will probably be M. Camille Rousset, the author of a remarkable historical work on Louvois. M. Rousset was appointed, under the Empire, Keeper of the Archives of the Department of War; and M. Thiers has just charged him with the mission of forming a regimental collection of military works. M. Rousset is M. Thiers's candidate, and this will probably secure his success. The fourth candidate who is likely to become immortal is M. de Loménie, the author of the "Life of Beaumarchais," now engaged in a great work on the "Family of the Mirabeaus." M. About is a competitor of M. de Loménie, but he is not yet thought serious enough; his versatile spirit has carried him into too many camps. Once the constant guest of Prince Napoleon, and one of the most ardent promoters of the wicked war with Germany, he is now a courtier of M. Thiers. Alexandre Dumas *fils* is also a candidate, but the impropriety of his two last pieces, "Une Visite de Noces" and "La Princesse Georges," have made him for the moment what we call "impossible."

Notes.

IT is proposed by the New York Chapter of the American Institute of Architects to commence, on the first Monday in February, a second course of weekly lectures, at their rooms, No. 925 Broadway, similar to that now nearing its close, and which has embraced such topics as the æsthetics of architecture, construction, hospitals, etc., treated by well-known experts. These courses are free to members, but the non-professional public are also admitted on payment of a small fee, and we hope will choose to avail themselves of so excellent an opportunity of improving their taste in an important branch of art.——The *New Englander* was in error, and we in following it, in announcing that the *Congregational Quarterly* had been consolidated with it. It is the *Congregational Review.*——Messrs. J. B. Lippincott & Co. will publish shortly "Homer and Socrates," translated from the French of Lamartine by Mrs. Eliza W. Smith; "Black-Robes; or, Sketches of Missions and Ministers in the Wilderness and on the Border," by Robert P. Nevin; "Science and Revelation," proving for the hundredth time their agreement, by Rev. Jos. H. Wythe, M.D.——The Wisconsin Historical Society has now acquired a copy of Domesday Book, and also Larking's magnificent "Domesday Book of Kent"; and we understand that it has, during the past year, gone largely into county histories of England.——Macmillan & Co. will shortly publish a memorial sketch of Mr. Edwin Field, by Dr. Sadler, the editor of "Crabb Robinson's Diary." Mr. Field was widely known both in England and in the United States, not only as an eminent solicitor and law-reformer, but also as a lover of art and artists, and a most zealous promoter of the fine arts. Dr. Sadler's sketch will contain a record of the principal services rendered by a man whose rare abilities were employed with extraordinary energy and largeness of aim.

—Mr. John H. Treadwell, of this city, has in active preparation a book about pottery and porcelain, which is to have special reference to the wants of American lovers of this branch of the fine arts applied to industry. Mr. Treadwell desires to find out and to record just what is the amount of our wealth, here in America, in the way of old or curious or even of rare and choice modern porcelain and earthenware; and any person having something of this sort in his possession will do a favor, not merely to Mr. Treadwell, but to all of us, by sending him a description or a drawing of it, or, better still, by putting him in the way of seeing the object itself, so that, if it shall be thought worth while, it may be catalogued and described with those that Mr. Treadwell has already noted. No one knows, we imagine, or has anything like a just notion, of what there is in private hands, in this country, in the way of such ware as Mr. Treadwell's book is to be concerned with. It is well, therefore, to take account of stock, as the shopkeepers say; and though the first venture cannot, from the nature of the case, hope to give us complete information, yet Mr. Treadwell is doing his best to make his book cover the ground, and he trusts that all who are interested in the subject will lend him a helping hand. His address is 593 Broadway.

—Our artists who wish to send contributions to the International Fine Art Exhibition, London, should know that application for space should be sent in at once, the end of January being the time fixed for receiving demands. This exhibition is well worth the attention of our best painters, as its galleries are very fine and the light of the best, while the space is so great that all pictures worth hanging can be well hung, and the management is far more liberal towards the foreign element than any of the purely English exhibitions can be. Such of the rules as will be of interest to American exhibitors are here subjoined:

> "II. No artist can be allowed to submit more than three works of each kind for exhibition, but he may submit works of as many different kinds as he pleases: thus, the same artist may send for admission three oil paintings, three water-color paintings, three paintings on enamel, porcelain, etc.; also, three sculptures in marble, three in wood, etc.
>
> "IV. All works of art, except architectural works, and reproductions of ancient and mediæval works, must have been executed by living artists, or by artists deceased since 1862.
>
> "VIII. Foreign works may be sent with the certificate of admission given by the respective governments of the countries in which they are produced. Foreign works sent without such certificate, and all works of British subjects, will be submitted to the approval or rejection of judges, appointed by her Majesty's Commissioners, for the respective classes. The decisions of the judges will be final, and the result of such decisions may be ascertained on application at the exhibition building.
>
> "X. The Commissioners cannot undertake to receive any package which may be presented by carriers with charges unpaid. Foreign artists, whose works are not sent through a foreign government, should consign their works to an agent in London.
>
> "XIII. All pictures and drawings must be in gilt or suitable frames. Drawings with wide margins are inadmissible. Excessive breadth in frames, as well as largely projecting mouldings, may prevent pictures obtaining the situation they otherwise merit; and oval frames should be avoided, as they are difficult of arrangement.
>
> "XIV. The prices of works, if for sale, must be stated on a label accompanying the work, and if not for sale, the work must be so marked.
>
> "XV. A numbered list of the works submitted for approval must be sent in with them, each work bearing a number corresponding with this list. To each work should also be securely attached a label, bearing the title and the artist's name and address. Particular accuracy is requested in this respect.
>
> "XVII. All objects of fine art must be delivered on the following dates: On Thursday and Friday, March 7th and 8th, painting in oil and in water-colors; Saturday, 9th, reproductions of pictures, mosaics, enamels, etc.; Monday, 11th, architectural designs, drawings, and models; Tuesday, 12th, tapestries, carpets, embroideries, etc.; Wednesday, 13th, engraving, lithography, photography, as fine arts; Thursday, 14th, designs for all kinds of decorative manufactures; Friday, 15th, furniture and all decorative works; Monday, 18th, stained glass and mosaics; Wednesday, 27th, sculpture."

—The exhibition of 1871, though one of the most interesting held in London for many years, will, no doubt, be far surpassed by that of 1872, as the sales of Continental pictures effected there were very considerable, and the war prevented many artists from contributing who will now contribute. Applications for space must be sent, before the end of January, to Major-General Scott, C.B., Secretary, Offices of Her Majesty's Commissioners, Upper Kensington Gore, London, containing simply name of applicant, postal address, nature of object submitted. In the last exhibition, not a single American picture was contributed. It is to be hoped that what we have to show may not be so utterly ignored this year; and, as these annual collections of the art of all nations are destined, without doubt, to become the principal art exhibition of London, our artists would wisely direct all their contributions to it, adding proportionately to its importance. In case no commission on the part of our Government has been named, it would be well to delegate the approval of contributions to the National Academy (default of which works had better be sent to the Commissioners at London by the intervention of a London agent); and as they will have to stand hard comparison, it will be as well to subject them to a severe standard of excellence before approval. In case of artists having no agent, or knowledge of one, works of art may be sent, carriage prepaid, to Mr. W. J. Stillman, 100 Clarendon Road, Notting Hill, London; if for sale, a label, giving price, etc., must be pasted on the back of the frame.

—On the 9th instant the American Academy of Arts and Sciences presented the Rumford medals to Mr. Joseph Harrison, jr., of Philadelphia, for the invention of the boiler which bears his name. These medals, in the intention of Count Rumford, as expressed in his letter accompanying a gift of $5,000 to the Academy (p. 250 of Ellis's Life), were to be awarded "to the author of the most important discovery or useful improvement . . . . on heat or on light; the preference always being given to such discoveries as shall, in the opinion of the Academy, tend most to promote the good of mankind." The ground of the award in Mr. Harrison's case, according to the inscription on the medals, was "his method of constructing steam-boilers, by which great safety has been secured." In making the presentation, the Rumford Committee confined its opinion of the boiler to this single quality, stating that while it might burst under excessive pressure, "a violent, destructive explosion is almost impossible"; and this will certainly be allowed to be a good reason for not waiting till absolute safety is attained, if indeed it ever can be Mr. Harrison acknowledged the honor thus conferred upon him by presenting the Academy with Rumford's portrait, painted from life, in Paris by Rembrandt Peale about 1811. Our great countryman is again brought to mind by the recent award to Dr. Julius Robert Mayer of the Copley Medal of the Royal Society of England. This medal dates from 1709. Franklin received it in 1753, and Rumford himself in 1792. Last year it was awarded to Dr. Joule, along with the medal of Rumford's founding (1796). A warm and admiring account of Mayer's genius, and the services which he has rendered to science by his speculations on the subject of heat, will be found in *Nature* for Dec. 14, from the pen of Tyndall.

—For the benefit of inventors, the majority of whom have probably never heard of the Rumford medals, or even of the Academy itself, we may state that this body annually appoints a committee of seven fellows, called the Rumford Committee, whose duty it is to investigate all claims for the Rumford premium. This is awarded only on recommendation of the Committee, and at the annual meeting of the Academy, held on the fourth Tuesday in May. The Rumford fund would enable the Academy to bestow the medals every year, but the premium can be awarded, as above mentioned, only for a new discovery in light or heat, or for a substantial improvement in the application of these agents to the arts of life, whose usefulness has been tested by experience. Mr. Harrison's is but the sixth award that has ever been made, the others having been for the compound blow-pipe and improved galvanic apparatus (Dr. Robert Hare, of Philadelphia, 1839), the caloric engine (John B. Ericsson, of New York, 1862), improved management of heat (Prof. Daniel Treadwell, of Cambridge, 1865), improved manufacture of refracting telescopes (Alvan Clark, of Cambridge, 1867), and improved steam-engine (Geo. H. Corliss, of Providence, 1870). All communications on the subject of the premium should be addressed to the Chairman of the Rumford Committee, American Academy of Arts and Sciences, Boston.

—"Carl Benson" writes us as follows: In an article on "Thomas Watson, the Poet," in the *North American Review*, Mr. F. T. Palgrave quotes a sonnet of Watson's, mainly on account of a "coincidence" in the closing lines which have the same rhymes as one of Shakespeare's couplets. It is singular that such a reader of the old poets as Mr. Palgrave should not have noticed the much more striking coincidence in the body of the same sonnet:

"The myrrh, sweet bleeding in the latter wound,"

which is pure Spenser (Catalogue of Trees, imitated from Ovid by Spenser), all but one word, and probably that, too, since "latter" looks very like a misprint for the Spenserian "bitter."

—The late General Henry Wager Halleck, who died at Louisville on the 9th inst., was, if not one of the greatest, one of the most respectable characters in our war against the rebellion. If he did not satisfy every expectation as to his military abilities, he betrayed no trust, and exhibited a solid loyalty and absence of jealousy which contributed not a little to the success of the Federal arms. He was born near Utica, N. Y., in 1816, was one of the best products of West Point, and, like other graduates of his generation, found employment in Mexico, where he served with distinction, afterwards taking a share in the Territorial and State organization of California. In 1854 he resigned his commission as captain of engineers to engage in the practice of law, from which he withdrew in 1861 on being made a major-general. General Halleck was the author of "Elements of Military Art and Science" (New York; 1846) and "Elements of International Law and the Laws of War" (Philadelphia; 1866).

—The liberal wing, that is to say, the majority, of French Protestants have been deeply agitated by a decree of the Government dated November 29, ordering a general synod to be chosen by the so-called *synodes d'arrondissement* (particular or provincial synods). The decree was issued on a report of the Minister of Public Worship and Instruction, M. Jules Simon; but as this report was not simultaneously made known, it can only be conjectured what influences have been at work to affect this State interference with the congregationalism of the Reformed Church of France. M. Guizot has for many years openly sought to have a synod imposed on his co-religionists, he representing the orthodox wing, and being one of the leaders of the Paris "oligarchy" who have narrowly in late elections escaped defeat. It is not unnatural to connect him with the new decree, especially as there has been no unusual demand for a synod on the part of his associates. His liberal opponents, whose organ in Paris is the *Renaissance*, edited by the Coquerels, do not hesitate to brand the synod as an orthodox manœuvre to maintain a local minority in power, as arbitrary, illegal, or of doubtful legality, highly inequitable, and a reuniting of church and state contrary to the historical development of the Reformed Church in France, and promising a renewal of religious strife, persecution, and bitterness. The chief grievance of the liberals is that the synod is not to be chosen by the direct suffrage of church members, which would give all shades of opinion proportional representation, but by the particular synods, which in turn are named by the consistories—bodies only in small part elected immediately by the faithful. This is what the *Renaissance* styles suffrage in the third and a half degree. Then, again, the consistories represented in the particular synods have only two delegates, whatever their numerical strength: that of Brest, counting 1,200 Protestants, having as many delegates as that of Paris, with its 45,000 Protestants, or of Nismes, with its 17,000. Moreover, in fixing the membership of the general synod, not the number of communicants but the number of pastors was selected as a basis. Of course, the larger the religious community, the larger the congregations and the fewer the pastors needed, so that the basis selected is wholly in favor of the little churches scattered about the country, and against the large ones of the cities, as well as opposed to the growing importance of the laity in the government of the church.

—The elections are to be held this month or early in February, and this in brief, according to the *Renaissance*, is what M. Guizot and his friends expect to gain from them:

> "The future synod does not prevent the electors from sending eight liberals to the Paris presbytery, but it permits the orthodox to remain there—at least so they think. Their hope is that they will be masters of the synod, and that it will decree, for all the electors in France, that confession of faith which they wished to impose on the church in Paris; that it will thus banish, and for ever, all the liberals from the church. Having obtained so much from the state, they count on obtaining still more, and hope to lead it into severe measures against the recalcitrants. In a word, Parisian orthodoxy saw itself lost, and no longer felt equal to continuing the struggle. In ten years of oppression it had ruined the church and its own side much more than it had harmed its adversaries. In order to survive any longer, it needed support from without; and it trusts that the synod will give it the support of the orthodoxy of the departments, and, by a sort of back action, the still more precious support of the Government itself—of the secular arm, as our fathers were wont to say."

—Those of us who think that a few million acres appropriated by Government are enough to found a university, State or national, would do well to take account of the difficulties which are experienced in getting the proposed University of Strassburg on its feet. The intention had been to open a portion at least of the lectures by Easter of this year, but this has been abandoned for want of proper accommodations. Moreover, the faculties of law and philosophy will have to be remodelled; it is uncertain how many professors of the medical school for which Strassburg was formerly distinguished will consent to take service under the Empire; and the theological faculty alone appears to be securely counted upon. Instructors, meanwhile—the *Docenten*—do not volunteer in plenty, and the reason assigned is that, as a rule, Prussian professors are miserably paid, and have little temptation to transfer themselves to a semi-hostile city, in which living is very dear. On an average, their pay is 1,145 thalers, with perhaps an honorarium of 300 additional, making 1,500 a full estimate; and their future is so little brilliant that the tendency is for an academic career to be within reach only of the well-to-do—a curious outlook for science. Fault is justly found with the budget of 1872, that the King's promise to raise the salaries of Government employees conformably to the altered circumstances of the times and the enhanced price of living, has not been kept by the Ministry of Public Instruction. The universities are, it is true, in a measure endowed more liberally than heretofore, but the gymnasia fare no better than ten years ago—that is, they receive an appropriation no larger than in 1861-63, when it was, even then, too scanty, and, meanwhile, the necessaries of life have undergone a serious advance. The maximum salary of a head-master—the highest grade of promotion, at the end of long service, by the best teachers—is 1,000 thalers, and how a young or a growing family can be supported on such an income, it is difficult to see.

—Prussian frugality, in fact, would be scarcely tolerable, unless mitigated not only by life-tenure of office and pensions, but occasionally by such tributes as that lately paid Friedrich von Raumer, the historian, when celebrating his sixtieth year of state service, he having been for most of that time (since 1819) connected with the University of Berlin. Congratulations early poured in on him this day (Dec. 6), beginning with thanks from Bismarck, in the name of the ministry, for his faithful services to the state and to the cause of learning, and felicitations on his having survived the bitter downfall of his country in his youth to witness its present resurrection. This was followed by similar expressions, in person, from Mommsen, Dean of the Philosophic Faculty, accompanied by several of his colleagues; from the Rector of the University, Dove; the Dean of the Law Faculty, Heffter, and others. From Breslau, too, where Raumer passed the first eight years of his professorship, came greetings and good wishes from the Rector and Senate, and gratitude for his share in founding that University in his official capacity of Secretary to Chancellor von Hardenberg. There was also crowning of his bust with laurel; and two autograph letters from the Emperor and Empress, accompanied by a portrait of the former, completed the happiness of this "Nestor of all living historians."

FORSTER'S DICKENS.*

ALL of this volume, except what consists of Mr. Forster's critical estimates of Dickens's novels, will be found to be of some interest to almost every class of readers; but the most valuable part is contained in the first hundred pages. These relate to Dickens's boyhood and to his love affair with the lady who figures as "Dora" in "David Copperfield"; and although the love affair is treated of somewhat after that fashion—neither wisely reticent on the one hand nor wisely plain-spoken on the other—to which Mr. Forster has accustomed his readers, the account of the hardships of the boy, which is for the most part done by Dickens himself, is full and minute, giving all the information as to this part of his life that is to be desired, and much that is directly useful towards the understanding both of the novelist and the novels. It appears that Mr. John Dickens, the father of Charles, being a man of an excessive easiness of disposition, had so involved himself in money difficulties that, just as Charles arrived at his eleventh year, the family became very much straitened in means, and, after doing all that could be done in the way of getting help from their friends, they were driven in succession to the auctioneer, the pawnbroker, the Marshalsea Prison, and the protection of the bankruptcy act. While their affairs were in this posture, one of Mrs. Dickens's relatives who owned a blacking manufactory offered to give employment to Charles, and to pay six or seven shillings a week for his services, an offer which it was not unnatural that Mr. Dickens should accept. Neither was it unnatural that the acceptance of it should fill Charles with wretchedness. He was only ten years old, but he was extraordinarily precocious. In "David Copperfield"—a novel which is in some sense his autobiography—the hero states that he remembers very well the time when he was learning to walk, and how his nurse and his mother looked stooping down on the floor as he tottered from the one to the other; and Mr. Forster says that he has often heard Dickens describe things which he saw before he was two years old. Then, again, the mind thus early awake the child had stored with the scenes, incidents, and personages of a good number of books of a kind particularly fitted to his peculiar cast of mind. He had diligently read "Tom Jones," "Roderick Random," "Peregrine Pickle," "Humphrey Clinker," "Robinson Crusoe," "The Vicar of Wakefield," "The Arabian Nights," "The Tales of the Genii," "Gil Blas," "Don Quixote," and several volumes of voyages and travels, and, like every child of active mind, he did in imagination all that had been done by his heroes and habitually identified himself with them—knocked down over again all the bullies that Tom Jones knocks down, was as generous as Mr. Alworthy and as magnanimous as the Don, saw as many lands and seas as Peregrine, wandered over Spain with Gil Blas and had adventures in every town, was as good and good-natured as Dr. Primrose or Parson Adams, and, like the parson, and the doctor, and Tom, and Aladdin, and the rest, came prosperously out of obscurity to unalloyed honor and happiness. "It is curious to me," he says, "how I could ever have consoled myself under my small troubles, which were great troubles to me, by impersonating my favorite characters. I have been Tom Jones (a child's Tom Jones, a harmless creature) for a week together. I have sustained my own idea of Roderick Random for a month at a stretch, I verily believe." We may imagine, then, the grief—sincere, poignant, and lasting, as a child's grief may often be, though it cannot be unremitting—with which the high-spirited boy, who already had some knowledge of his powers, and indeed had begun to compose, found himself called away from his dreams, aspirations, and pleasures and set as a creature uncared for to drudge in a drudgery which appeared as hopeless as sordid. For children, though they have childhood's knack of hoping and cannot have learned the true depths of despair, yet very easily despair, not finding ability to hope when they feel themselves helpless in the disposing hands of elders, who are as Fate itself in point of power, and seem like it in point of sympathy and exorableness.

A great deal Dickens describes himself as suffering at this period of his life, and in the experiences of David Copperfield while in the warehouse of Murdstone & Grinby we may see his record of the impression made on him by his personal experience while in the blacking warehouse. But, while it is a common thing for children to suffer in the way in which he suffered, it is not common that the impression made is so permanent, or, rather, that it remains so permanently deep and sharp as seems to have happened in his case. He was, to be sure, deprived of the opportunity to go to school, which he much craved; the little store of books in which he delighted had disappeared in the family stress, and there was no money for more; he was made to work at a confining employment, and for companions had an illiterate man or two and boys who, if no worse, were no better than boys of their employment might be expected to be; he had to wear worse clothes than he wished, and worse probably than it was well he should wear; and often he had parted with all his dinner money before he had parted with all his hunger, his appetite being a keen one; his father and mother behaved, he says, as if they thought he "was quite provided for," while, as for him, he remembers that one day when Mr. John Dickens entered the warehouse while outside a knot of chance passers were looking in at the window watching the dexterity of the boys with the pots of blacking, he looked at his father and could not help "wondering how he could bear it." Here, evidently, is matter for much justifiable unhappiness in the boy, and for lasting recollection by the boy become man; but it is surprising to hear Dickens saying on one occasion, so long afterwards as after his second or third child was born, that it made him cry to enter a certain street through which used to lie his road from his work. "My servitude," he calls his employment. "Until old Hungerford Market was pulled down; until old Hungerford Stairs were destroyed and the very nature of the ground changed, I never had the courage to go back to the place where my servitude began. I never saw it. I could not endure to go near it. For many years, when I came near Robert Warren's, in the Strand, I crossed over to the opposite side of the way to avoid a certain smell of the cement they put upon the blacking corks, which reminded me of what I was once. It was a very long time before I liked to go up Chandos Street. My old way home by the Borough made me cry after my youngest child was born." In another place, speaking of a quarrel between his employer and his father, which led to his employer's discharging him, he uses this language in reference to his mother's conduct as regarded his employment: "My mother set herself to accommodate the quarrel, and did so next day. She brought home a request for me to return next morning, and a high character of me, which I am sure I deserved. My father said I should go back no more and should go to school. I do not write resentfully, or angrily, for I know how all these things have worked together to make me what I am; but I never afterwards forgot, I never shall forget, I never can forget that my mother was warm for my being sent back."

These certainly are not very pleasant passages in the biography; but it may be worth while to dwell for a moment on the feeling with which Dickens looked back upon the lowness of his boyish fortunes. Perhaps he deceived himself somewhat in supposing that he thought of them without anger or resentment; and perhaps he overstates the case when he asserts as he does in reference to his two years in the warehouse that, "but for the mercy of God, he might easily have been, for any care that was taken of him, a little robber or a little vagabond."

We are inclined to think that Mr. Forster's narrative of these circumstances—which, he says, when he first heard of them startled him—would warrant the biographer in saying that Dickens has decidedly overstated the case, if not as regards his misery, at least as regards the dangers to which he was exposed; that he is even culpably severe upon his father and mother; and that it was precisely because of a certain angry and resentful feeling, from which he had not been able to free himself, that the overstatement in question came to be made. Mr. John Dickens was a Government clerk on a small salary, with a large and increasing family, and, at the time of which we speak, was an insolvent debtor, lying in jail, with every resource exhausted. The eldest of his six children was a girl then, as it happened, just luckily provided for by an appointment as free pupil at the Royal Academy of Music; the second child was a boy of ten, and his genius for novel-writing being as yet unsuspected, he was put with a relative—long an inmate of Mr. John Dickens's house—in order that he might earn a little money, by working at a light employment, until such time as the family could get out of the Marshalsea and on its legs again. This occurred in about two years. The quarrel above-mentioned as having taken place between Mr. John Dickens and the warehouseman was on Charles's account, we learn, and may have related, he says, "to my employment at the window"—that is to say, Mr. John Dickens, who "dreadfully insulted" the warehouseman on Charles's account, was probably not so indifferent as might have appeared to what of degradation there was in his son's position, and probably was more than willing to put him to school when that should seem possible. Of course, in their harassed waiting for something to turn up, the father and mother—whom, with a remarkable hardness and want of delicacy, Dickens afterwards made into Mr. and Mrs. Micawber—may probably have been more careless than they should have been about the boy's goings-out and comings-in; and poor Mrs. Dickens, fresh from her experience of housekeeping in jail, of pawning a book to get a dinner, and then borrowing another prisoner's knife and fork to eat it with, may very likely have been even over-cautious about losing her son's contribution to the weekly income and at the same time quarrelling with a well-to-do relative who had befriended her husband; but that, either at his cousin's or his father's, there was ever any imminent danger, but for the mercy of God, of Charles's becoming a little robber or a little vagabond, it is not necessary to believe. Nor is it necessary to believe that he was not by far too hard on his father and mother, when he allowed his own very real but somewhat selfish misery to blind him to the family distress. It is, on the other hand, probably correct to suppose that Dickens, being an exceedingly sensitive man, though notably deficient in delicacy of sensibility, a man with a great deal of a certain sort of personal pride, and with no small sense of his superiority and of what was due him, found it very hard work to forgive any one's putting a slight upon him, and could not bring himself to look with reasonable kindness and allowance on the act of his father and mother in letting him incur the stigma of having been, though only as a boy, "a workingman." This would have been no injury to his friend had Mr. Forster told it. Whatever it is the practice of biographers to think, it is still allowed among men that a man shall have faults, of various degrees of magnitude, and nevertheless retain the love and esteem of friends and capacity for friendship. And Mr. Forster's friend, in this instance, being a popular novelist, much of whose fame has rested on the attacks which he made upon a social system which chafed him, it became no less than Mr. Forster's duty to point out traits in his subject's character which may be of service towards a better understanding and valuation of the man and his works. It is true that Mr. Forster gives the data which will enable the reader to reach the conclusion which we have set forth. But as it is not at all his conception of his business as a biographer to give facts but no inferences, we expected, and should have been pleased to see what were in this case the inferences which he would draw. He could hardly have failed to dash the too profuse laudation which is a principal characteristic of the work with a word or two of reprehension.

---

* "The Life of Charles Dickens. By John Forster. Vol. I. 1812-1842." Philadelphia: J. B. Lippincott & Co. 1872.

Later, when the succeeding volumes of the biography shall have made the record of the life more complete, it will be time to speak more at length of the other effects produced upon him by his enforced drudgery, with its bitter sense of injury inflicted and with its acute misery endured. Meantime, we may remark that it is doubtful if any other field comparable to that of the low life of waterside London could have been found for the full development of Dickens's whole nature. As a contemplator of social problems, who brought to the study of them readier sympathies than professed insight or much knowledge; as an observer of the utmost sharpness, but whom possibilities of caricature made indefinitely sharper; as a caricaturist, as a master of a self-pitying sort of pathos perpetually on the verge of falseness, no better lot could have been asked for him than that his father should have gone to the Marshalsea when he was at an age when his observing powers were at their highest power of registering phenomena, and should have sent him, when in an anguish of not unselfish sorrow he should be brought to hate the infliction of the misery he saw about him, to share the humble pains and humble pleasures, the recital of which afterwards should touch all hearts.

The part of this first volume which the American reader may perhaps expect to find most interesting after the autobiographical fragment of which we have been speaking, is the part relating to the American tour; but though Mr. Forster quotes from numbers of letters which now for the first time see the light, we believe there is not much in it that is new. We do not recollect if it is in the "American Notes" that in 1842 there was not one gray-haired man to be seen in St. Louis, Missouri—"all the inhabitants were young," so fast was life in those Western regions, and so aggressive was Young America. But this has a familiar sound:

> "As I had a window close to me yesterday that commanded this gentlemen's car, I looked at it pretty often perforce. The flashes of saliva flew so perpetually and incessantly out of the windows all the way that it looked as if they were ripping open feather-beds, and letting the wind dispose of the feathers."

And so has this:

> "The prevailing grammar is more than doubtful; the oddest vulgarisms are received idioms; and all the women who have been bred in the slave States speak more or less like negroes."

But though Mr. Forster's quotations add little to what was known before, and though of that little it would be better to have left out something, as the needless unkindness of printing Dickens's private remarks about a certain well-meaning secretary of his who is, we believe, yet living—the last chapters of the volume have nevertheless for an American a curious sort of interest. Here is our tourist, for example, at Cincinnati, at Judge Walker's hospitable mansion: "He wore a dark coat with lighter pantaloons," one of his young lady admirers says, "a black waistcoat embroidered with colored flowers, and about his neck, covering his whole shirt-front, was a black neckcloth also embroidered in colors, on which were placed two large diamond pins connected by a chain. A gold watch and a large red rose in his button-hole completed his toilet." The young lady adds that when she saw him thus clad and adorned she felt that his throne was shaken, his dress seeming to her to be foppish and his manner a little foppish also. To this and similar strictures on his appearance and garments implying that when dressed to meet the Honorable Mr. Pogram and other eminent citizens and patriots the inimitable Boz bore a close resemblance to a London Jew dressed for a half-holiday, Boz tells his friend Forster that he wishes Forster could have seen "the other gentlemen present," between whom and himself comparisons disadvantageous to himself have been instituted by the local newspapers. Forster should see these other gentlemen present, dressed in black broadcloth, spitting on the carpet at evening parties, chewing tobacco everywhere, and boring Boz beyond measure, though it must be confessed they have displayed for him "a perfect affection." It is a curious enough picture of the America of thirty years ago and of the Dickens of that time—the time when Clay, "an irresistible man," was getting ready to be President, and Tyler was in office; when Mr. George Ticknor was declaring that Boz would have a triumphal ovation such as to beat everything in America since Lafayette made his progress from State to State; when the New York *Herald* was "the satirist of America"; when "the prairies fell by far short of my preconceived idea," but Niagara did not; when "a party of 'gentlemen' actually planted themselves before the door and windows of our little cabin while I was washing and Kate lay in bed"; and when this and the fact that a Cleveland paper asserts that before 1852 "Hail Columbia" shall be sung in Westminster Abbey so incenses us with Cleveland that we decline to receive the mayor when he comes aboard the flat-boat; when Boz was welcomed to these free shores as a foe to British aristocracy and a convert to the free American democracy, and Daniel Webster remarked that he had done more to ameliorate the condition of the British poor than all the statesmen Great Britain had ever sent to Parliament; when Boz, being invited to speak after our dinners to him, when we naturally wished to hear something about the goodness of a well-known form of government, talked to us instead about our meanness in robbing him and Scott and many other British writers by cheating them out of copyright money; when, in short, it was thirty years ago, and the United States had not made those unparalleled advances in power and civilization which will please Mr. Forster to witness when he comes over to enquire how much the United States of his young friend resembles the United States of the present time.

As this first instalment of the work brings the life of Dickens down as far as to 1842, we presume there are to be two more volumes. In 1842, Dickens—who, by the bye, was baptized Charles John Huffham—was thirty years of age, his birth having taken place on the 7th of February, 1812. At the close of his visit here, when just fairly entered upon manhood, he had already made himself the most widely-known and admired of living British authors; and in England, in Scotland, and in the United States had been welcomed, both by the popular voice and the consent of his literary brethren, with honors unexampled in the history of English literature. That this did nothing to increase his native confidence in his own powers, and to encourage in him a frame of mind akin to mental arrogance, could hardly be said; but apparently it did little or nothing to turn his head or to make him conceited.

LORD BANTAM.*

IN "Ginx's Baby" Mr. Jenkins described a pauper with whom the world could make no terms. In "Lord Bantam" he describes a young nobleman who could make no terms with the world—until he reached his estates. His birth is announced thus in the *Piccadilly Journal*:

> "Sons.
> Ffowlsmere, Countess of, on the 1st April, at 20 Hiton Place."

We are told with much particularity of the "happy accidentia" connected with the birth of the young aristocrat. Great care was taken to avoid the risk of pre-natal accidents. Gillow, the coachman, had orders not to drive her ladyship in the direction of any street row, monster, or accident; and it was the groom's duty to "watch for deformity or ugliness on either side of the way, and to warn the maid, who diverted her ladyship's attention until they were past the dangerous object." But, in spite of all precautions, an unlucky accident occurred. The red-headed Marquis of Arran, a hated relation of the Earl of Ffowlsmere, one morning recognized my lady's carriage; he "rode up to the wheel, and, uncovering his orange-tawny pate, bowed it portentously forward almost in the Countess's lap. Lady Ffowlsmere, giving a little shriek, burried her face in her handkerchief." When, soon after, she first saw her new-born child, she uttered another shriek and fainted away. "The little honorable's head was the color of a Maltese orange."

In spite of this piece of ill-luck, the red-headed Bantam came bravely through his infancy. He was christened Albert Alfred Augustus Adolphus, and other names. His hired nurse gave up her own infant to the mercies of a baby farmer, sacrificing its life—for it died just as she left the Ffowlsmere service. The only personal misadventure of Lord Bantam's childhood was his vaccination. The lymph was taken, indeed, from the healthiest child in the neighborhood; but it afterwards appeared, to my lady's horror, that this healthy child was the son of the shoemaker Broadbent, "an infidel Chartist, the plague of the town." Lady Ffowlsmere was intensely indignant "that such shocking blood should be transferred to poor little Alfred," and was in terror lest the child had "been inoculated with some low *Red* opinions." The surgeon was instantly dismissed for his imprudence in the matter. Every one, indeed, who had to do with the care of the infant suffered, the parents' sense of justice to their employees being overpowered by a feeling of class superiority.

---

* "Lord Bantam. A Satire by the Author of 'Ginx's Baby.'" Author's edition. New York: George Routledge & Sons. 1872.

By the death of an elder brother, who was broken down by dissipation at the university of Camford, Alfred became Lord Bantam at the age of four years. In due course of time he was provided with private tutors, his father being afraid to risk his morals at Camford. One of these tutors, a Scotchman named Kelso, communicates radical ideas to the boy, denounces the feudal aristocratic system, and takes him to Methodist love-feasts, breeding in him a habit of destructive criticism toward his own class. Finally, avoiding the scene of his brother's ill-fate, Bantam goes for a year to the sister university of Oxbridge. Here he joins radical clubs, both political and religious; and when he returns to Ffowlsmere his parents, the wealthiest nobles in England, are dismayed to find that their future heir has become a rank Communist. He objects to an expensive celebration which his father proposes for his coming birthday; he finds the management of the Ffowlsmere estate oppressive, and unjust to the tenants; and, more than this, he publicly admits, on coming of age, that the whole system of landed estates is false in principle. In short, the young lord commits himself in a quite shocking manner to radical views. He fraternizes with Broadbent, the Chartist, the troublesome malcontent of the Ffowlsmere estate, who begins to claim an ally in Lord Bantam. The course of the young man is lamented by his friends and denounced by the newspapers. It begins to seem, indeed, as if the Broadbent vaccination had worked in the way that Alfred's mother feared and had converted the young aristocrat into a red republican.

Lord Bantam, however, in due course of time is returned member of Parliament, and takes his seat for Ffowlsmere. The peer's son and budding statesman is a conspicuous person there; but his radicalism is in no way tempered, except that for the first time he becomes interested in the management of business affairs, not forgetting those of his own estate. He is made president or director of a score of charities and public companies. Broadbent persuades him that a great career lies before him "in the transfiguration of labor and the regeneration of society." The condition of the working-classes appeals to all his sympathies and philosophies; he dedicates himself "to the propagation of theories of free thought and free life"; he falls into the hands of political charlatans, and learns to disregard practicable measures "for the impracticable dreams of the Commune." He embraces the "Eclectic" religion, and joins the "Society for Developing the Mental and Moral Stamina of Women." After a hasty and philosophic courtship, amusingly described, he marries the honorary secretary of this society, Lady Sophronia Enequil, a lady who would have been charming but for her large nose and her preternatural familiarity with philosophy. To make the dismay of his parents and of his connections more complete, he marries her by civil contract, the Earl consenting to know nothing about the transaction. On the return of the pair from a wedding tour upon the Continent, they take a house in Belgravia, and devote themselves to politics, social science, and the Eclectic religion. Lady Bantam develops into a notorious agitator. Her husband joins the "Social Anti-Climax League," and aids in forming a new Charter of English Rights, in which it was announced that "the land is the people's," and that "the capitalist is the tyrant." From his seat in Parliament Lord Bantam urges, with eloquence and sincerity, his radical views. Great is the alarm in aristocratic circles. The heir to the richest estate in England is a rebel against wealth and prescriptive rights. The hour for the Anti-Climax League to act has arrived. At this time the old Earl dies, his last words to his wayward son being a solemn warning against his revolutionary bent. Young Alfred becomes Earl of Ffowlsmere, with an annual income of £700,000; and it is observed that he takes a deep and novel interest in the money affairs of the estate. A week after his father's burial in Westminster Abbey, a body of rough-looking men seek an interview with the young Earl at his country seat. It is a deputation, headed by Broadbent, from the "Social Anti-Climax League." The old man reads once more, "with uncouth emphasis, a proletarian address." After expressing sympathy for the death of the Earl and congratulation upon the young lord's accession to the estate, he reminds the latter of his often-declared adhesion to the principles of the League, and calls upon him to employ his new and great opportunities to carry them out. He concludes by praying Lord Bantam "to take the lead in the great social movement for the transfiguration of labor and the regeneration of society." The Earl receives the address with embarrassment. He hesitates:

> "'Well, my lord,' said Broadbent, 'we wait your answer. Surely you have made up your mind. We are prepared to follow you to the death.'
>
> "'No doubt—a—Mr.—Broadbent; but, Mr.—Broadbent and my good friends, I—I have lately had to reconsider the subject of this address with some care, and—in fact, gentlemen—I have seen reason to change my opinion.'"

With this surprising answer the book ends. The movement for the transfiguration of labor is checked, we are left to infer, by Lord Bantam's recusancy. The author does not, however, leave us in doubt as to his own ideas of reform. The following passage will explain one of his leading recipes for improving the condition of the poor. To compare, says he, "the respective numbers of persons that do make a living out of a huge estate, and the maximum that might be maintained on and out of it, and from the results to invent some system which, without wrong to any living person or perilous disregard of economic laws, should tend to encourage the distribution of the land among the aforesaid maximum, is the problem of problems for us to solve in England just now. Look not at it askance, O ye select and heaven-ordained body of Primogenitals! It must be solved or *you* be dissolved. It is a question between you and the maximum." To us, indeed, this seems but a weak and temporizing remedy. The permitted increase of English population would in a few years fill all the parks and preserves of England, and the same problem of poverty from overcrowding would recur upon a yet greater scale than before. The "question of the maximum" is not the most important one. We cannot admit that a nation is necessarily better off in the ratio of the size of its census list. And as to the "equalizing" plan which the author of "Lord Bantam" seems to favor, a criticism sufficiently in point was suggested in one of the January magazines: "Bless your soul, if all the cities in the world were reduced to ashes, you'd have a new set of millionaires in a couple of years or so out of the trade in ashes."

Mr. Jenkins's book is written with much humor and clever management of details, but has the unpleasant fault of occasional lapses into the Carlylese style, as our readers will have noticed in the passage already quoted. It deals so largely with local details of English politics that it can hardly become as popular in this country as "Ginx's Baby" was; but it manifests not less of what Prof. Seeley calls "the enthusiasm of humanity" than the earlier work, and it makes useful suggestions toward improving the condition of the English people; but it throws little light upon the deeper questions of reform—as, for instance, how to limit the number of working hands in a community to a number that shall not be out of all proportion to the amount of work required to be done.

THE HOOSIER SCHOOLMASTER.*

IN his preface Mr. Eggleston tells us that "The Hoosier Schoolmaster" has been very well received among the Hoosiers themselves, and we suppose that whether or not they are good judges of novels they are good judges of the faithfulness of a picture of life and manners in the Indiana of twenty years ago. So far as we can judge, the book merits their approval. The West which the clergymen used to come East to tell us about, as being in heathenish darkness; to which we used to send colporteurs and tracts and schoolmasters; the region of Suckers and Pukes and Hoosiers of which "Crockett's Almanac" used to be redolent; the West of Murrell and his horse-thieves and of Lynch law; the sordid, brutal, lawless West of the days before railroads, when the prairies always showed somewhere a border-land of frontier life with its hardness and wickedness as well as its courage and laborious industry; the West of the rough itinerant preacher and his sermons—the darkness visible of dense ignorance and illiteracy lit up with hell-fire—this region, more or less known to all Americans, Mr. Eggleston appears to have known and understood, and in his novel it is reproduced, quite sketchily, to be sure, but, as we should say, with essential truth and with some effectiveness. This is, perhaps, hinting that the book is not a captivating one. In fact, the faithfulness itself of its transcript of the life it depicts will alone make it to many readers a repulsive book, especially as it has no interest of passion or of mental power; but possibly the good feeling of the intertwined love story may conciliate the good-will of some of the malcontent.

The Hoosier schoolmaster is a young man who undertakes the management of the Flat Creek school—or as Mr. Jack Means, the trustee, remarks, "trusts his hide in the deestrick school-house." He fights the boys; "boards roun'" with their parents; incurs the hostility of a gang of horse-thieves and burglars, who have at their head the principal physician among the Flat Crickers; narrowly escapes lynching at the hands of a mob instigated by the robbers; is put on trial, but makes his innocence apparent; and ends his tribulations by marrying Mr. Jack Means's "bound gal," taking her mother out of the county poor-house, an institution which he rescues from the clutches of a "ring" who dictate the politics of Hoopole County; and, finally, materially assists in the marrying of "Bud" Means, the second hero, to Miss Martha Hawkins, niece of Squire Hawkins, an immigrant Yankee from the neighborhood of "Bosting." "Bud," we may add, who could "git no good" from the preaching of Mr. Bosaw, the Hardshell or Forty-gallon Baptist, and who even cut off the stirrup-straps and saddle-bags of Mr. Soden—Brother Sodom—who "preached eternal damnation" at Mount Tabor, Indiana, is converted by the schoolmaster, who is a Christian of the fluid, as opposed to the rigid, type of Christianity. It is a type, by the way, that grows commoner daily, if certain of our editorial brethren of the religious press are not mistaken. They will be gratified to hear of Mr. Means's new church, the "Church of the Best Licks," namely, as composed of "them that'll put in their best licks for Jesus Christ" (who was "himself a kind of a Flat Cricker"), and have an aversion to the stifling character of creeds and formularies apprehensible by the intellect.

---

* "The Hoosier Schoolmaster. A Novel. By Edward Eggleston." With twenty-nine illustrations. New York: Orange Judd & Co. 1872.

Our brief sketch of the contents of "The Hoosier Schoolmaster" shows that its author has made for himself an opportunity to do for some of the more obvious phases of Western life what such books as "Locke Amsden, the Yankee Schoolmaster," and scores of others of various merit have done for the life of New England. The band of thieves such as still here and there infest the Western country, keeping grand juries in awe, electing or killing sheriffs, and necessitating or instigating lynch-law executions; the "protracted meeting"; the spelling school in the evening; the "rough and tumble" fights; the brutality and sodden vulgarity of the ruder part of the community; the jumble of religious sects—something of these things which all once were of the West, if not precisely the West itself, is, on the whole, not ill sketched by Mr. Eggleston, and as these things are rapidly passing away, and are not finding too many or too clever observers, it is well that a man like Mr. Eggleston, with a fair share of literary skill, has taken occasion to sketch them. How long will it seem credible, for example, that such sermons as this, a part of which follows, could have been preached before an audience of native-born Americans? Yet Mr. Eggleston vouches for its careful accuracy, and nothing would be easier than to procure corroborative evidence in abundance from men now living and not old:

> "You see, my respective hearers-ah, as how-ah as my tex-ah says that the ox-ah knoweth his owner-ah, and-ah the ass-ah his master's crib-ah. Ah-h! Now my respective hearers-ah, they're a mighty sight of resemblance-ah atwext men-ah and oxen-ah, bekase-ah, you see, men-ah is mighty like oxen-ah. Fer they's a tremengious defference-ah atwext defferent oxen-ah, jest as thar is atwext defferent men-ah; fer the ox knoweth-ah his owner-ah and the ass-ah his master's crib-ah. Now my respective hearers-ah, you all know-ah that your humble speaker-ah has got-ah jest the best yoke of steers-ah in this township-ah. They a'n't no sech steers as them air two of mine-ah in this whole kedentry-ah. Them crack oxen over at Clifty-ah ha'n't a patchin to mine-ah. Fer the ox knoweth his owner-ah and the ass-ah his master's crib-ah. Now my respective hearers-ah, they's a right smart sight of defference-ah atwext them air two oxen-ah, jest like they is atwext defferent men-ah. Fer-ah" [in a loud voice and with a vehemence of gesticulation out of all proportion to the importance of the subject matter]—"fer-ah, you see-ah, when I go out-ah in the mornin'-ah to yoke-ah up-ah them air steers-ah, and I says-ah 'Wo Berry-ah! *Wo Berry-ah!* WO BERRY-AH!' why Berry-ah jest stands stock-still-ah and don't hardly breathe-ah while I put on the yoke-ah and put in the bow-ah and put in the key-ah; fer, my brethering-ah and sistering-ah, the ox knoweth his owner-ah and the ass-ah his master's crib-ah. Hulleluger-ah. But-ah my hearers-ah, but-ah when I stand at t'other eend of the yoke-ah and say 'Come Buck-ah! *Come Buck-ah!* COME BUCK-AH! COME BUCK-AH!' why what do you think-ah? Buck-ah, that ornery old Buck-ah, stid of comin' right along-ah and puttin' his neck under-ah, acts jest like some men-ah what is fools-ah. Buck-ah jest kinder sorter stands off-ah and kinder sorter puts his head down-ah this ere way, and kinder looks mad-ah and says 'Boo-*oo*-OO-OO—*ah!*'"

The "ornery" ox, Mr. Bosaw went on to say, resembled the Campbellites, or Anti-Forty-gallon Baptists, who believe things not authorized by the Scriptures, while the other was the type of the Hardshell denomination, of which Mr. Bosaw was himself a professing member.

We have said that Mr. Eggleston vouches for the exactness and correctness with which the extract just quoted reproduces the words of the preacher; furthermore, he says of the novel throughout that "the true *usus loquendi* of each location" has been carefully preserved. We may perhaps find it profitable to give a little attention to the dialectic variations which it records. We are not informed to that effect, but it is meant, we suppose, that we should think of the speech of these personages as the speech of a community living somewhere in Southern Indiana about the year 1850, and that we need not necessarily presume that the dialect as here given is still extant and prevalent. The first remark that it occurred to us to make as we read was that almost none of the dialectic forms was unfamiliar, that none was of much rarity, but all had been very well known as existent. Next we observed that forms of speech peculiar to widely separated parts of the country were here to be found side by side—a natural consequence of the way in which the West was settled. Immigrants from the Eastern, Middle, Border, and Southern States entered in to possess the land together; and previously to 1850 the great stream of foreign immigration had not exerted any modifying influence on the language of the native-born settlers, especially in regions where the railroad had not yet come, and which were not on the line of any great thoroughfare of communication. These are nearly all of such expressions as vary from the common standard, and it may be worth while to set them down for the inspection of the curious in such matters: "Crick" is used for "creek," and apparently designates a stream smaller than a river, but larger than a "branch," which latter is what we call a brook. "Deestrick" for "district" went West from New England, we suppose. "Lick you like blazes," for "thrash you more or less, according to my ability," may "hail from" anywhere perhaps, but we can at any rate testify to having early heard it in the vicinity of Boston—or "Bosting," as Miss Martha Hawkins calls it in the story before us, and as we have known other people also to call it. "Allow" or "'low," in the sense of "assert" or maintain, is a Southernism, we take it, so far as the common employment of it goes, whatever may be the case as to its parentage. "Claim," by the way, we understand to be the equivalent Westernism for "allow," and both Houses of Congress and all the Washington correspondents may be observed to be exerting themselves to make it an integral part of the language. "A right smart sight" for "a good deal" appears to be a combination in one phrase of a New Englandism with a Southernism, "right smart" not being pure Yankee, we believe, though "sight" for "quantity" is often heard throughout New England. "Sonny" is, in New England, a diminutive, sometimes semi-contemptuous, and used for purposes of exasperation, sometimes ingratiatory and pleasantly familiar, accordingly as it is applied to a person old enough to be one's father or uncle or is addressed in good faith to a boy. "Aout" for "out" is, we suspect, commoner now in the West than in the East, where it disappears before the face of the schoolmaster. "Sâft" for "soft" we know nothing about. "Boss," for supervise, from the Dutch, as it is held to be, may have come first into use in the Middle States, but has long pervaded all the northern part of the Union. So too—as far as regards its pervasiveness—of the term "these diggin's" for "this place." "Kin" for "can" is probably more used in the South and West than elsewhere, though it may be heard in the East. "Grit" is good Yankee, but we did not know that "pluck," which Mr. Eggleston put into Jack Means's mouth, was doing much service outside the circle of literary Americans somewhat Anglicised—and these, we should say, might do as well to follow Scott in thinking that spirit and courage are "blackguardly called" when called after the liver and lights of animals, as to follow the muscular-Christianity men and the undergraduates in the perpetual use of a rather coarse term. "Sinnoo" and "sinner" for "sinew" are current still in New England, and "wade in" for "begin" has become so. "Boardin' round" is less used than formerly, decay having attacked the practice itself, which, as some of our readers may need to be told, consisted in the teacher's living first with one and then with another of his patrons, staying with each one a longer or a shorter time, according to the number of pupils which each sent to the school. "Holt" for the noun "hold" was once commonly heard in Massachusetts, and so may "yarth" have been for "earth," though "airth" is the variation with which we are familiar. "Bud" for "bub"—a name applied indiscriminately to all small boys, and perhaps a child's attempt at saying "brother"—was and is used in the Middle States, but in the Eastern we doubt if it ever had a foothold. "Sis" for "sister," which, according to Mr. Eggleston, is in the West "the birthright of the oldest girl," is not in the East always confined to the eldest daughter of the family, though it sometimes is. "Ax" for "ask," "to take the starch out" of a person who is too conceited, "ef" for "if," "'nough said," "hev" for "have," "jist" and "jest" for "just," "'bjection," "'nsurance," and many similarly clipped words, are now to be found in use among the vulgar everywhere in the country, and are no longer to be called distinctively the property of any one district; but the expression, "I don't take no such a dare," in reply to a challenge to perform a given feat, we have heard only in Pennsylvania, never in New England. The addition of the phrase "nor nothing" (or "nawthin'") to an assertion negative in form, but implying strong affirmation, intensifies the affirmation—as when one says, "I wouldn't like to go on a coon hunt," meaning that to hunt the coon is precisely the thing necessary to his happiness, he adds the words "nor nothin'" to indicate the extremity of his longing, and says, "I wouldn't like to go on a coon hunt, nor nothin'."

"Purty" for "pretty," and "peart" in the older, unrestricted sense of "pert"—active, ready, able—are doubtless from the South. And so, too, is "doggone," an imprecatory term which perhaps is a popular form of the wicked *godon* which the French made out of a well-known English household word. "Skeered" for "scared" we have heard in various parts of the country, but not first in New England. "Seed," as a result of a regular conjugation of the verb "to see," is probably as old as the language, and probably will perpetually renew its youth and be impartially rediscovered in all lands where the English tongue is attempted to be spoken. "Whip," in the sense of "beat," "conquer," may be set down, we fear, as the property of the entire Union. We do not know that Eastern generals were not as much in the habit of ornamenting their dispatches with it, in its active or passive form, as Western or Southern, but most likely it is of Southern or Western origin. It seems to bear witness of "personal difficulties" and bar-room "turn-ups," which, for a long time previous to the irruption of the foreign element now so conspicuous in the Eastern population, had not been much in vogue in New England. "Fit" for "fought"—like "seed" and "plead" and "knowed"—seems to be of no particular place, but to spring perennially from the conjugatory trouble before mentioned, which embarrasses many minds. "Shucks" for "husks," as of corn, is a term which never found much acceptance among the English settlers of the Northern colonies, though familiar to their Southern brethren, and now, together with the verb "to shuck," commonly used in the South and the West. "Plunder," for what Americans in general call "baggage" and the English "luggage," is not unknown in the West, where, in old Mrs. Jack Means's time, at any rate, it was applied also to one's real estate and personal property. "Lots and gobs" for large quantities is another of Mrs. Means's expressions, and one as to the origin of which we are in doubt, though we have heard it in the Middle States. A plausible etymology traces "lots" in this sense to the New England practice in colonial times of apportioning the town land by lot among the householders; but, on the other hand, we have more than once heard in the South the expression "lots and cords" in the sense of Mrs. Means's "lots and gobs." And "gobs of it" is good modern Celtic, as "gob" is good Erse. Wherever it came from, it is, at all events, a nice phrase as it stands. "Salted down," as applied to "hoarded" money or other valuable property is evidently an effort of the metaphor-making faculty of the human mind, and may be of any place of nativity, but we first heard of it as a Westernism. "They's" for "there is" may be heard any day in Massachusetts, and even "they is," spoken emphatically, may often enough be heard; all that is needed for the production of it and many similar corruptions being the frequent habit, prevailing in many parts of the country, of slurring the sound of the letter *r*. "Air" is a common Yankee pronunciation of "are," as is "gin" for "give," "'most allers" for "almost always," "gal" for "girl," "slep'" for "slept," "ruther" for "rather," while "heap" for "a good deal" is Southern, we believe; "to set up with a gal," as when one makes evening calls for the purpose of courting, is still constantly met with in New England. "Big road" answers to the "great road" of the Eastern States. "Raley" for "really," and "obleeged" for "obliged," were brought from Old England by way of New.

Other phrases that we must hastily note are: "whole kit and tuck of them"; "dodge" and "gum game" for "manœuvre"; "keer" for "care,' and "cheer" for "chair"; "sass" for "sauce"; "all my born days" for "all my life"; "a thunderin' sight" for "much" and "many"; "furder" and "furdest," "nearder" and "neardest" for "further," "furthest," "nearer" and "nearest"; "smart" for "clever"; "I'll bet a hoss" for "I'll bet a good deal" or "I'll lay odds"; "laying in with" for "becoming an accomplice of," "allying one's-self closely with"; "needcessity" for "necessity"; "howdy?" for "how d'ye do?" "To knock the hindsights off'n" anybody or anything, or so to excel it or him as to secure its or his great depreciation, and perhaps mortification—the metaphor being, as we guess, from the diminished value of a rifle whence the "sight" nearest the breach has been taken. "Overly" for "over," in the sense of "too much," "kyindness" for "kindness," "Britisher" for "Englishman." "To crate a person," a phrase which we find incomprehensible. "Tuck" for "took"; "fer" for "for"; "cute" for "acute," and also for "acuteness"; "drap" for "drop"; "sugar camp" for "sugar orchard," as the Eastern name is for a number of sugar maple trees which have been tapped in order that the syrup may be got. "Triflin' people" for "people of no repute and of no consequence." "A man to tie to" for "a man that may be relied upon." "Hoss sense" for "sound sense." "Purty consid'able shuck up" for "badly punished in a 'personal difficulty.'" "Kase" and "bekase" for "because." "Passel" for "parcel"; and "brash" for "hasty," "rash," "unconsidered."

This list will perhaps appear to indicate the possession by the Flat Crickers of a scanty vocabulary, not only of presentable language, but even of the dialectic forms in which, of one kind and another, the West has been presumed to be rich. The explanation is to be found, we suppose, in the fact that Mr. Eggleston's people are honestly reported by him. They are ignorant people, leading a monotonous agricultural life; their minds are naturally dull, and there is little or nothing to waken them into intellectual activity. Under such circumstances, a community does not modify its language much, either by improvement or by bold distortion, but goes on clumsily talking the language that was taught it.

Fine Arts.

DELSARTE AND MR. MACKAYE.

THE question as to the relative value and respective limits in artistic delineation of technical methods and original faculty, of the skill which can be taught and the genius which comes not of teaching, is hardly capable of categoric solution. That they must, in some form or other, be combined for the production of a satisfactory result, is generally conceded, but each individual critic, according to personal taste or prejudice, will be inclined to attach some varying shade of importance to the one or the other element. As the theoretical determination of the problem is difficult, so its complete solution in practice is infrequent. An artist, of whatever department, in whom the creative and inventive faculty should be in exact counterpoise and harmony with his artistic and technical training, would be the *rarissima avis* of his profession. In no branch is this more patently true than in dramatic art. The American stage, in particular, is a daily illustration of the utter inefficiency of mere technical routine, unenlightened by original power and unchastened by intellectual culture on the part of the performer. The French, with that practical keenness which distinguishes them in so many other fields, have brought the resources of their good sense and good taste to bear on the stage, and have done their best to put it in the actor's power, if he cannot command success, at least to deserve it. Recognizing under the general head of training two elements—the intellectual or theoretical as well as the more purely mechanical—they preface the young aspirant's actual entry on the boards with a severe and thorough discipline, from which he comes to his professional work not merely well informed in the more obvious rules of his art, but adorned with some, at least, of the graces of the scholar and the gentleman. Unwilling to leave him free to pick up his technical methods at haphazard from the more incomplete and often perverted traditions or the personal whim and habit of his associates, and recognizing that dramatic like all other expression has its laws, based on *à priori* principles and fundamental facts, they aim to put the student in full and intelligent command of his own physical resources before leaving him to that individual development which actual dramatic work brings with it. The Paris Conservatoire, with its corps of able, earnest, and distinguished professors, is an institution almost unequalled of its kind, and has long had the most powerful and beneficial influence on the dramatic life of the country.

Among these professors, none perhaps has enjoyed a more widespread reputation than Delsarte, whose death last year, just as he was contemplating a visit to America, or at least some attempt to propagate his system of instruction here, was a severe disappointment to many intelligent friends of dramatic art on this side the water. Commencing his career, in early life, as a singer, he was soon forced by the failure of his voice to abandon music and devote himself to dramatic instruction. What may have been a loss to music was unmistakably an immense gain to the stage. For many years his invaluable counsels and teaching were eagerly sought by all the aspirants to theatrical success in the great capital; and besides his professional pupils, his aid was equally in request among the clever men and women who aimed at eminence in the more modest sphere of the *comédie de salon*. Such great artists as Rachel, Madame Plessy, and many others testify to the success of his labors; and his perfect breeding, genial temper, and lively, impressive manner of communicating his ideas made him as agreeable in society as effective in the class-room.

A distinguishing feature of his system, as reported by his pupil, Mr. Mackaye, and others, is the great value it lays on facial expression, and the immense variety and minuteness of shading of which, under his skilful training, the play of eye and feature is shown to be susceptible. A still further feature, we are told, is the moderation he recommended in gesture, which he made exquisitely delicate, subtle, and imaginatively expressive, rather than vigorous or profuse; and furthermore—a main point—his fundamental principle that the actor must dominate his methods, not be dominated by them. The actor who, forgetting himself in his part, and carried away by the excitement of the moment, does anything in unregenerate and unconscious fashion, without entire, deliberate, and rational self-command, is, according to Delsarte, by so much the less a good actor. The frantic realism so often affected by a certain school of performers on our own side of the water would have been to him the worst of artistic heresies. Such a one, he would maintain, may be a fanatic or an epileptic, not an artist.

We have no desire to enter on a discussion of these or other points of Delsarte's system, but use these brief hints as an appropriate introduction to his first American interpreter, Mr. James Steele Mackaye. This gentleman, who has enjoyed the personal friendship and instruction of the great professor, gave last winter a short series of lectures on the Delsarte method, with experimental illustrations, which, as we are informed, went far to confirm what we have stated as to the originality and skilful minuteness of Delsarte's researches and invention in the field of facial expression. Wonderful stories are told of the immense number of separate and distinct movements of eye or brow or muscles of the face, which in the system are catalogued and classified, each aptly depicting, of course, its corresponding passion or emotion. The plain common sense of the average critic will be inclined to think that the number should be somewhat reduced, and doubt the capacity of any but exceptional spectators to distinguish such manifold and microscopic shading. No one, however, who has the best interests of the drama at heart but must be glad to see any intelligent system, with reasonable *prima-facie* claims to consideration, fairly tried; and among a certain class of critics it was with no little interest that the announcement was received of Mr. Mackaye's approaching appearance in a drama expressly written for him, and assisted by a lady whom he has personally trained and indoctrinated. Within the last fortnight these representations have been in progress at the pleasant little St. James's Theatre, which has been fitted up for the occasion with good and appropriate scenery and tasteful costumes and accessories.

The piece, "Monaldi," as not unusual in such cases, seems to have a somewhat mixed parentage, being originally, if we are rightly informed, an Italian *novella*, and having undergone various translations into German, English, and other tongues. Allston's version into the form of an English romance has been adopted as the basis of the present play. Though professedly a drama, it has rather the character of a dialogue, with only such intervention from outside passages as suggests the plot and barely sustains the action. *Monaldi*, a sculptor of humble birth and growing reputation, falls in love with one of his sitters, a noble maiden, by name *Rosalia*. His passion is returned, and, parents consenting, they are wedded, to the rage and confusion of a rejected suitor and whilom friend of the artist, *Maldura*. By the intervention of a broken-down libertine, *Fialto*, whom he hires as his tool, *Maldura* poisons the mind of the adoring but jealous husband, who, in a fit of frenzy at his own apparent dishonor, stabs his wife, as he thinks, to death, and goes crazy in consequence. The confession of *Maldura* in the mad-house, to which he as well as his victim has been brought, sets matters right, and the sculptor and his bride are happily reunited.

The plot is one of the conventional sort, so often found in old-time Italian romances, and, properly worked up, might have made an effective drama. As it is, the piece is tedious. It lacks movement, variety, and relief. Of symmetrical development of situation and event there is little; of that of character, none. The personages plunge at what they have to do as a set job, which they are anxious to finish and be done with. We say the less of the imbecility which makes *Monaldi* at one instant repent of his hasty suspicions because his wife is impassive during his recital of a story like his own murder her the next moment on finding her closeted with *Fialto*, and repent the next on overhearing her dying prayer that heaven will pardon him her unjust murder, since such elements seem to have grown conventional in the romantic drama. Leaving out the intellectual treatment, the outlines of the situation are much the same in *Othello* as in the present play. But to carry off such absurdity in the *matter*, the *form* at least should be good. The dialogue in "Monaldi" is perhaps the worst part of it, turgid yet commonplace, with all the stilted sonorousness of blank verse without any of its rhythm or poetic beauty. A slight diversion to the prevailing tragic sentimentalism of the piece is effected by a would-be comic servant and shrewish tiring-woman (eminently worthy of the name), who have nothing perceptibly to do with the action, and are thrown in merely as a stop-gap.

In short, *Monaldi* is an excessively slow play, and we could afford to commiserate Mr. Mackaye for his unfortunate selection of an opening piece, were it not for some indication that it was chosen on purpose for the chance it offers to exemplify some of the strong points of the system under illustration. The character of the love-sick, uxorious, jealous, despairing, homicidal, and finally frantic artist, offers a cycle, as it were, of facial delineation, all which Mr. Mackaye dutifully and, to do him justice, very skilfully goes through. This said, all is said. There is the greater difficulty in making Mr. Mackaye, as we had at first proposed, the central figure of our sketch, that, apart from his play of feature, his delineation is not highly significant, and, while it calls for no very decided blame, is equally little susceptible of sincere praise. His gesture, of which we had a right to expect much, is mannered, unpleasantly studied, and, in many cases, extremely awkward. With all consideration for the languid and morbid aspect under which the love-lorn artist is introduced to us, Mr. Mackaye has some languishing ways of drooping his shapely head, some dragging, ill-studied ways of posing his ultra-graceful length of limb, which are somewhat of a trial to the good taste of the spectator. As blemishes in an otherwise excellent impersonation, they might easily be passed over; as failures to carry out the main purpose of the evening—the illustration of the possibilities inherent in physical expression—they are important.

In his reading, Mr. Mackaye is fairly correct, but often conventional, and does not always recognize the distinction between pathos and bathos. His elocution, in consonance with his action, is pervaded by an over-sentimentality which borders on the sickly, and forfeits the spectator's sympathy for *Monaldi* by divesting him of all manliness and crisp, vigorous, intellectual tone. The already present encouragement to this in the text and the situation needed tempering, not exaggeration.

And, finally, to sum up briefly an estimate of Mr. Mackaye's merits or demerits, he seems to us to lack the one thing needful—dramatic genius. His series of facial expressions, of gesture and intonation, are all given in proper sequence, and with greater or less mechanical correctness, but without the fusing and combining power which marks the native actor. As a series of *études* in crayon, his face of horror, or despair, or jealousy, or rage, would make excellent models to draw from, but they do not constitute an impersonation. With all his effort, Mr. Mackaye does not identify himself with his character; we do not recollect a single scene or passage in the play wherein he for a moment succeeded in impressing our mind with the sense of reality or actual passion. And this, perhaps, is at once the most comprehensive and the most fundamental criticism which could be made on the whole performance.

Miss Griswold, the *Rosalia* of the evening, is a young actress of considerable promise, especially in view of her youth and entire inexperience of the stage. Her face, though not beautiful, is sympathetic. Her manner—singularly self-possessed and dignified—and gesture and action are fairly easy, and entirely free from affectation or exaggeration. Her reading, too, while it shows some of the conventional faults of the old-school dramatic style—faults which one must be more than human not in some slight measure to catch—is still tasteful, and sometimes very tender and full of feeling. Longer study in elocution, we may hope, will give her voice more roundness and fulness, and will correct certain faults of pronunciation and utterance which we will call not so much vulgarisms as *cheapnesses*, if the phrase may be pardoned. The energy and fire, the large, broad, vigorous freedom and high color now lacking in her delineation may come with longer stage practice and more complete self-knowledge. It is to be hoped that she may have the occasion.

It would be pleasant to be able to give a more encouraging report of this the first distinct attempt to engraft upon our dramatic life a shoot from the French stock. Were Mr. Mackaye an ordinary actor, or making an ordinary *début*, his enterprise might be passed over with slight but slighting comment, and the indulgence which comes of neglect. In deference to the importance of this or possible similar enterprises, and to the distinction of the great name so prominently connected with it, we have thought it right to treat the subject with respectful and minute attention, but with absolute sincerity.

CORRESPONDENT.—A Journalist attached to one of the morning newspapers would like to act as New York Correspondent for an Eastern or Western paper, furnishing two or more letters a week. Address C. R., Box 2997, New York P. O.

A WELL-KNOWN PUBLISHING HOUSE will take a LIVE Partner, if the right person can be found to succeed a retiring partner. Address with particulars about experience, etc., etc.

Investment of $25,000 to $50,000 is necessary.

"SCHOOL BOOKS," care of the NATION,
5 Beekman Street, New York.

A new work by Prof. MAX MULLER is published this day. It includes his four "LECTURES on THE SCIENCE of RELIGION," a paper on "BUDDHIST NIHILISM," and a translation of the "DHAMMAPADA or PATH of VIRTUE," an important part of the Buddhistic canon. These papers have never before been published in a collected form, either here or in England. Copies sent postpaid on receipt of price ($2), by CHARLES SCRIBNER & CO., NEW YORK.

"For country readers and for all who, having no time to read more than one paper, nevertheless wish to see the drift of opinion on all current topics, we can conceive of nothing more convenient.—*New York Tribune.*

THE WEEK.

A RESUME OF CURRENT OPINION, HOME AND FOREIGN.

THE WEEK fills a place unoccupied hitherto in American journalism, though its importance has long ago been demonstrated in England. From week to week it presents the cream of home and foreign journalism, and gathers from the leading papers of America and England, and of all sections and parties, the most important utterances on current questions of Politics, Society, Religion, Literature, Science, Art, Music, the Drama, and all other topics likely to interest the reader. In addition to the longer articles, which themselves cover every variety of subject, there is Literary Gossip, Science and Art Gossip, Musical and Dramatic Gossip, and General Notes and News, giving the freshest and most copious intelligence in all these departments. In no other paper can be found so large and so various an amount of instructive and entertaining reading matter.

The first number of THE WEEK was published on December 2d of last year, and in the short space of two months has achieved a most decided and flattering success. No paper has ever received more cordial words from the press and the critics, and it is the general testimony that THE WEEK has met an important and well-defined want in the journalism of America.

THE WEEK is a 16-page paper of large size, with three broad columns to the page, and is neatly and tastefully printed.

TERMS—$3 a year; single copy, 8 cents. Trial subscription, 4 consecutive numbers, for 25 cents.

Address "THE WEEK,"
P. O. Box 1383, New York.

SUGGESTIONS IN REFERENCE TO

THE METALLIC CURRENCY

OF

THE UNITED STATES.

By ERNEST SEYD.

Octavo, half bound, price $1.

D. VAN NOSTRAND, Publisher,
23 Murray Street and 27 Warren Street, New York.

Copies sent free, by mail, on receipt of price.

LORD BANTAM.

PRICE TWENTY-FIVE CENTS.

Handsomely printed, and only authorized edition.

GEORGE ROUTLEDGE & SONS,
No. 416 Broome St., New York,

have bound their handsomely-printed author's edition of LORD BANTAM in paper covers, and have reduced the retail price to

TWENTY-FIVE CENTS.

This has been done in consequence of the appearance of an unauthorized and inferior edition containing 104 pages.

Paying, as they do, a very large copyright to the author for its sale in America, G. R. & Sons are prepared to defend their right to this book.

All persons intending to purchase this great work can procure the authorized and genuine edition, beautifully printed on fine paper, in large, clear type, and forming a fine 12mo volume of 250 pages, for

TWENTY-FIVE CENTS, FREE OF POSTAGE.

THE TRADE

are respectfully requested, before purchasing the unauthorized edition, to obtain terms of the rightful publishers.

OUR ENGLISH BIBLE

AND

ITS ANCESTORS.

BY THE REV. TREADWELL WALDEN,

Rector of St. Paul's Cathedral, Indianapolis.

16mo, tinted paper, cloth, extra, $1 25.

A VERY COMPLETE SKETCH OF THE HISTORY OF THE ENGLISH BIBLE, from the time of Wyckliffe, written in a very fine, forcible style, and full of suggestive thought. It is intended, as a whole, to be an argument for revision, and at times the author writes eloquently in behalf of it. In its historical statements it is always accurate, and constitutes a history of the Reformation in England from the standpoint of the Bible. The story of the English Bible is a very fascinating one, and to this little book, as bringing out this profound interest which gathers about it, we are much indebted, and heartily commend it to our readers."—Christian Witness.

"An admirable popular account of the successive steps in the growth of the English version of the Bible, from the first attempt of Wyckliffe down to the final revision in the time of King James."—Sunday-School Times.

"In itself a story of profound interest, the ripe and elegant scholarship of the author gives it many additional charms; and it is specially welcome now, when our version of the Holy Book is to take another step forward, and assume that additional completeness necessary for a new age."—Christian Union.

PORTER & COATES, Publishers,

DEAN HOWSON'S

METAPHORS OF ST. PAUL

AND

COMPANIONS OF ST. PAUL.

Two Volumes in One. $1 25.

PROFESSOR H. B. HACKETT, in his Introduction of this compact and suggestive volume, says: "The Apostle Paul has taken his imagery largely from local customs and national usages which for us have passed away. Hence the allusions to them can be fully understood only as the things themselves are explained and set before us by vivid representation. This service Dr. Howson has performed for us in an admirable manner. He gives us no tedious archæological details, but just the requisite kind and amount of information concerning the military and agricultural usages of the Greeks and Romans, their style of architecture, and the contests of the Gymnasium and Stadium; and thus we are enabled to see and feel almost as eye-witnesses the force of his illustrations drawn from such sources."

Published for
THE AMERICAN TRACT SOCIETY,

WHITAKER'S ALMANAC

FOR THE YEAR OF OUR LORD 1872.

THE BEST ALMANAC PUBLISHED; containing an account of the usual Astronomical and other Phenomena; also, full statistics of everything connected with the British Empire, the Sovereign, the Government, the Legislature, Army and Navy, the Church of England, with a list of Archbishops, Bishops, Deans, and Canons of the Dioceses, with their incomes, etc., the Roman Catholic Church, Wesleyans, Presbyterian Church, Independents, and Baptists; Law, National Finances, Commercial, British Colonial and other possessions. An account of the Austrian Empire, France, the Germanic Empire and States, Italy, Holland and Belgium, Russian Empire, Spain and Portugal, the United States of America, China, Siam, Japan, etc., giving the name of the Sovereign, Population, Products and Commerce, etc. Obituary. Parliamentary Summary for 1870. Scientific Inventions and Discoveries.

A copious Index is affixed, containing over a thousand references.

"Every succeeding issue proves the indispensable necessity of such a work to persons whose occupation or whose reading requires them to test the accuracy of the despatches and the news coming here from abroad."—Phila. Ledger.

"Of Almanacs, we have to mention first and foremost, Whitaker's, in which it is only difficult to say what is not contained."—Saturday Review (London).

"It contains everything, and the easiest way to find it out. We could not give it higher praise."—Athenæum (London).

POTT, YOUNG & CO.,
Cooper Union, New York.

PRESIDENT PORTER'S address on the HIGHER EDUCATION, delivered at his inauguration at Yale College, together with the addresses of ex-President Woolsey, Prof. Thacher, etc., on the same occasion, are published this day in octavo, handsomely bound in cloth. Sent post-paid on receipt of $1, by CHARLES SCRIBNER & CO., NEW YORK

The Nation.

NEW YORK, THURSDAY, JANUARY 25, 1872.

The Week.

THE only thing of importance in the Congressional proceedings during the week has been the debate on the civil-service regulations, begun by Mr. Carpenter, of Wisconsin, who has long been preparing himself for this effort. His principal objections to the new reform are, that it is not constitutional; that it is ridiculous; that it will not work; and that it deprives the Executive of all power and influence. The objection that it will not work is of itself sufficient, and makes all the others idle, and, if well-founded, should make Mr. Carpenter's mind easy. He is hardly worth arguing with, as may be readily inferred from the fact that one point he makes against the regulations is that under them a light-house keeper on the shore of Lake Michigan will be required to read and write the English language, while the Attorney-General of the United States will not. He said one thing which probably had a great deal of truth in it—that is, that if the authorization of the President to appoint the Commission had not been tacked on to the Appropriation Bill, at the close of the session, "not twenty members would have voted for it." There was a good deal of criticism expended in the course of the debate upon a remark made in the Commissioners' report, that a fourth of the revenue is lost in the collection, which some of the "henchmen" are disposed to deny stoutly. We may mention, however, that the Commission did not make this assertion on their own authority, but on that of David A. Wells, who made it in one of his reports three years ago, and that it has never been contradicted by anybody whose contradiction was of any value. We would advise the friends of the Administration not to get into a controversy with Mr. Wells about it. An amusing illustration of the embarrassment into which the civil-service reform is plunging them may now be found any day in the New York *Times*, which from day to day shows the working of the Administrative machine to be so perfect, the responsibility under it so well arranged, the punishment for malfeasance so certain, that all talk of reform becomes ridiculous.

The majority of the Committee of Ways and Means, after a hearing, have absolved Mr. Boutwell from the charges made against him of having increased the bonded debt of the United States in defiance of the law, and of having expended more than one-half of one per cent. in the expense of funding the new loan. The process by which the Committee reached its conclusion was very simple, and consists in assuming that, no matter what the terms of the law may be, the law must be held to mean that Mr. Boutwell should do whatever he did. Thus the law said he was not to increase the bonded debt of the United States; but he did, humanly speaking, increase it by issuing a great quantity of new bonds, without receiving at once an equivalent in old bonds. The Committee meet this by asking how he was to get the old bonds in without first issuing the new ones and waiting three months for the proceeds. To this the natural man would reply by saying that this was Mr. Boutwell's affair, and, if he could not do it, then the law was badly drawn and incapable of execution, and he was bound to wait for its amendment. If, at his own discretion, he could wait three months for the old bonds, he could wait a year, and, after paying out a year's interest to the Syndicate, turn round and tell us that he had not increased the debt, as the law must be held to mean that a year was a reasonable time for conversion. The Committee dispose of the charge that he exceeded the amount allowed by law for the expenses of the funding process by declaring that, as the banks which took the loan were made "depositaries" of the public money, they were entitled to the use of the funds during the three months, and that, if it had been paid over to the United States Treasury, it would have lain idle in the vaults, and the Government have gained nothing by it. The whole defence, taken together, is, in short, simply this: that the new bonds could not be disposed of in less than three months, and that, if they were disposed of sooner, it made no difference who held the proceeds for that period, and that, if the law did not say this, it ought to have said it. The opinion of the public will be, we think, that the next time a funding act is drawn, it ought to be made to say what it means, and that those who act under it ought to be made to do what it says. Nothing can be more dangerous in these days, when so many gentlemen are "on the make," than this way of playing fast-and-loose with financial legislation. Mr. Boutwell, we are told, is an honest man, which is doubtless true, but he is not immortal, and his tenure of office is not perpetual.

Mr. Boutwell has submitted the following proposition to the Committee on Appropriations:

> "The expenses of loans, legal tender notes, fractional currency, checks, certificates, commissions, and other plate and seal engravings and printing, required by the Treasury Department, including the issues, transfer, delivery, redemption, and destruction of securities, shall be paid from, and shall not exceed the appropriation of one per cent. on the amount of legal tender notes, for the conversion and securities issued and redeemed during each fiscal year."

This would not only cover up his shortcomings on the late loan, but would, as the *Financial Chronicle* shows by an elaborate though simple calculation, give him complete control over $10,000,000, which he could spend at his discretion. The Secretary himself has not had the courage to appear to defend it, but politely referred the Appropriation Committee to his chief clerk, "who would explain the matter more fully," etc.

The Custom-house investigation continues, and with results very much the same in character as those indicated in our last. It may be said, however, that the more the Leet affair is turned over, the worse it looks. It was a great scandal for Leet to have been pocketing a large part of $100,000 a year from the New York General Order business for a whole year while residing in Washington and drawing both the pay of a colonel in the army and of a clerk in the War Department, after the President had expressly—so runs the testimony—pointed out to him the "impropriety" of his holding any office in the civil service immediately after leaving his staff. It was reasonable to expect after this that, even if Leet had left the army and come to New York, the President would have been very much annoyed, and would have caused his dismissal on finding that he had secured a foothold in the Custom-house. People are, therefore, a good deal surprised, and not unnaturally surprised, to find that the discovery that he had not only got an office, but had got a sinecure, and not only held it, but held it under an assumed name and while non-resident, and not only drew large profits from it, but drew them while drawing pay as a colonel and as a clerk, did not lead to any manifestation of the President's astonishment or displeasure. Nay, it does not appear to have even led to Leet's retirement from the army, for he only left when Congress offered tempting inducements to officers of his rank to do so. Moreover, Leet is still in the General Order business, with this mountain of "impropriety" on his head, and was, we believe, till this unpleasant investigation was started last year, both happy in it and hopeful; and he is there still. All friends of the Administration must admit, however, that he is, as he stands, the most "improper" man of our day.

Perhaps the most atrocious of the Custom-house abuses exposed by the investigation is the "seizure" system, as carried out against persons suspected of frauds on the revenue. Anybody who has read the account given of the condition of the civil service in the late report of the Commission, the testimony taken in this enquiry, and the testimony of all persons who know anything about the matter in every enquiry touching the character, qualifications, and antecedents of the great body of the officers employed in the revenue service, will be perhaps surprised, if not shocked, to learn that, as the law and the practice has hitherto stood for some years, whenever any of these estimable politicians came to the conclusion that any merchant was evading the duties, or had evaded them, he would obtain a "general warrant," containing no description of the things to be seized, but authorizing him to seize all the books and papers of the accused, and ransack his premises, not in search of designated proofs, but in order to find out whether any proof existed. Under this law, the business of nearly every man in the community has been placed literally at the mercy of a class which it is not unfair to call a low order of needy adventurers, who are in the service of the Government to-day, but to-morrow may be getting a living by their wits; and that it should be alleged and believed that the making of seizures had been converted into a mode of levying blackmail on innocent and guilty—the innocent paying it to avoid the scrutiny of their books and correspondence, and interruption of their business—is not to be wondered at. Reports that enormous levies in the shape of "compromises" have been made for a long while have been rife for some time back, and they have come before the Commission in the shape of charges against Colonel Frank E. Howe, a special agent, made by Naylor & Co., the great iron firm of this city.

The Messrs. Naylor allege that their premises were occupied and held for five weeks, and their books, papers, and even private correspondence seized and examined, on a warrant issued on the affidavit of a person who had no special knowledge of the article (steel rails) he accused them of undervaluing, and applied without the knowledge and authorization of the Collector, which it is customary to obtain in such cases, and that finally Colonel Howe, the special agent, offered to "compromise" for $40,000, but they refused, applied to the United States courts for redress, and then the District Attorney abandoned the case. Colonel Howe acknowledges he had not the authorization of the Collector for getting the warrant, and that he did not know it was necessary, but denies that he offered to "compromise" corruptly or for his personal benefit. Viewed in any light, the whole transaction is disgraceful. The Messrs. Naylor suggest, as an amendment to the present law—and that a foreign commercial house should have to suggest it to American legislators seems very extraordinary—that no warrant shall be issued in such cases unless the "complaint or affidavit shall set forth the fraud alleged to have been committed, the importation or entry to which it relates, the place or premises to be searched, and shall specify particularly by names, dates, and otherwise the invoices, books, or papers to be seized, and the facts which induced the complainant to believe that the fraud alleged had been committed, and the sources of his information." They ask, in short, American publicists to take some little notice of the Fourth Amendment to the Constitution of the United States, which guarantees the right of the people "to be secure in their persons, houses, papers, and effects against unreasonable searches or seizures."

The Murphy order of last November, directing all Custom-house officials to pay two per cent. on their salaries, is now declared by Mr. Cornell, the Surveyor of the port, to be a forgery. Shean, or Sheehan, who is suing him and Murphy for money paid under it, declares, however, that it was posted in a conspicuous position in the Surveyor's room, and that the Surveyor's messenger told him it had to be obeyed under pain of dismissal. The main question is, however, was the two per cent. paid by the clerks, and taken by the officials under this order, no matter whether it was a "forgery" or not? This is what Murphy and his friends ought to deny, if it be deniable. The authenticity of the order is of little importance, if it drew the money. It will not do to stick threatening notices or allow them to be stuck up, and after they have produced their effect on a certain number of victims, and you have profited by it, turn round and say that you never signed them. Did the Custom-house officers pay an assessment of two per cent. on their salaries last November in virtue of an order, whether real or forged, and was the money received by their superiors? Let us have an answer to this.

The dismissal of Van Cleft from the Brooklyn Navy Yard, on which we commented last week, is disposed of by the *Times* by saying that it was not the President who dismissed him at Murphy's instance for opposing him at ward primaries; that it was the Secretary of the Treasury who removed him; and that "the true reason" of his removal was that "he was proven to be in the interest, and believed to be in the pay, of Tammany Hall." But who "proved" it? Was it not a certain gentleman named Murphy? And what was the "proof"? Was it not Murphy's own word? Where else could the Secretary of the Navy learn anything about any New York politician's being in "the interest of Tammany"? Moreover, is not the denial that the President removed him because it was the Secretary of the Navy, his official superior, who did it, after Murphy had announced that he was to be removed, a trifle too fine-drawn for common use? Might you not deny, with almost equal accuracy, that it was the Secretary who removed him, and lay the whole blame on the sun, or "Old Sol," as the reporters call him, who, Professor Tyndall will tell you, is responsible for the production of animated nature on this globe, including the Secretary, Murphy, and Van Cleft, and by his action on matter put Murphy up to "controlling primaries," Van Cleft up to opposing him, and the Secretary to punishing Van Cleft, just as he splits rocks and dissolves glaciers? For that matter, indeed, it might be said that it is to the Constitutional Convention of 1787 that we are indebted for the noble example set to our young politicians by "Tom" himself, for, had that Convention not framed the Constitution, we should never have had Murphy for Collector.

A correspondent of the *Tribune*, writing from Cheyenne, makes the first coherent attempt we have seen to give some idea of the working of female suffrage in Wyoming Territory; but he confines himself to furnishing a batch of illustrations, for the authenticity of which he vouches, leaving the reader to draw his own conclusions. He ascribes the passage of the act to the fact that the Legislature was largely composed of bachelors, who wished to attract women to the Territory, wives being very scarce, and were doubtless in the habit of taking that humorous view of public questions not uncommon in new communities. The first action taken under the law was the election of a female justice of the peace, a married woman, who decided plain questions of fact fairly enough, but was completely bewildered by questions of law, with which it was the unamiable custom of the bar to bother her; and the lawyers, after argument, were in the habit of retiring and settling their controversies by a game of "seven-up" while the "court" was making up her mind, or rather preparing her judgment, for she always agreed with the last speaker. She committed her own husband for being drunk and disorderly, but finally had to adjourn for an indefinite period for the purpose of discharging what the correspondent calls "the maternal function." The female voting was very orderly, and the female jurymen were stern, but the spectacle of husbands and children hanging about the door of the court-room, waiting for the mothers and wives to come off duty and attend to the dinner and the washing, was not hopeful or edifying. It may be said that there are plenty of unmarried women to serve on juries and be justices of the peace, but there are objections to them of another and no less serious nature; besides, who of the woman's champions is going to pronounce married women disqualified? The Wyoming experiment, indeed, wears a little the appearance of a farce, and a farce which, in older communities, would cease to be funny. Would it not be well for Mr. Wilson to collect a few more facts, and reason on them, before he pushes his bill extending female suffrage to all the States and Territories?

The British "Case," prepared for submission to the Board of Arbitrators at Geneva, has been delivered, and is of about the same size as the American one—that is, contains 500 pages or thereabouts. It limits the British liability to the claims growing out of the acts of the *Alabama*, *Florida*, *Georgia*, and *Shenandoah*, and maintains that it is with regard to these four vessels only, if any, that Great Britain can be found guilty of any violation of international law. The introductory statement dwells with great emphasis on the position that the conflict between the North and South was not a simple insurrection, but a great civil war, and was recognized as such by the United States, by the proclamation of blockade, and by the seizure and condemnation of neutral ships—the total number of vessels captured or destroyed by the United States, either for running or attempting to run the blockade, or for acting as belligerents, being 1,200. The Case then, under this theory, maintains that the parties to the conflict being lawful belligerents, the duty of neutrals was to treat them with perfect impartiality, and this duty ought not to have been in any way affected by considerations arising out of the previous political relations existing between the neutral and either of the belligerents; that the neutral was bound to recognize commissions issued and captures made by either; that the body of persons forming a *de facto* government wielding the power of a belligerent, though not actually recognized by a neutral as a sovereign state, is nevertheless entitled, in a maritime war, to all the rights, privileges, and immunities of a sovereign state; and that, therefore, the reception of Confederate cruisers in British ports on equal terms with those of the United States was not an act of which the Federal Government can lawfully complain. On the question of liability for the escape of the *Alabama* and *Florida*, or, in other words, on the question what constitutes "negligence" or "due diligence" on the part of a neutral, the Case lays it down that the precautions to be taken by the neutral government to prevent its territory being made a base of operations against one or other of the belligerents must depend on circumstances, and that, as a rule, it may be held that these precautions should be such as the neutral government would use for its own protection or those of its citizens, and that a belligerent has a right to require that the legal machinery existing for this purpose should be such as experience would lead one to believe sufficient, and that the Foreign Enlistment Act under which the British Government acted had been founded on American legislation, and had been in force for forty years, and found efficacious; and, finally, that it has to be taken into account that the British Government does not possess despotic power, but is compelled to act under law, and through legal processes, which are necessarily slow and sometimes uncertain.

Considerable uneasiness is excited in England by the appearance in the American Case of everything that was ever said or done, claimed or maintained, with regard to British liability, for damages caused by the war, and this is supposed by many to be proof of our intention to revive Mr. Sumner's demand for consequential damages. We believe the view of the American Counsel to be that the Board is certain not to award too much to the United States, and that the United States is entitled to every cent that will be awarded, and that everything that bears at all on the British connection with the war is proper matter for consideration, either as proof of damage suffered by America or as proof of animus on the part of Great Britain. The diplomatic discussion certainly throws light on the question of negligence, by exhibiting the state of mind in which the latter came to the performance of its neutral duties; and the Commission can hardly pass intelligently on the question how much the United States should receive without being informed what was the total extent of their losses.

The refusal of the French Assembly to agree to the taxation of raw materials—a refusal in which they were undoubtedly acting in accordance with the sentiment of the country—has led to M. Thiers offering his resignation, which caused a great and doubtless to him very gratifying hubbub. The Assembly sent a deputation to beg him to remain, and Marshal MacMahon warned him that the army would obey the Assembly, but if M. Thiers's retirement was followed, as it probably would be, by a dictatorship, there was no telling whom it would obey. So he withdrew his resignation, and is now overwhelmed by expressions of confidence. The probabilities are that the Commercial Treaties will now not be abrogated or seriously modified. Though he has lost on this, however, it is probable that M. Thiers will come off triumphant on the income tax, to which he is violently opposed, and to which the country does not take kindly, although it has several times in French history been attempted. M. Thiers has taken a prominent part in the debates on both these questions without the formality prescribed in his case, that he should send notice of his intention to speak to the President of the Assembly; but his participation in the discussions does not seem to improve his relation with the body, and it is now announced that he means to speak more rarely. It is a dangerous thing for a man in his position to make the failure of any measure wear the appearance of a personal defeat. M. Grévy, the President of the Assembly, who is in the prime of life, and has long been known to be the weightiest as well as one of the ablest men in public life in France, is now talked of for the Vice-Presidency of the Republic, doubtless by way of provision for M. Thiers's death or resignation.

The topic of most interest at present in the politics of Eastern Europe is the probable policy of Russia, which the growing difficulties of the Austrian Empire are making of greater and greater importance both to Germany and France. The old Russian party, headed by the Czarevitch, who is said to be fanatically anti-German, are anxious for a close alliance with France, and then a vigorous pushing of the Panslavic policy, and they have been much hurt and disappointed by the cordial reception recently given to the German generals at St. Petersburg, so much so that the Government has been driven into the unusual step of publishing in the official paper an explanation or defence of its policy, which is in all respects a remarkable and important state paper. It makes no secret of the dislike of the Government for Austria, whom it threatens almost in terms, owing to the Austrian coquetting with the Slavi, and especially the Poles, who, since the downfall of France, are openly rallying in Gallicia, as well as elsewhere, to Francis Joseph, as their new Moses. Towards Germany, the article expresses warm good-will, provided she does not absorb the Austrian Germans, and thus make the position of the minor Slavic populations unendurable, and, while openly concurring in the general sentiments of the Czarevitch and his friends as to the proper tendency of Russian policy, it recommends patience, and boldly declares that time is working for Russia, if in no other way, in restoring France, who is now evidently relied on to furnish the cloud in the West which is to prevent German or English interference with Russian movements on the Black Sea. Considerable amusement is excited in Europe by Catacazy's report, in his Boston speech, of the poetic language in which old Gortchakoff, one of the dryest of European statesmen, expressed himself with regard to the United States during the war. Catacazy ought to have added, to make the tale complete, that, while talking, the Prince accompanied himself on the lyre.

MR. PERCE'S NATIONAL SCHOOL BILL.

THE promotion of public education has been forced upon the attention of Congress by the neglect of this interest in many of the reconstructed States, and by the obvious necessity of providing in some way for the enlightenment of all the various races and people who are now entitled to the rights of American citizens. Three important measures have been recently proposed for this end in Congress: the bill of Mr. Hoar, which was introduced last year; the bill of Senator Stewart, for amending the Constitution so as to secure public education everywhere; and, finally, the bill of Mr. Perce, proposed on the 8th of January, "to establish an educational fund, and to apply the proceeds of the public lands to the education of the people." This last the Committee on Education and Labor have agreed to report, and its leading provisions may be summed up as follows: It provides that the net proceeds of the sales of all the public lands shall be devoted to the maintenance of the common schools—one-half of the yield of each year going to form a perpetual "National Educational Fund," the other half to be distributed among the several States and Territories on the basis of population. To entitle a State or Territory to its quota, it must provide by law for the free education of all its children between the ages of six and sixteen. In the first year one-half, and afterwards one-tenth, may be applied to the payment of teachers in a normal school. But, after the first year, the money is to be apportioned on the basis of the number of schools maintained, and the average daily attendance in each, exclusive of city schools, and forfeiture may be worked by misappropriation, or abuse, or failure to report to the General Government.

Jurisdiction of offences under the bill is attributed to the United States Circuit Courts exclusively.

It is to be observed that no attempt is here made to define what the public schools shall be. That question is left entirely to the local authorities of the several States. Whether religious instruction shall be excluded or Bible reading permitted; whether boys and girls shall be taught together or separate; whether or not there shall be separate schools for the blacks or for such nationalities as do not speak English; whether high schools shall be regarded as a legitimate part of the system or not; whether industrial schools or evening schools shall be maintained or not; whether normal schools are essential—these and many more kindred questions on which there is a diversity of opinion are not touched by the bill. Its chief requirements respecting the school system are very simple, and will meet with little or no opposition. The schools must be (*a*) "common," *i.e.*, public, or open to applicants without respect to creed, color, social condition, etc.; (*b*) "free," *i.e.*, without charge for instruction; (*c*) comprehensive, for all the children in the United States, *i.e.*, for Africans, Chinese, Indians, poor, rich, orphans, criminals, etc.; (*d*) maintained yearly for at least four months; (*e*) designed for children between six and sixteen years old; (*f*) thoroughly reported upon.

With these principles the bill leaves every State and Territory free to exercise its own preference upon the details of the system. There is one extraordinary exception, however, to the universality of the measure. The national appropriation, after reaching the several States, is not to be bestowed "upon cities having a population of 20,000 or more inhabitants." They are expressly excluded from the benefits of the act. Upon what principle of justice or expediency this exclusion of the large towns is made we cannot discover. Are they so intelligent that they require no aid, or so blind that it does not pay to help them? Why draw the line at 20,000 rather than at any other number?

Again, we think it is also well worth discussion whether (in view of the tendency to appropriate public money to the free schools of religious bodies) it would not be well to declare more explicitly than is done in this bill that the national grant shall not be appropriated to aid any private, parish, corporate, or ecclesiastical school, but solely to those which are maintained by the public, for the public. In some of the States, New York for example, we are already involved in trouble from the bestowal of school money upon religious foundations, and the controversy will become national unless special pains be taken to exclude that element of difference.

A third point to which attention should be called is this: No obligation is imposed upon any State to appropriate anything from its own resources for public instruction. The national grant can only be employed for "the payment of teachers," so that buildings, fuel, libraries, etc., must be a local charge; but it seems to us a great pity that the national grant should not be made a condition of local liberality and fidelity. The experience of Connecticut is well worth examining. Her magnificent school fund has tended to relieve the people of small, poor rural districts of all willingness to contribute to the school expenses, and to make them depend exclusively upon the State aid; so that for many years past all the friends of public instruction have advocated the bestowal of the income from the school only on condition of local appropriations of a specified rate, and the laws have been constantly modified to secure this end.

On these three points, the exclusion of cities from participating in the grant, the failure to declare that ecclesiastical schools shall not be aided, and the omission of a requirement of local appropriations as a condition of national aid, the bill seems to us to require amendment.

If the educational details of this bill be perfected, there are still important questions of a more general character on which we are not quite clear. We are heartily in favor of the establishment of public schools; if they cannot be secured in the reconstructed States without the exercise of national encouragement, we are in favor of that; we approve of leaving the administration of public instruction to the local authorities even when national aid is granted; but we have some doubts as to whether it will be best to extend the national aid to the entire country instead of making it exceptional, because of the abnormal condition of the South in this period of reconstruction; and we have further doubts as to whether it is wise at present to devote *all* the public lands to any one object. We have still a magnificent public domain which may be serviceable in many ways in the promotion of our highest interests as a people. Unquestionably the public schools form one of the most important of such interests; but they are not the only elements of good society which we need to foster, nor are we confident that after the Southern States are reorganized and prosperous other concerns will not be quite as dependent upon national aid as the common schools.

We make these remarks with deference and with caution. Our aim is rather to suggest points for further consideration than to offer opposition.

THE SITUATION IN FRANCE.

THE news from France that M. Thiers had resigned in a pet, and had been coaxed into withdrawing his resignation by the Assembly and Marshal MacMahon, furnishes a fresh illustration of what may be called the volcanic condition of French politics, and may fairly prepare us for the recurrence of serious troubles before anything that can be called a final settlement is reached. At the bottom of the difficulty lies, it is easy enough to see, the strong tendency of French society, under all circumstances and under all forms of government, towards the establishment of a one-man power. For Louis Napoleon it substituted, after the revolution of September 4, M. Gambetta, who reigned five months; for M. Gambetta it substituted, after the fall of Paris, M. Thiers, who is still reigning, but who is constantly threatening to resign, and who may die any day. The political antecedents of M. Thiers were very bad. He was noted under the parliamentary régime for his vanity and love of intrigue, and for a narrowness of view which made him the greatest "chauviniste" in France. As a literary man, his great powers were mainly devoted to the diffusion and embellishment of the Napoleonic legend by his "History of the Consulate and Empire"—a work which is considered by good judges to entitle the author to a far larger share of whatever glory or shame came from the success of the *coup d'état* of

December 2 than either De Morny or St. Arnaud. They struck the felon blows in the capital, but M. Thiers had so debauched the public mind that they struck with impunity. Under the Second Republic he warmly supported the expedition against Rome, and, when he reappeared in politics under the Empire, he devoted himself steadily for fifteen years to preaching the detestable doctrine that the glory and safety of France required the division and abasement of Italy and Germany. This preaching it was which made the one great act of the Imperial régime, the unification of Italy, a source of weakness to it, and which finally had a large share in lashing the Emperor into a suicidal attack on Prussia.

M. Thiers was taken up and put at the head of the state by the Assembly at Bordeaux for the simple reason that it was a panic-stricken body, possessing no political or administrative experience. M. Thiers had a great deal, and the deputies clung to him as frightened children to a father, and the position they offered him was, of course, in the highest degree flattering to his vanity. As a man to negotiate a hard treaty of peace, and get France to accept it, they probably could not have made a better choice; as a man to lead France back to the habits of constitutional government, they could hardly have made a worse one. Nearly all the ideas of constitutional government are strange to him, and its ways hateful. The traditions which have strongest hold of his mind are really Napoleonic; and as soon as the Commune was suppressed, he went to work diligently to restore the two things which most strongly recalled the Napoleonic epoch—a high tariff and a large standing army. His idea of a great state is, indeed, very much that of the elder Bonaparte. He has accordingly surrounded himself with a cabinet of which we believe it may be said with literal truth that every member of it differs radically from every other member on nearly every great public question (the Minister of Finance, for instance, is an ardent protectionist, the Minister of the Interior an ardent free-trader); and he probably did this on the theory that, he being the central figure of the government, it made no difference what his subordinates thought. The most curious illustration of his indifference both to the theory and the forms of constitutional government—and it is only one of many—has, however, been afforded by his entering into an agreement with the Duc d'Aumale and the Prince de Joinville that they should not take their seats in the Assembly. It apparently never occurred to him, and it is just to add that it did not appear to have occurred to them, that the constituencies had anything to do with the matter; and under this agreement their places remained vacant till very recently. Another illustration of his fondness for Imperialist precedents is his treatment of the press, which is at this moment more fettered in Paris than it was in the closing days of the Empire. Newspapers are everywhere suppressed or suspended in cases in which, under the Empire, they would at least have received two warnings, often for language which the Empire in its worst days could have supported.

It is right to add that, in dealing with the pressing questions of the hour—such as the restoration of administrative order, which the war and Gambetta had almost destroyed, and the execution of the treaty of peace with the Germans—M. Thiers has displayed great energy and ability; but to the solution of the still greater problem in what manner France shall be put under a permanent constitutional government, he has contributed little or nothing. Nay, his whole course has a tendency to postpone any such solution. By drawing to himself all possible power, and exercising what he has in an arbitrary manner, he prevents the growth of political sense and political practice on the part of the Assembly and the country, and, by constantly threatening to resign, he reminds them of their dependence on him, and thus strengthens the hold of personal government on the popular imagination; and though last, not least, the strenuous efforts he is making to increase the army keep the country in a sort of feverish expectation of something in the nature of an attempt at vengeance on Germany.

The last break with the Assembly has, however, arisen out of his financial policy. He has been pursuing with regard to the tariff very much the same course as was pursued by the Emperor. The Emperor made the commercial treaty with England, which produced great effects on French industry, without consulting the country. M. Thiers has been using his personal influence over an Assembly not elected on any financial issue, and slenderly versed in financial questions, to make changes in the treaty, and in the system of taxation, also without consulting the country. French industry has grown prodigiously during the last ten years through cheap raw material. M. Pouyer-Quertier is in favor of taxing it, and M. Thiers supports him, and, the Assembly dissenting, he threatens resignation, which at the present state of affairs means revolution. So that the body must accept his financial theories or endanger the very existence of the government and the obedience of the army. It may be easily seen that it is not through experience of this kind that a country like France contracts sound political habits. His weaknesses and oddities, too, are aggravated by his great age. At seventy-four, the most vigorous man—and M. Thiers is undoubtedly a vigorous man—may be said to live from day to day; and whatever the Assembly dreads by his resignation may at any moment come upon them through his death; and as well as foreign observers can make out, that thing is chaos.

What makes the outlook all the gloomier is that not only is the Cabinet, which holds the wires of the administrative system, irreconcilably and widely divided on nearly every question of importance, but no statesman, or man whom the country is willing to trust or obey, has come to the front during the past year; and this—if the régime of personal government is to continue—is a serious fact. Indeed, the dearth of "prominent men" is more apparent now than when M. Thiers took office. Of the Government of National Defence, Jules Simon has since become ridiculous; Jules Favre is gone into disgraced obscurity; and Gambetta, who for a while seemed to hold his own with the extreme Republicans, is now rapidly falling into insignificance. His own followers have begun to denounce him as too moderate, or, as they call it, "reactionary," and he certainly has not been gaining ground with any other class of the community. M. Grévy, the President of the Assembly, was for a while talked of as the coming man, but he has not answered the expectations entertained of him, and, indeed, the chairmanship of a French deliberative body is hardly a position in which the ablest or most ambitious man could be expected to win popular confidence. There was at one time good reason to believe that the turn of the Orleans princes at last had come, and that the reign of Thiers was simply a preparation for their accession to power; but the chance of this has been greatly weakened in various ways. In the first place, they took no part in the national defence against the invasion. They eagerly desired to do so, and vainly sought permission to do so; but the hero of the balloon knew better than to let them. Consequently, through no fault of their own, "their record," as we should say here, has been marred, and it is well if it be not fatally marred. It is a bad thing for a candidate for political, and especially royal and presidential, honors in France to have been a looker-on merely when Frenchmen were contesting French soil with a foreign enemy; and the French public is the last public in the world to make allowance in such cases for circumstances. This and their enforced silence during the last six months have put them, in the popular eye, in the same category with the Comte de Chambord—that is, of pretenders to the crown in virtue merely of traditions, theories, and precedents of which few of this generation know anything. For, sad as it may seem, there is no doubt that twenty years of despotism have almost completely effaced all reminiscences of constitutional government. The eighteen peaceful and happy years which poor Louis Philippe managed to interpolate into nearly a century of revolution and war have passed like a dream. Looking back to 1789, no Frenchman sees anything now but flame, and blood, and convulsion. Looking forward, few see anything better; for behind the honest toilers of France, the scholars, the peasants, and the artisans, there lies the socialist, biding his time, writhing under the law—the law of the universe as well as the law of the land—and, indeed, racked by that fierce horror of all rule but that of his own will which, as has been well said, converts the Reds into as near an approach to "infernal beings" as their human nature will permit. What agency will drive these devils into the sea, and leave France clothed in her right mind, nobody knows; but it is certain that it has not yet shown itself.

THE CUSTOM-HOUSE WHICH MR. CASEY "HAS TAKEN OUT OF POLITICS."

WE have received from a source which we consider above suspicion of partiality, and unusually likely to be well informed, the following account of the troubles in New Orleans. The moral is obvious.

It will be remembered that, in August last, Mr. Casey, collector of the port, Mr. Packard, United States marshal, and Mr. Lowell, the postmaster, engaged in a desperate conflict with Governor Warmoth for the control of local politics. Finding that the Governor had a large prospective majority in the proposed convention, they adopted the extraordinary expedient of calling the session of that body in the room of the United States Circuit Court in the Custom-house. They then proceeded to garrison the building with deputy marshals and Federal troops, and, when the Governor and ninety other delegates presented themselves with tickets of admission, dealt out to them from the money-order window of the Post-office, they were refused admittance. The whole country was disgusted by this exhibition of combined fraud and force, and even the New York *Times* expressed a feeling of great relief when it was reported that the President would remove these office-holders. He did not remove them, however, and, by implication, approved their conduct.

In November, Lieutenant-Governor Dunn died, and in December the Governor called a special session of the Senate to elect a successor. The Warmoth candidate was Pinchback; the Custom-house party and the Democrats united on a Mr. Coupland, who is at once a State Senator and a United States deputy-collector. Pinchback was elected, and the ability of Warmoth to defeat the Custom-house and the Democrats together was demonstrated. On the first of the present month (January) the regular session began, and the contest was renewed with some novel features. No quorum appeared in the Senate, and the sergeant-at-arms was unable to find the absent members. They were absent by preconcert, and were concealed in an upper room in the Custom-house, used as the office of Mr. Kinsella, a special agent of the Treasury. Fearing that the sergeant-at-arms might even invade this sanctuary, they next went on board the revenue-cutter *Wilderness*, and, steaming up and down the river, set the bailiff of the State Senate at defiance. Among the senators thus absconding on a vessel of the United States were *five* Custom-house employees—Herwig, Coupland, Ingraham, O'Hara, and Sypher.

But worse, if possible, remained behind. On the third day of the session it appeared that the Warmoth party had a working majority in the Lower House, and a resolution was offered to elect a new speaker in the place of Carter, a Custom-house man. A row ensued, and finally was calmed by the promise of Carter to resign. Next day, about fifteen minutes before the House met, the Governor, Lieutenant-Governor, and some dozen of the House were arrested under the Ku-klux Act, and the marshal caused them to be taken before a United States Commissioner in the Custom-house, in such way as to keep the arrested members of the Legislature away from the session. There was no necessity for this course, and it was evidently collusive. While they were thus momentarily absent, the Custom-house party and Democrats in the House, without a quorum, unseated six members friendly to Warmoth, and seated six contestants of last year supposed to be hostile to him. But the Governor knew a trick worth two of such weak inventions. He assembled the House; a quorum and seven to spare met, unseated Carter, and elected as speaker a friend of Warmoth named Brewster.

On the fifth day of the session, the Custom-house party, knowing that they were beaten in the Lower House, assembled over a grog-shop in Royal Street called "The Gem," and proclaimed themselves the regular House of Representatives of Louisiana. They had no quorum, however, and did nothing but make speeches to incite the mob to violence, and send out pretended sergeants-at-arms, bristling with pistols, to arrest the Warmoth members and bring them in to make a quorum. On the following day the Governor applied to the courts, and obtained an injunction against "The Gem" saloon assembly as disorderly and unlawful; but they declared that the injunction was illegal, and one member, of the name of Stevens, a Democrat, proposed to bring the Judge before the "bar" of the House. This suggestion, from a member of an assembly held in a drinking-saloon, was, perhaps, a joke.

On Tuesday, the 9th, the comedy was suddenly turned to a tragedy. Three of the pretended sergeants-at-arms, sent out from "The Gem," attacked and killed Mr. Wheyland, a Republican member of the House and a friend of Warmoth. The coroner's jury found it was a wilful murder, and that Carter was an accessory before the fact. The proper magistrate issued a warrant for his arrest, and he and his now rapidly decreasing crowd fled to the Custom-house.

To return to the Senate. The Secretary of the Treasury telegraphed to stop the *Wilderness* scandal, and the absconding senators were obliged to come ashore. They fled to Mississippi, and set up their tents at Bay St. Louis, having still among them the five Custom-house employees above-mentioned, two of them deputy-collectors, who receive each some ten dollars a day for supposed services to the United States. We may roughly estimate that the United States pays the party of five twenty-five dollars a day for staying at a hotel in Mississippi.

THE NEW ACADEMICIANS.

PARIS, January 5, 1872.

THE elections to the French Academy have taken place, as I informed you in my last letter. The four candidates elected have been the Duc d'Aumale, Littré, Camille Rousset, and De Loménie. The rival of M. de Loménie was Edmond About, the author of "Tolla," "Le Roi des Montagnes, etc." All the influence of the *literati* proper in the press was used in his favor, and he had besides on his side the influence of the chief of state. Not only did M. Thiers go from Versailles to the Institute in order to give his vote for About, but for a month before the election he asked all his Academician friends to vote on his side. But the Academy has other gods than M. Thiers: M. Guizot had adopted M. de Loménie; the Academy is now the only ground where the two rival statesmen can meet. M. Guizot, who would be as active, as eloquent, and in my opinion more eloquent, than M. Thiers, has renounced political life; he lives in dignified retirement, writing now a summary history of France for the use of his grandchildren (which I recommend you to read). He is not wealthy, and literature is not merely the amusement of his old age. Under Louis Philippe, he was the successful antagonist of M. Thiers, and from 1840 to 1848 kept him out of power; now the two old gladiators meet only on the floor of the Academy; but even there they have silent battles, where paper bulletins are the weapons. M. Thiers had espoused the cause of About, not because the frivolous and clever writer was so long the friend of Prince Napoleon—not because he wrote the most inflammatory articles in favor of the war during the Ollivier Ministry—not because he insulted Germany and the Germans in the most unjustifiable manner—and, I suspect, not even because he is the author of several novels written in a clear, silvery, Voltairian-French style; but simply because he now defends, in a newspaper called *Le Soir*, the policy of M. Thiers—of "the illustrious old man who has saved France from invasion, from civil war, etc., etc." About, who has spoken in this vein since the meeting of the Assembly at Bordeaux, had been promised an embassy—a small embassy, that of Lisbon or of Athens. But at Athens some objections were made against the author of "Grèce Contemporaine"; even at Lisbon, it was thought that About was "too light weight" for diplomacy. M. Thiers, not being able to satisfy him, told him he would make him first an Academician; but in this, as you see, he has not succeeded. The Catholic party, which is strong in the Academy, had mustered in all its strength in order to defeat the election of the Positivist Littré; M. de Falloux, who was ill in the country, M. de Laprad, also, who was very unwell at Lyons, came on purpose to support Bishop Dupanloup. They were defeated, and Littré was elected; but they turned their wrath against M. About, who wrote a book called "La Question Romaine" at the dictation of the Imperial Government a few years ago. During the election, About was walking nervously on the bridge which crosses the Seine opposite the cupola of the Institute. First he heard from a friend that he had fourteen votes against fourteen given to M. de Loménie; a second vote was taken, and he lost a vote, which went over to his adversary. M. Thiers was so sure of success that he had invited About to dine the same evening at the Préfecture (which is now the equivalent of the White House) at Versailles. About was obliged to go to the Préfecture, and smile on all the diplomats who had been asked in order that he might be introduced to them.

But this Academic battle was not yet ended. The day afterwards a letter appeared in all the papers, addressed by Bishop Dupanloup to the Director of the French Academy: he could no longer, he said, have the honor to sit in it; he therefore offered his resignation to his colleagues. Bishop Dupanloup did not wish to remain in the same corporation with Littré, who is an atheist. Before the election, he had presented to all his colleagues a memoir full of extracts from M. Littré's works. These extracts are just what would be expected of a Positivist. Littré is not, absolutely speaking, an atheist; but he maintains that there is no possibility of proving the existence of a God. God, the soul, all the first causes, he denies in this sense—they may or they may not be; the human intelligence must remain a stranger to the question. It is, however, a fact, as positive as any other fact recognized by Positivism, that the human mind looks always to a cause in every phenomenon. However, this is not a place for a philosophical discussion. It is sufficient to say that M. Littré drily dismisses God, the soul, etc., into the unknowable: his God is humanity. But how is humanity to frame its own laws? Bishop Dupanloup gives a curious extract which applies to that unfortunate fraction of humanity called France. What is France to be under the new era of Positivism? Littré informs us that royalty is exploded, that parliamentary government and representative institutions are played out. France will, in the Positivist era, be governed by Paris, the capital; because Paris has taken the functions of the brain in the body politic. And Paris itself will be ruled by the Parisian proletaries. A committee, a board of Parisian joiners, carpenters, etc., will take France by the hand and conduct her into the new haven of Positivism.

Bishop Dupanloup's resignation is a novel event in the history of the Academy. Voltaire had bishops for his colleagues, and Bishop Dupanloup would not have been held responsible for all the vagaries of M. Littré, who was not elected to the Academy as a Positivist, but as a very learned grammarian and philologist. But Bishop Dupanloup is of a very ardent disposition; he is quite an interesting character. He was a foundling, and was educated in a foundling hospital. His genius was, however, soon recognized; he has an impetuous eloquence which is even felt in his letters. He resisted the Empire as much as it was possible for a bishop to do. He is a man of generous impulse, of a noble character, of an infinite charity; he has organized at Orleans the best Catholic school there is now in France. At Rome, he resisted in the Council with all his power the new dogma of infallibility; but now that the dogma has been proclaimed, he has not ventured to make a schism in the church.

Such is also the position of his colleague of the French Academy, Father Gratry, of the Dominicans. Gratry was a pupil of the Polytechnic School, but on leaving it he entered the convent. He is well versed in science, and his works have had for their object to reconcile science with religion. At the time of the last Council, Father Gratry, who, with Dupanloup, is at the head of the liberal section of the French clergy, attacked the new dogma. He proved that a Pope, Honorius, had once been proclaimed a heretic, and that, therefore, the pontificate could not historically be said to have always been orthodox. "The condemnation of Honorius," he wrote, "will for ever be an obstacle to the doctrine of personal, absolute, separate infallibility." The *breviarium* of Rome has, to be sure, suppressed this incident of Honorius, but Gratry called this suppression a piece of the most audacious hypocrisy. Writing to the Archbishop of Malines on these points, he concluded thus: "As for myself, I believe most firmly that I write these lines by order of God and of Jesus Christ, and out of love for his church. The last of men can receive and do receive orders of God. I have received such, and I will obey, and I will endure all I must endure." It will surprise you that after such emphatic declarations Father Gratry also has submitted to the new dogma. I do not believe that either he or Bishop Dupanloup has been led away by worldly considerations. They are both honest men; and this is just what makes their submission more alarming for the future of France. There would, I think, have been some chance of better prospects for this country if the old Gallican Church had been allowed to revive. In the traditions, now nearly stifled, of that Gallican Church, there was nothing which offended the faith of the people, their habits, their cherished associations; while there was a certain amount of independence. Bossuet, Fénelon, were bishops of another pattern than the Ultramontane bishops of the day. Even Bossuet, who was a supporter of the divine right of kings, could resist the Papal supremacy.

It is not idle to dwell for a moment on these momentous questions; for, as I told you in my last letter, the French Academy is a sort of microcosm, it is a *résumé* of the spiritual life of France. The elements you see in it are these: the Catholic faith, represented by its most intelligent defenders, forced even against their own will into the doctrine of absolute submission to Rome; and, beside the party which calls itself Catholic, a party of *littérateurs,* who are, as it were, without religion at all, who may be called the Gentiles. There is hardly a common link between the two parties. It is rather singular that Guizot, who is a Protestant, has joined the Catholic party in the Academy; but when he has to choose between the Ultramontanes and the Gentiles, his Christian instincts incline him toward the first. In his person he represents exactly the state of the Protestant churches of France, which are in the hands of wealthy conservatives, and which live in a sort of dignified retirement. The cause of Protestantism was killed in France by the Massacre of St. Bartholomew, by the abjuration of Henry IV., and by the Revocation of the Edict of Nantes. Ever since (and it has been the great misfortune of France) all those who have ceased to be Catholics have become infidels. The theories of the French Revolution and of the modern Commune are the only gospel which has been preached to the masses of the people. The Communists felt justly that the Catholics were their most dangerous French enemies; they shot an archbishop, they opened clubs in all the churches and desecrated them. The political divisions of France are only one of the symptoms of a moral decomposition which has continued for centuries. What is wanting in France is a living faith, which would not be simply a faith in words and forms, or a brutal faith in matter, in facts, in hunger and thirst, in the objects which can satisfy the animal instincts of man.

Notes.

OF the new magazines that come to us, not the least interesting is the *Colorado Monthly,* of which we have seen one number, and of which we make the following notice, as requested by the publisher: "The *Monthly* is published at Denver, Colorado, and contains full and reliable information about that remarkable land; its pages are embellished with fine engravings of the wonderful and peculiar Rocky Mountain scenery—the finest in the world." We cannot speak of the engravings, as our number, "owing to the snow blockade," contains none, but it is true of the letterpress that it does contain a good deal of information about the new Territory—or at least it contains, as the affidavits say, a good deal of "information and belief." This begins on the outside of the cover, where is printed a deep-red rose with a legend in which the prophecy at all events is patriotic, whatever the implied statement as to the present condition of the Territory may be; "the desert shall blossom as the rose" it is predicted. In the body of the magazine we find, first, "A Few Words about the Indians," and they are of a kind that was to have been expected from people who have been made aware of "the wanton cruelty and irresponsible barbarity of the wild red devils known in Arizona by the more classical name of Apaches," and as to whom it is the opinion of the writer in the *Monthly* that "no amount of favors shown them by the white settlers, or of supplies furnished by the Government, has any tendency to allay their innate desire to plunder, scalp, mutilate, and commit all kinds of fiendish atrocities." "These incorrigible demons it is," he continues, "that Vincent Colyer, and others of that ilk whose humanity is equally one-sided, wish to feed, clothe, and teach good morals in a peaceable way, at the expense of the Government, and, at the same time, protect from the just punishment of their crimes by substituting missionary effort for military control." There are no bad Indians in Colorado, however, the writer adds; Eastern people who go there will see only Utes who are peaceably disposed, and who, even when inclined to steal oxen or other chattels, "are as likely first to ask for them." Another article speaks of irrigation, and tells the Colorado farmer—who would seem to have the notion that Colorado is too dry—that "no farmer, let him live in the most highly favored spot in the universe, can afford to do without irrigation," and the writer "ventures the statement, and challenges contradiction, that irrigation is an actual necessity in any climate, in any country." He praises very highly the productiveness of the Colorado soil, averring that within six miles of Denver he has seen wheat growing equal to any wheat raised in England or on the shores of the Mediterranean, and that the fancy kinds of wheat sent out by the Department of Agriculture are so far exceeded by the productions of Colorado as to bring smiles upon the lips of the person who compares them. Let any man who doubts the fact, says he, "wait upon me at the Territorial Library and Agricultural Society Rooms on Larimer Street, Denver." There the doubter may have any sort of satisfaction, we dare say, but a sight of the samples is what is promised him, and opportunity to see "the comparison, or rather the contrast," between wheat raised by irrigation and wheat, to call it so, raised by any other means. This writer, it is our duty to say, is a civil engineer. What he says seems all very true. Just previously to the time when the *Monthly* made its appearance, the weather in Denver had been unusually wintry, it appears, or, as the *Monthly* says, "States weather became quite popular in Colorado this year," snow to the depth of a foot having fallen on the 17th and 20th of November, and the warm winds from the Pacific not having swept in, as is their common custom. Not only snow came, but on one evening the town was enveloped in a heavy mantle of vapor, which the editor conjectures to have come for the purpose of symbolizing the future greatness of Denver, by "bringing it into closer sympathy with the metropolis of Great Britain, so noted for its dense fogs." But with that pride of climate which seems to be a besetting sin of mankind in all countries, and which flourishes more luxuriantly in Denver and that region than elsewhere, he hastens to say that the fog had none of the disagreeable effects of a London fog, and that in duration it was only momentary. He mentions also as unusual a beautiful frost storm, which, on the 26th of November, attracted the attention of all beholders—delicate flakes of ice falling for some hours, and affording a novel spectacle. During the fine sleighing, the citizens improvised sleighs after a method invented by Mr. W. J. Kinsey, a carriage-maker apparently, who, as we understand it, removing the tire and felloes of the wheels of a buggy, and fitting runners to those of the spokes, showed Denver how "to revive the memories of merry Christmas days at the East." We observe that persons desirous of trying the climate, which indeed every one pronounces admirable for all well people and many sick ones, may have board at "the best hotel in the city" for six dollars a week if they board by the day, and doubtless for less if they make agreement with the "proprietress, Mrs. Martha Karns," to stay for some greater length of time. We are glad to see that the *Colorado Monthly* has a department devoted to educational matters, and proposes to impress it on the minds of the people that the way to make a community richest, in money and in everything else, is to support good schools and give every child an education—in which undertaking we hope the editor and publisher may succeed; and, indeed, in every other of the "variety of good objects" to which they announce that their magazine is devoted, not forgetting their wonderful scheme of making people read their advertising columns. They offer a prize of twenty-five dollars to the person who first solves a certain puzzle—the solution being, so far as we make out, occultly hidden in the words of the advertisements themselves, and only to be got at by the conscientious reader who counts each letter; or, indeed, we may say, by the prince of darkness himself, such is the depth of obscurity in which the ingenious author has involved the subject.

—The conductors of the *City*, the newest of the New York magazines, announce that in their undertaking "a due mingling of purely literary, artistic, instructive, and practical matters covering the ground of taste, culture, convenience, and public good is aimed at." Of this extensive field, the number before us best succeeds in covering the artistic part, and we bespeak the attention of our readers for the photozincographic reproductions which illustrate Mr. Charles Sumner's article entitled "The Best Portraits in Engraving." Mr. Sumner has long been a great collector of fine engravings, and being, to say the least of it, not less avid of facts than he is known to be of principles, he does not possess an engraving about whose subject and author he does not know all that the books tell us, and about which he cannot discourse not only instructively, if one is fond of facts, but with interest and feeling also, as of a collector fond of his treasures. The publisher of the *City* Mr. Sumner has permitted to make use of his collection for the purpose of copying two portraits, famous among connoisseurs as masterpieces of the prince and the king of engraving, Nanteuil and Gerard Edelinck—the portraits, namely, of Pompone de Bellièvre, President of the Parliament of France, and of Philippe de Champagne, a Flemish painter. For letterpress to accompany these reproductions—which must be said to be executed with a success greater than could have been well expected—Mr. Sumner has made a sort of essay about engravers and engravings, and especially about these two great engravings, in which he comments very agreeably on the works and the workmen of this branch of art. We do not know of anything from his pen more pleasant. Perhaps, however, the intrinsic beauty, great as it is, of the funeral sermon preached over the body of Pompone de Bellièvre, is hardly so great as to make us glad, all things considered, to see Mr. Sumner taking pains to quote from it this passage: "It were easy for him," says the preacher, "to have turned a deluge of wealth into his house, but he knew that gifts insensibly corrupt—that the specious pretext of gratitude is the snare in which the greatest souls allow themselves to be caught; that a man covered with favors has difficulty in setting himself against injustice in all its forms; and that a magistrate divided between a sense of obligations received and the care of the public interest, which he ought always to promote, is a paralytic magistrate, deprived of a moiety of himself." The magnanimity of Pompone's soul, as depicted in his face, where wisdom, benevolence, and courage are refined and lighted up by delicacy and honor, is much to be desired for all magistrates in all lands; but there is a way and a time of rebuking magistrates who may lack it that set to youth an example of delicacy and true dignity of spirit much better than that set by the personage rebuked. Mr. Sumner supplies the one of the two "distinguished authors" of the list of contributors to the *City*, and his contribution differs decidedly from similar contributions that magazines sometimes show us. The case is different with the other, for Mr. Greeley's remarks about the various "World's Fairs" and crystal palaces are singularly empty, especially if one considers the chance which the subject afforded any writer with definite views on the subject of protection for American industry. A writer new to us, Mr. Andrew C. Wheeler, begins an American novel, "Water Won," which apparently has a good deal of Charles Reade in it—or rather the writer appears to have something of Charles Reade in him, which is another matter. We do not know if it will be good, but we found ourselves reading these first chapters with some interest. Another article is one entitled "Nota Bene," in which Mr. William Wyckoff talks of street signs, and, among other things, informs the Broadway passenger that the gray horse, which he will recollect as looking so lifelike, in a certain carriage warehouse on the right-hand side as one goes up, has doubtless perished in the Chicago fire; for it was to Chicago he was sent when two or three years ago he was lost to Broadway. A sign, which was once visible somewhere near this same horse's window, and which Mr. Wyckoff does not mention in his full enumeration, we remember as being among the more effective of its kind. It was the stripped skin of a lion's whelp that had been untimely cut off, or perhaps untimely born; but, small as it was—it was no more than a few inches long—it had in its countenance all the dignified fierceness and energy of aspect that it could have shown had it been of full age to rend and tear. Something was due to the yellow glass eyeballs which the taxidermist had given him; but the frown and the set of the jaw were as much his own and as leonine as if he had never known bran, but, as the ancient fable ran, his father breathed upon and put life in his nostrils. "The Townward Tendency" is an essay by Dr. Bellows, in which the tendency of population to accumulate in cities is discussed and approved; "The Modern Magian" is a story by Mr. Julian Hawthorne; "Jessie" is by Mrs. Harriett Prescott Spofford; "Hotels" is by Mr. Thomas W. Knox; "The Editor's Rendezvous" contains brief essays like the "Nebulæ" of the *Galaxy*, but more extensive in range, as being to some extent political, and as containing what literary and other criticism the magazine contains; Mr. A. R. Spofford makes an article on "American Humor"; there is a poem by Mr. Stedman; there is a series of illustrations, procured from General McClellan's office, showing what is the scheme for the restoration of our piers and docks; and there is, finally, a scientific article, illustrated, entitled "Studies of the Tides," and written by Mr. J. E. Hilgard. This, we think, will be called a very good showing for a first number. Perhaps it will be considered promising for the pecuniary success of the *City* that the publisher places between the body of the magazine and the advertisements some pages which bear the name of "A Record of Progress," and in which proprietors of inventions, projectors of railroads, and other similar business men may, for a stipulated price, explain their schemes. Exercising a certain care, the publisher may even make this department, or a portion of it, agreeable reading for the general public. For instance, anybody whatsoever might be very willing to read the pages in which Colonel Ezra Miller sets forth the merits of his improved method of coupling cars. Railroad commissioners know all about it, we suppose; but it would seem advisable for passengers to know about it too, if it is really true that there is in use on many railroads, and may at no great expense be in use on all, a mode of coupling cars which makes it absolutely impossible that there should be such an accident as that "telescoping" accident in Massachusetts last summer; which entirely prevents that jerk at starting which is so disagreeable to nervous people and other people; which vastly diminishes that oscillation of the cars when in rapid motion which is of all sources of railroad accidents the most fruitful; and which renders unnecessary the crushing of brakemen between the cars they are coupling, as the Miller platform is so constructed that the cars are coupled automatically. Colonel Miller's presentation of his case is eminently taking, and seems to be the writing of a very straightforward and trustworthy man. It is his assertion that loose coupling causes seven-eighths of the accidents on American railroads.

—The *Kansas Magazine* offers in justification of its existence the statement that "the word 'Kansas' is at once historic and characteristic, embracing both a memory worth preserving and a present fit for portrayal," that "Kansas history is national history, Kansas people are cosmopolites, and Kansas enterprise fully reflects that splendid spirit of faith and pluck which is carrying civilization horizonward." This no doubt means that the magazine will give us sketches of the men and actions of the days when Kansas was "bleeding Kansas," and "Border Ruffians" and "Free State men" were fighting out, as well as Mr. Buchanan's governors would let them, the quarrel between the North and South. Kansas politics were, at any rate, national politics, whatever they may be now, and many a tale could be told of the fanaticism of freedom and the fanaticism of slavery, which struggled together on her prairies from the days of '54 and '55 till the last stroke of slavery, when Quantrell's raiders massacred the people of Lawrence. This is well done in one article in this first number of the magazine—"Border Annals," by Mr. C. B. Wilkinson, who gives us a chapter out of the history of the famous city of Saint Jo, where Southwestern Secessionism once made its headquarters. "Oliver Brown," too, by Mr. F. B. Sanborn, is a sketch that may be said to belong to Kansas, in virtue of the leadership of "Old Osawattomie," his father, in the bushwhacking days; and the same thing may with emphasis be said of the obituary remarks on James Montgomery, better known as Jim Montgomery, and to some as Colonel Montgomery, who commanded after the Kansas time, or attempted to command, a colored regiment in South Carolina and Georgia. He could not make war in a way to satisfy Colonel Shaw, who, we think, served with him at one time, nor Colonel Higginson, nor indeed anybody else who had any notion of making war in a civilized manner. But when it came to the kind of business indicated by this entry in his note-book, he was at precisely the business he could do: "Russ Hinds: hung the 16th day of November. He was a drunken Border Ruffian, with a good deal to hang, but good for nothing else. He had caught a fugitive slave, and carried him back to Missouri for the sake of a reward. He was condemned by a jury of twelve men. The law found in the 16th verse of Exodus 21st." The text in question, which reads, "And he that stealeth a man and selleth him, or if he be found in his hand, he shall surely be put to death," certainly was no part of the Territorial law; but Montgomery was an Old Testament Puritan, and the circumstances of Kansas were such just then as to require men of a certain sort rather than perfect men. A few like him might do something for Kansas politics—or politicians perhaps—even to-day, when Border Ruffianism has ceased. It is still profitable to reflect, if we may be excused for pointing the moral for the thousandth time, how it is that the Montgomerys are succeeded by the Pomeroys. We believe there is little else to mention in the January number of the *Kansas Magazine*. "Black Jack" narrates a thoroughly Western incident of the wild variety; Mr. W. E. Channing writes about "Wulur Lake," and puts the condor in the Himalayas; Mrs. H. M. North declares that the French were beaten by the Prussians because they "have no homes"; there are some lively short paragraphs under the heading "A-bee-cees"; some poetry by Mr. George Alfred Townsend; a pathetic Western piece called "Nerv"; and, in general, what may be called a miscellaneous assortment of magazine pieces which, we should think, might have a local popularity. There is not as yet, we should say, much promise of the general public's being very commandingly addressed by the new magazine; but old Abolitionists, who were active in the days of Sharpe's rifles and the New England Emigration Society, may find things that will have for them very much interest.

—Mr. Wendell Phillips's lecture on the "Lost Arts," which has probably been repeated oftener than any other that has been heard in our "lyceums," has more than once been accused of inaccuracies which seriously weaken the case he seems to make out for the ancients. For his aim is to show that they not only practised a number of valuable arts of which the secret has perished, but were familiar with others on which modern discovery plumes itself. The microscope and the telescope find their place, according to Mr. Phillips, in the latter category. M. Th. Henri Martin, Dean of the Faculty of Letters in Rennes, is of the opposite opinion, as is implied in the title of a recent contribution of his to an Italian scientific journal: "On the Optical Instruments falsely attributed to the Ancients by some Modern Scholars." M. Martin denies that the optical tube with which the ancients observed the stars was anything but a tube, without lenses; and accounts for their having seen stars now only discoverable with a glass on the supposition that such astronomers were endowed with uncommon vision, besides that the stars themselves may have undergone changes in the meantime affecting their prominence and importance. The same argument is extended to spectacles for the near-sighted, microscopes, and other magnifying contrivances, as to all which the author contends that the ancients, if they had had them, would have left some mention of them in their writings. Doubtless his explanation, which is ingeniously and learnedly framed, will solve many of the problems proposed by those who take Mr. Phillips's view, but on the face of it it seems inadequate to remove the grounds of controversy altogether.

—M. Philarète Chasles, in a very caustic review of French literature during the past year, in the *Athenæum* of December 30, has several "little digs" at the French Academy, he being of opinion that it is a national disgrace not to find on its rolls the names of such creative geniuses as Descartes, Molière, Beaumarchais, Dumas, and Fourier. He asserts that "it has no longer any weight in the intellectual sphere, but merely in the sphere of intrigues." It can only recover its influence by changing the mode of its elections. The change which M. Chasles proposes is radical indeed. The "stupid custom" of the candidate calling upon his future electors must be given up. Next, a list of candidates deemed worthy must be drawn up, and the discussions had on them published. Then a certain time must still elapse before the election, in which the Academy must "consult public opinion." The new academician, by the way, M. Littré, gives notice in the *Philosophie Positive* of an intention on the part of himself and his associates in that Review to compose six treatises—"one for each of the fundamental sciences, mathematics, astronomy, physics, chemistry, biology, and sociology." These are to be so subordinated to one another that each science forms an introduction to the one above it in the scale. Moreover, by including only what is of essential importance, the entire course is to be made brief enough to be mastered in a time compatible with the necessities of life, and still "complete enough to raise the student to the main level of positive knowledge."

—An article in the *Academy* of December 15, by Professor Max Müller, shows very significantly what progress in Latin pronunciation has been made in England during the past few months. When the question of reform was started, Professor Müller felt very much exercised about the letter *c*. He thought this would be an insuperable stumbling-block to the conservative English mind. "What!" it would be said, "is *Sisero* to be called *Kikero?* This will never do in the world." So, for the benefit of the weaker brethren, he called attention to the well-known difference between guttural and palatal *k*, attempting to show that *something* might be said in favor of a slightly different sound of the *c* in *ca* and in *ci*. In one sense, his argument was a decided success. When a special pleader of Professor Müller's ability and ingenuity made so poor a case, it showed how little hope there was for such pronunciations as *Tchitchero*, *Tsitsero*, and *Sisero*. After being away from England some months, Professor Müller has just got back, and, behold a change! He finds that since he has been gone—*posquam illuc Arrius isset*—the British youth have all learned to say *Kikero*. Now he withdraws his plea, and welcomes the *k* pronunciation, which he was always in favor of.

—On one point we must take exception to Professor Müller's statements. He says: "Though nearly all scholars in Germany and France were convinced that *Kikero* was right and *Zizero*"—he means *Tsitsero*—"was wrong, not one, as far as I know, had ever ventured to adopt the right pronunciation in any university or school. . . . I see with great satisfaction that public opinion in England, or, I should rather say, the opinion of those on whom the introduction of a correct pronunciation of Latin will mainly depend, the masters of public schools, has made such rapid progress that no compromise is required. I, therefore, gladly withdraw my plea, and I hope that England will have the credit in this as in other reforms, if not of having been the first to find out what is right, at all events of having been the first to do what is right." Such credit as may attach to "having been the first to do what is right" can hardly be left with England. Long before any stir was made in England, the Reformed Pronunciation had been adopted in Harvard College, and taken up with great alacrity by the schools preparing pupils for that institution. In the excellent Boston Latin School, for example—not to speak of many other schools, public and private, in Massachusetts—a generation of boys is growing up to which *Sisero* in a Latin sentence will have quite an Opican twang. We say in a Latin sentence, for the distinction between a Roman name in a Latin sentence and the same name in ordinary English parlance is often left out of sight. To say Kikero and Kaisar, in talking English, would be as pedantic as to say *Firenze* or *Wien*. By the way, how long will newspapers and popular magazines keep up the meaningless phrase, "Continental pronunciation," when there is such good ground for hope that the Reformed or Latin Pronunciation may uproot all Continental pronunciations?

—Latin pronunciation naturally suggests Greek pronunciation. In the year 1848, Professor Sophocles published his "History of the Greek Alphabet, with Remarks on Greek Orthography and Pronunciation." Though this book showed the same vast reading and masterly grasp of the subject which have made the author's subsequent works classics, it attracted very little attention. It was published twenty or thirty years too soon, and the public mind was apathetic. A new edition, with such modifications as Professor Sophocles's later studies might suggest, would be gladly welcomed now and receive the attention it would deserve.

—For new books on Music one has always to go to Germany, and the publications of the last few months present much that is interesting. First and foremost is the collection of "Popular Lectures on the Formation of a Critical Musical Taste," by Hermann Küster (Leipzig: Breitkopf und Hertel), which should be read by every one who wishes to enjoy music understandingly. The lectures are clear and well expressed, and are full of excellent examples. The "Catechism of Composition," by J. E. Lobe (Leipzig: Weber), and the "Theoretical and Practical Study of Harmony and Music" of Leopold Heinze (Ober-Glogau: Handel), will carry the reader further into the practical knowledge of music. Among books of musical history and biography we must note "German Composers," by Dr. Emil Naumann (Berlin: Oppenheim), a series of lectures delivered at the Victoria Lyceum in 1870-71, devoted to the chief German composers since Bach. The treatment of Meyerbeer and Wagner in one chapter is exceedingly singular. "The Great Piano-forte Virtuosi of our Time" (Berlin: Behr) is a very entertaining collection of reminiscences of Liszt, Chopin, Tausig, and Henselt, by W. von Lenz, well known to the musical world by his studies on Beethoven. Lenz is now very old, and it can be seen from the title that the "our time" is not the present day with its Bulon and Rubinstein. Persons who remember Mendelssohn's description in his letters of his playing before Goethe, will perhaps be interested in "Goethe and his Relations to Music," by W. von Bock (Berlin: Schneider). Some new letters and recollections of Mendelssohn himself have just been published by his friend Eduard Devrient. We are glad to see the first volume of the complete writings and poems of Richard Wagner (Leipzig: Fritzsch), which contains, besides "Rienzi" and "Der Fliegende Holländer," the various sketches he published when he was earning his bread in Paris in 1840 and 1841. The best of these is "A Pilgrimage to Beethoven." Wagner then had much humor, and his style was pleasanter than now. His last brochure, "Beethoven," is very hard reading. The Beethoven Centenary of 1870 called out a number of memories, of which the best is "The Beethoven Festival and the Art of the Present," by Ludwig Nohl (Wien: Braumüller), the biographer of Mozart, and an adherent of the new school. Ferdinand Hiller, the successor of Mendelssohn, and a violent partisan of the old school, has also published a charming essay on Beethoven, which is printed separately and also in his little book, "From the Tone-Life of our Time" (Leipzig: Leuckart). This book contains in addition articles on Rossini, Hauptmann, and Bach, and an amusing sketch called "Too Much Music," directed against the tendency to riot in musical noise at dinners and balls and in gardens of all sorts.

—We have received from Messrs. B. Westermann & Co. the "Almanach de Gotha" for 1872, and from Messrs. Pott, Young & Co. "Whitaker's Almanac," also for the current year. Armed with these two annuals, no American need remain ignorant how any part of the civilized world is governed, what its population is, and area and productions, and how it is represented abroad; and especially how the English-speaking portion of the globe fares socially and politically. The "Almanach de Gotha," with its princely genealogies, its diplomatic and statistical exhibit for the year, its necrology and its *chronique*, is too well known to need description. The present issue (its 109th) has as usual a number of steel portraits—of the King and Queen of Spain, Gen. Von Roon, Gortchakoff, and Thiers. The changes wrought by the Franco-German war are thus briefly indicated in the preface:

> "In the *Partie généalogique* a new chapter has been devoted to the imperial house of Germany; the chapter 'France' has been suppressed, and the family of Napoleon III. figures under the name of 'Bonaparte' [second part of the Genealogy: *Familles princières non souveraines.*] The nomenclature of the Cardinals hitherto contained in the chapter 'Pope and Cardinals' has been transferred to the *Partie diplomatique* under the rubric 'Holy Apostolic See.' A new chapter has also been inserted under 'Spain' devoted to the family now reigning in that country."

"Whitaker's Almanac" is, we trust, known to most of our readers—if it is not, they will be surprised at the amount of useful information compressed into so small a compass and sold at so cheap a price. It is, of course, primarily designed to circulate in Great Britain and the colonies, and hence is rich in lists of the peerage, of the House of Commons, of the army, etc., etc., and in imperial statistics; but all that relates to foreign countries has as much interest for American as for British readers. Like the "Almanach de Gotha," it has especial value for editors, and writers upon foreign affairs, and indeed may be said to be indispensable to them. It has proved serviceable, we remark by the way, to the editor of the New York *Observer* "Year Book," which appeared for the first time last year, on better paper and more attractively printed than now. The only substantial difference between the two editions (excepting the extensive alterations to date) is that the present "Year Book" furnishes extracts from the census, and reproduces certain early numbers of "Poor Richard's Almanac," which are curious reading. Without overlooking the humor of the passage which we quote from the preface to "Poor Richard" for 1737, we may fairly conclude from it that Franklin had no prevision of a weather-signal service such as now lets "anybody know what weather it is 1,000 miles off":

> "As to the weather, if I was to fall into the method my brother J——n sometimes uses, and tell you, *Snow here, or in New England,—Rain here, or in South Carolina,—Cold to the northward,—Warm to the Southward*, and the like, whatever errors I might commit, I should be something more secure of not being detected in them: But I consider it will be of no service to anybody to know what weather it is 1,000 miles off, and therefore I always set down positively what weather my reader will have, be he where he will at the time. We modestly desire only the favorable allowance of *a day or two before, and a day or two after* the precise day against which the weather is set;—and if it does not come to pass accordingly, let the fault be laid upon the printer, who, 'tis very like, may have transposed or misplac'd it, perhaps for the convenience of putting in his holidays: and since, in spight of all I can say, people will give him great part of the credit of making my Almanacks, 'tis but reasonable he should take some share of the blame."

—While speaking of annuals, we must mention a work so elaborate that it hardly seems to belong to the class: "The Illustrated Catalogue and Oarsman's Manual for 1871" (Troy: Waters, Balch & Co.) This catalogue is a bound volume, quarto, of nearly 500 pages, beautifully printed on toned paper, with red-line borders throughout, and liberally illustrated. Primarily designed to advertise the merits of the paper boats manufactured by the publishers, it appears to have been diligently and conscientiously edited with a view to embracing all that is needful to be known in regard to the structure of pleasure-boats, the art of rowing, the best methods of training, and the history of boat-racing in this country and in England. The *Rob Roy* canoe is here figured in diagrams, along with the shells with which Americans are more familiar, and of which twenty-two varieties are here counted. Part V. is devoted to hints on the construction of boat-houses, also accompanied by plans and specifications. Part III. relates to regattas, and is undoubtedly the completest record ever attempted of our college and association races, of the English university races, and of international contests; while Part IV. is a very elaborate directory of the boat-rowing and hunting clubs and associations of the United States and British Provinces in existence on the 30th November, 1870. This directory, generally giving two names on a page, includes 273 associations, great and small, and extends over 150 pages. The collection of these statistics could only have been the result of great painstaking, but we have no doubt the publishers will find their account in it. They promise an improved edition next year, but those whose interest lies in the practical rather than the statistical portions of the "Manual," and would be disposed to purchase it on that account, need hardly fear, we should think, that the present edition will be superseded.

TAINE'S NOTES ON ENGLAND.*

NOW that by the issue of an English version of his "English Literature" M. Taine has been made one of the topics of the day, this volume of "Notes on England" may expect a double welcome. Offering, as it does, a glimpse of the documents and materials on which the History rests, it is a valuable complementary sequel to that work. These notes were taken, the author informs us in a short preface, during two visits, in 1861 and 1862; they have been revised and modified from the impressions of a visit last year, and, as they stand, they present an extremely copious and comprehensive record of personal experience.

The reader's foremost impression will be that the author is a singularly vigilant and methodical observer. His note-book is never out of his hand, and facts, facts, is his constant demand. His work fairly bristles with them; his constant effort is to resolve his impression into a positive and definite statement. "I continue," he somewhere says, "to jot down conversations; nothing seems to me so pleasant as an evening passed in this way, with one or two interlocutors who are sincere, obliging, and unprejudiced, who have seen life and the world; national conceit does not interfere; you talk to learn, not to contend or shine. You venture to give the little characteristic fact, the precise, telling detail; each offers, as briefly as he can, the best of his experience. . . . My mind has never fed so largely nor so well; I remained catechizing and listening till one o'clock in the morning." And again: "When I feel an inference beginning to take shape in my mind, I carry it to two or three English friends who have travelled; I submit it to their judgment; we reason about it; it comes out of the discussion corrected or developed, and the next day I write it down as it stands." As to the value of some of M. Taine's inferences there will be various opinions, but his manner is the right manner, and his temper is excellent.

He begins with the *dehors*—the outside look of things; and by the energy and vivacity of his pictorial faculty reminds us afresh of what we have formerly suspected—that descriptive and not philosophical writing is his strong point. He visits docks and workhouses and churches; he goes to the Derby, walks the streets, and lounges indefatigably in the parks; questions, converses, gazes, crowds item upon item. The climate seems to him detestable; he returns to it again and again with undiminished hostility, and exhausts his vocabulary in the attempt to express its abominations. We think that he exaggerates its influence as a factor in English character; but correctness here is a matter of degree. One thing certainly may be said: that if national temper is the product of external influences to the extent contended for by M. Taine, a larger sense of external beauty than he recognizes would have been apportioned to the English; for their climate, if not the most cheerful, is surely the most picturesque and, so to speak, the most pictorial in Europe. For a single "effect" in landscape and interior scenery produced in France or Italy at a given moment by the play of light and shade, there are a hundred in England. There is a hiatus here, as at various other points in M. Taine's reasoning. The moist, darksome, shifting, marine atmosphere which in his theory helps so largely to account for the idiosyncrasies of the Flemish and Dutch painters—their lowness of tone, their patient science and finish—has produced under English conditions the gaudiest school of art in Europe—a school in which color is nothing if not "telling," and in which, as a general thing, science and finish are conspicuously absent. In fact, we imagine foreign observers are apt to lapse into an easy fallacy as regards the English climate. There is, in the first place, the peculiar atmospheric medium of London, Liverpool, and Manchester—a monstrous and indefinable compound of fog and coal smoke and the myriad fine exhalations of serried hundreds of thousands of human creatures, half of them the most squalid in the world; then there is, in the second place, the English climate proper—the climate of villages and lanes and parks, of the whole vast world of English ruralism, and this, to the eye of sense (putting aside the eye of sentiment), fairly swarms with æsthetic suggestions. On the whole, M. Taine finds little beauty in the outward aspect of English life. He is overwhelmed, like most foreigners, with the massiveness and hugeness and multitudinousness of the material civilization, and he is struck, like Hawthorne, with a certain broad analogy between the English and the Romans of the Empire. The same vast and multifarious needs, gratified on the same huge scale—in the one case by conquest, in the other by industry; the same immense development of practical and material resources. The Crystal Palace at Sydenham, with its gigantic aggregation of specimens and trophies and pastimes, vividly recalls the traditional image of the baths and circuses and museums of the antique sovereign people. The want of taste is the salient fact: if it strikes an American, it must doubly offend a Frenchman; and it finds its most powerful expression in the costume of the women. "Their excessive overdress suggests the *lorette* or the *parvenue;* one is amazed to see reputable young women decked out in such a fashion. At Hyde Park, on Sunday, among the ladies and the young girls of the wealthy middle-class, the intemperance of dress is shocking; bonnets like piled-up tufts of rhododendrons, or else of snowy whiteness and extraordinary smallness, with bundles of red flowers and enormous ribbons; dresses of shiny violet silk, with dazzling reflections, or of stiff tulle on a roundabout cage of petticoats bristling with embroidery; immense shawls of black lace falling to the heels, gloves of spotless white or of vivid purple; chains of gold, belts of gold, with buckles of gold; hair falling in a shining mass upon the back. . . . Their heads are stiff on their necks, like those of beadles in a church-march; their hair is either plastered flat or excessively undone." And on top of all this, no grace of movement. To the beauty of Englishwomen the author in various other places does ample justice, and of their moral graces, their steadfastness, their devotion, their precious domestic virtues, he seems to have formed a most flattering opinion. But as to their social faculty he makes the following happy discrimination:

---

* "Notes sur l'Angleterre. Par H. Taine." Paris: Hachette. 1872.

> "According to C., an Englishwoman is incapable of presiding in a drawing-room (*tenir un salon*) as skilfully as a Frenchwoman; he knows but two or three women in this country who could. The Englishwoman lacks the tact, the promptitude, the pliancy, to enable her to accommodate herself to people and things, to vary her greeting, to catch a hint, slip in a compliment, make each guest the object of a particular welcome. She is only affable; she has nothing but kindness and calmness. For myself, I ask nothing more, and I imagine nothing better. But it is plain that a woman of the world, a woman who desires to make her house a favored and valued place of reunion for distinguished people of all kinds, has need of a talent more complex and more delicate. C. vastly admires the ease with which, with us, a young wife learns the world. A month after her marriage, she knows how to do the honors of her home to all comers; and, in the same way, a little *bourgeoise* takes her place at the desk in the shop the day after her wedding, catches the trick of the trade, talks, smiles, keeps customers. I saw the contrast at Dieppe, in a restaurant. The husband, a Frenchman, always *empressé* and smiling, circulated among the tables with all kinds of civilities, and seemed to be waiting on people for his pleasure; the wife, an Englishwoman, stiff and serious, said in icy tones to people as they rose from table, '*Havé-vo payé, mosieur ?*'"

For certain elderly gentlewomen of England he professes an especial relish. Here is a passage which at once expresses it, and indicates his admirable faculty for presenting his impressions as pictures:

> "Two of these aged ladies have remained in my mind as a fine Dutch picture. It was in the country, in a lofty parlor, upholstered in white and pearl-gray; the high light was softened by the evening shadows. The broad middle window jutted out upon a series of flower-beds, showing masses of verdure through its brilliant panes. On a chair, near the light, a young girl—fair, intelligent, and cold—sat reading a little religious treatise. In the middle, two old ladies, before a tea-table, entertained their guest. Faces with large features, serene, decided, even imperious; in this single point they differed from the Flemish portraits. For dress, gowns of black silk, in large folds, lace at the throat and at the wrists, rich gauze caps, with streamers, white embroideries at the bosom, as in the figures of Mierevelt; the combination of severity and opulence which is displeasing in the adornments of the younger woman harmonized with their age and their gravity. Around them, the signs of ample fortune, unquestioned position, a well-balanced mind, a healthy soul, a worthy life."

Upon education there is a very interesting chapter, especially in its remarks on the public schools and on Oxford. English children seem to him essentially different from French—the grand distinction being that, as regards boys especially, there is no definite line of division, as in France, between the moral life of the child and that of the grown man. "School and society are on a level, without intermediate wall or moat: one prepares for the other and leads into it, and the boy enters life not from a forcing-house and special atmosphere. . . . The French collegian is *ennuyé,* embittered, over-refined, precocious—too precocious; he is kept in a cage, and his imagination ferments." The relation between English parents and children puzzles him, as it does most foreigners. The apparently reckless multiplication of offspring, the necessity not only of sons but of daughters shifting for themselves, the want of sentimental confidence between mothers and sons, are all at variance with French tradition. As to French habits under this last head, he mentions some facts which the unregenerate Anglo-Saxon mind hardly knows whether to pronounce very nice or (as Charles Lamb says) very nasty. He closes his account of Oxford with a reflection which admits us vividly into a certain bitter and, as it were, tragical phase of an intelligent Frenchman's consciousness—words which suggest afresh what so frequently occurs to students of French literature, that the rays of the sun of "glory" must, after all, be rather chilling ones:

> "I visit [at Oxford] two or three of the professors' residences; some recalling old French *hôtels,* others modern and delightful, all with gardens and flowers, outlooks noble or graceful. In the very oldest, beneath the portraits of former occupants, are gathered all the elements of modern comfort. I compare them to those of our *savants*—denlike lodgings in some third story, in a great city, or to the gloomy quarters of the Sorbonne, and I think of the meagre, colorless aspect of our Collége de France. Poor French! poor, indeed, living here and there as we can! We are of yesterday; we have been ruined from father to son by Louis XIV., Louis XV., by the Revolution, by the Empire. We had pulled down, and had to make over all things anew. Here the generation that follows never breaks with the generation that precedes; institutions are reformed by superposition, and the present, resting on the past, continues it."

Both the interest of M. Taine's work and the rigor of his method reach their climax in his chapter on "The English Mind." He has collected here a number of suggestive facts—such facts as a society rarely disengages by any spontaneous attempt at self-analysis, and for which it is generally indebted to the fresher vision of an alien. His main impression is that the characteristic English mind is indifferent and even hostile to ideas, and finds its almost exclusive pabulum in facts. The inside of an English head is like one of Murray's guide-books, crammed with facts, figures, statistics, maps, bits of historical information, useful moral admonitions; it lacks *vues d'ensemble,* spontaneity of thought, the general harmonizing action of a sense of style and form. Society furnishes the young Englishman when he enters it with ready-made moulds (*cadres*) of thought; the religion is reasonable, the constitution excellent; the great lines of belief are distinctly traced. The author says elsewhere, we remember, that the Englishman who begins life finds on all things ready-made answers; the young Frenchman nothing but ready-made doubts. To theories, inferences, conclusions, to the more or less irresponsible play of conjecture, opinion, and invention, the Englishman turns the cold shoulder. His power of conclusion strikes the author as strangely unproportioned to his rate of information. M. Taine cites as an example a letter in Carlyle's "Life of Sterling," written by Sterling from the West Indies to his mother immediately after a fierce tornado had ravaged his estate and almost destroyed his house. The writer is an author, a poet, a man of fancy, but he confines himself to a naked statement of facts; he accumulates details, he draws a diagram, he suggests Gulliver and Robinson Crusoe. The point with M. Taine is that he makes no phrases, no attempt to embroider, generalize, or round off his picture. And this love of facts is the more striking, as it includes the taste for moral as well as material facts. M. Taine mentions two letters shown him by an English lady, from two young friends recently married, each considering herself the happiest woman in the world. One of these ladies gives an exhaustive account of her material circumstances—of her husband's appearance, manners, temper, of their house, their neighbors, their expenditure, their whole external economy. The other traces, in equal detail, the moral history of her courtship and honeymoon, and reveals a singular aptitude for psychological observation. The clearness, directness, and simplicity of each letter is the same; each is a string of special facts, without a hint of general reflection or conception.

M. Taine touches further upon the comparative paucity in English speech of abstract words and general terms. Nothing is more natural in French than such a formula as *le vrai, le beau et le bien;* nothing is less a matter of course in English than to allude to the True, the Beautiful, and the Good. M.

Taine, we suppose, pretends here to be dealing only with those straws which show how the wind blows, so that we may suggest a case even more in point—the common currency in French speech of the term *la femme*, as compared with its English analogue. For twenty times that this agreeable entity figures in an average French conversation, it puts in but the shadow of an appearance in an English one. M. Taine's theory may be infinitely fortified by special examples, and Americans, as a general thing, if they are not sensibly more furnished with the conceptive turn of mind, as we may roughly term it, than the English, are sufficiently less oppressed by that indefinable social proscription which, in England, weighs upon the jauntily-theorizing tendency, to feel a certain kindly fellowship with our author in his effort to establish his distinction. There is that in the walk and conversation of the average self-respecting Briton which denotes the belief that it is a sign of inferior, or at best of foreign, breeding to indulge, in the glow of conversational confidence, the occasional impulse to extemporize a picturesque formula, or to harmonize fact with fact by the plastic solvent of an "idea." This idiosyncrasy, definitely stated, however, belongs to that class of allegations which immediately evokes as large a body of contradictory as of confirmatory testimony; and to our minds a juster, or at least a simpler, expression of the prime intellectual difference between the English and French is to be found in their unequal apportionment of the sense of form and shape. The French possess that lively æsthetic conscience which, on the whole, is such a simplifier. Upon this point our author also touches: "In our magazines an article, even on science or on political economy, should have an exordium, a peroration, an architecture; there occur few in the *Revue des Deux Mondes* which are not preceded by a sort of porch of general ideas." That quality of the English mind on which M. Taine most insists—its imaginative force—might seem in some degree to undermine this charge of the want of intellectual agility; but in English imaginations it is the moral leaven that works most strongly; their home is the realm of psychology, and their fondest exercise not the elaboration of theories, but the exposition of the facts of human character, the mysteries and secrets of conscience and the innumerable incidents of life. The English genius for psychological observation has no correlative in France. Its vast range is indicated, in M. Taine's opinion, by that delicate scrutiny of the childish mind effected by so many English-writing novelists—Dickens, George Eliot, the author of the "Wide, Wide World." We may say, on the other hand, however, that the enquiry has perhaps been pushed at one end to its undue curtailment at the other. If there are no David Copperfields nor Tom Tullivers in French literature, there are no Madame Bovarys, Jacques, nor Mauprats in English.

It is in fiction and in painting that this characteristic comes out most strongly; and upon the English school of art M. Taine has several very interesting pages. The absence of form, of the sense of design and of beauty, and the rich suggestiveness on the moral and sentimental line, seem to him here equally conspicuous. He professes a deep though restricted relish for Wilkie and Mulready, Landseer and Leslie:

> "It is impossible to be more expressive, to expend more effort to address the mind through the senses, to illustrate an idea or a truth, to collect into a surface of twelve square inches a closer group of psychological observations. What patient and penetrating critics! What connoisseurs of man! . . . I find here and there masterpieces of this kind—that of Johnston, for example—'Lord and Lady Russell receiving the Sacrament.' Lord Russell is about to ascend the scaffold; his wife looks at him full in the face to learn if he is reconciled with God. This intense gaze of the wife and Christian is admirable; she is satisfied now of her husband's salvation. What a pity that it should have been painted instead of being written!"

The reader who remembers the work in question (at Kensington) will agree that it is a singularly characteristic mixture of sentimental delicacy and pictorial ineffectiveness. We refer him to the author's remarks on the further idiosyncrasies of English art and on Mr. Ruskin's theories. They will yield some of the elements of that critical corrective without which Ruskin is so erratic, and with which he is so profitable, a monitor. The art in which the English have best succeeded is that of poetry; the deep impressibility of the moral *ego* feeds the sources of their verse with unequalled generosity:

> "No poetry equals theirs, speaks so strongly and distinctly to the soul, moves it more to the depths, carries in its diction a heavier burden of meaning, reflects better the shocks and the strivings of our inward being, grasps the mind more potently and effectively, and draws from the innermost chords of personality sounds so magnificent and so searching."

The reader will be surprised after this handsome compliment to find M. Taine citing "Aurora Leigh" with infinite admiration as a representative English poem. This choice is a capital example of that want of *initiation* which his history so constantly betrays, of his insensibility to the color and mystery, as we may say, of English diction, and of his consequent failure to apprehend the native code of æsthetics and do justice to a whole great province of the English mind. This province he has hardly visited; he might have gathered there on the outskirts many a Tennysonian, a Wordsworthian, or even a Byronic lyric, telling more in its twenty lines of the real genius of English verse than Mrs. Browning in her twenty thousand. Mrs. Browning, however, was certainly a poet of English temper, and we have no desire to cut the ground from under the feet of genuine admiration.

M. Taine, reviewing his impressions, briefly concludes that the English are better off than the French in three main points: the stability and liberality of their political system; the morality and healthy tone of their religion; the extent of their acquired wealth, and their greater ease in acquiring and producing. Against these advantages he places in France: the better climate; the more equal distribution of property; and the *vie de famille et de société*. You have in France the immense advantage that—

> "In talk, you can say anything—go to the end of your story or your theory. Fiction, criticism, art, philosophy, and general curiosity are not shackled, as on the other side of the Channel, by religion, morality, and the official proprieties. . . . These differences make the English stronger, the French happier."

A very obvious remark is that if, just now, the French can manage to be happy, we can but wonder and admire. But, in fact, French optimism has been pretty rudely tested through the whole course of French history. The "spirit of conversation" apparently holds its own. May it still stand firm and continue to produce talents as vigorous, as living, as national as that of M. Taine!

RECENT EXPLORATIONS IN THE PENINSULA OF SINAI.

Explorations in Sinai, looked at simply as narratives of travel, are usually regarded as having no longer the charm of novelty. Robinson, with his cautious and exact statements, and Stanley, with his pictorial descriptions, have made the general aspects of the Peninsula familiar to all who are interested in Biblical archæology. Mr. Palmer is the latest of a long line of competent men—Burckhardt, Russegger, Ruppell, Laborde, Robinson, Lepsius, Wilson, Bonar, Stanley, and Holland—who have endeavored, by original and protracted enquiries, to interpret the geography, complex and difficult as it is, of that remarkable region, and to show its relations to the Mosaic history. But although the region is thus familiar, there is still something quite novel in the narratives of Mr. Palmer. On his first expedition, he went as the associate of two engineers of the British army, whose business it was to make an accurate map of the Peninsula, under the general directions furnished them by the head of the Ordnance Survey of England, Sir Henry James. Photography also lent its aid to the exact reproduction of important scenes. When we add to this that Mr. Palmer kept rigidly on foot during the journeys which he made, we indicate another noteworthy peculiarity of his narrative. There is, besides, in his story an evident relish for the humorous, which is highly entertaining, though it is sometimes hardly accordant with the subject, and is certainly the very opposite of Dr. Robinson's stately and serious narrative and of Dean Stanley's beautiful style.

Mr. Palmer is still a young man, a Fellow of St. John's, Cambridge, and Lord Almoner's Professor of Arabic. He is described to us by one who knows him personally as a man of cool, independent judgment, honest, patient, and not likely to be carried away by any prejudice or preconceived theory. His special qualification for the important researches confided to him appears to have been his knowledge of Arabic, which gave him advantages in the enquiries prosecuted on the spot; but the modern nomenclature of places and the modern traditions are notoriously so untrustworthy, that his linguistic talent would have been of little value if it had not been supplemented by careful observation and discriminating methods of examining evidence. He made two journeys to the Peninsula—first with the Ordnance Engineers, as already mentioned, to Sinai proper, in the winter of 1868–9; and second, in 1869–70, under the auspices of the Palestine Exploration Committee, who requested him to prosecute his researches in the wilderness between Sinai and Palestine. The narrative of the first expedition constitutes Part First of the narrative; the second, Part Second.

The party of the Ordnance Survey consisted of Captains Wilson and Palmer, of the Royal Engineers, Rev. F. W. Holland (who had made three previous visits to Sinai, and went as a sort of guide to the expedition), Mr. Wyatt, who was charged with the natural history, four non-commissioned officers of the corps of Engineers, and the author of this narrative, to whom was assigned the duty of archæologist and linguist and that of entomologist—

[*] "The Desert of the Exodus. By E. H. Palmer, M.A." London: Bell & Daldy. New York: Scribner, Welford & Co. Parts I. and II. 1871. 8vo, pp. 576.

the habits of the natives, as he tells us, "affording every facility for combining the two pursuits." The investigations were directed first to the accurate survey of the country, then to the determination of the site of the true Sinai, and then to an enquiry respecting the capacity of the Peninsula for sustaining the hosts of the Israelitist Exodus. The map is, of course, the chief embodiment of the work of such an expedition as this. An area of country about 3,600 miles in extent, embracing about one-third of the Peninsula, and including the loftiest regions of the south and west, was surveyed and plotted on a scale of two miles to an inch. Besides this, the two noteworthy summits, Jebel Músa and Jebel Serbál (which have been the rival claimants for the name and associations of Mount Sinai), were mapped on the very liberal scale of six inches to the mile. These special surveys were made with great difficulty, partly because the trigonometrical points were sometimes 6,000 or 8,000 feet high, and far apart; partly because, for the want of wood, whitewashed piles of stone were employed as stations. But difficult as these labors may have appeared to the Engineers, they cannot, of course, be compared in difficulty with much that has been done elsewhere—in the trigonometrical survey of India, for example, or by the Californian Geological Survey. The Arabs were completely mystified by the work of the party, sometimes regarding it as extremely absurd, sometimes as extremely suspicious. Sálem, the chief native guide, who had accompanied Mr. Holland on his previous journey, exclaimed one day, "The Captáns spend hours and hours on a single mountain, and don't make much of it after all. Now, Khawájah Hollol was a *jeda* (athlete), and did not waste his time looking through spy-glasses all day; no, he used to take a book in one hand, and a pen in the other, and write it all down as he walked along."

The official map of the Ordnance Survey has not yet come under our eye. It is doubtless satisfactory in a high degree, but the reduced copy of it which is contained in this volume is quite obscurely printed, and, though more accurate in its details, is not nearly so clear and convenient as the map of Kiepert prepared for Robinson. The reduced maps of Serbál and Músa are still more imperfectly executed, and fail to give a clear impression of the relations which are discussed in the text. On the other hand, the woodcuts and lithographs, usually, if not always, reduced from photographs, are distinct and impressive—often Robinson in this part of Palmer's volume, and the conclusion of the Survey is given as if it were a new and important contribution to the local topography. Indeed, we think there is one expression which, in view of Robinson's authority among German and American scholars, as well as among the English, is hardly correct—an assertion that the southeast summit is "generally" regarded as the true Sinai.

This chapter on Mount Sinai, which is far from being as methodical and clear as we could desire in the treatment of a disputed point of so much interest, stands apart from the rest of the volume, which deals very little with questions of historical topography, and very fully with the incidents of travel. In respect to the question as to which is the true Mount Sinai of the Law, one of the summits of Jebel Músa, or one of Jebel Serbál, the members of the Ordnance party give a unanimous answer, and declare it to be Jebel Músa—which is not a single peak, but a mountain mass two miles long and one broad, or thereabouts, with a narrow valley on either side. The plateau in the centre is surrounded by peaks, two of which are prominent above the rest—one at the north, and the other at the south. It is the northern of these summits of Jebel Músa which Mr. Palmer and his party consider to be the site of the giving of the Law by Moses, and they base their opinion on a study of the physical structure of the country and on the narrative in Exodus. These conclusions are very interesting, but so are also two facts which the author of the volume does not mention. In recognizing Jebel Músa as the true Mount Sinai, the Ordnance party confirms the conclusion to which Dr. Robinson came in opposition to Burckhardt and the early Christian traditions—a conclusion which was adopted by Ritter and confirmed by Stanley. Lepsius, among modern writers, has been the most prominent defender of the claims of Serbál. Again, the discovery and designation of the northern slope of this mountain mass, where it declines toward the plain El Rahah, as the site of the Law-giving, is also the work of Robinson, and has been familiar to all students of Biblical archæology since the publication of his researches in 1838. But there is no allusion to the nature of the country; toward the close, a few pages are devoted to the tracing of the route of the Israelites from Egypt to Sinai, and the conclusion is reached that it can be very closely identified. The site of Rephidim is also discussed.

Whatever defects these volumes may have, they are not dry, like the desert to which they relate. Mr. Palmer has great skill in portraying scenes and characters, and great skill, we should judge, in dealing with the monks and Bedawin whom he encounters. His picture of the monks at the Convent of St. Katharine reads like the letter of a traveller sent home to his confidential correspondent—laughable and racy, indeed, but a freely drawn caricature of those whose hospitality had been enjoyed. Among other points of interest in this part of the work may be mentioned a visit to Serbál, where Robinson did not go, a study of the manners and customs of the Sinaitic Bedawin, a visit to the ancient Egyptian turquoise mines of the Wady Igmé, which an Englishman lately attempted in vain to work, and the description of a primeval cairn near Jebel Músa.

The prehistoric remains of Sinai resemble those of some regions in Europe—huge stone circles, like the "Druidical" circles of Britain, skeletons, charcoal, etc., indicating, in the opinion of the writer, the "permanent camps of an ancient pastoral people." The pictures of the convent life are vivid, from the entrance—which was through a side door, and not, as formerly, by a rope let down from the window—to the closing lunch, when the vegetarian monks were beguiled by the persuasive odor of a "Liebig" soup. Notwithstanding his interest in ancient manuscripts, Mr. Palmer did not make any important discoveries in the library of the convent. Indeed, he thinks that the monks have become shy of unfolding their treasures since the Tischendorf Codex has attracted so much attention.

We have dwelt so long on the first part of Mr. Palmer's narrative that we must pass briefly over the account of his second journey, which was devoted to an exploration of the desert of El Tih, in company with Mr. C. T. Tyrwhitt Drake, a student of natural history. One of the most noteworthy points in this part of the researches is an attempt to identify 'Ain Gadés with the Biblical Kadesh. The districts of Edom and Moab were also explored, as well as the wilderness of the Exodus; but as this portion of the narrative has been substantially printed already by the Palestine Exploration Committee, we refrain from comment upon it now.

Tableaux de Siége: Paris, 1870–1871. *Par Théophile Gautier.* (*Paris:* 1871.)—Among the innumerable volumes dealing with the great events of the last eighteen months, in their various phases, none has a more peculiar interest than this collection of "Tableaux de Siége," by Théophile Gautier. The interest is of a less melancholy sort than belongs to many of these productions, for M. Gautier treats chiefly of the picturesque aspect of his country's troubles. Good patriot though he is, he preserves, through the mist of filial tears, a searching eye for "effects," and in these, bloodshed, fire, and famine, whatever other merits they may lack, are richly prolific. We have in English no literary analogue of Théophile Gautier. No English writer has as yet taken stock of the capacity of our language for light descriptive prose; and indeed, for that matter, the turn for light analytical description is decidedly less common in the English than in the French mind. M. Gautier is the apostle of visual observation—the poet of the look of things. His pen is almost a brush. Shut up in Paris during the first siege, and one of the host of anxious refugees at Versailles during the second, he remained a *feuilletoniste* through all; turned his enforced leisure to account, walked about, looked, noted, and wrote. His manner reaches perfection in these little sketches, originally printed for the most part in the miniature journals issued during the siege, when news was scanty, and the *feuilleton* ungrudged. He has rarely hit the vivid word and the pictorial phrase with more felicity. His style is such a perpetual tissue of images and pictures, that it is almost as unfair to detach examples from the context as it would be to make an excision in one of Titan's canvases for a specimen of his color. Here, however, are two or three hints. Of a certain emaciated dog, during the hungry days: "He was seen walking along the rampart as if he were going the rounds, raw-boned, dissected by leanness, his spinal column like a rosary of beads, the tuberosities of his joints nearly piercing his skin, his sides like a series of hoops, his hide as rugged and rough as dry turf. . . . He was the ghostly shadow of a dog—two profiles glued together, with no more thickness than cut-paper." Of the fasting lions in the Jardin des Plantes: "One of them went vaguely to and fro with an air of *ennui*, beating his thighs with his tail; the other was lying in his cage, one fore-paw outstretched, the other folded under his breast, his head shining like a human mask, with its straight nose, its broad brow, its stiff moustaches, like silver threads, and its dishevelled, tawny mane. The yellow look of his fixed eyes was full of melancholy. Perhaps, in his famished dreams, he was thinking of the antelopes who came, towards evening, to drink at the fountain. . . But a still more touching spectacle was a poor sick lioness, of an almost diaphanous leanness, who seemed consumptive and in the last stage of a decline. Attenuated, hollowed out like a greyhound, she had assumed a sort of ideal elegance, and looked like those lions rampant on ancient coats of arms, half ornament, half chimæra, of cursive and extravagant outline, which the heraldic art used to imprint on a groundwork of metal or of color—'tongue and claws gules.' Her hide, of a pale yellow, took the light and relieved her against the dusky background of her cage; she stood fixed on her four paws, whose muscles, still powerful, lay in furrows beneath the skin. Homesickness for the desert and the scorching rocks of Atlas was stamped in her chilled and languid *pose;* illness had given to her eyes a sort of unwonted softness—a harrowing look. Stripped of her strength, she seemed to beg for human pity. . . ." Lastly, of the park at Versailles: "At the end of the alleys which open in a fan around the basin near Trianon, as in the fugitive blue distances of the parks of Watteau, hovered those light fumes which deepen with their mists the aerial perspective. *The spring, like a timid landscapist, who advances with little strokes in his foliage, had begun to lay on the branches, with a sparse and sober brush, a few touches of tender green.*" The readers will see that the author's style plays over into a sort of jocose and conscious exaggeration; he is always "humoristic," as the French say. Not the least of his charms, to our mind, has always been a certain sensuous serenity, the imperturbable levity of a mind utterly unhaunted by the metaphysics of things. Even in the presence of the Prussian ravages, he retains a fair share of good-nature. But we must pay for everything. Just as his visual perception and his happy verbal instinct have grown strong, his power of thought has declined. There is the oddest constrast between his descriptive *brio* and grace and the feeble note of reflection which from time to time crops through it. In this matter M. Gautier is little better than one of those Philistines of taste whom he despises. The chapter with which he closes his book (*Paris-Capitale*) reveals a moral levity so transcendent and immeasurable as to amount really to a psychological curiosity. It is a strange spectacle to see exquisite genius conditioned, as it were, upon such moral aridity. If M. Gautier's *confrères*, as a rule, remain as grossly unilluminated as himself by the lurid light of their country's woes, the fact bodes ill for the future of France. The ineffable frivolity of his peroration recalls irresistibly that sternly unsavory Scriptural image of the dog and his vomit. It is enough to disgust one with the pursuit of local color.

Ought We to Visit Her? A Novel. By Mrs. Annie Edwards. (New York: Sheldon & Co.)—This is a well-conceived and unusually well-written story, at once bright, amusing, and natural, and a very skilful attack on the absurdities of the so-called "county" society of English life. Frank Theobald, a good-natured and fairly intelligent young fellow, of good family but with Bohemian tendencies, marries early a pretty, clever, and warm-hearted girl of humble birth, at the moment she is preparing for a career as a ballet-dancer at a metropolitan theatre. After a few years of roving and rather out-at-elbows existence at European spas and watering-places, they come into possession of a small fortune, and the pleasant estate of Theobald's father, and return to settled existence among the county respectabilities of Chalkshire. But here comes the tragedy of their existence. Jane unwittingly fascinates a heavy but kindly young scion of family, Rawdon Crosbie, and narrowly misses being the cause of breaking off his match with his cousin Emma, a silly and commonplace little woman, but an heiress. The county families with one accord cut poor Jennie for her birth and former profession, while the young officers of the garrison with equal unanimity do homage to her beauty, good sense, and natural spirit and grace. Theobald, in the meantime, though sincerely fond of his wife, after his own fashion, has lazily fallen back into an old flirtation with Lady Rose Golightly, a reckless and somewhat tarnished coquette who had known him in his days of bachelordom and fashionable life. Outraged by social proscription on one hand, and domestic neglect on the other, poor Jane, after bringing about a reconciliation between Rawdon and his *fiancée*, escapes in sheer desperation and bitterness of soul to the Continent, with the design of throwing herself into the arms of an unprincipled admirer, the Duke of Malta. Falling ill at Ostend, she is rejoined by her husband and happily reconciled; all misunderstandings on both sides are cleared away, and the now united couple conclude to spend their lives abroad, as in the old happy days of their poverty and *insouciance.*

Miss Edwards's plot is—as in a realistic novel it should be—remarkably simple and uneventful, and the one episode of Jane's despair and intended flight is the only incident which in the slightest degree transcends the average of prosperous everyday life. But the story will be found interesting at every point, and especially good in its dialogue and its keenly humorous sketches of character. Judging as outsiders may, across the ocean, we do not remember any picture of modern English life which surpasses it for light, easy, and spirited handling, and even for its thoughtful and perceptive truth to nature and feeling. Miss Edwards's men, in particular, are decidedly the best women's men we can at the moment call to mind. The one creation of the book, Jane Theobald, is lovingly and very ably drawn. The blending of shrewdness, beauty, good sense, and good nature, and knowledge of the world—from a Bohemian point of view—with the warm heart and passionate impulsive temper which has grown with her dramatic education, make the character as attractive as it is in its way original and striking; and the author, while keeping her heroine—as Englishwoman—in relation with the rest of her picture, gets a very artistic relief by making her an actress, and in so far an exception to all conventional categories. Mrs. Crosbie, as the conventional British female, and Emma, as the conventional young lady, are capitally worked up; but, indeed, enumeration may seem superfluous—all the characters, down to the least important, are drawn with the same judicious care and knowledge of human nature, and with a sly, mischievous humor which makes any given chapter of the book amusing for itself, as is so noticeably the case with similar work in Thackeray.

A Russian Journey. By Edna Dean Proctor. (Boston: James R. Osgood & Co. 1872.)—Miss Proctor is a lady who has travelled extensively, as appears from this narrative, and whose capacities for enjoyment we judge to be such that she finds every country, and nearly every place, last visited, the most delightful. She has no relation to the tribe of tourists who are perpetually bored, and so much is to be said in her favor. The disposition to gush, exhibited in its worst form in the very bad poetry prefixed as a sort of argument to each chapter, is readily forgiven one who has sketched correctly the superficial traits of the parts of Russia which she traversed. Her journeying was from St. Petersburg *viâ* Moscow to Nizhni Novgorod, thence down the Volga to Tzaritzin, thence by rail to the Don, and so down to the Sea of Azof, the Black Sea, and the Crimea, landing at the Imperial watering-place called Yalta. A charming drive across the mountains to Sebastopol introduces us to scenery quite opposite to that of the great steppes, amid which, however (though in sight of the Carpathians), we take leave of the author, who passed by steamboat to Odessa and thence northward to the Austrian frontier.

The earlier chapters of this work savor quite as much of the guide-book as of independent observation, but those which relate to the Volga and to Southern Russia are evident transcripts from Miss Proctor's diary. As we have already remarked, her descriptions are truthful and occasionally graphic, but her style is not calculated to leave a perfectly distinct impression on the mind of the reader. We quote the following passage not only for its own sake but because it pleasantly recalls one of the stories in Hans Christian Andersen's "Picture-Book without Pictures":

> "As we walked about [at Kamyshin, on the Volga] we heard that a theatrical company had arrived, and would give a performance at eight o'clock, admittance one ruble. Glad of a little variety, tickets were purchased, and just before the time we went to the designated building. A crowd of shabbily dressed people stood about and looked on with evident envy, as the door-keeper made way for us and handed us two programmes of the entertainment, written with a pen, in Russ, and each covering two pages of foolscap. For all the good they did us, he might as well have furnished us with a list of the plays in the moon. I doubt if the alphabet of that, or any other orb, would be so tormenting to the American eye as is the written Russ, with its letters so like, and yet so unlike, our own, deluding and baffling at every line. It was a barnlike structure into which we entered; its floor of earth and its seats rude benches. An audience of perhaps a hundred people, half of them army officers with their families, waited the opening of the entertainment. Eight o'clock came, but the fall of faded calico, which hid the stage and wavered in the wind that found entrance on every side, refused to rise. Voices as in angry altercation were heard behind it, now repressed, now rising with the passion of the speaker; and although profane swearing is almost unknown in Russia, if we had been familiar with the language we should doubtless have heard some astonishing epithets. Ten, fifteen, twenty minutes passed, while the three weary musicians laid down their instruments, and the candles flared and the curtain trembled in the draught. The seats were hard; the sandy floor cold; yet there was no calling, or hissing, or stamping of feet, but all, in patient silence, waited the pleasure of the performers.
>
> "At length, their quarrels over, there was a stir and rustle, and the thin screen rose slowly, disclosing a farm-house interior, with a pretty young girl in peasant costume standing by the table in earnest conversation with her lover, who was evidently agitated and fearful of being discovered by the family. I could not see how their wooing was in aught different from that of the lovers of the West, or their grief less heart-breaking than theirs, when the enraged father burst in and, rudely seizing his daughter, compelled the young man to fly. The action was natural and spirited, and the audience listened with closest attention. But as only now and then a word was intelligible to us, the cold got the better of our enthusiasm, and we left at the end of the first act, without waiting to see whether Romeo and Juliet went forward to a wedding or a funeral."

The New Year's Bargain. By Susan Coolidge. With illustrations by Addie Ledyard. (Boston: Roberts Brothers.)—Two German children, Max and Thekla, walking one day farther than usual in the forest, come upon an old man moulding clay figures of men and women. One was finished, and the other eleven were in process of completion. The children address the old man, and a conversation ensues, in which it is disclosed that he is Time, that he is making the months of the year, and that the two big jars beside him contain severally water from the "stream of time" and the "sands of time." The sand and water, which, out of a fairy tale, do not combine to make a very adhesive substance, are the materials of the *clay* figures. Max yields to a temptation to steal some of the "sands" or the "moments," as they are also called, and transfer them to his empty dinner-can when the old man's back is turned. That night he and Thekla are astonished by receiving a visit from the figures they saw in the forest, now all alive and very angry on account of the stolen moments. Each month, except January, lacked something. March wanted the third finger of his left hand; June had only five roses, and should have had a lapful; November missed his turkey, December his holly-sprig, etc. Max, however, will not give up his plunder except for compensation. So a bargain is struck, by which each month is to come on the last night of the preceding month, bring a present, and tell a story. This gives us eleven stories, besides a little account of the visit and appearance of each month, and enough of the progress of Max and Thekla to preserve the interest in them to the end. The presents do not affect the story particularly. March brings a bad cold for his gift, and August a bag of mosquitoes; but the rest are all agreeable—such as April's little chickens and June's feast of strawberries. All this part of the story is very pleasantly imagined, and the pretty pen-pictures of the months will doubtless strike most readers as being good likenesses.

Of the separate stories, one is about a family of bears, another about a family of squirrels, three about children who nearly lost their lives in the great perils of freezing, drowning, and burning. The best, perhaps, are "The Little Housekeepers" and "Chusey." The notion of making two small children play at getting married, and setting up housekeeping in a deserted cottage, is a good one, and it is well carried out in the telling. "Chusey" is a turkey, destined for the Thanksgiving dinner of some poor frontier children, but who becomes such a pet that they cannot part with him when the day arrives; so, instead of being eaten, he comes to the table tied to the leg of the baby's chair, and gets his share of the dinner—scanty enough with the part of Hamlet left out. There is more humor in the book, but scarcely any so good as this—"Nippie Nutcracker," the "squirreless," who turns "doctor," because she is a disappointed old maid, and, failing at that, goes to lecturing, being, to our taste, the least successful effort. Nippie's enquiries why squirrels should not lay eggs were, however, not bad.

A good many phrases and fancies are to be found throughout the book which will be comprehended or relished by the grown reader rather than the small hearer; but this habit of writing with an eye to the parents is becoming so common with the children's story-tellers that a "juvenile" without a trace of the fault is a positive rarity. Imaginative stories, which are not rare, are not apt to be so good as this "New Year's Bargain," but they all run the risk of unrestrained exuberance, and making clay out of sand and water.

Insects at Home. Being a Popular Account of Insects, their Structure, Habits, and Transformations. By the Rev. J. G. Wood. With 700 Figures. 8vo, pp. 670. (New York: Charles Scribner & Co. 1872.)—Instead of being a popular account of "insects at home," this is a systematic treatise on entomology, based on a system over thirty years old, and therefore in a degree obsolete; while so far as any reference is made to recent discoveries of the habits of insects, the compilation (almost solely from British authors) might have been made fifty years ago. "Insects at Home" would be an admirable title for a series of sketches of insects which make their home in the air, the water, forests, fields, mountains, and deserts. On such a plan, even though carried out by a clumsier writer than Mr. Wood, a readable book could scarcely fail to be made. As it is, the homes and habits of insects are a secondary feature of this book, since, tied down by his adhesion to a cut-and-dried system, the author is as often compelled to treat of insects without a local habitation and with only a name as those living in homes accessible to human observation. Moreover, the title of the book should read "British Insects at Home," as the insects of France and Germany are apparently regarded as exotics, while extra-European forms are almost entirely ignored. We have not a word, for example, about the white ants, the stingless honey-bees, and singular ants of the tropics, together with the multitudes of bizarre forms made known by Wallace and Bates and Continental authors. Even among English insects, the wonderful economy of the gall-flies is passed over in silence. Among English readers, the tendency of the book will be to narrow and insulate the average British entomological mind. In America, the only use of such a book will be to acquaint the beginner with certain insects similar to but not identical with those of this country, though Harris's treatise, which can be bought at a much lower price, is far more readable and useful.

For a popular work the author's style is singularly bad, and at times ungrammatical. Tedious and prolix, he often digresses on subjects the most remote from that which immediately engages him. Paragraph after paragraph, often in quick succession, begin with "we will now examine" or "we will proceed to examine," "we now come" or "now we come" to such an insect. This is not Mr. Wood's first book, nor is he a tyro in authorship, and had he not attempted to make a ponderous tome to match his natural histories of man and of animals, his "Homes without Hands"—all excellent in their way—and had compressed the present volume into half the size, a much more successful result would have been attained. As to the illustrations, the colored frontispiece is execrable; the woodcuts are good, but the figures in the full-page illustrations are not numbered so as to be readily identified.

The World of the Sea. Translated and enlarged by the Rev. H. Martyn Hart, M.A., from "Le Monde de la Mer," by M. Moquin Tandon. (London and New York: Cassell, Petter & Galpin. 8vo, with plates and cuts, pp. 448.)—M. Tandon has here given us a model of the "popular science" book. So skilful has he been in weaving in his facts, so pleasant a story of the sea and its marvels does he tell us, that the reader, however unlearned in natural history and averse to reading simply for mental improvement, will be so amused and led on from chapter to chapter by the rare artistic features and the simple and elegant narrative, that it will be a matter of surprise to him, on closing the book, to realize how much information has been forced upon his attention. The most successful seaside books are those of Gosse, and Lewes's "Seaside Studies." These are mostly narratives of personal research, and are stimulating to the special student; but Tandon's work, though largely written from the French side of science, contains facts and illustrations drawn from two seas, the Atlantic and Mediterranean. If more prominence has not been given to recent discoveries in Great Britain and America, it is the fault of the English translator, who evinces an entire lack of scientific knowledge, though excellent in translating from the French. The illustrations are beautiful, and scarcely a slovenly cut mars the neat typography of the book. Moreover, they have the merit of being fresh, and, if we mistake not, will be novel to many naturalists. In these days of monods and protoplasm, the gorgeous and accurate colored lithograph of the Radiolaria, selected from Hæckel's great work, as well as the accompanying cuts, will be welcome even to the student. So, also, the plates illustrating the development of sea-weeds, corals, and molluscs. The author has not neglected the practical aspects of science, and his chapters on oyster and mussel culture and sea fisheries will interest those less concerned about the animals themselves. The book excels Figuier's "Ocean," since Tandon was an excellent naturalist and comparative anatomist, while the former is a compiler whose knowledge of science is only equalled by what he pretends to know of spiritual realms. Our author grows careless in one flagrant instance when he ascribes four stomachs to an infusorial animal, "thus bringing these minute creatures into a comparison with the ruminants"! The translator is to blame for the perpetuation of such an error in the English version. The original was published several years since, but only recently translated. Hence some competent hand should have added a chapter on the startling results obtained by deep-sea explorations on both sides of the Atlantic.

Had the translator taken the pains to have some one, even with the most rudimentary knowledge of zoölogy, and, for that matter, of Latin, read over the proof-sheets, we should not have been shocked by such expressions as "This algæ is composed"; "by their rostro," when rostrum is meant; "Amiba" for Amœba; "Actinaria" for Actinia; a "Poritidæ" for a Porites; "an Alcyonidæ," etc. The names of Alder and Hancock, so familiar to English-speaking naturalists, their countryman renders "*Alderet Hancock*"*!* and he also allows himself to speak of "a huge cetacea." When will publishers confide their scientific republications to the supervision of competent naturalists?

Probatio Latina: A Series of Questions designed to test the progress of learners in the Latin Language. By Charles D. Morris, A.M. (New York. 1871; pp. 81.)—An extremely useful little book, containing 659 miscellaneous questions on Latin Grammar. Lads who do their daily tasks fairly enough are often completely upset in examinations by questions either unexpected or not put in the familiar words of their own instructor. The occasional use of this book, in the hands of a lively teacher, will greatly lessen the dread of novelties, give a new zest to instruction, and be a good check on humdrum and routine. The questions are clear and searching. Moreover, the work is so general in its character that it may be used with any Latin grammar whatever.

MACMILLAN'S
STANDARD LIBRARY
OF
POPULAR READING.

UNDER this title, the Publishers are issuing, from time to time, editions of standard books by the best authors, including both Works of Fiction and others of general popular interest. The volumes of this series are beautifully printed and tastefully bound in cloth, and are sold at the moderate price of a dollar and a quarter each.

The following are already Published:

SKETCHES OF CONTEMPORARY BIOGRAPHY, 1852-1858, by Harriet Martineau.
OLD SIR DOUGLAS, by the Hon. Mrs. Norton.
A SON OF THE SOIL, by Mrs. Oliphant.
CLEMENCE FRANKLIN, by Miss Keary.
THE COUNTESS GISELA, by E. Marlitt.
JANET'S HOME, by Miss Keary.

MACMILLAN & CO.,
38 BLEECKER STREET, NEW YORK.

THE ECLECTIC MAGAZINE
OF
FOREIGN LITERATURE, SCIENCE, AND ART.

Twenty-seventh Year—Seventy-sixth Volume.

NEW VOLUME BEGINS JANUARY, 1872.

NOW IS THE TIME TO SUBSCRIBE.

THE ECLECTIC reprints the best Essays, Reviews, Stories, and Scientific Articles, from the prominent English, French, and German periodicals. Its selections are very carefully made, and for more than a quarter of a century it has maintained its position as the leading exponent of foreign contemporary thought.

CONTENTS OF THE FEBRUARY NUMBER:

EMBELLISHMENT: Lord Lisgar, Governor-General of Canada.

I. Church and State in Italy. Fortnightly Revew.—II. Samuel Taylor Coleridge. Blackwood's Magazine.—III. A Persian Passion Play. By Matthew Arnold. Cornhill Magazine.—IV. The Last Tournament. By Alfred Tennyson. Contemporary Review.—V. A Morning in the Tuileries. Macmillan's Magazine.—VI. The Kembles. Part I. Mrs. Siddons. Chambers's Journal.—VII. Hawthorne's Italian Note-Books. St. Paul's.—VIII. The Voyage and Loss of the "Megæra." Cornhill Magazine.—IX. Gerty's Necklace. Blackwood's Magazine.—X. The Arts in Captivity. Macmillan's Magazine.—XI. A Frenchman's Voyage Round the World in 120 Days. (Concluded.) Revue des Deux Mondes.—XII. Forster's Life of Dickens. Examiner.—XIII. Paper-Making in Japan. Chambers's Journal. XIV. "Come." Macmillan's Magazine.—XV. Lord Lisgar. The Editor.—XVI. Literary Notices: Some New Books.—XVII. Foreign Literary Notes.—XVIII. Science.—XIX. Art.—XX. Varieties.

Besides the longer articles, which themselves represent every variety of subject, the Eclectic has five Editorial Departments: Literary Notices, Foreign Literary Notes, Science, Art, and Varieties. Terms: Single copies, 45 cents; one copy, one year, $5; two Copies, one year, $9; five copies, one year, $20. Agents wanted to get up clubs.

Address, E. R. PELTON, Publisher,
108 Fulton Street, New York.

IN PRESS.

THE BRITISH QUARTERLY REVIEW
FOR JANUARY.

Containing valuable Articles by

Have recently Published,

SAINT ABE AND HIS SEVEN WIVES.

A TALE OF SALT LAKE CITY.

12mo, extra cloth, $1 25.

"The reader closes with regret a book that brims with broad and healthy humor, smooth and vigorous versification, and graphic individualities, refined occasionally with glimpses of a sweet and serious poetic sentiment, and underflowing with a sympathy for virile passion not unblent with an appreciation for whatever is pure and honest and true. We shall quote somewhat largely from this volume, because it belongs to the best of its kind, and deserves a place in that unique and original literature which has flowed during the last year from the English and the American press, and which includes 'The Coming Race,' 'The Battle of Dorking,' 'Ginx's Baby,' 'Lord Bantam,' 'The Luck of Roaring Camp,' 'The Heathen Chinee,' and the 'Pike County' poems."—The New York Standard.

"They have the ring of originality, and they indicate ability to produce something still more remarkable than this very remarkable little piece. . . . . . None who read about Saint Abe and His Seven Wives can fail to be amused, and to be gratified alike by the manner of the verse and the matter of the tale."—London Daily News.

"We suspect that the author is none other than Mr. John Hay, whose 'Pike County Ballads' have made his name famous. . . . . The dedication of the poem is in itself so sparkling and fresh, and with such a merry air about it, that we are tempted to reproduce it entire, but have room only for extracts."—Cincinnati Commercial.

"Beyond the date, 'Newport, October, 1871,' no clue is given to the authorship; but if it be the first work of the writer, we may conclude that the world is richer by the possession of a new poet of unquestionable originality and power."—The North British Mail.

"There are some passages in the book that will remind the reader of Lowell; indeed, he might have written all of it. But there are other passages which are not unlike Bret Harte, and him we suspect; while again there are pages which look as if they had been written by Joaquin Miller. . . . 'Saint Abe' is a poem to be read, and when it has been read it will be approved. It is rough now and then, a little plain-spoken here and there, free almost to what many people will think profanity occasionally, but it is full of force and vigor, and, while it teems with thoughtful lines, it not unfrequently is marked by singular beauty."—The Scotsman.

For Sale by all Booksellers, or will be mailed to any address, post-paid, on receipt of price by the Publishers,

The Nation.

NEW YORK, THURSDAY, FEBRUARY 1, 1872.

The Week.

A MOVEMENT which may prove of great importance, and is likely at all events to give the Democrats a fair opportunity of trying their "passive policy," was begun in Jefferson City, Missouri, on the 24th inst., by the calling of a mass convention of Liberal Republicans, which was largely attended, nearly every county in the State being represented, and which closed its proceedings by issuing a call for a National Convention at Cincinnati, on the first Monday in May next, "to take such action as their convictions of duty and of public exigencies may require." The platform was very significant, and we do not know of a single objection which anybody who seriously believes in the principles of the Republican party can make to it, except that General Grant could not be nominated on it. The convention declared its adhesion to sovereignty of the Union, emancipation, equality of civil rights or enfranchisement; that peace and purity in administration can only come from such reconciliation as enfranchisement has wrought in Missouri; demanded complete amnesty and equal suffrage for all; a reform of the tariff, and the removal of such duties as, in addition to the revenue yielded to the Treasury, involve an increase in the price of domestic products; denounced the use of Federal patronage for the control of elections; called for a thorough and genuine reform of the public services; eulogized the senators who pressed for the recent investigation; rebuked "the use of coercion to ratify a treaty," the "packing of the Supreme Court to relieve rich corporations," the use of unconstitutional laws "to cure the Ku-klux disorders, irreligion, or intemperance," and, finally, corruption in general, and called for an "uprising of honest citizens."

The proceedings in Congress during the week have been almost without interest, and it is pretty clear that "the friends of the Administration" are eager to get into the canvass, and are determined that no legislation of importance shall take place this session. The Senate has passed the joint resolution fixing the 29th of May as the day of adjournment. All attempts on the part of the independent senators to procure the passage of a resolution providing that there should be no adjournment till the Service Bill was passed and the tariff revised, and a vote reached in the House on the bill repealing the duty on coal, proved failures. It is a significant circumstance, and one which we commend to the attention of the public, that the only senators who voted for the civil-service proviso were Trumbull, Schurz, Sumner, Tipton, and Fenton. In fact, it is pretty clear that the Administration senators will be very well content with the new rules if they are not acted on, and, while very desirous that the President should have the credit of reforming the civil service, are opposed to his reforming it. Their position in the matter was well expressed in the Conklingite resolution of the last New York State Convention, which lauded the President for having "by considerate investigation made worthy efforts for the reform of the civil service."

There was some debate on Friday, in which Gen. Garfield took the lead, on the question of the public printing, the text being furnished by the very handsome volumes of the U. S. Expedition for the Geological Survey of the 40th Parallel—under the auspices, as our readers are aware, of the War Department. A great deal of what was said as to the necessity of some restraint upon the cost of our public documents we quite agree with; and we admit that some slight economy might have been effected in the mere letterpress of this magnificent work. But both Mr. Garfield and Mr. Dawes seemed to have an idea that had it been printed "in fair, honest, plain type," and nothing more, like "other public documents of which Congress has control," it would somehow have become popular reading—at any rate, the people would not be cheated, as they now are, by the use of toned paper with good binding and gilt edges. Nothing could be more delusive. Be the printing cheap or dear, in good taste or in vile, the nature of such a work precludes it from being of immediate use or interest to any but a very limited class of persons, and its proper destination is at once the public libraries of the country and the archives of foreign governments and scientific bodies. The people at large are as incompetent to judge of the value of its physical surveys—for instance, of its mapping out the Comstock Lode with a thoroughness never equalled on so grand a scale in any country in the world—as the Commissioner of Agriculture is to appreciate the good that can come to "practical" farming from his botanist's herbarium. They would probably begin their retrenchment by cutting off the maps and illustrations, which are of course the most expensive feature of the publication; and even Gen. Garfield, who happens to live near coal mines with hoisting apparatus, could find fault with a plate representing the same thing at the silver mines. In short, if we take a "popular" view of the labors and services of Mr. Clarence Cook and his associates, we shall have to condemn the War Department for sending them out before proceeding to condemn the public printer for extravagance; but if we take the rational view of intelligent men, we may as well acknowledge that this Exploration is in the highest degree creditable to the Government which ordered it and the parties who have executed it, and that the printed embodiment of its invaluable results is well calculated to increase the respect for American science now entertained abroad, as well as to stimulate scientific pursuits at home.

The "Short Cut" has received a finishing stroke in the report of the majority of the Judiciary Committee of the Senate, that the Fourteenth and Fifteenth Amendments do not give women the suffrage, and that Congress has nothing to do with giving it to them in any event. The conduct of a mob of women who assembled to obtain entrance to the committee-room on the morning of the hearing, and their language with regard to members of the committee supposed to take a hostile view of the suffrage, were not calculated to inspire one with hopeful views about the "purifying and elevating influence" of the great reform on politics. Nor did they, according to all account, give much evidence of the abasement and humiliation produced by ninety thousand years of male oppression, or whatever the period is on which scientific men have fixed as that at which man became a conscious and responsible tyrant with regard to the female sex. The faithful Butler was, at the close of the fray, presented with a big bouquet, which he kept on his desk for a whole day, the envy and admiration of weaker-kneed statesmen.

Mr. Sumner has proposed an amendment to the bill for the removal of the legal and political disabilities imposed by the Fourteenth Amendment to the Constitution, which provides, under heavy penalties for opposition or obstruction, for the admission of persons of color to all public conveyances by land or water, all theatres and other places of amusement, and to all schools, churches, cemeteries, and benevolent institutions incorporated by national or State authority. Now, there can be no question as to the propriety of forcing common carriers to afford all citizens accommodation on equal footing, and there is the same thing to be said with regard to licensed innkeepers. Men must travel on their lawful occasions, and the means of travel are now, and indeed have been ever since stage-coaches were established, great monopolies, to which everybody must resort *nolens volens.* In travelling, too, one must often use inns, and in large numbers of places there is only one inn, and in most places there are only a few; and there is hardly any place in the country which can support even one good inn for persons of a particular race, color, persuasion, or other small class. To allow common carriers, therefore, or innkeepers to refuse to afford a man accommodation on the ground of his color, is to arm them with the power of inflicting a penalty which is sure at all times to be severe, and may sometimes be terrible, for it may prove one of the most ingenious combinations of insult and injury to which a human being can be exposed. In seeking to deprive them of such a power, Mr. Sumner will have the sympathy and support of all right-minded men. It is preposterous to allow a steamboat captain, navigating American waters, under the American flag, or a railroad company owing its very existence to the law, or an innkeeper carrying on his business with peculiar privileges, to degrade and harass people because their complexion raises disagreeable associations in certain people's minds. We may add, too, that the prejudice against color is supported by restrictions directed against color. Thousands of people who could not bear to ride in the street-cars with colored people in this city as long as the companies did not compel them to do so, now that they must do so, or walk, find no difficulty in it. Here we stand on firm ground, where there is no room for the play of taste.

The attempt to compel the owners of all cemeteries, theatres, and other licensed places of amusement to accommodate colored persons on the same terms as whites must be judged by a different standard, as here we get into the field of pure taste and sentiment. There is nothing which is more purely a matter of sentiment than the place and manner of a man's burial. The legislator has no right to concern himself about it, further than may be necessary for the protection of the public health and the maintenance of order and decency. It is of no sort of consequence to the State where a person is buried if proper arrangements have been made with the owner of the soil, or how he is buried, if the grave is of the proper depth. Nothing could, therefore, be more tyrannical or less excusable than either to force him to be buried in a particular place, or force others to receive his body among the graves of their friends. To compel people to inter negroes, Turks, Jews, infidels, heretics, or any other class of persons to whom, for any reason, whether wise or foolish, they entertain an antipathy, beside their deceased friends and relatives, would not be a civil right, but a civil wrong of the most ridiculous character; and if the colored people have as much sense as we believe them to have, they will ask Mr. Sumner to let them bury their own dead, in their own way, among such persons as are willing to wait for the resurrection in their company. Graveyards are no places for the service of writs, and the denizens of tombs do not care a rush for disabilities based on race, color, or previous condition of servitude.

The same argument applies, *mutatis mutandis*, to the compulsory admission of colored persons to theatres. The exclusion of them is absurd, but it is a matter of taste. If there be any such thing as a natural right, it is the right to select the company in which we shall amuse ourselves. If anybody chose to open a theatre for the entertainment of fair people exclusively, it would be a silly outrage to compel him to throw his doors open to dark people. We should have a right to laugh at him, or preach at him, but not to legislate against him. We might nearly as well lay down rules by law for the admission of persons to the various clubs of this city, as to deprive managers of theatres of the right of deciding for what classes of persons they will play. The surest way of hardening a social prejudice is to levy penalties for the display of it in matters which the community does not believe to be in the domain of law. We desire to see colored people occupying such places in every theatre as they are able to pay for, but we desire to see them gain admission through improvement in the moral sense of the community and not through the assistance of the United States marshal.

The Custom-house investigation has gone on through the week in the old style. It would be useless, even if our space permitted, to attempt any further summing up of its results. The abuses disclosed continue to be the same in character as those which came to light the first week. The Administration organs, which were at first confident there was nothing to be found out, and that the whole affair was a mere "Schurz-Fenton trick," now admit that a good deal has been found out, but they throw the blame on "the system." "The system" plays much the same part in political that "the cat" plays in domestic life. Whenever a politician finds himself confronted with unmistakable and undeniable misdeeds, the chances are that he will first try to throw the blame on Andrew Johnson, but this failing he will declare that it was "the system" which led him astray. In commercial life, there being generally no "system" to seek shelter under, the friends of a rogue are apt to say, if indeed he does not say it himself, that he is living in a "transition period," meaning that, having got rid of his old reasons for being honest, and having indefinitely put off the duty of providing himself with new ones, he is at liberty to do pretty much as he pleases. The contemplation of "the system" at the Custom-house now seems to make Murphy and his backers quite sad. They think it ought to be reformed, but whose duty it is to do it they cannot for the life of them find out. One thing they do know, and this is, that reform just now would be very inexpedient, and, in fact, is not to be looked for. Who ever heard of "the system" being reformed immediately? Their surrender of "the system" to public odium is, however, rather odd, as they publish, every now and then, long statements, showing that it works to perfection, that all frauds are exposed and delinquents are punished under it, and that when any officer indulges under it in a little picking and stealing, or "compromising," he is nearly sure to be an appointee of that old reprobate, Andrew Johnson.

The great case of *Sheehan against Murphy, etc.*, for the recovery of $30, levied as a political assessment in the Custom-house, came off on Saturday in the Justices' Court. Sheehan seems to have signally failed in proving the posting up of the notice in the Surveyor's room, though it was admitted that the money was paid under the assessment; but the defendants maintained, and successfully, that it was "paid voluntarily," so the complaint was dismissed. These "voluntary" payments at the Custom-house remind one of the address of the French colonel to his regiment on election day, in which he informed them that every soldier could vote as he pleased, but it was right and proper that all should know how he (the colonel) was going to vote himself, and the *sous-officiers* were directed to put down the names of all men who took a different view of the public affairs from that taken by him. An instructive illustration of the present condition of the Fenton-Conkling quarrel is to be found in the fact that the *Times* looks on Sheehan's failure to prove the posting of the notice as a great triumph over the *Tribune*, and dares this cowardly assailant of the Administration and its "Toms" to acknowledge itself beaten.

Governor Scott, of South Carolina, has defended himself against the charges made against him by the impeachers in a special message. His defence with regard to the alleged over-issue of State bonds, which is the only point of much interest to the public here, is twofold—first, that there has not been any "over-issue"; and, secondly, that if there was, he is not responsible for it. As we pointed out some months ago, the last Legislature directed the government to raise a certain sum of money, but placed no limit on the number of bonds that might be issued for that purpose—as ingenious a temptation to malfeasance as was perhaps ever offered to an executive. So it got bonds ready to the amount of $22,540,000, of which $8,200,000 were to be used in the conversion of the State debt, and the law expressly prohibited their issue except on the call of holders of State securities already extant. Now of these bonds Governor Scott's own account shows that only $1,260,500 have been called for in the manner prescribed by law; that only $501,000 have been cancelled; and the question what has become of the remaining $6,438,500 is a question which agitates the financial world, and which he does not answer. If this amount has become, as he admits virtually, a part of the State debt, it has become so illegally, and the only remaining point for discussion is the extent of Governor Scott's complicity in a responsibility for the fraud, for such it is in law, if not in words. He endeavors to clear himself of this by alleging that the law gave "the financial agent" exclusive authority to pledge the bonds of the State which the State now has, or may hereafter have, in its possession as collateral security for the State loans. The financial agent, however, such as he was, was the appointee of and was dismissible by the Financial Board, composed of the Governor, State Treasurer, and Attorney-General; and when we say that his reckless operations in New York have ruined the State credit, and that bonds which were created by law for a special purpose could not have been honestly held by the executive to have been "in the possession of the State," and, therefore, deliverable to Kimpton for any other purpose, we think we leave this question of the Governor's defence in a very undesirable condition. We shall pass over, too, without notice the disgraceful if not suspicious fact that Governor and Treasurer, or, in other words, the Financial Board, at different times previous to the late breakdown, gave three widely different accounts of the amount and composition of the State debt. The Governor now confesses that they raised money in New York to meet enormous deficits in the revenue, at rates varying from 15 to 20 per cent., pledging bonds as collateral, in the proportion of twenty-five cents in bonds to the dollar borrowed. The proper division of responsibility between himself, Parker, and Kimpton, is indeed the point on which his defence is strongest, but it is one which there is but little to be made of. His attempt to get the Union Trust Company of this city to become his financial agent has, we believe, failed.

Judge Jameson, of Illinois, the well-known author of the work on the Constitutional Convention, has given a decision in another suit brought in that State by two women against the inspectors of election for refusing to register them as voters. The court took substantially the same ground as Judge Carter of Washington, and Judge Sharswood of Philadelphia, that citizenship does not involve the right to vote; that women are citizens as minors are, and may be made voters if the people please, but are not now voters; that the Fourteenth and Fifteenth Amendments do not affect the question of female suffrage; that "history and common sense" refute the notion that women have under these amendments acquired any rights they did not previously possess; that there is no such thing as a "natural right" to the suffrage, that right being wholly artificial, and bestowed or withheld by that portion of the community which possesses the power to bestow or withhold it. On the general question of the policy of amending the law so as to permit women to vote, Judge Jameson said "he saw no ground for refusing it whenever a general demand for the suffrage was made by women themselves." But he added "that if they wish to enter the capitol as legislators, they ought to wait till they can effect their entrance there legally and directly by the door, and not seek to climb thither some other way through passages intended for wholly different purposes"—in which view of the "Short Cut" we think the great majority of sober-minded and *honest* people will agree with him.

The questions which have been most prominent in England of late are social questions. The trades-unions have been holding a convention at Nottingham, which has been largely attended by both workingmen and capitalists, and at which the best of feeling has prevailed, and at which there was produced, for a wonder, a substantial legal grievance, viz., the state of the criminal law, which makes the agent of a trades-union who duns a man for his dues on his way to or from his work guilty of "besetting him" with a view to intimidation. It will probably be now amended. Mr. Scott Russell has recovered from the confusion into which he was thrown by the failure of his celebrated scheme for reconciling the aristocracy and the working-classes, and has published a long letter, in which he intimates that he has again something to disclose of a serious nature. He now declares that villages and towns should have power to purchase outlying lands, and cover them with detached cottages, gardens, school-houses, and places of recreation for the use of the workingmen, and he would have the day's work restricted to eight hours.

The most healthy sign which has appeared in French politics for a long while is the defeat of Victor Hugo at an election of a deputy to the Assembly from Paris by M. Vautrain. To be sure, he got 93,423 votes against 121,158, but there were an enormous number of "abstentions," and probably on the part of persons who, if they had voted, would have voted for M. Vautrain. It is, of course, surprising to us that so many persons should be found to vote for a man who, in all that relates to politics, has for some years back given most of the evidences of what is ordinarily termed insanity, but, then, that the majority have not done so, is a sign of progress. M. Vautrain is a real republican, and of long standing, having thrown up the mayoralty of a Paris arrondissement as a protest against the *coup d'état*, but knows well what are the conditions of a republic, and labors to produce them with thorough sagacity, patience, and good sense. He was the candidate supported by the Government, and he is considered a valuable addition to the Chamber.

The Germans are apparently fully aware of the difficulties the future may have in store for them, and Bismarck is addressing himself to the study of the new problem with his old zest. Nothing is left undone at present to keep the Russians in good humor, and to avoid precipitating a crisis, but the task of building up Germany and filling her with self-confidence is pursued with the same uncompromising zeal. One of the small but remarkable signs of Bismarck's temper has just been shown in his directing the substitution of German for French as the German diplomatic language, thus departing from a practice two centuries old, and which England and the United States have alone hitherto ventured to resist. Its adoption was one of the first-fruits of French ascendancy under Louis XIV.; its disuse is one of the first-fruits of French decline, but it will doubtless help to open the eyes of the French to the necessity of learning foreign languages, to their ignorance of which many critics ascribe in large part their military reverses, and M. Martins, in a late number of the *Revue des Deux Mondes*, their lamentable falling off during the last forty years in scientific research. Bismarck's most serious difficulty, at this moment, is the state of feeling in Alsace. In the course of this year, 1872, under the law, all Alsatians must decide whether they will remain French or become German, and the German law of conscription takes effect. The result is a great emigration of the young men into France, which threatens to assume alarming proportions, and the Mayor of Mühlhausen has written a letter to Prince Bismarck, asking him, as a matter of policy, not to enforce the law for six years. The Catholic clergy are also assuming a position of rancorous hostility to the Government on the school question, and, although the German policy in the new territory is acknowledged to have been on the whole very moderate and conciliatory, the situation is full of great difficulties.

THE REFORM MOVEMENT.

IT is now more than six months since the outburst of indignation began which finally overthrew the New York Ring, and which, through its influence on popular sentiment throughout the country, did a great deal towards absorbing all political questions into the one great question—how to prevent politics being made a trade by adventurers anxious to enrich themselves. There is now hardly a State or county in which the citizens are not occupied more seriously with this problem than with any other; and it is interesting and instructive to see how many local rings were brought to light as soon as public attention began to be turned in good earnest towards this subject. Indeed, whichever way we look, we find the community engaged in the singular occupation of devising ways and means of preventing itself from being sold out by its appointed guardians. Much of this zeal is unquestionably due not less to the indignation excited by the exposure of the New York frauds than to the success of the first assault made on the New York Ring. Considering all the circumstances of the case, there has perhaps been nothing in political history more remarkable and more brilliant than the movement which closed with the November election in this State. Between July and November the public indignation was kept at white heat by a rapid succession of exposures of the most extraordinary kind and by the prospect of reaching them effectively within a brief period by the ballot-box. When the election came, the result more than realized the expectations even of the most sanguine. Not only did the reform movement hand the State over to the Republicans, but it almost swept away the Democratic majority in this city, and gave the reformers, to all outward appearance, the most powerful majority in the Legislature possessed by any party in this State for a great many years. In fact, it armed them with the power of doing anything they pleased within the limits set by the constitution, and there were signs, by which many were deceived, that we had reached the halcyon days in which zeal for the common good was to take the place of party spirit.

Since the election, however, it must be admitted that the movement has slackened, and we do not think we exaggerate when we say that many men, by no means pessimists, and possessing a full knowledge of what is passing "inside politics," begin to fear not that it has spent its force, but that, after all, the forces of corruption are not yet overthrown, and that we have before us still another stage of abasement through which we must pass, and which it will take many years to pass, before we can look for anything like complete purification.

The grounds of these fears are mainly to be found in the lukewarmness or, to express it more accurately, the low tone of the Legislature. Two-thirds of its members are Republican; three-fourths, we believe, are new men, unfamiliar as yet with the arts of the Ring; and the leaders of the reform movement in this city who went up to Albany when the Legislature opened glowing with hope and enthusiasm, and expecting to see short work made with the corruptionists, and, the ground having been cleared of abuses, the immediate initiation of constructive measures, have been sadly disappointed. There is, of course, always a good deal of allowance to be made for the reluctance of legislators who are called on to provide working machinery, to travel as fast as agitators who are hot from the work of destruction; but then, in judging the Albany Legislature, it has to be taken into account that it was reasonable to expect that members from the rural districts, of whom it is mainly composed, would be more deeply moved by the Ring frauds, and therefore more eager to act promptly on them, than New Yorkers, who have for ten years been familiar with the spectacle; that the corruption of the judges in particular—a phenomenon said to be unknown in the interior of the State—would rouse them more than it rouses the people of the city, who have looked on it so long that they have learnt to laugh at it, and lead to instant action; that the sessions of the Legislature are limited to one hundred days, which is little enough for ordinary work, far too little, even with the greatest zeal, for the work now before it; and that the experience of the last few years proves that the power of the corruptionists is always weakest at the opening of the session, most members coming up with honest intentions, and only succumbing after the lobby has had a few weeks to work on them, the delay of valuable measures generally proving equivalent to defeat.

Now the reformers have found to their surprise that the Legislature was when it met not only not in an excited but not in a zealous frame of mind, and that indeed its temper, whatever its character, was not materially different from that of its predecessors. There is not and there has not been any disposition to attack the New York question vigorously. After sitting a month out of its three, it has done nothing towards reform beyond passing a bill creating a board of audit to pass on some eight millions of old claims against the city, and another legalizing the action of the anti-Ring Grand Jury of the Court of Sessions. The case of the corrupt judges has not been even alluded to. A committee of the Bar Association laboriously collected evidence to support an impeachment, and carried it up to Albany, and were severely snubbed for their pains, and given so plainly to understand that the Legislature would attend to that matter itself, and did not care for help from the outside, that they have come back home sadder and somewhat wiser. When we consider the length of time impeachment proceedings consume, it will be seen that the prospect of judicial reform begins to look gloomy. The new charter is now under consideration, the in the main excellent draught of the Committee of Seventy having been taken as the basis of legislative action, but we are unable to say what progress is likely to be made with it. The Erie Ring is still untouched, but by no means inactive, if we may judge from the petitions which pour in asking for the continued swindling of the English stockholders, on the good old savage, we will not say pagan, ground that they are foreigners. It is rather disheartening to see that not one man has shown himself in either House capable of taking charge of legislation, or whom the majority listen to with any respect. Mr. Tilden would, it was hoped and believed, have had a good deal of influence on legislation relating to this city, but he has found himself all but totally disregarded, and does not attempt to raise his voice.

We have thus far been complaining of the small amount that has been done, and this is really all that there is as yet to complain of; but we meet every day with the opinion among the best informed men that very little will be done; that the agents of the Ring are playing their old game with the old success, every day of delay enabling them to strengthen their position; and that when Tweed goes up this week he will find that his month's delay in taking his seat has done him no harm. We find, too, and among Republicans as well as Democrats, a strong suspicion that whatever is done will be done in such fashion that the Republican party, and especially the Administration wing of it, will get the full benefit, at least during the coming year, of the power which the revolution has thrown into its hands. These are, of course, only suspicions. They may not be well-founded; but, should events justify them, it is not difficult to predict what the effect would be on the fortunes of the party in this State. The intelligent and respectable Democrats have in a burst of public spirit and under the pressure of frightful abuses given it its present majority. If it were at the present crisis to show itself a party of radical reform, and make a clean sweep of the abuses, both State and municipal, under which we are groaning, it would retain permanently the allegiance of tens of thousands of those old enemies to whose votes it owes its present ascendancy. Should it now disappoint their expectations, and convert the reform movement into an electioneering machine for use in the Presidential campaign, we venture to predict that it will be a good many years before it has another chance of doing the same thing.

A variety of circumstances have combined to produce this gloomy prospect, and in considering how gloomy it is we must remember how much we suffered and how much the Ring dared before the rising of last November took place. Of course the division of the Republican party into two hostile factions must be placed foremost among them; but this division has been aggravated and made more mischievous by the attitude of the Administration. As we have frequently pointed out, and as everybody knows, the Fenton-Conkling feud could not have been kept up if the Administration had not supplied patronage to the Conklingites to enable them to vanquish their opponents in the primaries and at the convention. The result of giving the Conklingites the control of the Federal offices for use in the local scrimmage, and the reception into the President's confidence, and indeed intimacy, of a Conklingite politician of a low grade, has been of course to make the Conklingites secretly hostile to all reform out of which they were not likely to reap some advantage, and to attach them fanatically to the very arts through which the Ring attained its supremacy—that is, the art of "controlling primaries" by hired men, dividing and redividing offices and "plums" so as to satisfy the greatest possible number of retainers. In all these things the Custom-house has differed from the City Hall simply in the fact that nobody in the Custom-house stole openly, as Tweed, and Watson, and Connolly did. On the other hand, this same state of things either rendered the Fentonites indifferent to changes which would deprive them of all prospect of revenge, or has exposed all their reformatory zeal to the imputation of being inspired by "sore-head" spleen, and has made, we need hardly say, all concert of action impossible. At Albany they are fighting each other with far more bitterness than either has ever fought the Ring, and the Tammany men are said to be rapidly learning how to use each clan against the other. A striking illustration of the condition of their political morals is to be found in the fact that one side is very indignant over the failings of "Hank" Smith, but numbers among its own chiefs the renowned "Jimmy" O'Brien; while the friends of "Hank," though preserving a respectful silence with regard to his numerous imperfections, are greatly outraged by the contemplation of those of "Jimmy." To cap the climax, each of them has got possession of one of the leading Republican papers, which abuse each other heartily every morning.

This would have been a sufficiently unfortunate state of things even if the President had not appeared on the scene, at the outset of the reform movement, as a candidate for renomination. This produced two unfortunate results. It not only quickened the zeal of the Conklingites, and inflamed the animosity of the Fentonites, but it gave the Administration, and its friends and organs, a strong leaning against the spirit and processes by which alone the reform movement could hope for success—that is, the spirit of suspicion and enquiry, and the process of investigation and exposure, without fear or favor. It led them to see, in that most necessary step in any attempt at real civil-service reform—the Custom-house investigation—an insidious attack on the President as a candidate for re-election, and made them, after opposing it with all their might, accept it with the greatest reluctance, and with a firm determination that the exposures should be as few as possible. It is difficult to illustrate what we mean in any way so well as by citing the case of the New York *Times*, which was a fearless reform organ, and had acquired a powerful hold on the confidence of the public of all parties down to the meeting of Congress. The necessity of "supporting the Administration" then drove it at once into the position of an opponent of any measure, however salutary, which seemed likely to injure General Grant's chances of renomination, or to further the infamous designs of Schurz, Fenton, and Trumbull; and its reports and comments on the Custom-house enquiry have been remarkable as an attempt to ride two horses—that is, as a reformer, it has to clamor in one column for thorough revelation on all State and city abuses; while in the next it has to pooh-pooh the investigation into Federal abuses, to "castigate" those engaged in carrying it on, and belittle the evidence. Now, it is easy to see what a very different influence on the politics of the State the Administration might have had if General Grant were going out of office, or had nothing to fear from an overhauling of the Administrative machine, and could lend his whole weight to the breaking up of the system which produces the Hank Smiths and Tom Murphys just as much as the Tweeds and Sweenys, and which, as long as it lasts, must render all reform partial or short-lived, if not nugatory. It would be difficult to overestimate the purifying influence on local politics of the spectacle of a Custom-house conducted like a merchant's office, presided over by a respectable and honored citizen who devoted himself to the collection of the revenue, and managed by decent men who attended primaries or not, as their inclination prompted.

THE NATIONAL GUARD IN FRANCE AND ITALY.

THE National Guard is one of the many institutions which the Italians have imported from France ready-made, as it were, and free of duty. The article was never examined at the frontier or at home either. Every other institution, from that of royalty to the grist-tax, has, occasionally at least, been discussed and criticised. But the *raison d'être* of the National Guard has never been made the subject of any serious enquiry. The general or, we will say, the original and now purely ideal meaning of this institution is well-known and deservedly approved of. But it might have been worth while, ere this, to ascertain whether that abstract meaning holds good in the concrete case of Italy. On its validity depends not only the actual value of the institution but the very possibility of its ever becoming useful. The habitual pessimists and fault-finders of Italy have hitherto been the men of the Left, who, having never (or hardly ever) been in power, had naturally to do the work of the opposition. And this may be one of the reasons, if not the only one, why the usefulness of the National Guard has never been impugned, since its maintenance, even if proved to be an error, would be an error on that side which a democratic opposition would naturally call their side and, therefore, the safe side.

Only recently, when the "Federation of the National Guard" in France had shown to the world what armed burghers are capable of, and that their errors, if such they commit, are not necessarily on what would by ordinary men be called the safer side, the moderate part of the Italian press and especially the more spirited and less pathetic papers indulged, for the first time, in some facetious remarks on the subject, timidly hinting at the possible superfluity of the self-styled "palladium" of Italian liberty. Not that they saw in the French disorders anything like a *warning* to Italy: the contrast between the two national temperaments was too great to admit of any such ominous parallel being drawn between the steady constitutionalism of Italy and the fitful political saturnalia of France. But this being so, it was rational to ask whether the people's rights required the same degree and the same kind of protection in Italy as in France, and, if they required any protection, whether the Italian National Guard, although a faithful copy of the French National Guard, was likely to afford, or capable of affording, such protection. The Italian critics, taking its harmlessness for granted, point out that its abolition would be equally harmless, and there are probably few men in Italy who seriously think that if this "palladium" were stolen, their Troy would fall and perish. If no Ulysses has yet come forth to commit the *pia fraus*, it is probably from fear of rousing the political Cerberi, who would bark over any bone however hollow and fleshless it may be.

The *Fanfulla*, a comic and very clever paper of Florence (now published in Rome), one day astonished its readers by reminding them that the National Guard is, if not an anti-constitutional, at least an extra-constitutional institution, of which the Italian *Statuto* makes no mention whatever. That alone would, of course, be no argument against it. But the remark is literally (though not essentially) correct. The 76th article of the Italian constitution enacts that a "communal militia" be instituted, but the term "National Guard" does not occur in the document. Now, a *communal* or *civic* guard is something very different from a national guard. Civic guards have existed from time immemorial. Some French towns had them in the eleventh century, but such a militia never was to its city what an army is to a State. There was no danger of inter-municipal warfare, as there was in Italy. A French civic guard was either a purely ornamental institution, a guard of honor to the town, or it was an armed police whose attributes depended on the degree of public security in the communal district. The state laws, therefore, or royal edicts referring to this institution, could never be but either prohibitory or permissive enactments. Only in 1791, when the Republic seemed likely to be attacked by the foreign Reaction, Lafayette thought it expedient to raise the Civic Guard to the dignity of a state institution, and it was he who, having reorganized the Municipal Guard of Paris, invented the name of National Guard for it. It was a misnomer, the Parisians not being the French nation; but the name was soon made true by the spontaneous adhesions of the other communes. The principal office of these new citizen-soldiers was to secure the great achievements of the Revolution, and to defend the newly-conquered yet ill-defined rights of the people against tyrannical usurpers and reactionary pretenders. But they were also expected to act as a military *reserve*, and even to garrison the fortresses whenever the army was engaged abroad.

As long as the Reaction (represented by Austria, Prussia, and the fugitive French nobles) was the only enemy of France, it was, of course, the common enemy of the army and the National Guard. But against any other enemy, such as a military usurper, they could not well co-operate, and it is easy to see that, when these two forces cannot co-operate, the National Guard need not operate at all, since it can never be a match for a standing army. However excellent as a protecting and (in the best sense) conservative power it may be, it is notoriously worthless as a resisting power, and must remain so as long as the executive, from which alone encroachments upon civic rights may be apprehended, is allowed to wield that worse than two-edged weapon, the standing army. To leave the standing army, with its formidable organization, its overstimulated *esprit de corps*, its hectoring traditions, and its oath of allegiance to the head of the state, and then to institute, as its counterpoise, a so-called National Guard, with a loose organization, having neither traditions nor *esprit de corps*, and being bound by the same oath of allegiance to the same head of the state, was hardly rational, even under the reign of the goddess Reason.

In fact, the National Guard of France has never counterpoised anything nor protected anything; it has retarded no change nor accelerated any; it has resisted no temptation, avenged no wrong, and saved no right or liberty. When some few of its legions were defeated by Napoleon on the 13th Vendémiaire, the whole National Guard of France allowed itself to be placed under military command, and, a few years later, under the Directorate, to be altogether transformed into that wonderful hybrid called *Garde Mobile*. The sheep allowed the wolf to become shepherd, and, strange to say, were proud of him. And thus the original idea which had given rise to the institution having been totally destroyed and lost sight of, the National Guard soon saw its real functions entrusted to an Imperial *gendarmerie*, while some of its own battalions, in token of Imperial gratitude, were incorporated in the Imperial Guard, under the remarkable appellation of "National Guard of the Guard." In 1812 it became a real landwehr, or army of reserve, and when Louis XVIII. ascended the throne it allowed itself to be stripped of its last remnant of autonomy, the right of electing its own subaltern officers. It offered no resistance to the King, and no resistance to the returning Emperor. And when at last, in 1827, at a review held by Charles X., these guardians of national liberties had the courage to raise cries against the ministry and against the Jesuits, they were ignominiously dismissed and disbanded. Louis Philippe reorganized them, and Louis Napoleon ignored them. Somehow, they managed to survive even the *coup d'état*, and the Third Republic would hardly have dared to suppress so popular an institution if the latter had not, in the eightieth year of its existence, remembered its original vocation, and for the first time made some attempt to become what it never yet had been, and what it should never have ceased to be, an army of the legislature, in contradistinction from and, if needs be, in opposition to the army of the executive. The French Republic, believing in standing armies as the only means of national revenge, could not tolerate that. The National Guard is no more. The Republic has eaten its own, its dearest offspring. May its reign be equally Saturnian in other respects.

Very different and much shorter is the history of the counterfeit institution in Italy. The Sardinian constitution which sanctions the organization of a "Communal Militia" is dated March 4, 1848, and the law (or royal edict) containing its statutes bears the same date. Another law, modifying these statutes in some essential points, is dated February 27, 1859. These dates show that the National Guard was only thought of and cared for on the eve of some impending national struggle against Austria. Who would blame the Italian rulers for that? But as a matter of fact, it cannot be denied that the institution smuggled in under the captivating name of "Communal Militia," and in the latter law, without rhyme, reason, or explanation, called "National Guard," was intended to form part of the strictly military preparations for the wars of independence in '48 and in '59. The National Guard, far from being a "palladium" of popular rights (which rights, it must be granted, required no armed protection), was, according to Art. I., "to defend the monarchy and the constitution, to enforce obedience to the laws, to maintain public order, and, in case of war, to assist the army in the defence of the country." Even in time of peace it was to have "detached corps for extra-communal service" (Art. III.) And it was further enacted that any meddling with politics, "any deliberation concerning State affairs, or even communal affairs, shall be punishable as an offence against the State" (Art. I.) If this is to be taken literally, the institution can have no political value. It is true, the National Guard can elect its own subaltern (and unpaid) officers, but the major and the staff officers are either nominees of the King or chosen by him from a list of candidates. It is also true that the local commander of the National Guard is the *civic* magistrate, the mayor or syndic of the commune. And this sounds well enough. There is a democratic ring in these words. But it so happens that these mayors or syndics are all royal nominees, so that, practically, the king is commander-in-chief of the National Guard. He can dissolve it (though he is bound to reorganize it within a year—Art. V.), and he alone can, at any time, collect its scattered battalions into one large body, while these cannot meet for purposes of their own. It is easy to see that such a militia can never be what it ought to be—one of the powers securing the political equilibrium of the state—and that it could never carry out the programme implied in its high-flown name or title. To test the truth of this assertion, we have only to ask what services such a National Guard could render against, we will say, a *coup d'état*. If such a danger has never existed and can never exist in Italy, the shield intended to ward it off has become a superfluity. And if the danger exists and for ever must exist in the abstract, then the statutes of the National Guard must be remodelled, and its autonomy must cease to be a sham. In its present form, the National Guard may amuse the people or serve ornamental purposes; but when the charm of novelty has passed away, it soon becomes a nuisance and a burthen. These two stages we have seen quite recently in strange juxtaposition. While the new National Guard of Rome was reviewed no less than twenty times in the course of six months, its Neapolitan sister, whose days of play are past, was all but dying of ennui and inanition. The service, though nominally "personal and obligatory," is in reality neither one nor the other; and its duties are so generally and so successfully shirked, especially by the upper classes, that, if it were not for the musical band, one would not often be reminded of the existence of a National Guard.

It is, of course, desirable that the educational benefits of military drill should be placed within the reach of every Italian. But to do this most effectually, every Italian should be placed within the reach of the drill-sergeant. As long as the duties of the militia can be shirked with such ease and such impunity, while a small sum will purchase immunity from military service in the army, Italy will continue to be badly off for fighting men, and the people will prefer the knife and the dagger to the rifle and the sword. Should it be true (as rumor says) that the minister is preparing a bill abolishing substitution and rendering military service strictly "personal" and at the same time obligatory, the National Guard, already convicted of being either useless or insufficient as a political power of resistance, would then become superfluous even as a school for military discipline and drill, and lose its last pretext for existence.

ENGLAND.

LONDON, January 12, 1872.

THE coming session casts its shadow before. Rumors come from all sides of the plans of the coming campaign, and of the mode in which Government proposes to encounter its direct enemies and to pacify its alienated supporters. At present, it may be safely said that nobody knows much about the matter. We can only say that the programme will include a strenuous effort to carry the Ballot Bill, and a proposal of some measure for restricting the sale of spirituous liquors. Meanwhile, opposition orators are beginning to raise their voices in various parts of the country. Prominent amongst them, by virtue of their former position, are Sir J. Pakington and Lord Derby. Of Sir John I shall say nothing. He is a solid country gentleman, of the heavy respectable type, and merely puts the ordinary language of Conservatives into specially pompous phraseology. Lord Derby deserves more notice. His great social position and his reputation for real ability give him a chance to be heard when he speaks as the representative of his party. On the present occasion, he has made a speech marked by his usual strong sense, and by much more than his usual vivacity. As a rule, his oratory produces a chilling influence. All that he says is apt to be very true, and yet somehow to miss the real point of the question. If political problems could be solved, like problems in arithmetic, by a dispassionate addition of the items on both sides of the account, his answers would be exhaustive. But when imaginative vigor and sympathy with the passions of human beings are required, and that is pretty frequently the case, Lord Derby is apt to be inadequate. His recent speech at Liverpool, however, whilst marked by his usual common-sense, showed, as most of the papers remark, a certain buoyancy and animation of tone. For once, he seemed to be throwing himself into the current of party feeling, and anticipating with eagerness an assault upon the Treasury benches. He spoke, so it is said, more like a general on the eve of action, and less like a speculative philosopher estimating the probable course of future events. This impression is probably derived rather from the general tone of his remarks than from any assignable opinion which he uttered. An examination of the substance of his remarks certainly does not lead one to regard the speech as a very stirring trumpet-call to an enthusiastic party. I will venture to follow him through his main points, in order to discover less what the policy of Conservatives is actually likely to be, than what it probably would be if that policy were throughout controlled by the shrewd common-sense which is its best, though seldom its prevailing, element.

Lord Derby declined to attack the Liberal government for the various blunders which they have undoubtedly committed; he contented himself with pointing out that there was no lack of materials for such an attack whenever it might be thought desirable. His speech was chiefly devoted to chalking out the line of policy by which the Conservative party might be enabled to exert great influence, though he neither expected nor desired them to obtain office prematurely, with the necessary consequence of being speedily turned out, as has happened three times in the last twenty years. "Don't let us spoil our own game," he said, "and lose power in running after place." That power would probably not require to be exerted in defending the essential parts of our constitution from any serious attack. The crown, thanks to Sir C. Dilke's blunders and the Prince's illness, is tolerably secure for the present. The House of Lords is almost equally secure, though it might be as well to adapt it a little to the present time, by letting in a certain number of peers appointed for life. The main reason for this innovation, according to Lord Derby, is the rather narrow one that he thinks "pauper peerages" a mistake, and therefore holds that when a man without fortune is ennobled the burdensome honor should not descend to his posterity. Lord Derby is the antipodes of a "pauper peer," and would naturally prefer to see his order consist entirely of very rich men. For the church he has a rather doubtful word of encouragement. "Logically," the English Church should follow the Irish Church; but "legislation"—and Lord Derby seems to think this a very good thing—"is not governed by logic." Otherwise, indeed, what would become of the peers? As it is, he thinks that the church will rub on pretty well, if the contending parties within its limits can keep their hands off one another. That is a pretty large "if"; but Lord Derby characteristically expresses his belief in the power of English common-sense to restrain theological hatreds. He is notoriously rather of the Gallic turn of mind in these matters. Coming to questions of more immediate interest, Lord Derby takes up the *laissez-faire* principle, to which he has always an inclination. Without pronouncing very positively as to the education question, he thinks that the great thing now required is, that we should allow the existing system a fair chance, and wait till it has worked for some years, to see whether it produces any grievance. His remarks upon the liquor trade are chiefly directed to deprecating what he considers to be the tyrannical proposal of allowing two-thirds of the rate-payers in any district to shut up the public-houses. He would prefer, though he has no great faith in any kind of legislation for the promotion of sobriety, to trust simply to stricter police regulations. He would rather look to a gradual and almost imperceptible social reform. In sanitary questions, again, he confines himself chiefly to the remark that we don't want grand schemes so much as more attention to petty local details. Of the ballot, he declares that there is no question in the whole range of politics of which the importance has been so much exaggerated. If a man is so cautious and prudent as to conceal his vote, he is not likely to be a very dangerous revolutionist, and the Liberals pay themselves a very bad compliment when they assume that all people who take advantage of secret voting—that is, all the cowards and sneaks—will be on their side. In finance, again, all we have to hope is that our Chancellor of the Exchequer may not seek to be too ingenious. We shall be all right if Mr. Lowe will only condescend to give us a commonplace budget. However, we had better be trying to pay off a little more of the national debt, whilst trade is flourishing and pauperism diminishing. And here Lord Derby introduced an able panegyric on the advantages of individual energy as compared with state interference; stating, not for the first time, that all the great achievements of Englishmen were due to individual enterprise, and complaining that there is too great a tendency at present to demand governmental action to get rid of every possible grievance. Then in foreign politics we may hope to maintain a neutral position; and in regard to Ireland, we have now done all that can be fairly demanded from us, and all that remains is to resist firmly the further demands for home-rule and for the handing over of education to the power of the priests. Finally, Lord Derby calls upon his party to hold together as a political connection, to work and wait, and to avoid quarrelling.

Now, without criticising the value of any of these opinions beyond saying that they all deserve a certain amount of respect, I think it will be admitted that they are of a curiously negative character. Almost the one definite proposal is to alter the House of Lords in such a way as to prevent the intrusion of pauper peers. All we have to do for the church and the crown is to stand still. To educational reformers he says again, "wait"; to advocates of sanitary or temperance legislation, "do little, and expect next to nothing"; to believers in the ballot, "your scheme doesn't matter one way or the other"; to financial enthusiasts, "make no changes"; to social reformers, "leave things alone as much as possible"; to foreign politicians, "be strictly neutral"; and to Irishmen in general, "we have set our foot down, and are not going to move a step further in any direction whatever." Finally, the Conservative party is exhorted to stick together and wait in hope. I must say that this does not seem to be a very exciting programme. The party which accepts it as a fair exposition of its principles must content itself with acting like the brakeman whose whole activity consists in keeping down the pace of the train, and is not likely to be promoted to the position of engine-driver. The favor with which the speech has certainly been received was due, as I take it, rather to a certain pithiness of style than to anything very animating in the actual substance of the remarks. And the fact illustrates the real difficulty of the Conservative party. They live upon the blunders of their opponents; but they have scarcely a sufficient *raison d'être* when their most sensible leader can only advise general inaction, whilst their official leader is altogether too brilliant to possess their confidence. Between following a guide who may take you at any moment in the opposite direction from that which you intended to pursue, or a guide who confines himself to advising you in the most philosophical and sensible manner to sit still, the choice is difficult. Of course, the difficulty is more or less inherent in the nature of a Conservative party; but a first-rate leader, such as the late Sir R. Peel, might, one would have thought, have held out some more definite prospect. As it is, Conservatives are generally in good spirits. They prophesy freely that Mr. Gladstone will be upset within a month or six weeks from the opening of the session; and they are content not to look much further. I have a rooted disbelief in all prophecy.

There is one other subject which I must briefly notice. The report which has reached us of the nature of the demands made by the American Government before the Geneva Congress has produced an uncomfortable sensation here. It is said that the damages demanded are altogether preposterous; that it had been universally understood here that no claim was to be made for indirect or vindictive damages; that if the American counsel have made an excessive demand in the hopes of obtaining some fraction of it, they have taken a course beneath the dignity of their own country, and insulting to ours; and that if the arbitrators should sanction these unjust demands, we should be justified, under the terms of the treaty, in withdrawing from the convention. Much is added as to the disappointment of those who had counted upon a new era of international good-feeling and the substitution of peaceful arbitration for war. I shall not attempt to say anything more upon the matter, further than to express my belief that even the best friends of the United States in this country have certainly been scandalized by the pretensions thus put forward. Whether they are right or not in this sentiment, I commend to your candor for consideration.

MATTER FOR MUSEUMS.

London, Jan. 11, 1872.

I HAVE been to see the works noticed in a Note of the *Nation* of December 14—the Ripaldi Madonna and the Cartoons. The former is an undoubted Raphael, but not such an one as to make it a desirable addition to any collection which aims at instruction, or sufficiently Raphaelesque to justify the demand of £40,000, or even the reduced price of £25,000, for which it is now held. It is hard, conventional, and, in parts, apparently executed by another hand. It is, in fact, two pictures, a semi-circular surmounting an upright, with the composition continuous. In one respect it is unique—the fastidiousness of the nuns required of the painter that he should drape the infant.

The cartoons are a different affair, really the work of the grand school; and though inferior in majesty of composition to some of the well-known Hampton Court cartoons, they are unmistakably Raphaelesque—how much of any of them is due to the hand of the master being, as with the English cartoons, matter of speculation. One of the four, the debarkation of Scipio, resembles in motive the miraculous draught, which many admirers of Raphael regard as the finest of the Hampton Court (now at South Kensington) series, and in the landscape background, the details of ornament, in the character of the heads, and in the lack of maritime common-sense and consistency, it is quite on a level with the other mentioned. Two of Scipio's galleys are nearing the coast, most unserviceable boats even for a Mediterranean voyage, most unreal and theatrical in their conception, and ornate to the last degree; but as examples of ornamentation, nothing in all Raphael's works surpasses them. There is a sculptural frieze, so to speak, along the side of the galley in which Scipio is, representing a river-god from whose urn the waters are pouring into a rushy pool, while nymphs filling their urns give to drink to the satyrs who come down. A second cartoon, with the dinner given to Scipio and Asdrubal by Syphax, or *vice versa,* I do not remember which, is characteristic of the school, but hardly of its master. The third, the defeat of Syphax, is a large battle-piece, completely thought out, and with a motive of composition unique so far as I know amongst Raphael's designs or those of his school. The mass of the composition is contained in the lower division made by a diagonal line which would be drawn from the lower left-hand to the upper right-hand corner, the action being, however, concentrated in a subordinated pyramidal form, with Scipio at its apex in the middle of the picture. The action is intense and dramatic throughout, two or three episodes being admirably conceived. Amidst the struggling and dying men are painted here and there wild flowers, with all the grace and freedom of nature, and tenderness of drawing and coloring which was characteristic of Raphael's best time. The fourth, the battle of Zama, represents the turning-point of the fight, when the Romans drove the elephants back by flaming torches. The elephants occupy the centre in the second distance, and the Romans group round in the elliptical form of the Ananias and Sapphira picture, with two centurions on horseback breaking the ellipse somewhat, in balance with the two principal elephants placed above them in the composition. This, the most ambitiously grouped of the four compositions, seemed to me the least Raphaelesque; but the fact that the drawings, uncontestably by Raphael, for the elephants of the pictures are in the Oxford collection, puts his complicity beyond question.

These cartoons, like those now at Kensington, were made for tapestries, is shown by the figures being all reversed—left-handed—and were sent to Brussels to be worked, where they were cut into pieces for more convenient preservation. They were discovered by a connoisseur and passionate amateur of the classical school, M. Desburche, about 1792. By him they were carried to Paris, where they were exhibited in the first collection of old masters in the Galerie d'Apollon in the year 1797, and afterwards in the exhibition formed by Napoleon I. in the year 1805. They form part of a series of twenty-one pictures from the life of Scipio, of which another four are now in the Louvre, and of which as authentic history as most works of art possess gives the execution to Giulio Romano and tradition the design to Raphael, the tradition being in many points confirmed by internal evidence. They are in a most admirable state of preservation, far superior in this respect to any of Raphael's or contemporary oil pictures, another proof of the better keeping qualities of water-color, they being painted in distemper.

By M. Desburche they were sold to Madame de Chavagnac, who took them to her chateau at Prangins, in Switzerland, where they have since remained in the possession of her family, who now bring them "on the market." And London is, in point of fact, the greatest—surest for the seller and cheapest for the buyer—of all the markets which form, from time to time, at the great centres of trade and luxury, Venice, Amsterdam, Paris, even perhaps, in its time, Madrid. Hither come pictures, antiques, Oriental wares, coins, etc., etc., drawn not only by the numerous collectors for their own fancies, but by the purchases made by the national museums, the British and South Kensington; and, according to that law which makes the productions of market gardens cheaper in New York than in the villages where they grew, porcelain comes cheaper here than in Nanking or Yeddo. Pictures of the old school command lower prices than in provincial capitals, and coins and antiques, with few exceptions, are worth less here than in Rome or Athens. You can scarcely anywhere in the world find rarer Oriental porcelain than at Marks's, and for old books and manuscripts your surest field of search is on the shelves of Ellis or Quaritch. The fact explains itself when one knows that exceptional articles bring fabulous prices, and every possessor considers his article exceptional until a wasting sojourn in London makes him content to dispose of it for what he can get. I saw a head the other day—a mere head without even a neck—in a soft, chalky stone (one of the *trouvailles* of Cyprus), for which a dealer had paid £110, and, selling it for £250 a week later, he made an offer a few days later still of £500 to repurchase it, having an order for it at £700. It was so friable that an air-tight glass case had been made for it, but it had, at the same time, been so securely buried and so early that weather had not corroded it perceptibly, and its beauty was something quite exceptional in Greek art.

Another *morceau* just now "on the market" is the set of table ornaments made for the Emperor Francis I. of Austria by Thomire, the greatest of the French ornamental designers of the day of Napoleon I., and the artist who made the cradle of the King of Rome. It is in the style of Louis XVI., and is something imperial in dimensions and richness. The entire piece which holds the fruit, or flower-basket, is a composition of four figures, representing Music, Painting, the Drama, and Agriculture—why this selection, one does not comprehend—the figures about twenty inches high, in art bronze, and executed with a delicacy and elaboration of detail which I have never seen equalled in modern bronze-work. There are besides several other groups in similar style—the Graces, copies of the Medici vase, Bacchantes, etc.—and the whole arranged on a plateau of plate-glass mirror, twenty feet long. But, like the spoils of other empires, it comes to London to be broken up, and is being sold piecemeal to decorate merchants' tables.

The curiosity and second-hand shops of London alone are a world of research in which almost all known products of human ingenuity appear at one time or another, and where the slow alternations of wealth and misery turn up the treasures of past generations; so that you need not be surprised to find the sword of Napoleon in a pawnbroker's shop, or the buff coat of Cromwell in a Wardour Street window. Into this London, paved with gold and inhabited by princes, how many confident and well-to-do-at-home young aspirants push, to leave their last possessions in pawn and their bones in the dust. Their misery is the collector's thrift. This week there is for sale porcelain from the collection of the Marquis of Hastings; the other day the copy of Hogarth's engravings that once belonged to the Duke of Buckingham was brought me for sale by a young man to whom money was for the moment a *sine quâ non.* The jewels of an empress in exile are now on sale in the shop of a London jeweller, and will probably decorate the fat figure of a new-made lady whose husband was a prosperous shop-keeper, as shiftless as Whittington when he came to London. The marvellous museum of South Kensington is a result of this maelstrom of valuables—a collection which nothing in the world, not even the plundering of Napoleon I., could rival, and which no other nation will probably ever care to equal at its cost. We can never have a great museum, because, firstly, the people who rule don't care to pay for these things; and, secondly, we have no capital. We submit to be plundered of enough to make a gallery like that of Trafalgar Square, but will not tax ourselves to pay for a single first-rate picture or to establish a single art-school.

The picture sales commence this week, and some choice Turners and Sir Joshuas, with numerous Dutch favorites of the London taste, will take another turn in their career. The popular favorites will bring high prices—all others will go for less than the painter received.

W J. Stillman.

Correspondence.

MR. PERCE'S SCHOOL BILL.

TO THE EDITOR OF THE NATION:

SIR: Your strictures on "The National School Bill" are on the Bill 802, which was read twice, and, on the 8th instant, "referred to the Committee on Education and Labor." Bill 1043 is the matured bill as brought in from the Committee by L. W. Perce, now under consideration, and materially changed. It is not open to any of the objections of your article, excepting one, viz., not declaring "that ecclesiastical schools shall not be aided." To assume that they could be aided, even as the bill now stands, would be by a very forced construction. The apportionment to any State cannot be had without "local appropriation." The bill does not and cannot tie up Congress from other appropriation of the lands, and is not intended to hurry their sale. It will have the moral effect to prevent their waste.

Y. W.

GERMANTOWN, PHILA., PA., Jan. 27, 1872.

EQUITABLE TAXATION.

TO THE EDITOR OF THE NATION:

SIR: Sympathizing with your endeavors to take the wrongs of the workingman out of rhetorical guardianship, I ask attention to an unjust burden which legislation has laid upon his labor. The subject is suggested at the present time by petitions presented to our General Court to remove a tax upon bank stock held by charitable institutions—the tax having been imposed (*accidentally*, as some of the petitioners claim) by an act of the last Legislature.

Believing that a just view of the principle upon which taxes should be laid is more important than the increase of any charitable fund, I am constrained to oppose the wishes of these well-intentioned gentlemen. Whether owing to accident or design, the repeal of the exemption from taxation of bank stock held for alleged charitable purposes seems to me one of the most promising acts of our recent legislation. It began a movement in the right direction—a movement that ought not to end until people's eyes are open to the fact that exemption from taxation of any property held by alleged charitable institutions is a burden upon the labor and savings of the community which it is impossible to justify.

Before offering some concrete examples of the injustice worked by exemptions to which we are at present subjected, I may be permitted a passing remark upon the economical effects of the non-taxation of bank stock held by charitable corporations. Its mischief may be summed up in three words: *it deranges values.* And the evil wrought, while it appears in many forms that we can see, must necessarily exist in many more that are too subtle to be detected. A knowledge of the precise worth of bank stock, as of all other commodities, is of vital interest to the community, and Government has no right to throw obstacles in its way. But the exemption in question casts a doubt upon all figures. For who can tell whether the current quotation of stock signifies its value to a taxed citizen or to an untaxed institution? The widow and orphan have surely a right to invest their savings in the stock of their town bank (whose directors are known to them) at its natural market price. Yet, until last year, this right was only recognized in case parties representing an untaxed institution were not disposed to compete. I have been informed of an instance where the entire stock of a national bank was unjustly taxed—the assessors making their valuation accord with a market quotation which did not represent the value of the shares to any tax-paying citizen, but only to a favored institution. But even if our legislators are persuaded to return to this exemption, it will prove but a temporary check upon a good work that must sooner or later be continued. For it is monstrous that irresponsible corporations should be allowed to assess labor year after year because they are running establishments which somebody once chose to call charitable. Whoever has awakened to the extreme facility with which endowed charities, passing beyond the control of the people, may be perverted to mischief, will be chary of granting them extraordinary privileges. It is surely favor enough if we allow the average donor, with his average want of foresight, to glorify himself in an institution subject to taxation, like the real or personal property with which he endows it. But what sense is there in permitting him to lay an annual tax upon his neighbors for any grotesque scheme of charity which may be accepted by the hasty majority vote of a popular meeting?

Two instances of the injustice worked by such legislation may be found within the limits of the town of eight thousand inhabitants from which I write. By looking through the State for illustrations, one would be pretty sure to come upon more striking ones. A physician left certain estates for the education of a portion of the girls of Quincy, who were to be capriciously selected by an accident of birth. The bequest was accompanied with peculiar conditions—so peculiar, in fact, as to render the proposed institution of no advantage to our community in the eyes of many intelligent citizens. A town-meeting was called at an hour at which voters engaged in industrial occupations could not easily attend. Yet even at that meeting a powerful minority opposed the acceptance of the school. Although I was not convinced by their arguments, it is just to say that gentlemen whose judgment in educational matters would be considered better than mine contended that a school established upon the prescribed conditions would prove a misfortune to the community. The bequest, however, was accepted; and as soon as the building occupies a fine piece of land on our principal street, the snap-judgment of a single town-meeting will be permitted to assess those remonstrating citizens year after year for the rest of their lives, and this in aid of a "charity" which they protest will on the whole work evil.

The other instance is more striking in the amount of the contribution it exacts. During the war, some benevolent persons raised a fund for the relief of our national sailors. Trustees were appointed to take charge of it, and some seventy acres of land were purchased in this town. About thirty-five acres of this territory are high upland, on the sea, and two miles from the Boston line. There is no land in the neighborhood so certain to be covered with the summer residences of business men were it in the hands of private parties who could be subjected to the market coercions of taxes and competition. If we estimate the taxable value of that property to the generation at present living in Quincy, the result is startling. And yet this town is selected from all other cities and towns in the United States to make a forced contribution, princely in amount, to what is emphatically declared to be a *National* Sailors' Home! All economists agree in condemning taxes which throw obstacles in the way of the sale of land or other instruments of production. But how could legislation more thoroughly effect this mischief? It is right to say that the sums we are forced to contribute to the institution in question are bestowed upon a deserving charity which, at present, happens to be in the hands of an excellent board of managers. To a community unable to find consolation in such reflections the case would be much harder.

A certain class of persons, who reason from sentiment, may believe that worthy institutions will languish if Government withdraw its clumsy patronage. But history shows how little cause there is for such fears. Unjust legislative interference, in the long run, can never benefit the interests it pretends to foster. Churches are stronger and purer than when the state paid the minister, and works of beneficence will not be wanting because people are not juggled into supporting institutions in which they do not believe, and this at a rate often far exceeding their natural cost. Of course, some hardship must be experienced in acknowledging a just principle which has long been violated. Many institutions are worth far more to a community than the tax remitted to them. But there is little danger that their just claims would fail of allowance. There is always the straightforward method of appealing to legislators for special grants of money in favor of such charities as can prove their utility to the whole people, and it is no evil that those whose service cannot be measured by popular standards should depend upon the efforts and contributions of men enlightened enough to know their value. In the morbid humanitarianism of these latter days, our average legislator easily gets maudlin over the command "to love mercy," to which the prophet gives the second place in his terse summary of human duties. But small good comes of it when he skips the requirement "to do justly," which in all properly printed Bibles takes precedence of that obligation.

J. P. QUINCY.

QUINCY, MASS., Jan. 26, 1872.

Notes.

MESSRS. APPLETON & CO., who have borne such a prominent part in the discussion of the copyright question, are about to undertake a practical solution of it which appears to leave nothing to be desired. With the aid of Professor Youmans, who went expressly for them to Europe, they have formed what we may call, after the fashion of the day, a "syndicate" for the publication of an international series of scientific hand-books. The other members are H. S. King & Co., of London; Baillière, of Paris; and Brockhaus, of Leipsic; "and the authors will receive a 'royalty,' or percentage, in accordance with the American plan, from the publisher of each country." These authors, we must now say, are the leading and authoritative scientific *savans* of the present time (our own country excepted), and embrace Dr. W. B. Carpenter, Professors Tyndall, Huxley, Jevons, Bernard, Virchow, Quatrefages, Sainte-Claire Deville, Sir John Lubbock, Walter Bagehot, Herbert Spencer, J. N. Lockyer, and a great number of others. We doubt if any better evidence could be given of American sincerity in the matter of copyright, or American ingenuity in overcoming the difficulties which naturally (and only) present themselves in the case of two nations speaking the same language.——Mr. F. Leypoldt's *Trade Circular*, the official organ of the Publishers' Board of Trade, will hereafter be published weekly, no doubt to the great advantage of the trade.

—In our review, last week, of Palmer's "Desert of the Exodus," an awkward transposition occurred not easy to be corrected by the reader. The close of paragraph second belongs near the close of paragraph third on page 61, which would then read:

> "But there is no allusion to Robinson in this part of Palmer's volume, and the conclusion of the survey is given as if it were a new and important contribution to the local topography. Indeed, we think there is one expression which, in view of Robinson's authority among German and American scholars as well as among the English, is hardly correct, an assertion that the southeast summit is generally regarded as Mount Sinai.
>
> "Towards the close," etc.

The words "nature of the country" should be struck out.

—*Young Israel*, a monthly publication for Jewish boys and girls, edited by Messrs. L. Schnabel and M. Brecher, of this city—the first appearance of which we noticed last year—has finished its first twelvemonth, and opened its second volume with the new January number. We have no doubt the editors have given satisfaction to their youthful readers, whom they have done their best to amuse and to instruct, presenting them with a variety of sketches drawn from the domains of nature, history, and fiction, without troubling them with much religious instruction. The historical pieces contained in the first volume of the magazine are, it is true, all, or almost all, of Jewish interest, but they are free from that denominational varnish which renders so many similar productions quite unpalatable to all but those for whom they are expressly written. The spirit which pervades *Young Israel* is unmistakably one of enlightenment and philanthropy, and Christian pens seem to have an almost equal share in its pages with those of Jews. Mr. Horatio Alger, Jr., the author of the yearly serial, is undoubtedly the favorite of its readers; most of the poetry is from the hand of the junior editor. Some of the articles soar a little too high for the sphere of the journal, and form, perhaps, too striking a contrast with others apparently intended for readers of a very tender age.

—We might have spoken more particularly than we did, last week, in our remarks on the new magazine, the *City*, of the kinds of processes employed in making the illustrations, which are of various degrees of excellence. The two portraits furnished by Senator Sumner were particularly worth mentioning, because they are proofs of what may be done by the Albert-type process in other hands than its inventor's. Mr. Bierstadt, the artist, who has been for some years experimenting with the process (which, in two words, may be described as a modified form of lithography), seems at last to have attained a fair success in working it, though, we should judge, not absolute certainty. We hope the conductors of the *City* will, next time, permit us to see what he can do with views from nature—a much higher test than copying line engravings. A similar process to the Albert-type is now in operation at the studio of Mr. Rockwood, the photographer, of this city, and gives good promise. Two specimens of it may be seen in that luxurious publication of Judge Hilton's—"First Annual Report of the Board of Commissioners of the Department of Public Parks"—facing pages 158 and 168. They have the accuracy of the photograph with the general appearance of a lithograph, but are without brilliancy or artistic *chiaroscuro*, and probably do not represent Mr. Rockwood's ideal. In regard to rapidity of reproduction, we believe he is in advance of Mr. Bierstadt and his method.

—The candid mind trying to hold the scales even between Darwinists and their opponents, ought to take pleasure in two articles published impartially in the January number of the *American Naturalist*, whose conductors, we may state, belong to the latter class. One, on "The Blind Fishes of Mammoth Cave," is by Mr. F. W. Putnam, and compares the only two known species, Amblyopsis and Typhlichthys, with a species, Chologaster, of the same family, which is sometimes found in open ditches and sometimes in subterranean waters in different parts of the country, but which has eyes. There is also a mud-fish, not blind, which occurs in the Mammoth Cave beside the blind fish. Mr. Putnam asks why this fish and the Chologaster can see, where eyesight is of no use, if the Amblyopsis and Typhlichthys lost their eyesight in consequence of their sunless habitat. The natural answer—Give them time enough and they will doubtless become blind—is met by Mr. Putnam, but we cannot easily condense his argument. Prof. N. S. Shaler, on the other hand, who writes on "The Rattlesnake and Natural Selection," begins with the remark that for some years he had been teaching that this reptile's tail "was not to be explained on the doctrine of natural selection, inasmuch as it could contribute in no way to the advantage of the animal," but by warning its prey of its presence was clearly calculated to hinder the creature in the struggle for existence. He shows how his opinion was completely reversed last summer on hearing the rattle of a snake lying in the road on which he was riding. He mistook the sound for that of the "locust" (cicada), and would have driven over the snake had it not been discovered and pointed out to him by a companion. He has since ascertained that "the note of the rattlesnake is recognized by many persons as indistinguishable from the sound made by the cicada," and he concludes that birds, who are well known to be dull in discriminating among sounds that even imperfectly resemble each other, are pretty certain to be deceived as he was, and, rushing to pick up a fat cicada, are caught by a "worm" on which they had not counted. He suggests, also, that what is called the fascination of birds by serpents may be only the response to a food-promising call. How snakes with rattles might, on the Darwinian hypothesis, have grown out of those without them, Prof. Shaler endeavors to show, with much ingenuity.

—In his "Life of Dickens," Mr. John Forster pays his respects to another American man of letters in much the same fashion in which he deals with Mr. N. P. Willis in the "Life of Landor." Dr. Shelton Mackenzie, a well-known bookmaker of Philadelphia, is the victim this time. In the paper called the *Round Table* the Doctor some years since made a statement, which was afterwards repeated in a "Life of Dickens" put together by him, and which Mr. Forster asserts can only be properly characterized "by one unpolite word (in three letters)." The statement was to this effect: Being in London in 1847, Dr. Mackenzie made the intimate acquaintance of George Cruikshank, and one day calling at that gentleman's house found him busily at work on an etching and not able at the moment to converse. Dr. Mackenzie therefore amused himself with a portfolio, and in doing so came upon—

> "A series of some twenty-five or thirty drawings, very carefully finished, through most of which were carried the well-known portraits of Fagin, Bill Sikes and his dog, Nancy, the Artful Dodger, and Master Charles Bates—all well known to the readers of 'Oliver Twist.' There was no mistake about it, and when Cruikshank turned round, his work finished, I said as much. He told me that it had long been in his mind to show the life of a London thief by a series of drawings engraved by himself, in which, without a single line of letterpress, the story would be strikingly and clearly told. Dickens, he continued, dropped in here one day, just as you have done, and, while waiting until I could speak with him, took up that identical portfolio and ferreted out that bundle of drawings. . . . He told me that he was tempted to change the whole plot of his story—not to carry Oliver Twist through adventures in the country, but to take him up into the thieves' dens in London, show what their life was, and bring Oliver through it without sin or shame."

So far Dr. Mackenzie, whom we need not quote at greater length, since later we shall give Mr. Cruikshank's own account of the relation of himself and of Dickens to the novel as we have it. Mr. Forster, besides remarking on this narrative in the manner we have seen, goes into some details, and shows that the last instalment of "Oliver Twist" had three plates prepared for it—one the picture of Sikes attempting to drown his dog, one of Fagin in the condemned cell, and one of Rose Maylie and Oliver, and that Dickens was so ill pleased with this last that he wrote at once to Mr. Cruikshank in these words:

> "With reference to the last one, without entering into the question of great haste or any other cause which may have led to its being what it is, I am quite sure there can be little difference of opinion between us with respect to the result. May I ask whether you will object to designing this plate afresh, and doing so *at once*, in order that as few impressions as possible of the present one may go forth?"

Now, says Mr. Forster, "this letter entirely disposes of a wonderful story originally promulgated in America with a minute conscientiousness and particularity of detail that might have raised the reputation of Sir Benjamin Backbite himself." The argument apparently is that, as Dickens wrote a letter to Cruikshank in terms which imply that the Rose Maylie plate was done in haste after the letterpress was all ready, therefore all the plates had been made in the same way—equally in subordination, that is, to the manuscript furnished by Dickens. That would, at any rate, appear to be Mr. Forster's principal argument. Of course, in the tone of the letter and in the fact that a second plate was called for on account of the first one's being unsatisfactory, there is an implication that it was addressed not to an equal coadjutor in the novel, but to an artist occupying the usual position of the illustrator of a book.

—Mr. Forster's argument fails, however, and proves nothing at all against a full version of all the facts which Mr. Cruikshank has sent to the *Times* since Mr. Forster's book came out. Mr. Forster, by-the-by, had said that Mr. Cruikshank was "calumniated" by being made the authority for a fable which he might properly have disregarded, indeed, had it been confined to America, but the circulation of which in London made it amount to a calumny upon a distinguished artist. This brings Mr. Cruikshank out to show that the "invention" "fathered upon him" is not an invention at all, and that Dr. Mackenzie is more nearly right about the matter than Mr. Forster supposes. This letter of the veteran gives several indications that his natural force is not yet abated, and is in every way worth having, but we must summarize it. And first for the argument which we have found in Mr. Forster's book. Dickens did write to Cruikshank asking that a new plate be made for the last part of the story, and his request was complied with. The first plate had been done in great haste, Mr. Bentley "allowing no proper time for it," and, says Mr. Cruikshank, it was "a subject without any interest; in fact, there was not anything in the latter part of the manuscript that would suggest an illustration, but to oblige Mr. Dickens I did my best to produce another etching, working hard day and night; but when done, what was it? Why, merely a lady and a boy standing inside of a church looking at a stone wall." Readers of "Oliver Twist," if they are late readers of it, will recollect the more feebly sentimental and more feebly melodramatic portion of it—the extremely dreary—what shall we call it? Stuff is what it might be called if one were speaking of a writer less deservedly distinguished than Mr. Dickens.[*] And perhaps in consideration of the other writers without Dickens's genius who imitate him in his worse moments, and in consideration of the good writers whom the example of his success may have made distrustful of better models and of themselves, it may be as well for this once to call it by its right name. Readers who do recollect that part of the novel in which the truculent Mr. Monks makes his highly probable confessions and in which Miss Rose and young Mr. Maylie figure, will agree with Mr. Cruikshank that it could not have been very inspiring to an artist. We may remark here that we conjecture the Rose-Maylie portion of the novel to be an expression of that extravagant liking for Miss Hogarth of which Mr. Forster tells us—an extravagance of liking which a very good critic has spoken of as in part really and truly felt by Dickens, and in part perhaps only supposed by him to have been felt. This by the way, however. Mr. Cruikshank goes on to say that for a reason which he will some day let the world know, he wished to bring before the public the life of the London thieves, and to that end had planned a series of engravings which should of themselves without verbal explanation show the career of a good boy, "Frank Foundling or Frank Steadfast," rising by merit through adverse circumstances to honor and prosperity. When, after the success of "Pickwick," Mr. Bentley asked Dickens to write a serial story for *Bentley's Miscellany*, Dickens, consenting, seems to have decided on telling the fortunes of a parish boy, but what the details of his plan were does not appear, though the figure of Mr. Bumble may help us to guess. Mr. Cruikshank, who was working a good deal for Mr. Bentley in those days, was to be the illustrator, and immediately on being consulted he begged Dickens to take the boy through Fagin's school of thieves, which Dickens agreed to do. Cruikshank had already made two pictures for the story when he urged upon Dickens what he had before suggested, that Oliver should be made into "a nice pretty little boy" in whom "the public, particularly the ladies," could take such an interest that their wrath would be aroused against the barbarities practised upon English paupers by workhouse officials—barbarities just at that moment exemplified in the cases of some orphan children who had been "farmed out" by St. James's Parish, London, and what with cruelty and starvation miserably put to death.

—To this also Dickens agreed. He at first had had another idea of Oliver; he had designed making his hero "rather a queer kind of a chap," and so it was that the queer name was given him, Dickens having been amused by hearing an omnibus conductor talking about a certain Oliver Twist. The name of the boy could not be changed, or at least the novel, which had already begun to appear, had to retain its title; afterwards Oliver's parentage turns out respectable, the reader will recollect, and he loses his surname of Twist. But the boy's character and appearance could be changed, the story having at the time of Mr. Cruikshank's suggestion gone no farther than to the second instalment, and the "nice pretty boy" was decided on instead of the "rather queer kind of a chap." It will be observed, Mr. Cruikshank says, that the Oliver of all the pictures after the first two differs from the famous "Oliver asking for more," in making which latter the artist deferred to the author, being well content to yield other points now that Sikes, Fagin, The Artful Dodger, Charley Bates, and Nancy were to be exhibited to the public in their villany and wretchedness, accompanied with a story by an exceedingly popular author and sure of an audience. "I must here mention," says Mr. Cruikshank, "that nearly all the designs were made from conversation and mutual suggestion, and that I never saw any manuscript of Mr. Dickens's until the work was nearly finished." He concludes the statement of his case by saying that he thinks it will be allowed, without his going farther into particulars, that he is "the originator of Oliver Twist," and that all the principal characters are his. We think it will be allowed that this is in very great part so; to originate the general course of a novel's story and to invent the principal characters is certainly to do a vast deal towards making the whole of it, and it would seem that the philanthropic turn of the novel, so far at least as it attacks workhouses, is due to Mr. Cruikshank. This is worth noting, as "Oliver Twist" may be set down as the first of its author's philanthropic novels; the picture of the debtor's prison in "Pickwick" evidently being drawn more for fun and because he had seen the Marshalsea, and because his favorite Fielding had done the same thing before, than from any distinct purpose of ameliorating the condition of poor debtors. That the philanthrophic part of "Oliver Twist," which consists of the plea, so to call it, for the women of the town, was Mr. Cruikshank's is not stated. The invention of the principal characters and the direction of the general course of the novel must, we should say, be conceded to Mr. Cruikshank. Of course it is to be recollected that poor as is much of what Dickens added of his own to Mr. Cruikshank's conception of the den in Field Lane, the Jew receiver, the brutal burglar, Nancy, the abandoned victim of the cruelty and cupidity of her vile companions, nevertheless the novelist added much that was good; and to have "originated Oliver Twist" is not to have written the novel as the world knows it. As for Mr. Dickens's share in the matter, it seems strange that his biographer and intimate friend should never have had the facts in the case from him. We say "facts," assuming, what we think ourselves justified in assuming, that Mr. Cruikshank's statements are to be taken as accurate. It is, nevertheless, an assumption on our part.

—Now that the first year of that new German politico-literary weekly, *Im neuen Reich*, is completed, we find that we have not done full justice to its merits in the notice devoted to its earlier parts. What makes us inclined to speak now more highly of it is not only the gradually developed greater variety of its contents, but chiefly the excellence of some of its later articles. Few periodicals in any language can boast of contributions like "Das neueste philosophische System" ("The Latest System of Philosophy," No. 38), in which Dr. Karl Freiherr du Prett reviews the second edition of Eduard von Hartmann's "Philosophie des Unbewussten" (Philosophy of the Unconscious—not of the unknown)—whether we consider the reviewer's powers of analysis and diction or the importance and gravity of his subject. The literary portions will, in general, be found the most interesting—not only by readers in this country, we presume, but also by more interested observers of the political affairs of "the new empire." Those contributed by the editor, Alfred Dove, himself are particularly well done and attractive. Mr L. W. Schmidt is the American agent.

FISHER AMES.[*]

NOT long since we discoursed to our readers of Thomas Jefferson, and expressed such views of his character and services to his country as we had formed on contemplating them in the light of history, after the passions and interests of his contemporaries, which had either magnified or dwarfed them, had been at rest for more than half a century. We spoke of the circumstances of his career and character which gave him a permanent place in the memory of posterity which the limitations of the human understanding and the nature of things had denied to many of his contemporaries, famous and useful in their day and generation, on whom the long night of forgetfulness has settled down. One of the most admirable of the public men of the days of Washington, whose name, we fear, the lapse of time has nearly worn out of the mind of the busy generation now on the stage, but who well deserves a place there, was Fisher Ames, whose Congressional Speeches have just been placed before the public in a compact and elegant shape by his grandson, Mr. Pelham W. Ames. During his public life, which may be said to have lasted from his election to the First Congress in 1789 to his death in 1808, his name was perhaps quite as familiar to men's minds and on their lips as that of Jefferson himself. Though retired from the scene of national affairs for twelve years, his voice was still potential in the councils of his party, who admired and revered him as they did none other of their leaders, with the single exception of Hamilton; and even his political adversaries could not refuse their tribute of respect to his genius and his eloquence, the integrity of his public and the purity of his private life.

If the name of Ames has suggested that of Jefferson when looking back to the times when they were both prominent public men, it certainly has been through the association of contrast rather than of resemblance. Never were two men more unlike in the main features of their characters, the nature of their talents, and the experiences of their lives. The natural life of Ames was included within that of Jefferson, which overlapped it at both ends. Jefferson was born almost exactly fifteen years before Ames, and he survived him exactly eighteen, Ames having also died on the Fourth of July.

---

[*] "Speeches of Fisher Ames in Congress, 1789-96. Edited by Pelham W. Ames." Boston: Little, Brown & Co. 1871.

The public service of Jefferson, reckoning from his entering the Continental Congress in 1775 to his leaving the Presidency in 1809, covered fully thirty-four years. It took him to the immortal Congress of the Declaration of Independence, carried him over seas to Europe, and placed him at the Court of France during its last most interesting and most melancholy days; it recalled him to take part in the national organization of the United States as the chief of the Administration of Washington; it seated him in the chair of the Senate as the second Vice-President, and crowned his career with the headship of the nation for two terms. The national public service of Mr. Ames was limited to a seat in the first four Congresses. There was nothing to excite the imagination about his modest course through life, whether before he went to New York and Philadelphia, while in Congress, or after his return to the simple duties and pleasures of professional and private life at Dedham. It was the brilliancy of his parliamentary eloquence, the winning charm of his conversation, where serious thought and deep feeling were lighted up by the play of fancy and the flash of wit, the sweetness and sincerity of his nature, and, above all, the belief in his political wisdom and the knowledge of his absolute integrity in public as well as private affairs, that gained for him the admiration and influence while he lived and the love and reverence after his death which his contemporaries never ceased to cherish, and which they bequeathed to at least one generation of their descendants.

Jefferson and Ames were fair enough representatives of the two opposite qualities of mind which the mighty change in political relations that took place in their time, and of which they were a part, developed and displayed. Jefferson's sanguine temperament looked only forward, and regarded the future only with hope and faith. He accepted the new ideas, and doubted not that they would lead his country on to prosperity and glory. Ames accepted the ideas also, but it was with fear and trembling. He looked backward to see what had been the experience of mankind, and read the present and foreboded the future by the lights of the past. He believed in the fallacious maxim, which we still sometimes hear sapiently uttered, that history repeats herself—a thing which she has never done, because the facts which she has to tell are never identical with those she has told. The American statesman eighty years since found himself face to face with a state of things which had no example in history. The experiment of a government resting on the will of the people as its basis, and of which the voice of the people, duly ascertained, furnished the omnipotence which, in some shape, underlies every government, looked very differently to different observers. It was very much a matter of temperaments. The sanguine saw only public virtue, disinterested patriotism, growing greatness, and ever-increasing prosperity as the natural result of the new state of things. The more saturnine natures remembered the bloody factions of the older republics, and dreaded lest anarchy and popular violence might lead finally to military despotism. The intellectual movement which had given rise to the French Revolution seemed to the one the prophecy of a higher and purer polity than the world had yet seen. The bloody excesses which had attended that tremendous event seemed, to the other, the necessary consequence of such an unloosing of the people, and they feared that something of the same nature might follow their own experiment of popular sovereignty. Jefferson and the Democrats were the party of hope; Ames and the Federalists that of doubt and apprehension. At this distance of time we may admit that the mass of both parties were honest and patriotic, and that the Democrats were as little desirous of making the United States a department of Bonaparte's empire as the Federalists of restoring them to the allegiance of the British crown or of setting up a Brummagem monarchy of their own.

Fisher Ames was descended, on both sides, of a good New England stock, the son and grandson of excellent country doctors, as excellence was accounted in those days before medical schools, and was born in Dedham, Massachusetts, April 9, 1758. His father died when Mr. Ames was but six years old, but his loss was made good by the energy and good sense of his widow, who lived to enjoy the fame of her eminent son, and survived him for several years. His education was rather rambling and desultory, as the best of educations then generally were, but of a kind which fed and nourished his mind well. He entered Harvard College at twelve and graduated at sixteen, where he acquired a sufficient acquaintance with Latin to have a thorough enjoyment of the classics all his life, and he had a reasonable opportunity to indulge an indiscriminate appetite for books, which perhaps built up his intellectual constitution quite as wholesomely as a more carefully selected diet could have done. He kept school for a while after graduation, and afterwards studied law and practised it with good success. His writings in the newspapers of the day on political subjects attracted the attention of the principal friends of the new Constitution, and introduced him to their acquaintance and friendship. And, accordingly, when the first representative from the Boston District, which then included what is now the County of Norfolk, came to be selected, their choice fell upon Mr. Ames. His Congressional life was exactly contemporaneous with Washington's two terms, and his influence had great and just weight in settling the perplexing questions which vexed the infancy and threatened the life of the young Republic. There were no more important eight years in the whole succession of Congresses or more vital to the solid establishment of the nation. Every particular of the efficient working of the Government, the raising of revenue, the organization of the courts, the funding of the debts, the adjustment of the outstanding quarrels with England, and the avoidance of new ones with France, everything connected with the machinery, the credit, the safety, and the permanence of the nation, necessarily had to be done by those early Congresses.

It is happy for us all who have entered into their labors that there were such men as Ames in Congress in those days when passions never more furious, and factions never more malignant, raged within and without and threatened the infant nation with destruction in its cradle. In those debates on matters which touched the very essence and existence of our national polity, Mr. Ames took an active and prevailing part. The question of the tariff of duties which was to provide the ways and means of carrying on the government was one of the first to be encountered. The constitutional right of the President to remove from office at his pleasure also was questioned in the earlier as in the latter days of our history, and the meaning of the Constitution accepted in the sense which custom and the courts have since given to it, Mr. Ames naturally helping to settle it thus. On the subject of salaries he held views which we are quite sure he would have changed had he lived to this day, considering $1,500 a liberal remuneration for a judge of the Supreme Court. On the vital question of sustaining the credit of the new nation by the simple process of paying its debts, and through the assumption by the nation of the debts of the several States, contracted mainly during and because of the war, it need hardly be said that his voice was raised in the most emphatic and eloquent tones. And it was doubtless in no small degree due to him that the earlier attempts to combine Statesmanship with Swindling, of which we have had such illustrious examples in our own day, came to the untimely end which they merited. He did not favor the tax proposed to be laid on imported slaves, on the ground that it might seem to countenance the practice of slavery, which "he detested from his soul." He promoted Hamilton's scheme of a national bank, and helped to carry it through the House; and he combated with all his artillery of eloquence, argument, and ridicule Madison's famous Resolutions, which were the introduction to the system of fighting England by commercial restrictions which was carried out to so disastrous an extent in the reign of Jefferson. But the greatest triumph of Mr. Ames as a parliamentary orator was the last of all—his speech on the 28th of April, 1796, in favor of passing the laws necessary for the performance of Jay's Treaty, which had been duly ratified by the President and Senate. Probably no speech ever delivered in Congress surpassed it in any of the elements of eloquence, or had a greater effect on its immediate audience. Scarcely able to stand from bodily weakness when he began, he kindled as he went on

> "To such a flame of sacred vehemence,"

that his audience, though not used to the melting mood, were in tears of excitement when he ceased, and the enemies of the Treaty would not suffer the vote to be taken in the state of mind in which the speech left the House.

The speeches of Mr. Ames have been not unaptly compared to those of Burke, and the *London Quarterly*, in an article quoted in the preface of this volume, allows that "there are passages in his speeches which might go far towards accounting for, if they do not quite justify," the comparison. If Ames does not quite rival the sublimest flights of Burke, he never is carried by the pursuit of an apt but offensive metaphor to a point that is scarcely short of the disgusting. His perfect taste is never at fault. In felicity of illustration, in playfulness of fancy, in readiness of wit, in neatness of raillery, in delicacy of irony, and in keenness of sarcasm, he is not unworthy to be placed in the company of the great Irishman. Mr. Ames left public life at the close of the Fourth Congress and returned to Dedham, where he spent the remainder of his days practising his profession as much as his slender and uncertain health would allow, and amusing himself with his books, his correspondence, his farm, and his orchards. He died in his native town on the 4th of July, 1808, at the age of fifty. And his name is not without honor there. The house which he built and in which he lived and died is still pointed out to strangers, and his portrait, along with those of Washington and Lincoln, hangs in the hall which the town has built in memory of her sons who died in the war of the Rebellion.*

It need not be said that the interest of Mr. Ames in public affairs during the fierce excitements which agitated the years of his retirement was intense to the last. It gave occasion to essays on a variety of topics in the newspapers which deserve a longer life than is usually accorded to such ephemeral productions. They are marked by all the distinguishing qualities of his speeches, and are admirable specimens of pure and idiomatic English. In the edition of his Life and Works, published by his son, Mr. Justice Ames, of the Supreme Court of Massachusetts, in 1854, many of these are collected and put in a permament form for preservation. These volumes also contain his private correspondence, from which one can form some idea of the liveliness and brilliancy of his conversation, which gave a delight to his friends that remained fresh to the end of the longest lives. It has every quality which goes to the making of good letters, and gives a charming picture of the man and of the times. Acknowledging our obligations to Mr. Pelham Ames for rescuing four of his great ancestor's speeches from the oblivion of newspapers and Congressional journals, we would call the attention of our readers to the larger and more important publication of his father. While we will not place his volumes under the humorous condemnation of Charles Lamb, of being "books which no gentleman's library should be without," we are bold to say that they are books which no public library, large or small, should be without; and we venture to advise any of our readers having authority over such institutions not to neglect ordering a set from Messrs. Little, Brown & Co., of Boston. They can place no more useful and entertaining matter before their clients.

THE MAGAZINES FOR FEBRUARY.

OUR copy of the February *Galaxy* does not say so, but there need be no doubt that Mr. Thurlow Weed is the writer of its article on President Tyler's Administration. We suppose that we may commend it to attention as being not only a highly readable chapter of political history and biography, but also as being fully as trustworthy as partisan political history written by a political partisan can fairly be expected to be, and more trustworthy than such history usually is. The reader gets the impression that Mr. Weed's feelings are not habitually allowed to run away with his judgment, and is disposed, as he reads, to a favorable opinion of the writer's candor. At all events, Mr. Weed writes in the midst of political friends and acquaintances who may be depended on for necessary criticism of his truthfulness. It will, for instance, be comparatively safe to accept what is left of his account of Henry Clay after it has undergone the examination of the *Tribune*. That this same account will be pleasing to the Whig veterans of 1840 and 1844 is problematical, Mr. Clay appearing in it in a light which will be new to the generation of readers who have been accustomed to think of "the Mill Boy of the Slashes" as "the chivalric and courteous Harry Clay." Suave as he could be, and even courteous and courteous to courtliness in his manner, his courtesy as described by Mr. Weed will not be pronounced of the most chivalric kind. Here is a story of his behavior to his friend and admirer, Mr. Tyler: When by the sudden death of General Harrison Mr. Tyler became President, he had to bear in Harrison's place the brunt of the hot resentment which Clay had two reasons for nourishing—one, that he himself had not been elected to the Presidency, and the other, that he had not been chosen as the President's influential counsellor in the matter of making up the Cabinet. Of course this resentment was nowise diminished when it began to appear that he, together with the rest of the Whigs, was to have in Mr. Tyler a Whig President more likely to use the Executive influence for his own benefit than for that of the party. But Mr. Tyler had been one of Mr. Clay's warmest supporters and admirers, had urged his claim to the nomination for the Presidency, and had shed tears when his favorite was defeated in the convention. At the first session after the death of Harrison, Mr. Clay offered a National Bank Bill which he had prepared, and on the passage of which he and the party which so long had been under the rod and yoke of Jackson were counting securely. But soon it began to be rumored that Mr. Tyler had constitutional objections to a certain section, and would be unable to give the bill his signature. A veto would be extremely likely to distract the party—and Mr. Tyler, it seems, was, at that time at least, unwilling to cause a rupture; and thinking himself and Clay to be on such terms of friendship as would justify a personal appeal by the one to the other, he invited Clay to call upon him, gave him a cordial greeting, and said to him: "Clay, I have asked a conference with you to have a full and frank talk, not as between the Senator from Kentucky and the acting Chief Magistrate of the country, but as between Henry Clay and John Tyler, two men who are supposed to act upon patriotic motives, who have been friends and ought still to be so. You know my antecedents on the Bank question. You know the principles and sentiments of my friends and party associates in Virginia, what I have said in my public speeches, what would be consistent and self-respectful in this exigency. I am as anxious as you can be for the unity and success of the Whig party. Now, sir, draw a Bank Bill that you give me your honor you would advise your son to sign under the same circumstances, and I give you my honor I will sign that bill." To this Mr. Clay replied by drawing himself up to his full height and saying: "Take your own course, sir, and I will take mine"; after which the bill was passed, was in due course vetoed, and the rupture occurred which three years later threw the Whigs out of office, and meanwhile caused Mr. Tyler to be the public man of this country and century at once best abused and least defended. Not Andrew Jackson, nor Andrew Johnson, nor Jefferson Davis, nor the Impeachment Traitors themselves, can dispute his pre-eminence in the double distinction. Yet, in Mr. Weed's description, he appears no such figure for this pillory as the ingenuous disciple of the Whig and Democratic newspaper editor might imagine. It is to Mr. Weed's article, however, that we must refer the reader for enlightenment on this topic. Another glimpse of Clay we get in his management of the Whig caucus at which Mr. Tyler's "whimsical objections" to the Bank Bill were discussed, and a substitute for the obnoxious sixteenth section was adopted. Clay had drawn it up, and in presenting it said that it was open for criticism or amendment, that he wished a free discussion of it, that he was not at all strenuous as to its form, that the senators all had a common purpose, and that he trusted any senator would suggest any modification he thought advisable. Upon this Senator Moorehead, Clay's colleague, proposed a slight change in the amendment, whereupon, says Mr. Weed, Mr. Clay flew into a passion and fell upon Moorehead with tones and language expressive of vehement indignation: "Who are you, sir," he said, "that presume to question what I recommend? Did Kentucky send you here as my censor? Am I to take lessons at your hands? When I propose a measure, it behooves you to acquiesce in respectful silence." This, we confess, looks a little like a glimpse of Clay seen through jaundiced glasses; but he was domineering and quick-tempered; he was that winter in a special state of exacerbation; and he was the master of his party in Congress as in all probability no other American senator or representative except him has ever been. Mr. Rufus Choate, we are reminded, comes in for a chastising during this same discussion of the Bank Bill. Incidentally, Mr. Weed informs us that Clay's opinion of Dickens, who was in Washington that winter, was that he was a puerile trifler, while Dickens, on his part, charmed no doubt with Clay's manner, was writing home to his friend Forster that Clay was "an irresistible man." Mr. Forster should be told, however, that of Shakespeare Mr. Clay's opinion was that he was a bundle of affectations and ridiculous conceits.

Another article in the *Galaxy* which we are reading with more satisfaction than the indurated reader of magazines is apt to get from them, is the series of sketches describing life in a community of Shakers. Like her sister before her, who leaves Wisdom's Valley and celibacy together, this writer evidently was without a "vocation" to the service of Mother Ann, and it is to Elder Evans's curious book that one must go if one would see the informing spirit of Shakerism. But the rather repulsive outside of the Shaker religious life, and the rather coarse domestic life, our author gives graphically and with apparent truthfulness. But we are bound to say that her description of the scene in which Theodore avows his love for Minette gives unequivocal evidence of having been composed after the writer had come in some degree under the influence of the world's people.

For the rest the *Galaxy* has, among many other articles, some more of General Custer's work, entitled "My Life on the Plains," but as the General does not, in this chapter, give us any of his life on the Plains, and gives us instead some theorizing as to the origin of the Indian which he might better have left to Mr. J. H. Trumbull or Mr. Lewis Morgan, we advise our readers rather to skip his contribution this month than to read it. Mr. Isaac Butts contributes a paper in which he discusses the troublesome problem of how to secure good government for large cities. His views are substantially the same as have more than once been laid before our readers in these columns, and are, in brief, to the effect that the expenditures of cities, like the expenditures of railroads, should for the most part be entirely controlled by those persons who have capital invested in the property for care of which the expenditures are made. Mr. Nordhoff may be surprised, Mr. Butts thinks, to learn that the remedy for misgovernment proposed by him in a late number of the *North American Review* has been in operation in Mr. Butts's own city of Rochester for nearly forty years, and that the result of its operation is not that therefore the city of Rochester has now an excellent city government, but that it has one of which the intelligent citizen of Rochester, "especially if he has visible property, stands more in dread than of all the thieves, burglars, highway robbers, and incendiaries that infest society." Mr. Butts does not see that "the best citizens exercise a real control" in Rochester, but on the contrary he sees gentlemen who are not even good citizens, and whose names are not to be found on the tax list, spending large sums of money in order to obtain offices which are without salary and without legal emolument.

Mr. Justin McCarthy writes about John Ruskin for the February *Galaxy*;

there is more of Mr. Trollope's new novel, "The Eustace Diamonds"; "Philip Quilibet" writes of "Alexis and the Prince of Wales"; Miss Rose Terry and Miss Lily Nelson make some pretty verses; and there is a quantity of scientific "Notes." In one of these the writer attacks indiscriminately the women who wish to vote and the women who do not for their cruel wickedness or almost unintelligible foolishness in allowing little children to go about in cold weather with their legs bare. He proceeds to a plea for the introduction of the study of physiology into girls' schools, and calls upon clergymen and editors to learn it for the sake of instructing their respective audiences. It has been made a question, however, how long the supply of those two professions would be kept up were the study of physiology and hygiene to become common among men.

The striking paper in the February *Atlantic* is Mr. Edward Atkinson's, and is called "The Visible and Invisible in Protection." The questions involved are such as cannot be handled in too plain, even homely, a manner, or we should have done what we were on the point of doing, and said that Mr. Atkinson's treatment of his subject leaves nothing to be desired, and that his article is perfectly adapted to the comprehension of the class of minds which must be reached and indoctrinated with rudimentary political economy before the legislation of the country can be affected. And perhaps that is what we ought to say, for certainly the article is admirable in its clearness and for the thoroughness with which theory is illustrated by concrete examples; and we feel sure that it will do a vast deal of good. But, as Mr. Atkinson remarks, "when our education is in reality what it is claimed to be, we shall cease to permit our representatives to take from us our liberty and to impose useless taxes upon us under the false pretence of protection to home industry." Our education is not now such; and as popular instruction by endless iteration is impossible in the case of a subject of this kind, which is repellent to the minds of the majority of men, it is the business of the political economists to set forth their theme in a literature as attractive and popular as may be.

Other things in the *Atlantic* are some criticism of Wagner by Alice Asbury; more of Hawthorne's posthumous romance; more of Doctor Holmes's "Poet at the Breakfast Table," which seems to us as good as the "Autocrat"; more of the "Diversions of the Echo Club," to which we should say that out-and-out parody is preferable; a highly finished Newport sketch with some good waterscape cabinet painting by Mr. Higginson; an extremely pretty little Norse song by Hjalmar Hjorth Boyessen, which is like a fountain in a thirsty land compared to most of the poetry one reads; some chapters of Mr. De Mille's "Comedy of Terrors," which, we submit, is a little too ridiculous; another chapter of Jefferson's life by Mr. Parton; and some twenty pages of artistic and literary criticism and scientific and political notes. Sufficiently vivacious the political critic seems to be. Tennyson's "Last Tournament," Forster's "Life of Dickens," Taine's "English Literature" and "Art in Greece," Longfellow's last poem, three German and five French books, are reviewed in the Literary Department, all the notices being good and that of Mr. Forster's book excellent for suggestiveness. There is also some poetry by Mr. W. E. Channing, Miss E. S. Phelps, and Mrs. S. M. B. Piatt. It may, for one reason and another, be worth while to call Miss Phelps's attention to the fact that the legends of Petronilla do not end leaving that saint stretched in sick dreams and dull pain on a fated bed; the other versions, perhaps better worth our perusing, tell us that on her earnest supplication she was restored to the use of her limbs.

The *Catholic World* has two articles of painful interest. One describes the massacre by the Communists in May of last year of "The Martyrs of Arcueil"—twelve persons in all, five of them Dominican fathers and the others teachers or servants in the school which the fathers had established at Arcueil near Paris; the other is an account of a visit to the celebrated prison hospital of St. Lazare at a time when some of the *pétroleuses* of the Commune had just been imprisoned. An article which it is more important that the public should examine with care is one entitled "Several Calumnies Refuted," which is an examination into the credibility of "Executive Document No. 37, United States Senate, Forty-first Congress, Third Session." This document, asked for by a Senate resolution, was supplied by Secretary Delano, who had received it from Mr. A. B. Meacham, Superintendent of Indian Affairs. Mr. Meacham's letter of transmittal to the Secretary is dated, we are asked to observe, five days before the Senate passed its resolution, and evidently was forwarded in anticipation of the Senate's action. The document itself consists of written information put into Mr. Meacham's hands by the Rev. H. H. Spaulding, long a Protestant missionary in Oregon, and the gist of it is Mr. Spaulding's account of the murder of a Protestant missionary, Dr. Whitman, by Nez Perces, acting, as Mr. Spaulding avers, under the instigation of Jesuit priests who hated the Methodist and Presbyterian missionaries. Unless the writer in the *Catholic World* manipulates the facts in the most audacious and ingenious manner, the Senate Executive Document No. 37, 1870-71, embodies some perversion of history and some wicked calumniation of brother Christians that is most disgraceful to the Rev. Mr. Spaulding and his abettors. We are not disposed to trust the *Catholic World* over much when a perfectly colorless statement of polemic matters is the thing in question, and that one story is often good till another is told is very well known; but we do not see how the Boards of the Old School, New School, United, and Cumberland Presbyterians in Oregon, and some Methodist, Baptist, and Congregationalist Boards, are going to justify their endorsement of the charges made against Brouillet and Bishop Blanchet. Very discreditable to them the case looks as the *Catholic World* states it, and it will be interesting to see if the Protestant religious press will be able to dispose of the charges here made, or, otherwise, to condemn the making of them.

A long article on "The Cosmic Philosophy" rates Mr. Herbert Spencer as incapable of philosophy and capable only of being what Cudworth called a physiologer; Madame Craven begins a serial story, "Fleurange" by name; an editorial writer contributes the first of a series of tracts in which he will point out the duties of rich men to society; and there is a popular description of the Mammoth Cave of Kentucky.

In *Scribner's Monthly* the reader will find Miss L. G. Noble treating of "A Small Piece of the Woman Question" in a forcible way, and with what seems to us much sense. Miss Noble points out some reasons for believing that none of the nostrum vendors, whether those like Mrs. Stanton and Mrs. Woodhull on the one hand, or those like Miss Gail Hamilton and Mrs. Stowe on the other, has yet offered a panacea, and she puts in a petition, in which most people will join her, for a little more insight into the complex influences which tell upon the American girl of the day, or else a great deal less noise. Miss Noble's naturally excellent mode of expressing herself the apparent influence of Dr. Horace Bushnell and Mr. Carlyle has not improved.

Among the other articles in *Scribner's* is an illustrated paper on the marvellous Yellowstone country, which we see Congress is asked to make into a national park like the Yo-Semite Valley. A pleasantly discursive humorous essay is by Mr. C. D. Warner, who has an easy-flowing fund of humor, not very refined nor very new, but which reminds one of a much clarified "Josh Billings" with less buffoonery and more poetry, but not dissimilar in its basis of good sense and good humor. We must also mention, as the most valuable, a perfectly intelligible statement of the burden imposed upon the country by our national banking system—a subject which has needed more ventilation than it has had. We wish the writer would narrate the history of a national bank founded in 1865 in some typical town, Northern and Southern, and show what a very good thing each board of directors got into. This article does it in substance, but, as we have remarked in speaking of Mr. Atkinson's *Atlantic* essay, the popularization of these matters is the desideratum, and they should be written about—in default of a better way—as Mr. Parton wrote about the sewing-machine.

The February *Harper's* is a particularly good number, not only in the magazine's own way but as containing one or two articles a little out of its usual field and good of their kind. Such an article is that treating of a certain part of the vast collection or rather the enormous and chaotic huddle of books, good, bad, and indifferent, which filled the store and cellars of the late Mr. William Gowans, of Nassau Street. Of Mr. Gowans himself, who was a "character," and whom some of his familiars should embalm in printer's ink, the writer has not much to say, beyond the remark that he commenced bibliopole by selling at a street stall—a branch of the business in which no book is so worthless as not to have a value—and that he never afterwards lost the habits of his early bookselling life. Unless, indeed, we may say that he partly lost the habit of selling at all, for in his later years his business seemed to be to buy, and we dare say many book-buyers can recall instances of his untradesmanlike manner and of his apparent repugnance to customers. Like most "characters," he was as apt to be the reverse of amusing as to be amusing, and an occasional lesson in good manners might have done him no harm. The probability is greater that it would have done him little good. He was, however, for the most part a pleasant man, and could be very entertaining when his store of literary anecdote was broached and he chose to be communicative. And that in spite of his eccentricities and brusqueness he was a faithful, hard-working, and just man of business, is proved by the fact of his having risen from poverty to a respectable fortune in the pursuit of a calling which is not particularly lucrative. The writer in *Harper's* describes himself as a collector whose special line of collection is early works of art, and his essay is mainly taken up with descriptions of some rare or valuable copies or editions of old works from the presses of renowned printers adorned by famous artists, annotated by great authors, which he rummaged for amid Mr. Gowans's pile of two or three hundred thousand volumes. Such copies, for instance, as that of Theophylactus, of the Basle edition of 1524, annotated in manuscript by Melancthon, as far as to the Tenth of Matthew, and adorned with wood-cuts from the hand of "I. F."—perhaps John Froben, perhaps

PUBLIC LIBRARY

not. As for us—who are so far from liability to the rabies as almost to purchase "diamond editions" and to think rare books might well be rarer—it is not for us to say whether this bibliomaniac in *Harper's* raves to the due height, or whether he does not deserve impalement and midnight burial where four cross-roads meet for being a pretender and guilty of bibliographical blunders of the minutest and most disgraceful kind and of the most vital importance. We have taken his word for his knowledge and trustworthiness; and at least we can say that there is his article, in an unexpected place and open to inspection by those concerned.

The first article in the magazine is "The Scott Centenary at Edinburgh," and it contains two engravings of the cast of Scott's head and face taken immediately after his death, and which make evident the immense height of the head above the ears, as if Scott had "one more story in his head than other men," as was once said by somebody looking at a portrait of him. Another thing that we find new in the article is a story about Goethe, Scott, Carlyle, and Professor Wilson. Carlyle being on a visit to Germany, Goethe, who knew Scott to be then busy with the "History of Napoleon Bonaparte," took the opportunity of Carlyle's return to send over for Scott's use "some very important suggestions, facts, and estimates concerning Napoleon." When Carlyle reached Edinburgh Sir Walter was at Abbotsford, where he was to remain three months, before the expiration of which time Carlyle was compelled to go to London. He therefore left the papers with Professor Wilson, and with them some medallion portraits of Goethe which Goethe wished Scott to have. The medallions Professor Wilson delivered, but the papers Scott never saw; for Carlyle learned from Lockhart that Professor Wilson had never delivered them at all. This is a circumstance of which the explanation might be interesting in more ways than one; though we might get no additional light on Napoleon's character or any of his actions. In concluding the perusal of this paper, one feels it a duty to praise it, as telling once more the admirable story of such a life as Scott's.

A thoughtful article in this number of *Harper's* is one called "The Pay-Roll of Christendom," which, admitting that the relation of industry to compensation is out of joint, has some suggestions as to the future of labor, and, among other things, recommends co-operation. In "The Editor's Drawer" we find, quoted from "The Life and Letters of Miss C. M. Sedgwick," a curious passage, in which occurs the statement that Judge Story, in a conversation with Miss Sedgwick, "denied that Calvinists died with more animation than Unitarians."

THE NORTH AMERICAN REVIEW FOR JANUARY.

THE most important portion of the literary side of the *North American* this quarter is the book-notices, though these are not numerous. One of these, however, is extraordinarily good, several others are of high merit, and there is none that will not be read with satisfaction. It is Mr. Ezra Abbot, doubtless, who signs the initials "E. A." to the leading book review, and that signature guarantees an unostentatious and profuse array of the most accurate scholarship employed to some useful purpose. The point which Mr. Abbot considers is the statement—made originally by Archbishop Trench in the first edition of his "Synonyms of the New Testament," since widely adopted, and in the latest and most revised edition of that excellent work still insisted upon—that the distinction between the words *ἐρωτάω* and *αἰτέω* is this, that *αἰτέω* is the more submissive and suppliant, indeed the constant word for the seeking of the inferior from the superior (Acts xii. 20); of the beggar from him that should give alms (Acts iii. 2); of the child from the parent (Matt. vi. 9), and so forth; while *ἐρωτάω* implies (in unclassical Greek, for in classical it means "enquire," "interrogate") that he who asks stands on a certain footing of equality with him from whom the boon is asked, as king with king (Luke xiv. 32), or if not of equality, on such a footing of familiarity as lends authority to the request. *Ερωτάω* is the Latin "rogo," and *αἰτέω* is the Latin "peto." The Archbishop, having established this distinction, goes on to say, "Thus it is very noteworthy, and witnesses for the singular accuracy in the employment of words, and in the record of that employment, which prevails throughout the New Testament, that Our Lord never uses *αἰτεῖν αἰτεῖσθαι* of himself in respect of that which he seeks on behalf of his disciples from God; for his is not the *petition* of the creature to the Creator, but the *request* of the Son to the Father. The consciousness of his equal dignity, of his potent and prevailing intercession, speaks out in this, that often as he asks or declares that he will ask anything of the Father, it is always *ἐρωτῶ, ἐρωτήσω*, an asking, that is, as upon equal terms (John xiv. 16; xvi. 26; xvii. 9, 15, 20), never *αἰτέω* or *αἰτήσω*." The dozen or so of pages in which Mr. Abbot shows with the utmost conclusiveness that the Archbishop has not a particle of color for making his distinction between the verbs; that his very noteworthy inference from the distinction has no basis whatever; and that he must have made his theory as to verbs by the Saviour's use of these words and the general use of them in the New Testament without taking anything like proper pains in verifying his citations, are such pages as may serve the scholar and controversialist for a model of procedure, and for an example of the true spirit of learning.

Another good review is a witty notice of the latest volume of Mr. Masson's so-called "Life of Milton." The reviewer, having the fate of the Countess of Desmond before his eyes, and feeling extremely old since accomplishing this second volume, declares that he has not ventured on climbing a cherry-tree since he began to read the biography. The worst of the matter is that Mr. Masson's book will prevent for a long time the appearance of a good life of Milton, who assuredly deserves it more than most of our English poets, and whose life might so well be made illustrative not only of the prideful will of the English Puritans, which struck out the figure of the arch-rebel in literature as well as struck off a king's head in politics, but illustrative also of the literary history of England—the learned, elegant, and accomplished Milton being, as Mr. Palgrave points out, the proper close and consummation of an epoch of English poetry which expresses the great Renaissance movement. Mr. Masson's aggregation of materials will be enough like a biography to warn off men who are competent to the task of making a true life of the poet, and will also no doubt by-and-by invite some less competent person to compile one that shall be convenient rather than sufficing.

Of the *North American's* other book-notices we may mention the elaborate notice, interesting to teachers, of Roby's Latin Grammar, and the notices reviewing "Lanfrey's Napoleon," "Baxter's National Debts," Freeman's "Historical Essays," and Colonel Meline's "Mary, Queen of Scots." The heat of this latter writer the reviewer remarks upon with some justice; but the author's primary intention appears to have been to show by a rigorously careful investigation that Mr. Froude, in his pretended history of Mary, made statements which he must have known to be inexact.

In the body of the *Review* we find for the most interesting literary article an account by Mr. Francis Turner Palgrave of a resuscitated poet, Thomas Watson by name, a friend of Sidney's, who vied with his accomplished friend in making "amourist" poetry of great smoothness and sweetness and of very considerable poetical merit. The age and the fashion of the age would seem to have had much to do with the young man's poetizing; but also there seems to be in the verses proofs that their author had it in him, as doubtless his friend and patron had, to have by-and-by done more than play a sweet variation of an elegant air of another's composing. There is a promising genuineness here and there hinted in some of the verses which Mr. Palgrave quotes.

"American Criticism" is by Mr. Charles Astor Bristed, and contains some indubitable truths as to the American critic; as to his former rascally good-nature, for instance; as to his ill-nature, too, directed against Boston if he was a Baltimorean or a New Yorker, and against New York and Baltimore if he was a Bostonian; as to his ignorance; as to his low standard of criticism; as to his foolish Americanism; and as to the whole legion of his faults. But Mr. Bristed takes, on the whole, a cheerful view of the subject, and might, perhaps, take a more cheerful one still, if he would turn from his own article in the *North American* to the critical notices at the end of the volume. There are not many of them, to be sure; and the *North American* is only one review; but the root of the matter is in us after all; and some American criticism is not surpassed for essential correctness. However, there is sufficient need for us still to be told that we are, on the whole, slovenly workers in literature, whether we compare ourselves with French or English models.

Ambas Américas—Contrastes (The Two Americas in Parallels). By R. P., of Venezuela. (New York: D. Appleton & Co. 1872.)—We do not think we betray a secret in telling our readers, what every reader of these sketches must easily discover, that the writer of them is Señor Ramon Paez, the son of the ex-dictator of Venezuela—whose "Autobiografia," published in this city, we reviewed some years ago in this paper—and author of "Wild Scenes in South America" and of "Travels and Adventures in South and Central America." The aim of the author in writing the last-named publications was to make the English-reading public familiar with the character and striking features of those sections of Spanish-America best known to him; his aim in publishing the book before us is to make his countrymen, and the citizens of South America in general, familiar with those institutions, improvements, and modes of life in the United States which they could most easily introduce within their own spheres. In order to enhance, however, the value of what he recommends, he feels obliged to picture, in parallels, also the corresponding shady sides of South American existence—and unfortunately these latter pictures are exceedingly dark, while the things presented for imitation are somewhat brightly colored, and—what is worse—in part the results of conditions and circumstances which the best will of the South Americans would be unable to reproduce. But if these parallels on the two Americas cannot fail to impress the readers in the southern division with a painful feeling of inferiority, they must also prove beneficial in imparting the knowledge of certain improvements which are not beyond their reach; for the author discourses not only on the higher phases of development and civilization as reflected in various public institutions of his adopted country, but also on the arts of making butter, preserving meat, preserving wood, and similar things.

For the convenience of purchasers not caring to buy the second volume of Taine's English Literature before reading the first, the volumes will be supplied separately.

TAINE'S ENGLISH LITERATURE

2 vols. $10. Holt & Williams, Publishers, New York.

NOW READY. PRICE 40 CTS., POST FREE.

THE NEW HYMNAL

OF THE

PROTESTANT EPISCOPAL CHURCH,

Printed from the Standard Plates, and bound in cloth boards.

POTT, YOUNG & CO.,
Cooper Union, New York.

HURD & HOUGHTON, New York;
THE RIVERSIDE PRESS, Cambridge,

Announce that their Edition of

THE HYMNAL

is now ready, and for sale by booksellers generally, at the price of

ONE DOLLAR.

They also publish an Edition of

COMMON PRAYER

uniform with the "Hymnal" in style and price. These books are made with reference to good taste and economy, simple and elegant in style.

Liberal discount for large orders.

THE CHEMICAL FORCES;
HEAT, LIGHT, ELECTRICITY,

with their applications to the expansion, liquefaction, and vaporization of solids; Photography, the Steam Engine, Spectrum Analysis, the Galvanic Battery, Electro-Plating, Electrical Illuminations, the Telegraph, etc., etc.

AN INTRODUCTION TO

CHEMICAL PHYSICS,

By THOMAS RUGGLES PYNCHON, M.A.,

Professor of Chemistry and the Natural Sciences, Trinity College, Hartford.

534 pp., 12mo, cloth, $3.

Published by TAINTOR BROS.,
678 Broadway, New York.

YOU HAVE SEEN THE ADVERTISEMENT of "THE WEEK." Send 25 cents for a trial subscription of four consecutive numbers. It is the very paper you need who have neither money to buy nor time to read all the leading journals, and who yet must keep up with current opinion. In it you will find what the leading home and foreign journals are saying from week to week on Politics, Society, Literature, Science, and Art, Music, the Drama, etc. Terms $3 a year. Address "THE WEEK," P. O. Box 1383, New York.

SALESMAN or BOOK-KEEPER.—A young and trustworthy man, who has had experience, desires employment in either of the above positions. Can furnish good references.

Address, G., P.O. Box 6732, New York City.

FRENCH READINGS.—Mr. Favarger respectfully announces to the Subscribers of the course that the opening reading takes place Friday, February 2, at 11:30 A.M., at Chickering Hall.

The readings are published in a brochure, for each week, at Mr. Christern's, 77 University Place. No tickets sold at the door.

MAGAZINES FOR 1872.

J. B. LIPPINCOTT & CO. respectfully invite the attention of the public to the two following valuable English Monthlies, for which they have taken the American agency:

THE CONTEMPORARY REVIEW.

A MONTHLY JOURNAL OF
LITERATURE, SCIENCE, AND POLITICS.

"The Contemporary Review" is unequalled in its peculiar department of literature by any similar periodical. It embraces among its contributors the most able writers and deepest thinkers of England, and the sterling value of the Review is evinced by its extended reputation and influence. As an index to its character, attention is invited to the following

CONTENTS OF JANUARY PART.

1. On Hibernicisms in Philosophy. By the Duke of Argyll. 2. The Church of the Future. By the Bishop of Tasmania. 3. Evolution and its Consequences. A Reply to Prof. Huxley. By St. George Mivart. 4. The Idealism of Milton. By Prof. Dowden. 5. Moral Philosophy and Savage Life. By Prof. Calderwood. 6. The English and Scotch Churches. By Prof. Tulloch. 7. John Huss and the Ultramontanes. By Rev. A. H. Wratislaw. 8. On Words in Mental Philosophy. By Prof. Maurice.

TERMS: Yearly Subscription, $7 50. Per number, 75 cents. With Lippincott's Magazine, $10 50 per annum.

THE ST. PAUL'S MAGAZINE.

A MONTHLY OF
LIGHT AND CHOICE READING.
Edited by ANTHONY TROLLOPE.

Fresh, brilliant, and apposite articles, by writers of taste and experience, form the staple of this magazine. The piquancy and variety of its matter render it one of the most attractive periodicals of the day. Two highly attractive serial stories, "Septimius," by Nathaniel Hawthorne, and "Off the Skelligs," by Jean Ingelow, are begun in the

OUR ENGLISH BIBLE

AND

ITS ANCESTORS.

BY THE REV. TREADWELL WALDEN,

Rector of St. Paul's Cathedral, Indianapolis.

16mo, tinted paper, cloth, extra, $1 25.

"A VERY COMPLETE SKETCH OF THE HISTORY OF THE ENGLISH BIBLE, from the time of Wyckliffe, written in a very fine, forcible style, and full of suggestive thought. It is intended, as a whole, to be an argument for revision, and at times the author writes eloquently in behalf of it. In its historical statements it is always accurate, and constitutes a history of the Reformation in England from the standpoint of the Bible. The story of the English Bible is a very fascinating one, and to this little book, as bringing out this profound interest which gathers about it, we are much indebted, and heartily commend it to our readers."—Christian Witness.

"An admirable popular account of the successive steps in the growth of the English version of the Bible, from the first attempt of Wyckliffe down to the final revision in the time of King James."—Sunday-School Times.

"In itself a story of profound interest, the ripe and elegant scholarship of the author gives it many additional charms; and it is specially welcome now, when our version of the Holy Book is to take another step forward, and assume that additional completeness necessary for a new age."—Christian Union.

PORTER & COATES, Publishers,
822 Chestnut Street, Philadelphia.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 8, 1872.

The Week.

THE excitement in England over the "American Case" is the only topic of moment either in home or foreign politics. We have discussed and sought to account for this excitement more fully elsewhere. The only thing certain about it is, that it has arisen out of a misunderstanding which we can hardly avoid calling absurd. There is no doubt that the English negotiators thought they had disposed of all talk of consequential damages by the apology; there is equally little that the American negotiators did not and do not expect the arbitrators to award, or England to pay, the expenses of carrying on the war for two years, and that they put in the claim on this head, very much as lawyers fill up the damages in a writ, without supposing it would cause surprise or offence. It is alleged, on the American side, that there is no reason why this claim should not be passed upon by the Geneva Commission, inasmuch as the Washington Commission has been allowed to pass upon claims under the cotton loan of the Confederacy. There is a certain analogy between the two cases, but there is not enough. The claim for consequential damages is made by the United States Government; the claim under the cotton loan is made by private individuals on their own responsibility, and without any recognition or encouragement from the English Government. The press on both sides, as is usual, is doing its best to make the difference unhealable. The English papers are representing the submission of the claims as a deep-laid plan to make England pay an amount larger than the cost of an unsuccessful war, in discharge of a liability which no human testimony could prove. The American papers, on the other hand, are showing that although the English editors are howling donkeys, there is good reason for their trouble, which is the sight of the frightful bill their nation will have to pay. The Washington correspondents are more than usually luminous. We have the assurance of one of them that General Grant does not expect an immediate ultimatum from the British Government. Our own belief is that the question of the general liability of England for the prolongation of the war is something the Ministry will not venture to submit to the arbitrators, and that if this be considered by the American counsel an essential part of their case, the Treaty will be thrown overboard. In the meantime, we trust the editors on both sides will keep the peace till the fleets and armies are ready.

The proceedings in Congress during the past week have been very like those of the week before—or, for that matter, the week but one before—Republican and Democratic combatants, and Administration and anti-Administration men, having been alike mainly engaged in what the gentlemen of the prize ring call "making play." The real, honest fighting, every Congressman knows, will come after the adjournment.

Of this state of the Congressional mind Senator Nye, of Nevada, furnished a striking illustration in his reply to Mr. Schurz's speech on amnesty. The latter's speech was a very able one, going over all the arguments relating to amnesty, and showing that every consideration of policy and humanity made against a continued proscription of the rebel leaders. At the close of the war, Mr. Schurz said, the rebel leaders might have been executed, but the instincts of the American people revolted against the idea of vengeance. The policy of generosity having been adopted, the only question was how to make it fruitful; and the way to do this was to make it complete. The question was not, as had been argued, whether defaulters should be punished and traitors go free, but whether a general amnesty to rebels was not more demanded by the public good than a general jail-delivery. A broad distinction had been always drawn between violations of law in which political opinion was a controlling element and crimes implying moral depravity. (We may say in parenthesis that there is no distinction which the ordinary politician is fonder of confusing than this.) Germany was not, in our sense of the word, a free country; yet there were men now sitting in the German Parliament, and now voting against the Government, who, a few years ago, were fugitives from justice for political offences. Again, it was argued that certain men should be excepted from amnesty because they had added the crime of desertion to that of treason. But such a rule, in view of the appointment and confirmation of General Longstreet, one of the most conspicuous of this class, would be an absurdity. And, finally, it was fast becoming evident that there are other villanies besides rebellion in the South which imperatively demand attention, and the class by whom they are committed is the class which has been called into power by the very proscription which amnesty will bring to an end. To these arguments Mr. Nye replied, first, that Mr. Schurz was an ignorant foreigner; second, that for his (Nye's) part, he would keep the rebel leaders browzing on the outside till their hair grew as long as Nebuchadnezzar's; and if that was not statesmanship, then he did not know anything about it. To this reply Mr. Schurz made a rather unnecessary rejoinder—we say unnecessary, because argument with a person of Mr. Nye's kind is as out of place as it would be with a child. They may be cajoled, or fondled, or frightened, but not reasoned into agreement. And they have the advantage over most children in an inexhaustible fund of a peculiar quality, which has never yet received an appropriate name, but which, in the case of the late Fisk—not that we mean to imply that Senator Nye is in any other respect like Fisk—was called his "humor."

The Missouri "Liberal Republican" movement has received the adhesion of an influential body of Cincinnati Republicans, headed by ex-Secretary Cox, and including such men as Judges Matthews, Hoadley, and Stallo, who have signed a card to that effect. In the meantime, the preparations of the Administration to influence public opinion do not seem to progress very rapidly. The President is said to be waiting for the close of the investigation to make a clean sweep of the General Order business, but the investigation is tedious, and the effect on the public mind of the contemplation of Leet and Stocking working at "the plums" is not edifying. Leet has been himself examined, and seems to be a thoroughly smart, impudent, glib young person, not overburdened with scruples, and quite ready to be "improper," or "indelicate," or "ungentlemanly," as may seem most likely to fill his pockets. The President's patronage of him can only be accounted for by the story that he is his wife's cousin, for the correctness of which, however, we do not vouch. His examination was calculated to give a very bad impression of him. The "Schurz-Fenton Trick," it must be admitted, has turned out a pretty good one for their purpose. General Hawley has been to Washington and has seen the President, and testifies that he is "in dead earnest" about civil-service reform. We wish Murphy, and Carpenter, and Leet thought so.

While waiting for the Cincinnati Convention to suggest some other name than Grant's for the Presidency, there is a vigorous canvassing going on for the second place on the ticket. Mr. Colfax's coy assent to another term of sacrifice on the altar of patriotism does not seem to throw cold water on these nominations for Vice-President, and it is easy to see that he has only to consult his own preference about retiring from political life. The name of Mr. Cameron does not gather strength from having been seasonably proposed, and perhaps, if anything is more certain than another, it is that Pennsylvania's chance of putting a "favorite son" on the next Presidential ticket is not worth discussing. We fear the same must be said of Massachusetts and her Senator Wilson, though it is not to be denied that New England needs placating before it will heartily fall in with the movement to renominate Grant. Horace Maynard's nomination is too suggestive of that other representative of Tennessee whom we unwittingly made President when we placed him beside Lincoln. On the whole, it seems much the most probable that the West and Northwest are to determine the Republican ticket for 1872, and that it will be as "sectional" as it now is whether the Reformers or the Administration party carry the day at the Philadelphia Convention in June. For this reason, the nominations of ex-Governor Wm. Dennison, of Ohio, and of James F. Wilson, of Iowa, seem to us more in order. The latter has been in training for some advanced office ever since he resigned his seat in the House, and it would not surprise us greatly if he got to the head of the Senate before he entered it as the colleague, say, of Mr. Allison. A worse Vice-President might certainly be selected, and we are not certain that a better one has been named.

There has been a smart contest in the Fourth Senatorial District of Pennsylvania, resulting in the election (it is alleged by fraud) of one Henry W. Gray over Colonel "Aleck" McClure. Mr. Gray was supported chiefly by Forney's *Press*; and as he told his constituents when they came to congratulate him that they had saved the nation, and sustained the great General Grant and General Cameron, there can be no doubt that he was what might be called an Administration candidate. "Aleck," on the other hand, represented Republicans who profess to be desirous of reforming the party in their State and city, and on this ground it has been inferred that he was an anti-Grant candidate. We observe, however, that the Philadelphia papers insist that Grant had nothing to do with the matter, and that the election was purely local, not national. The Missouri *Republican*, however, sees in it another illustration of the wisdom of the "passive policy," inasmuch as the Democrats had no candidate, and were free to assist either party to this family quarrel. The Philadelphia *Bulletin*, on the contrary, says that the total vote was 10,000 less than in October, thus showing that "the mass of the Democratic voters did not go to the polls," and that the closeness of the vote (Gray had less than 900 majority) proved "that there is a strong reaction in the party against the mode of nominating candidates and conducting elections which has long prevailed." Leaving the significance of this election, therefore, an open question, we are free to say that "Aleck" is not, in our opinion, a model reformer, and that the "reaction" is not quite akin to that lately manifested in Missouri.

In November, 1870, we drew attention, with great reluctance, to the withering denunciations of civil-service reform with which Colonel Forney was filling his *Press*, apropos of Mr. J. D. Cox's resignation. The Colonel was uproarious in his rejoicing over Cox's retirement. "Grant," he said, "now intended to rely on his friends, and not on his foes"; and, touching upon assessments on clerks for political purposes—which Cox had opposed—he declared "there was a mawkish and miserable susceptibility on this subject which only needed to be discussed in the light of common-sense to make it as ridiculous as it deserves." Throughout the whole winter, the Colonel kept up this same railing against the proposed reform, till, in March, the President stopped his mouth by giving him the Collectorship at Philadelphia. We predicted in November aforesaid, however, that the Colonel would surely come round to civil-service reform in time, though we confess we did not expect to see the process hastened by the corrupting influence of a fat office. We have waited ever since with unabated confidence. We knew the spirit of grace was at work in the Colonel's heart, that light was dawning in his receptive mind. We are now glad to announce that the long agony is over, and that the Colonel is converted. In the *Press* of January 20 we read with tear-dimmed eyes:

> "Civil-service reform is not all a delusion and snare, and the keenest ridicule and most beautiful rhetoric yet broached in Congress will not convince the people of the country otherwise. It will correct several very generally admitted evils, and tend not only to promote faithful service, but to secure increased efficiency. We are just beginning to find out whose interests are hurt by the adoption of the new rules drafted by Mr. Curtis and his colleagues. They are not those of the Executive—he has not complained—but rather those of members of Congress. These find their political influence, *i.e.*, the power of dispensing public offices as though they were private property, fading away, and of course they figure as protestants. But the people were never better satisfied or the reputable members of Congress more relieved."

There have been no new developments in the Custom-house investigation. Generals Porter and Babcock have asked for and obtained a subpœna to appear and clear themselves of suspicions to which the Leet case has given rise. The time of the committee has been a good deal occupied with altercations between the Administration and anti-Administration members as to the comparative purity of the motives which animate the two sides. The question seems to remain still open. The evidence of General Hillyer, formerly of General Grant's staff, that he considered Leet's engaging in the General Order business legitimate, because he was at the time on leave of absence, is interesting; this rule, if adopted, would enable army officers to add a very considerable annual amount to the moderate income allowed them by Government. To be able to engage in little money-making ventures would be certainly a great convenience to all military men, on or off leave; we may yet live to see colonels on leave of absence inspecting fish, and major-generals collecting the perquisites of the Sheriff's office. In such positions, too, they would have an admirable opportunity of bearing the West Point Cadet market, and covering other charts in staff-appointments. It will never do, however, to forget that this is a democratic community, and if such privileges as these are to be allowed officers on leave, they cannot fairly be refused to the rank-and-file. As the army is at present managed, they have all the work and none of the plunder.

A few weeks ago we alluded to the fact, well known, though not then proved in detail, that the rich men and corporations of this city had been able to make easy terms with the Ring during the ascendancy of Tammany, and that the whole burden of the frauds had fallen upon the poor and hard-working among the inhabitants. It now appears from the books of the Tax Commissioners, so long closed to the public, that the proof is not difficult to find. The *Times* published a list of ten city railroads (including such lines as those of the Third and Second Avenues) whose amount of property absolutely untaxed was no less than seven and a-half millions ($7,624,270). This partiality seems at the first blush to have been entirely arbitrary—one railroad having been assessed anywhere from twice to six times as much in proportion to its real valuation as another; but of course it was not so. The amount of the exemption depended upon the wealth and consequent influence of the road. Thus the Third Avenue line, having a real valuation of two millions and a quarter, was taxed on only half a million, or twenty-two per cent. of the real value, while the Bleecker Street and Fulton Ferry line, having a real valuation of only $360,000, was taxed on $169,000, or forty-seven per cent. Mr. Tiemann has introduced into the State Senate a series of resolutions calling for a return of all the city real estate, taxed and untaxed. We trust this matter will be pushed, that the people may learn what part of the community it is that profits by dishonest government.

The minor frauds of Tammany appear to have no end. Every few day the *Times* succeeds in unearthing some new swindle. The irony of events was perhaps never more curiously illustrated than in the history of the Tammany safes. These receptacles, for which the city, it will be remembered, paid the round sum of four hundred thousand dollars, were, it now appears, appropriated by the Ring and their friends, for the purpose of storing the booty while they were plundering the city. Tweed, and Connolly, and Cardozo, and many more besides, all obtained their share of this curious spoil, and in many a palatial extra-made burglar-proof sideboard in Fifth Avenue, as the reporters say, may now be seen the damaging evidences of Democratic crime. The only objection to the perpetual exposure of the villanies of the Ring which the *Times* keeps up is that it is gradually deadening the sensibility of the public mind on the subject. The Ring frauds are rapidly sinking from the level of real facts to that of "startling revelations," of which the public are tired. Enough has been said and written. It is of great importance that something should be done. Albany is the objective point. There seems to be some prospect of the passage of the new charter, and a little more chance this week than last of the removal of Barnard and Cardozo. The Committee of the Bar Association has at last got the matter referred to the Judiciary Committee with instructions to investigate.

The friends and foes of international copyright are busy with preparations for the hearing before the Committee of the Senate next week. A portion of the publishers have given in their adhesion to the bill introduced by Mr. Cox, and embodying Mr. Appleton's plan, which gives copyright to foreign authors, provided the books are manufactured in this country, or, in other words, makes the Government agree to protect the foreign author's property on condition that he will pay toll to some one American publisher, leaving him to make the selection. The general objection to this is that if an author has property in his books, to restrict his choice of a printer and publisher is rob him of his property to a limited degree. It is like saying, "We will let you pursue the business of a broker in Wall Street if you will agree to employ Brown, the tailor, to clothe your nakedness. You must have some covering, and we wish to encourage Brown." It is open to the special objections, that it would ruin the business of that large and respectable class of American booksellers who are engaged mainly in importing, and would cut off book-collectors from the more expensive but more accurate and legible English editions, in cases in which republication took place in this country. On the other hand, it would undoubtedly give authors a certain amount of protection, and put an end to the monopoly of republication now enjoyed by the great houses. There is an amusing argument heard occasionally in the course of the discussion—that there ought to be no copyright, because all really valuable books would be produced without it. Perhaps so, but then do not let us have publishers' profits either. If authors ought not to make money on the sale of their ideas, nobody ought.

The disappearance of Baskins from the scene of action in Utah and the arrival of District-Attorney Bates have had a very good effect in bringing clearly to light the peculiar financial character of the Mormon prosecutions. The criminal suits brought against Hawkins and the rest, charged with murder, lascivious cohabitation, and other offences against the Territorial laws, were necessarily expensive, and the judges and Baskins soon found that no money for costs was to be had. The offences were for prosecutions of Territorial laws, and it was very unlikely that the United States would ever pay for them. As no money was to be obtained, the cases were tried on credit, the witnesses, jurors, and officers of court receiving, it seems, certificates of stock in the Anti-Mormon enterprise, with which they were to do as well as they could. And now the Comptroller at Washington has declined, as it was evident from the beginning he must, to pay the expenses—amounting in all to some thirteen thousand dollars—and the certificates issued by McKean and his associates to the witnesses, bailiffs, and jurors are now selling on the street in Salt Lake City at twenty-five cents on the dollar. This seems a high rate, but the community is a speculative one. Not only is it impossible to pay the expenses of the trials which have already taken place, but no provision exists for those which are still to come off, and the Ring has now sunk so much capital that strenuous exertions are felt to be necessary to prevent a total loss. So the Government at Washington has been appealed to, and Senator Cragin has introduced a bill making an appropriation for more trials, and for the payment of the expenses of those which have already taken place—or, rather, for the holders of the court certificates, probably now in the hands of local brokers.

These facts are given in a letter from Salt Lake City to the *Tribune* under date of December 22, which fully confirms all that has been said about the illegal character of the Anti-Mormon proceedings. The history of the cases has been this: When McKean went out to Utah, he found that if he sat as a Territorial court he would lose the benefit of the United States statutes as well as the chance of anything out of the United States Treasury. On the other hand, if he sat as a United States court he would lose the benefit of the Territorial statutes, under which most of the indictments had been found. He therefore determined to sit in both capacities, recognizing the Territorial courts when the cause could be served by such recognition; denying all validity to their decisions whenever their jurisdiction seemed likely to make the other way. The result of this has been that there is now practically no criminal law in Utah. Several keepers of houses of ill-fame and prostitutes, for instance, who had been arrested by the police and sentenced by the Mormon alderman's court to fine and imprisonment, were at once released, with a full remission of their fines, by Judge Hawley, on the ground that the city had no authority to establish regulations of this character or provide courts to try the offenders. The thought of being let out of jail for the sake of the suppression of polygamy must be very amusing to this class of the community. In law, of course, the Territorial courts are entirely distinct from the Federal courts, and the confusion introduced by McKean is in direct violation of every principle and every precedent. On every ground, it is to be hoped that Senator Cragin's bill will not pass.

The newly acquired Rhine territory of the German Empire has been definitely constituted in three main divisions—Upper Alsace, with a population of 473,000; Lower Alsace, 610,500; and Lorraine, 514,400. Their material prospects dating from the new year must be considered good, as the Zollverein restrictions are now removed, and the products of Alsatian industry can now find an outlet through any part of Germany. The tobacco monopoly has been done away with. The German civil service, too, is proving better than the French: the mails are cheaper and surer, and the other functions of the post-office—such as money-orders and newspaper subscriptions—much simplified in practice. The telegraphic stations have been multiplied, no longer with a prefect's capricious "perspective," by which places of importance were slighted in favor of smaller towns, but with a common-sense regard to the good of the greatest number. The fortifications of Strassburg are to be pushed out from the city, and on one side will be merely nominal, in order to permit a healthy expansion, while new bridges across the Rhine and improved railroad facilities will tend to develop its commercial advantages. The entire school-system has been reorganized, and compulsory attendance enforced, and—what cannot be reckoned a slight circumstance—singing has been introduced, for which no provision was made in the French plan of instruction. The census taken at the close of the year does not show so great a falling off in population as might have been expected, and it is remarked that a concerted attempt of the women to raise money as a New Year's gift to France produced a niggardly return, that of Mühlhausen, for example, not amounting to $500, though the inhabitants have been conspicuously dissatisfied with annexation, and for other objects, religious and humane, have been in the habit of giving freely much larger sums.

THE DIFFICULTIES OF ARBITRATION.

WE hope the public will not allow itself to be cheated by the jaunty explanations of those far-seeing observers, the Washington correspondents, into the belief that the Treaty of Washington is in no danger. It *is* in very considerable danger, and the danger comes from a source which must fill those who, like ourselves, valued the treaty no less as a precedent than as a means of terminating an existing quarrel, with genuine concern; for the difference which has arisen is one which well illustrates the difficulties which attend, and must attend, all attempts to decide great international questions by arbitration. We believe nothing was better understood by both parties, when the Treaty of Washington was under negotiation, than that the question of consequential damages—that is, the question whether England was responsible for the loss caused by the prolongation of the war after the escape of the *Alabama*—was not a question of dispute between the two countries. Mr. Sumner made a great uproar by trying to put this question into the guise of a legal proposition, but no sensible man, lay or professional, in either country, gave his performance any attention, except as a passionate expression of feeling likely to create a good deal of popular excitement. It was never considered by any lawyer as a question which could be gravely submitted to any human tribunal. The American Commissioners produced it, as the newspapers produced it, as a general and vague description of the American cause of complaint against England, to be used in the further prosecution of the quarrel in case no "amicable settlement" was arrived at. But nobody hoped or believed that a thousand million dollars, the sum Germany has wrung from unhappy France at the point of the bayonet, was to be obtained from England by any process short of war. It was evident from the protocol that the British Commissioners were under the impression that they met and disposed of this, the immeasurable, incomputable, and therefore sentimental part of the American complaint, by their expression of regret and their agreement to give the three rules an *ex-post-facto* operation. Apparently the American Commissioners accepted these concessions in this sense, but, as so often happens where two disputants, after being much embittered against each other, come to terms and "make up" unexpectedly, there was so much "effusion" over the apology that both sides forgot to put on paper what it was the apology atoned for. It would now appear that the British looked on it as quieting and for ever disposing of that vast mountain of indirect and incalculable wrong of which the Americans had so often made threatening mention, leaving nothing to be paid for in cash except what could be exactly appraised. The Americans, on the other hand, seem to have looked on the apology as simply an expression of contrition which it was the moral duty of the British to make, but which in no degree modified the relations of the parties before the law, and which left the consequential damages in their old position—that is, good things to urge on the attention of whom it might concern, as an embellishment or aggravation of the American case, even if there was no hope of getting them recognized by the arbitrators. This view of the matter, however, unfortunately found no expression anywhere, but it would seem to have been excluded from the Treaty by the provision that the arbitrators should consider the damage done by each vessel separately. It is easy enough to estimate the amount of loss which each Confederate cruiser escaping from British ports caused to the United States; but of course it would be ridiculous to provide that the Commission should define the extent to which each cruiser was responsible for the prolongation of the war; and it is fair to conclude, therefore, that the negotiators did not intend that any attempt to estimate English responsibility for that prolongation should be made.

The American "Case" was evidently drawn up under the impression that the Treaty left the United States still at liberty to get all they could from the arbitrators, and that the English concessions had in no way narrowed the field of controversy, and that it was fair to submit whatever was likely to magnify the sum of American wrongs. The British, on the other hand, supposed themselves to have reduced the controversy within certain defined limits, and to have disposed of all sentimental griefs—that is, griefs incapable of estimation in dollars and cents—by the apology, and to have left nothing to be argued at Geneva but England's liability for damages ascertainable by ordinary computation. The appearance of the "Case" has, therefore, plunged the English public into a fever of excitement, and there is imminent danger that the Treaty will be thrown overboard. This danger flows from two sources. First, the Treaty never was popular in England. It was accepted as a mode of escape from a position of considerable difficulty and embarrassment; but it was not a welcome and gratifying mode of escape. It was, throughout, a string of humiliations. It conceded a great many things which everybody had believed, two years previously, never would be conceded. It contained—what was without parallel—an expression of regret to a foreign power for acts and omissions which the Government maintained were not blameworthy, and it agreed that certain *new* rules of international law should have a retrospective effect. This was a hard pill to swallow, and nothing but the graceful and kindly way in which these various concessions were received by the American people made it possible to swallow it. There was much grumbling, but it was smothered by the general desire to escape from an *impasse*, and to wipe out the remembrance of the most unfortunate blunder in English foreign policy. Nothing but the smooth working of the machinery, and the absence of any hitch in what remained to be done, could have prevented the revival of the earlier bitterness. This hitch has occurred, and it is to be feared we shall see now an outburst of the opposition which a combination of good influences suppressed last year. Second, the Ministry is not as strong now as it was when the Treaty was made, and its weakness has been largely due to growing dissatisfaction with its foreign policy and with its preparations to give it effect. An outcry which Mr. Gladstone could have disregarded twelve months ago he can hardly so effectually disregard at present, and the assault on the "American Case" will probably serve as a powerful weapon to the opposition. It is bad enough, they will say, to eat dirt in order to escape a kicking; but to eat dirt, and get the kicking, is something to which no nation can be expected to submit more than once.

If the Treaty should now miscarry, it will be a striking illustration of the difficulty of getting international questions before any tribunal that can be devised; and it will show that in our rejoicing over the gain to civilization which was made by the organization of the Geneva Board, we overestimated the reasonableness of man. For it must be remembered that the sole question which divides the two Governments is the question whether one party shall be allowed to ask the arbitration for incalculable damages which he frankly acknowledges he has not the least expectation of receiving, and which the other party knows perfectly the arbitrators would never think of awarding. A frank and fair acceptance of the principle of arbitration would make Great Britain indifferent to the contents of the American Case, provided she had confidence in the Board, for she would naturally say, the Board is as competent to pass upon the extent of the American claims as upon their nature. But the fact is, England has only yet reached the point of accepting arbitration on distinctly defined issues, and we doubt if any other nation has got much further. We are still at some distance from a state of things in which international disputants will throw down the facts before a court and ask it to say what are their rights and duties. In the meantime, both parties owe it to the great interests of civilization not to let the Treaty of Washington miscarry for any but substantial reasons. If nothing real is gained or guarded against by the claim for consequential damages, there ought surely to be some means found of disposing of it so as to save everybody's self-love.

MR. BOUTWELL'S "STRICT PARTY VOTE."

MR. BOUTWELL is probably perfectly satisfied with the strict party vote which on Thursday last absolved him from the charge of having violated the law in his loan operations with the

Syndicate, for he doubtless feels about a party vote very much as Moses felt about the voice out of the burning bush. A very large and very respectable portion of the community, however, regrets, for the sake of the Republican party and for the sake of public morals, that any such vote took place. Of its absurdity we do not need to speak, because we spoke of it last week, and because it is patent. Resolving Mr. Boutwell has not violated the law, because, no matter what the law said, what it meant was that he should do whatever he has done, is simply trifling with the popular intelligence. The resolution ought to have contained a formal admission that Mr. Boutwell had committed an error of judgment, which, however, Congress, in consideration of the goodness of his intentions, and the substantial success of his operations, was willing to overlook. This would have furnished Mr. Boutwell with all that he needed by way of indemnity, while it would have saved the party from the responsibility of conniving at a deliberate violation of a most important statute on a most important subject by a high official. As matters stand, the party has not only forgiven Mr. Boutwell, but has made on his behalf a statement which it is difficult to characterize in proper language, inasmuch as it displays the coolest contempt for notorious facts. There are certain circumstances in Mr. Boutwell's case which make this performance peculiarly unfortunate, though they are not circumstances which affect in any way the question of Mr. Boutwell's official integrity.

Great care ought to have been taken as to the form in which the Secretary was whitewashed, because his alleged offence was one flowing from the very condition of mind to which we owe nearly all the great frauds by which the country is being desolated. At the bottom of all the operations carried on against State and municipal finances by the various great Rings, we find that very disregard of the letter of the law of which Mr. Boutwell is accused, and justly accused. The great plunderers of the treasury, whether in New York, South Carolina, or Georgia, are persons charged by statute with the care and management of the public funds, and the real fraud begins in or is carried on through a disregard of the plain provisions of the law, exactly similar in kind to that displayed by Mr. Boutwell. Their motives in disregarding the law are, we admit, very different from his, but both pass through the same door. The reason why a man managing money under a statute is bound to follow the letter of his authorization, no matter what his aims, is the same as the reason why he must render his accounts regularly, no matter what his character. To condone Mr. Boutwell's evasion, therefore, is to make the way of the Tweeds and Connollys easy for them, and to encourage that lax habit of mind with regard to the nature and extent of the responsibility of those who are charged with the conduct of public finances, which is already certainly sufficiently prevalent. All the great Ring leaders have been persons placed in positions of financial trust, with certain duties to discharge which are defined by statute. They have found it inconvenient to obey the statute, and profitable to disobey it, and accordingly they have disobeyed it. They have issued bonds where they had no authority to do so, or in quantities not authorized by law, or for purposes not prescribed by law; and they have borrowed beyond their powers or at forbidden rates. The principal difference between them and Mr. Boutwell is, in short, that he has the good of the Treasury in view, and they have their own profit; but the machinery which Mr. Boutwell uses for one purpose, if we allow it to remain standing, a rogue can use for another.

What rendered Mr. Boutwell's claim on the extraordinary devotion of "the party" all the weaker was, that the law he violated was literally of his own making, and his violation of it was deliberately resolved upon. The terms on which the act prescribed the negotiation of the new loan were the very terms on which he declared himself able to effect it. When he found, after waiting for half a year or more, that he was unable to effect it on these terms, instead of acknowledging his error and seeking to get the law amended, he pretended that it was the war which had prevented his success; and when the war closed, he prepared for and perpetrated a series of evasions of the statute. The commission allowed (one-half of one per cent.) was too low, and, instead of getting it increased by law, he increased it himself by the device of letting the purchasers of the new bonds have them, and the interest on them, three months before they were called on to pay for them; and to cover this, they were directed to make a sham payment, by depositing sham certificates of deposit, drawn by themselves, in their own banks. Every one of these steps was illegal. The expense of the operation was more than the law allowed; the sale of the bonds at three months' credit was not, as has been judicially decided, the sale of them "at par," which the law prescribed; and the deposit of the paper memorandum in the Washington bank was not that payment of the money which the law contemplated. That the whole transaction was not, from a commercial point of view, commendable, we do not assert; what is plain is, that it was illegal; and in saying that it was not illegal the Republican majority in the House has made itself ridiculous.

The fact is that Congress should in the beginning have fixed the interest on the new loan, and a minimum at which it might be sold, and then have left the task of disposing of it to Mr. Boutwell's discretion, if it believed him honest. There is no way under heaven of getting more for a loan than the market rate; and no matter how much you may try to sell it "at par," if it is not considered worth par, par you will not get. Whether Mr. Boutwell knew this, and did not venture to say it, or did not know it, he is about equally to blame. The result is that the discretion he ought to have had by law and he did not ask for, he ended by taking without asking for it and in violation of law, but sought to conceal his taking of it by a string of shams and subterfuges which the Republican majority not only pardons, but actually denies he ever committed, after formally describing how he committed them, why he committed them, and what it was that made it desirable he should commit them.

Mr. Dawes, who has acted as Mr. Boutwell's defender, closed the debate with a remarkable *reductio ad absurdum.* He pointed to the large profits the United States would eventually realize out of Mr. Boutwell's operations as proofs that he was authorized to conduct them as he did, and finally warned the House that, even if it found him guilty of exceeding his powers, he would appeal to the American people. This was an appropriate close to a very curious discussion, but it was probably as encouraging an announcement as the loose fishes of the financial world ever listened to. Nothing is sweeter to a man who is engaging in unauthorized transactions with other people's money, than to be told that if he comes out all right nobody will blame him, and that, even if he is brought to book for violating the statute, he can appeal with perfect confidence to the judgment of mankind, which is always more lenient, and anyhow is much further off, than that of courts of justice. In short, the whole "funding business" has been performed in a style more remarkable for "smartness" than anything else. We trust that there will, with regard to the remainder of the loan, be a "new departure."

CENSUS FIGURES IN A CARTOGRAPHIC ASPECT.

THE cartographic method of presenting statistical facts, or, in other words, the exhibition upon a geographical diagram of the density of population, distribution of wealth, predominance of vocation, characteristics of industry, and other social statistics, is rapidly reaching a high degree of perfection, and is likely, before long, to be as commonly employed for the publication of such data as the system of co-ordinate curves by which meteorological and other scientific variations are indicated. Among the cheap and handy publications which exhibit this method may be mentioned several small eighteenmo books, which were printed at Gotha, a few years ago, at the well-known establishment of M. Perthes, for the purpose of exhibiting the population, resources, education, religion, industry, etc., of the principal European states. Four of these manuals lie before us, one devoted to France, another to Spain and Portugal (prepared by Dr. W. Block), a third devoted to Russia (under the supervision of A. v. Buschen), and a fourth to Austria (under the direction of Dr. A. Ficker). Besides the necessary text and tables, each volume has from twelve to eighteen maps, colored with several grades or shades of color, exhibiting the greater or less predominance of the element discussed; for example, in the population map, the darker the color, the denser the people upon a square mile; and so with the rest. Similar maps have been prepared for the *Geographische Mittheilungen* of Dr. Petermann, some of them very clear and beautiful. There are also governmental maps in Russia and Austria which to a certain extent are constructed on this principle.

But by far the most elaborate work of this kind which has fallen under our observation is the series of maps recently published by the Prussian Government exhibiting the condition of that kingdom in 1866. These maps are quite numerous, and for beauty of delineation, thoroughness of preparation, and fulness of topics, are as good as can be expected in the present state of the arts. The statistical basis for such maps must have been excellent to begin with, but the facts have also been discussed in a masterly way, and then engraved with great precision and a natural gradation of tints. The first map is a physical map, showing by five colors the structure of the country, the high lands, the intermediate, and the low lands. Next there is a political map, to indicate all the civil divisions of the kingdom. The geological structure of the country and the peculiarities of the soil are also indicated on two sheets. Then the climate, as far as that is possible, is represented not by isothermal lines alone, but by isothermal patches of color covering regions. The density of the population, the preponderance of religious bodies, the linguistic differences of the kingdom, the ratio of mortality, the birth-rate, the wealth, as determined both by real-estate taxation and income-tax, the industrial characteristics, the number of horses, cattle, and sheep, the culture of forests, fruit, grains, the vine—all these, and many more interesting points, are shown so clearly that the humblest can understand the facts, while the most intelligent are aided in quickly perceiving relations, and have relations suggested, which would hardly be thought of from the scrutiny of columns of figures. Indeed, the transfer of pages of Arabic numerals to graphic and almost pictorial atlases is quite like turning Arabic into the language of common life. Facts are brought from another tongue into the vernacular. Accompanying the atlases are the necessary explanatory tables and text. Sometimes only a small number of tints are employed, and again as many as twelve gradations of color are introduced.

An intelligent American, interested in the resources of this country, naturally asks, on looking at these German maps, Why cannot we have the same thing here? To this we reply, that we can if we ask for it. It would require that our next census should be more wisely planned by Congress than the last, so as to gather in more satisfactory returns on all-important subjects; but we need not wait for that. With the data now in the possession of the Census Bureau, a moderate outlay from Congress would secure the preparation of excellent maps, showing at least the law of population in this country. General F. A. Walker, who has just been transferred from the head of the Census Bureau to the head of the Indian Bureau, and who in all respects has been a most excellent superintendent of the census—securing far better returns than could have been expected under the defective law by which he was fettered—prepared, before he was transferred, some experimental maps to show what could be done with the statistics of this country in a geographical treatment. One of these maps shows the ratio of foreign-born to native citizens in all the Northern States east of the Rocky Mountains, and a second shows the like ratio in the South. But a closer study of the figures suggested that a nearer approximation to the truth could be secured by giving to small regions in which the foreign population preponderates the strong tint they are entitled to, and then deducting from the State at large the element thus eliminated. For example, we all know that in Hoboken and Jersey City the foreigners predominate far more than in the rest of New Jersey—that the Germans are numerous in St. Louis and Northeastern Missouri, but scarce in the Southwest. Now, by coloring dark the Hudson-shore cities of New Jersey, and allowing for the deduction, the State in general is shown to have but a light foreign population; and so, *mutatis mutandis*, in St. Louis and Missouri. Two other maps show the distribution of the African race in the South in 1860, and again in 1870—a very curious illustration of the influence of emancipation upon the residence of the colored population. Carrying the system out a little more in detail, county maps have been prepared for Alabama and Tennessee, exhibiting the ratio of the African to the total population, and showing at a glance some curious phenomena of distribution.

These seven maps, which we have been allowed to examine in manuscript, are nicely drawn and harmoniously shaded. It would, on some accounts, be more satisfactory if a better subordinate indication of the physical structure of the country could be given; but we lack the right materials to prepare such a basis well, and the approximation would have been a serious addition to the cost. It is greatly to be desired that the authorities of the census should be authorized to prosecute this cartographical study of the statistics, and to print as many maps as they can well prepare. Congress could do nothing better to utilize the census, and secure the good results of the outlay already incurred. Such maps would be acceptable to everybody; but it is not their popular value only which commends them. They will be found advantageous to the statesman, the journalist, the teacher, the writer on political economy. They are a kind of symbolism, which, like the symbolism of algebra, facilitates computation, suggests ratios, and leads to results which would otherwise be gained by slower and less satisfactory processes.

A PRINCELY WEDDING.

PARIS, January 19, 1872.

I HAVE just witnessed a ceremony which had in all its features something so peculiar and interesting that you may perhaps be interested in the details—I mean the marriage of the Princess Marguerite of Orléans, daughter of the Duc de Nemours, with Prince Ladislas Czartoryski, the representative of an almost dynastic family of Poland, and who is looked upon by all the Polish emigration as the representative of the last hopes of that country. This marriage took place in a small country church, but in a place which the memory of the great Condé has rendered famous, Chantilly, situated twenty miles from Paris. The ceremony was strictly private. A special train took the members of both families and a few friends to Chantilly, where they found twenty-five carriages. An improvised master of ceremonies had given numbers to the twenty-five coachmen, and called aloud by name the ladies and gentlemen, in order to give them their proper places. They were immediately conducted to the small church of Chantilly, built in the seventeenth century, and which has a curious altar under which are buried all the embalmed hearts of the Princes of Condé. This altar bears a Latin inscription written by the Duc d'Aumale, who is the heir of the Condé property and the actual owner of Chantilly. There is a principle in the Catholic Church which forbids appropriating a church at any time for the use of individuals; in this case, however, the choir was isolated, as well as a part of the nave; but the rest of the nave and the aisles were left for the people of Chantilly.

In the remaining part of the choir, I noticed the Emperor of Brazil, tall and standing alone; his son-in-law, the future Emperor of Brazil, the Count d'Eu, who distinguished himself in the war with Paraguay as well as in the part he took in the movement for emancipation, is the brother of Princess Marguerite. The Emperor Dom Pedro is quite a favorite in France. The nation is very grateful to him for making his visit at the time of her trouble; he does not frequent the small theatres, like so many kings and emperors who visited us during the Empire, and who were seen constantly at the "Grande Duchesse"; he visits our hospitals, our schools, gets acquainted with all our *savants*, and seems in earnest about everything. Next to him were the Comtesse de Paris, in the most brilliant gray and pale orange dress; her sister-in-law, the Duchesse de Chartres, in blue velvet and ermine; the Princess Clémentine of Coburg, sister of the Duc de Nemours, and just arrived from Vienna, where she resides with her lovely daughter, Princess Amélie of Coburg, who resembles Marie Antoinette in her youth—very fair, with a high Bourbon nose. The King of the Belgians was represented by the Belgian Minister, M. de Beyens. The Duc d'Aumale, who was, as it were, doing the honors of the place, was, like his brothers and nephews, all in black, with a dress-coat and white cravat; Princess Joinville; the old Princess of Salerno, the mother-in-law of the Duc d'Aumale, in a purple velvet gown, gorgeously adorned with lace; the young Duc de Guise, the only son of the Duc d'Aumale; Prince Philip of Coburg and the Duke of Montpensier were also on that side.

On the other, I noticed besides the bridegroom—who is a man of forty-four, still very young looking—and the young son he had by his first wife, a daughter of Queen Christina of Spain, the Countess Dzialynska, his sister, dressed in gray velvet adorned with gray fur, and Count Dzialynski, one of the greatest landowners of the Duchy of Posen. Countess Dzialynska is commonly called Princess Iza, and is well known by many foreigners in Paris, to whom she extends with the greatest affability the hospitalities of the magnificent Hôtel Lambert, one of the oldest palaces of Paris in the Ile St. Louis. She is very cultivated, fond of music and of the arts, the very type of a *grande dame*. There were with her several Polish ladies, all admirably dressed, with that peculiar air of elegance which makes all Polish ladies look, to use the word of a French *couturier*, like hot-house plants—Countess Zamoyska and her daughter Countess Sophia Tarnowska, Princess Maria Lubomirska, Countess Branicka. Among the men I noticed Prince Alexander Czartoryski; Count Stanislas Zamoyski, the brother of the general so well known in diplomatic circles; Count Charles Zamoyski, General Branski, General Bystrzanowski, Count Branicki, the French Duke of Larochefoucauld-Bisacera, married to a Polish lady, young Prince de Chimay, a Belgian whose mother is a Pole.

Below the choir and in the nave were only the most intimate friends of both families. When the bride arrived, she was received at the door by her own father, the Duc de Nemours, who bears a striking resemblance to Henri IV. He conducted her slowly to the choir; she was dressed in a white satin gown, with two flounces of magnificent old Alençon lace, quite yellow with age, and probably too valuable to be washed. She wore a thin tulle veil, which did not cover her fair face. She looked very happy, very calm, only a little pale, and she smiled gently to all the friends whom she recognized while she walked along with a graceful and dignified step. Behind her and her father came her brother, the Duc d'Alençon, a handsome young officer of artillery, her young sister, Princess Blanche, and behind them the lady who has educated Princess Marguerite and has, since the untimely death of the Duchess of Nemours, been to her almost like a second mother. When the Princess had kneeled in the centre of the choir, next to Prince Ladislas, the ceremony began. Bishop Dupanloup officiated. He is an old friend of the Orléans, and his emotion was intense when he began his sermon. He had been in old times the religious teacher of some of the princesses who were now before him; he had enjoyed the confidence of Queen Marie Amélie; he alluded to all the memories of the past; he gave a thought to the Queen, "so grand, so simple," to the father of Ladislas, the late Prince Adam, whom he described as a firm column, still erect among the ruins of the temple. Speaking to a young and charming woman, his sermon had perhaps something too severe and almost too painful from its numerous allusions to the sufferings of Poland and of France; but she was not an ordinary bride, she had learned since childhood the severe lessons of exile, and the Bishop thought the occasion appropriate to give, in the style of Bossuet, as it were, a lesson to his royal audience. Bossuet had often wandered in old times with Condé in the woods of Chantilly. All the associations of French history congregate on this spot. Louis XIV., the Czar Peter, the Emperor Joseph II., a host of potentates had visited there in old times. It is not wonderful if Bishop Dupanloup wandered out of the ordinary reflections which a wedding inspires.

When he asked the young Princess if she was willing to take Prince Czartoryski as her husband, she turned round to her father, made a long courtesy to him, as if to ask his leave; and when he returned her bow, she said yes with a distinct and silvery voice. When all was over, the carriages took the company to the château, which is not far distant. All the rooms, some of which are of a magnificent architecture, but which are hardly completely furnished—for the exile of the Orléans has just ended—were open. There is among the rest a long gallery, full of pictures framed between splendid panels, and representing all the battles fought by Condé. One central picture, by Mignard, is allegorical: it represents History tearing out of her book the pages which narrate the civil war of Condé against Turenne, the defender of young Louis XIV. All along the gallery was a table, covered with luncheon. The Duke did the honors himself to all his guests, with the help of some friends; princes, princesses, and commoners were indiscriminately installed before the table, and satisfied their hunger, rendered intense by the journey from Paris, the long ceremony, and the cold morning air. The Poles and the French mixed together, and there was a general feeling of satisfaction among the Poles to have, as it were, conquered for their cause and their nationality a representative of the most illustrious family of France. It is also reassuring for the friends of Princess Marguerite to think that her happy marriage has put her in a place of safety, and taken her out of the many troubles which are perhaps in store for her own family. It is very doubtful if she will ever have to leave the dignified retirement of the Hôtel Lambert and play a dangerous part in the fortunes of a new Poland; she is accustomed to be an exile, and it is more pleasant for her to be now an exile in France.

At three o'clock, all the guests were conveyed to the station, where the special train was waiting. The Princess herself joined the party, as she had refused to make a journey, and wished to go at once to the Hôtel Lambert, with her husband, to spend there her honeymoon. It was quite like herself not to go through the fiction of a journey and to do quietly what she had determined to do. She had changed her dress, and appeared in a dark purple gown, with a fur overcoat and a very *quiet* hat. In the evening there were great rejoicings at the Hôtel Lambert, but chiefly for the Polish ladies and gentlemen. There was a great banquet, where all the family silver was exhibited; but of this part of the ceremony I can give no detail.

Notes.

THE able conductors of the *Anglo-American Times* (London) have undertaken a penny publication called the *American Settler*—"a guide for British emigration to the United States." It is an eight-page paper of the size of *Harper's Weekly*, and will appear monthly. The contents of the first number are admirably chosen, and lead us to anticipate from this enterprise a high degree of usefulness. We notice that a correspondent, himself an old-countryman, who writes from Plattsmouth, Nebraska, calls that "the English State of the Union," and can "see no reason why the English should not take Nebraska, or, at all events, why the majority of the inhabitants should not be from England."——*La América Illustrada* is the title of a new Spanish illustrated newspaper, published fortnightly in this city, and in its main features resembling *O Novo Mundo*, from the office of which it is issued, if, indeed, the two journals have not a common editor as they have publisher—Mr. J. C. Rodrigues. Some of the contributors to the first number are the Minister from Ecuador at Washington, Prof. Mantilla, of the University of New York, and José Antonia Calcaño, member of the Spanish Academy, and "the most popular poet of South America." The regular correspondent from Buenos Ayres is a lady, Juana Manso, member of the Board of Education of Buenos Ayres, and "well known there for her incessant labors in behalf of public instruction." We learn from *La América Illustrada* that a treatise on International Law ("Derecho Internacional"), by an eminent Bolivian author, Agustin Aspiazu, is in press in this city, and that an excellent "Almanaque Hispano-Americano" for 1872 has already appeared here, edited by A. Da Costa Gomez. Also, that V. G. Manrique and R. I. Cuervo are preparing a "Diccionario de la Lengua Castellana," the first ever written and published in America, of which sample pages have already been issued at Bogotá.——To the *Sunday Magazine, Good Words, Good Words for the Young*, and the *Contemporary Review*. published by arrangement with English houses, Messrs. J. B. Lippincott & Co. now add *St. Paul's Magazine*, edited by Mr. Anthony Trollope.——A recent letter from Beirût (Dec. 29) mentions that Capt. Stewart, of the British Palestine Exploration Fund, and Mr. C. F. Tyrrwhitt Drake had arrived in Jaffa, and were about to commence the exploration in Western Palestine. The letter mentions also a rumor, which will be of interest to the American Palestine Committee, that Mr. Tristam and a party were about to begin an exploration east of the Jordan.——We did not mean, by a slip of the pen last week, to deprive Mr. Clarence *King* of the credit of the exploration of the Fortieth Parallel, of which he is geologist in charge.

—A remarkable outcry begins to make itself heard in certain parts of the country against the way in which political economy is taught in some of our universities—such as Yale, Harvard, and Williams. Some cutting remarks have appeared on this subject in one of our Philadelphia contemporaries which we need not name, in which Messrs. Mill, Malthus, Say, and Wayland are spoken of with suitable contempt as "dismal philosophers," and the college professors who "have been led astray" by them, and "have enthroned hypothesis above law, fiction above fact, error above truth, and, having done so, would misgovern mankind by means of the monster they have created," are warned that they will shortly catch it from the "judgment, the intelligence, the common-sense of mankind." Another warning voice is lifted up against Williams, which wonders whether Colonel Williams and the other contributors to this institution ever "for a moment dreamt that their doings were to be prostituted to destroy the industry of this country." This, we need hardly say, is a deadly thrust at Professor Perry, and fears are expressed that "the venerable President will soon be giving the prestige of his position in the same direction as his weak professor." Our Philadelphia contemporary aforesaid points out with pride that the University of Philadelphia "years ago rose above these false doctrines, and teaches the truth with all the acceptability and success that could be looked for or desired." It is pleasant to know that there is at least one institution in the land where the "truth" that has "money in it" is duly dealt out.

—We know of only one remedy for the state of things which our brethren deplore, and that is the Southern remedy with regard to abolitionism, viz., to withdraw our children from the institutions in which Mill, Malthus, Say, and their like are recognized as authorities; to refuse the books of these wicked men admission to our houses; and whenever we catch Perry, or any of the pestilent crew to which he belongs, in a protectionist district, to give them a nice coat of tar and feathers. That will teach them, if anything will, to take care how they spread their pernicious doctrinces "in our midst." The true way to select professors of political economy is by ballot at manufacturers' conventions. In that way, and that only, can the inroads of "false doctrine" be prevented. We rejoice to see in these protests on which we are commenting further evidences of the growth of the spirit which is creating such a salutary scare among State geologists. These wretched pedants have of late had the impudence to report in several instances that there was no copper, or tin, or iron in districts in which the interests of the State required that there should be plenty. The prompt decapitation which has followed in the case of some of them will teach their successors a little more real science than they ever got into their heads in their so-called schools. In short, there is a growing feeling that the professor of political economy, the chemist, the mining engineer, and the geologist should be the helper, and not the hinderer, of people who would like to make money and find the public coy. The pretence that so many of them set up—that they must tell the truth—is too shallow to impose on our people much longer. There is no real truth without money in it; and when we see so many eminent statesmen ready to endorse anything that promises even one dividend, the claims of a parcel of professors and schoolmasters to superior virtue are a little too preposterous. American science is not, and ought not to be, a thing of the closet and the laboratory, but of the ballot-box, and the platform, and the editorial sanctum.

—The following remarkable official invitation was issued by an American Consul at a heathen port to his countrymen last Christmas Day. The observance on the occasion of "the plain and frank usages of respectable American society," instead of the disgusting and immoral practices of low American ruffians, deserves, and we hope has called forth, an uproarious acknowledgment from the State Department:

> CONSULATE, —— ——.
>
> The pleasure of your society is requested, if not previously engaged, at this Consulate on Christmas Day, the 25th instant (as soon after 12 M. as convenient), for the interchange of friendly congratulations in honor of the day. The plain and frank usages of respectable American society will be observed.
>
> Repast will be served at 5 P.M.
>
> With much respect, ——, U. S. Consul.
>
> ☞ Please notify acceptance.

—The *Gazette des Beaux Arts* for January is an uncommonly interesting number. The opening article, Chapter XI. of Charles Blanc's "Grammaire des Arts Décoratifs," which is a continuation of his well-known and highly-esteemed "Grammaire des Arts du Dessin," is devoted to a discussion of the dress of the lady of to-day. We have read nothing on the subject anywhere else so philosophical as this, and its philosophy in no way hinders its being delightful reading both for those who enjoy seeing a woman charmingly dressed, and who do not mind understanding why the dress pleases in itself apart from the wearer; and for those women who enjoy being well-dressed, and feel that they are so, yet are not unwilling to be taught a reason for the faith that is in them. To our thinking, Charles Blanc's style is admirable every way. It is clear without being cold or formal, and picturesque without that too much of detail and color which sometimes makes French picturesqueness fatiguing. He is one of the most useful, as well as one of the most readable writers of art of our time, and a man to be relied on as well, for his information is both wide and deep, and his enthusiasm, which keeps him from being dull, never gets the better of his judgment. This particular article has the advantage over the one on men's dress (published in the *Gazette* for Nov., 1871) that it is illustrated. The illustrations consist of eleven wood-cuts engraved by M. L. Dumont, after designs by M. E. Préval. We venture to call the reader's attention particularly to these cuts, and we hope he or she will agree with us in thinking them worthy of attentive study both as designs and as specimens of wood-engraving.

—The present number of the *Gazette* contains also a well-written, sympathetic, but fair-minded account of the late Henri Régnault, the young artist whose Salomé made so great an impression in the salon of 1870, and who in less than a year after, 19th Jan., 1871, fell in the battle of Buzenval, in that desperate sortie made by the picked troops of Paris to meet the promised army of succor that never came. There is a very good etching given of the Salomé by M. P. Rajon. It appears, too, that in the volume recently noticed in the *Nation*, "Rome," by Francis Wey, there are twenty-seven designs by Régnault. These were originally intended to be published in the *Tour du Monde* as illustrations of M. Wey's voyage to Rome, but that gentleman saw their exceptional value, and laid them aside to be used when his article should be collected into a book. American readers of the *Gazette* will perhaps find the most interesting article in this number of it the one called "Un Musée Transatlantique," in which our New York Museum of the Fine Arts gets "a first-rate notice," and we are favored besides with a specimen of an etching by Jacquemart of one of the pictures from the collection bought by Mr. Blodgett. The advertising pages of the *Gazette* contain the announcement that the publication of these etchings is commenced. Messrs. Paul & Domenic Colnaghi & Co. will issue the work in ten numbers, each to contain ten etchings. The first number appeared on the 23d of December, and has just been received in this country by M. Knoedler & Co. (Goupil's), Twenty-second Street and Fifth Avenue, who are the agents, and ready to receive subscriptions. The list of plates in the first number is as follows: 1. The Sorceress, by Frank Hals. 2. Study of a Young Girl, by J. B. Greuze. 3. Repose, a Landscape with Figures and Cattle, by N. Berghem. 4. The Moerdyck, by Van Goyen. 5. St. John the Baptist Visiting the Infant Jesus, by Jacob Jordaens. 6. Portrait of Jacob van Veen, the Father of Marten von Heemskerck, by M. von Heemskerck. (This is the specimen given in the *Gazette*.) 7. Interior of a Dutch Cottage, by Willem Kalf. 8. Portrait of a Young Woman, by Lucas Cranach, the younger. 9. Portrait of a Dutch Burgomaster, by Barthelemy van der Helst. 10. Portrait of a Young Dutch Gentleman, by Adrian De Vries. The terms of subscription are as follows: Artist's proofs (very few), £3 3s per number. Proofs on India paper, £2 2s. Prints, £1 11s. 6d.

—Our readers are doubtless aware of the reputation of Herr von Mühler, Prussian Minister of Public Worship and Education, as a narrow-minded and bigoted official, whose retention in so important a place is one of those inconsistencies that offer a little shock to one's unreserved admiration for the Germans. One of the Berlin deputies to the Landtag has sought to throw ridicule on him as a Cultusminister who has mistaken his vocation, by publishing a collection of verses written in his youth by Herr von Mühler, and putting on the title-page one verse of a bacchanalian song by the same author:

"Wollt' man zum Minister wählen
Mich beim Wein"—

in which he pictured himself ruling a land full of topers:

"Trunken müssten alle sein—
Voll vom Wein!"

Though the Minister has shown himself sensitive to this little attention, it is the opinion of some good judges that he is needlessly so, inasmuch as the deputy's anthology contains not a few pieces of real merit, and gives Herr von Mühler a name in literature which he has not heretofore enjoyed. Herr Dohm, of the *Kladderadatsch*, professes to show proof that the Cultusminister has not mistaken his vocation, his line of attack being satirical parodies of the poems collected by Deputy Parisius. For instance, he turns the praise of wine above cited into a school-teacher's glorification of bread:

"Ei, wie wird mir doch so närrisch
Bei dem Wein!" etc.

becoming:

"Ei, wie bin ich doch so fröhlich
Bei dem Brod!" etc.

The full force of this parody lies in the fact that of the whole body of Prussian teachers, not one thousand have a salary of 500 thalers, while fully ten thousand receive from 50 to 150 thalers. In 1864, twenty thousand teachers received less than 200 thalers, and their condition is hardly improved to-day. "The schoolmaster conquered at Königgrätz, but starves at home," says a commentator on these unpleasant statistics.

—Miss Anne Brewster, writing from Rome to the Boston *Daily Advertiser*, gives an interesting account of some Dante readings she attended, by the Duke di Sermoneta. The distinguished company engaged after each canto in a conversation upon it, each one contributing his comment, emendation, or exegesis, as the case demanded. Of these the most noteworthy was perhaps a remark on the curious passage in the thirteenth canto of the "Inferno," which offers great obstacles to an elegant English rendering:

"Infiammò contra me gli animi tutti,
E gl' infiammati infiammâr sì Augusto
Che i lieti onor tornaro in tristi lutti.
L'animo mio, per disdegnoso gusto,
Credendo col morir fuggir disdegno,
Ingiusto fece me contra me giusto."

On this Delâtre observed that he had seen some MS. letters of Pietro delle Vigne, the supposed speaker, and that their style is precisely like these lines—full of antithesis and repetition. "Dante evidently knew it, and wished to give a faithful portrait of the Chancellor's mode of expression in this passage."

—Three historical works lately published in Italy deserve attention. The "Storia della Repubblica Milanese," of Francesco Peluso, is an attempt to supply needed information in regard to the period (1447–1450) referred to in the title—from the death, namely, of Filippo Maria Visconti to the accession of his son-in-law, Francesco Sforza. The same topic was treated by Bianchi-Giovini, in 1848 ("La Repubblica di Milano"), and will presently receive still further illustration from the labors of a committee appointed by the city of Milan to gather together the inedited archives of the Visconti epoch. Their third volume, now well advanced, is brought down to Sforza, and therefore includes the time of the republic. "Mémoires de la Guerre des Alpes," derived from the papers of Count Ignazio Revel, who died in 1835, is another work filling a gap in modern history. The contest here described by Revel from notes made during his service as a superior officer, was that among the Alps, from 1792 to 1796, between the Austro-Sardinians and the French Republicans, and has heretofore been chiefly narrated by partisans of one side or the other. The "Mémoires" will be found good military reading, and is accompanied by maps of the Maritime Alps and of Southern France. A new "Life and Times of Daniel Manin," by Alberto Errera and Cesare Finzi, is based on hitherto inedited documents deposited by his son with a public institution in Venice. The first volume extends from

1803 to 1848. Part of the new matter is the diary of Manin's daughter Emilia, which is very affecting reading. Of course large numbers of Italian patriots, past and present, figure in these pages; for example, the criminal process brought against Niccolò Tommaseo, in 1848, is here reported for the first time. Being asked who had instigated him in his writings, Tommaseo denied that anybody had done so, except on one occasion, when a couple of Jews, at the house of Manin, being in want of some one to draw up a petition for civil equality, Manin urged Tommaseo to undertake it, and he consented for want of some one better fitted. The law under which he was prosecuted directing an enquiry into the money or other advantage that might have accrued from the culprit's action, Tommaseo told his judges that he had declined the editorship of four newspapers and three professor's chairs in the Roman States, Piedmont, and Tuscany, and that from his exile in France he had brought home an article which may not be named in the presence of English ladies, but is mentionable in a prison—a pair of breeches, namely, costing eight francs, which he had worn every spring from 1839 to 1848, which fate had destined him to wear out in a Venetian prison, and which he had on at the moment of addressing his judges. Another work which we may also recommend is Giovanni Flechia's dissertation on the origin of names of places in Upper Italy ending in -ago, -asco, -ate, and -engo ("Di alcune forme dei Nomi Locali dell' Italia Superiore"). The author's illustrations show extensive familiarity with the dialects and nomenclature of the whole Peninsula. Finally, we can praise, without reserve, the balloon correspondence of the Milan *Perseveranza* from Paris, as being among the best of its kind for truthfulness, impartiality, and humor ("L'Assedio di Parigi, 1870–71"—"La Comune," five volumes in all, 32mo). The collection embraces a number of letters which failed to reach their destination, but of which the writer had preserved copies.

COBDEN CLUB ESSAYS.*

THERE is a school of political economists which holds that property in land rests upon precisely the same ground as other kinds of property; that its origin is the same, and its claims the same. Certainly this view finds support in the drift of popular sentiment on the subject, and, what is of still more importance, in the history of the laws which govern the tenure and transfer of land. This class of property has steadily diminished in relative importance from the time when it formed the sole, or at least the principal, basis of political institutions. The agricultural population of England, for example, which 800 years ago was three-fourths of the whole population, is now only about one-fourth. And side by side with this tendency of landed property to lose political weight, there has been an equally steady movement to assimilate the laws which concern the different kinds of property, and place land upon the same footing with stocks and chattels. In the United States we find this tendency most powerfully developed; and it is not to be wondered at that persons who have given no special attention to the subject have scarcely any conception of anything different, and find it hard to realize the immense power that landed property has exerted in other times and other countries. Nevertheless, there is at the bottom of men's minds a feeling that the distinction between real and personal property is something essential and permanent, not the chance result of a transient and artificial state of society. This volume of essays, published by an association one of whose chief aims is to facilitate the transfer of land, is itself a proof that the feeling exists and has a substantial basis. Granted that its aim is a controversial one, directed against the landlord class, as some of its critics have charged, the very fact that this kind of property permits and calls for an independent and distinctive treatment is one proof that it stands apart from other kinds of property. And, after all, it would be hard for the most captious criticism to detect any tendency in the book inconsistent with the most strictly scientific method of enquiry. Only two out of the whole collection of essays bear directly upon the practical problems which lie before British statesmen; and if two others are arguments for small culture as against large, and still two others bring forward historical facts which tell upon the same side, we do not know that the Cobden Club is to be blamed for borrowing arguments from history and political economy, provided it is all done in a candid and scientific spirit. That this is the case will appear from our analysis of the contents of this publication.

The volume consists of eight essays, varying very considerably in length, and devoted respectively to Ireland, England, India, the Netherlands, Prussia, France, Russia, and the United States. The two first are, as might be expected, the ones that deal directly with the practical questions of English statesmanship, the Irish question, and the English land question. Judge Longfield's essay on "The Tenure of Land in Ireland" contains a very calm and perspicuous analysis of the causes of the troubles in Ireland, which he traces very largely to the ignorance of the peasants and their low standard of living and agriculture. He is not in favor of peasant-proprietorship; "in general," he says, "it is not for a man's interest to be a peasant-proprietor." Neither does he think that the "Ulster Tenant-Right" can be advantageously extended to other parts of Ireland, or that it would be possible to establish by law a fixed and fair valuation of property upon which this could be based. He proposes, however, a plan of "Parliamentary" tenant-right which shall contain all of the Ulster system that is capable of being transplanted and of being legalized by set enactment, and which shall, at the same time, give free play to contract and recognize vested rights. Mr. Wren Hoskyns's paper on the "Land Laws of England" is, in the main, an argument in favor of greater facility in the transfer of real estate. It is shown, for example, by a comparative table, that under the present laws the expense incurred in purchasing land, irrespective of the stamp duty, is nearly twice as great for an estate of £1,000 as for one of £1,800; and very nearly the same for one of £100 as for one of £1,800. It is a complete refutation of the charge of an unfair bias in the compilers of this collection, and an illustration of the perfect independence of the several authors, that these two essays—the only ones that are primarily directed towards practical reforms—take an exactly opposite position. Judge Longfield thinks that it is bad economy for a laborer or farmer to become a proprietor; Mr. Hoskyns laments the separation of the English people from property in land. This proves, at any rate, that the Club had in mind only the attainment of scientific truth—not the establishment of any pet theory. A further proof of its fair spirit is shown by the comparative table at the end of the book, taken from an Irish paper, which contains a collection of facts going to show the superiority of the English system of large estates. M. de Lavaleye's discussion of "The Land System of Belgium and Holland" is hardly anything more than an argument in favor of small properties and "la petite culture," the argument being in the main drawn from the experience of the Netherland provinces, especially those of Belgium. It is eminently clear, well-arranged, and—one is tempted to add—convincing. The argument is very well supplemented by Mr. Cliffe Leslie's essay on "The Land System of France," which is not so much an elaborate argument for the system of small properties as an illustration of its workings in France, and a statement of the means by which it is maintained.

The four essays above described are those which will be most generally interesting to students of political and social economy, and to those whose chief concern is with the immediate problems and needs of the day. Mr. Campbell's long essay upon India (this and the one upon Ireland make up nearly one half the book) is also of interest to the English statesman who has to legislate for India; its chief value, however, is historical, as describing the various systems of tenure which have existed traditionally in that country and the various modes of settlements adopted by English administrations. Taken in connection with Mr. Maine's "Village Communities," it gives a tolerably complete account of this important subject. The student of history will, however, be most attracted by Mr. Morier's paper upon "Agrarian Legislation of Prussia" and Mr. Fancher's upon "Russian Agrarian Legislation." The historical sketches in introduction of these papers are of very high value. Mr. Morier begins with a summary of the views of Von Maurer and others upon the primitive Teutonic village communities. This essay is referred to by Maine, in the work above cited, as an authority upon this special subject; and this, as well as Mr. Campbell's, should be consulted by those who wish to go behind Mr. Maine's *comparative* study to the facts upon which his discussion is based. After these introductory pages, there follows a very clear statement of the revolution effected by Stein and Hardenberg in the early part of the century, together with some judicious remarks pointing out the analogy of this with the English "Enclosure" movement in the sixteenth century. As to the result, he uses the following striking language: "Three great countries—England, France, and Germany—began their political life from a similar agricultural basis. In each of them the great conflict between *immunity* and *community*, between *demesne land* and *tenant land*, between the *manor* and the *peasant*, has had to be fought out. In England the manor won; the peasant lost. In France the peasant won; the manor lost. In Germany the game has been drawn, and the stakes have been divided" (p. 329). We wish, by the way, that Mr. Leslie had given more than a page to the question of common ownership in France. The little he tells us suggests that there is much more that we should like to know.

Mr. Fancher's essay upon Russia also begins with an historical sketch which is exceedingly interesting and instructive. In many passages his description of the community system in Great Russia, within quite historical times, serves as a commentary upon Mr. Morier's sketch of what must have taken place in Germany in prehistoric times. For instance, the colonization of villages, described on p. 363, is in the main the same as that upon p. 289;

---

* "Systems of Land Tenures in Various Countries: A Series of Essays Published under the Direction of the Cobden Club." Second edition. London and New York: Macmillan & Co. 1870. 8vo, pp. 431.

and each system, the Teutonic and Slavic, serves to explain the other. The ends reached from these quite similar beginnings were very different—witness feudal Germany and the reforms of Stein; autocratic Russia and Alexander II.'s ukase of emancipation. There is nothing in the book, not even Mr. Morier's sketch, which we have found more instructive than Mr. Fancher's account of the manner in which the Russian village system was developed and transformed—at the same time without being destroyed; the problems which arose when emancipation was determined upon; and the manner in which these problems were approached. He makes an interesting suggestion, which, as he shows, is not without plausibility, that it may have been from the knowledge of Queen Elizabeth's legislation against vagabonds that Boris Godunoff (died in 1605) borrowed the scheme which turned the free peasants into predial serfs. In regard to the agrarian legislation of the present emperor, which is described in detail, the author is inclined to doubt the permanence of the *mir* or village community system. "If I am right in this, then anything rather than communistic habits and leanings are to be expected from them [the peasants] as free men; and I hope it will be so, in the general interest of civilized humanity" (p. 405).

There remains Mr. Fisher's essay on the "Farm-land and Land-laws of the United States," which is a short and rather slight affair, to be criticised rather for what it omits than for what it contains. There is a table of the amount of lands, farmers, laborers, etc., in the several States; a compendious and convenient statement of the laws in regard to the transfer of real estate; and some selections from the statutes of the United States, and the States of Massachusetts, Pennsylvania, Wisconsin, Illinois, Kansas, and Georgia. The remarks which accompany these statistics are of no especial value; we have the usual allusions to "cities rivalling some of the proud capitals of Europe which had been founded a thousand years ago," "as good land as any in the world," "the great prosperity of the country," and "the industry of our population." Our superficial agriculture is excused on the ground that "we can, and do now, produce a bushel of wheat at much less cost than the most scientific farmer of England can by the best approved method of cultivation, *even if he paid nothing for the use of his land*"—a statement which, if true, does not tell us how it will be when our process of "skinning the land" has been carried on a generation or two longer. As compared with the other essays in the volume, this is utterly without appreciation of the higher aspects and relations of the question. All the others present matter for the profound attention of the statesman, the economist, or the historian; this contents itself with bare statistics and forms. This is not for lack of matter so much as from the lack of habit in this country of looking below the surface, and seeing that land differs essentially from every other kind of property. American land tenures might be treated in either of the three methods illustrated in other portions of the book. Historically, much instruction could be derived from a study of the systems introduced by the early settlers into the several colonies. A system of community of property has been pointed out in these columns, at once in the New England colonies and in the French settlements on the Mississippi—whatever may have been their cause and origin. New York has still, we believe, some remnants of the manorial system; and it is not impossible that a careful search would bring to light other peculiarities. These, however, are matters of curiosity rather than of practical importance. The social and economic aspects of the land question afford many topics for discussion of a very practical nature, even in America.

In regard to the South, for example, Mr. Fisher only gives us a hint that since the war there has appeared a tendency towards small holdings. This is very true; in fact, it is almost a truism; but how does this tendency work in regard to the plantations? The plantation system—partly an outgrowth of circumstances, partly a partial copy of the manorial system of England—had a far wider effect than merely that of giving form to American slavery. It is the foundation of the social system of the South; it is the territorial unit of South Carolina, just as the *town* is of Massachusetts; and it seems destined to give shape to the free labor of the future as it did to the slave-labor that has passed away. At all events, this tendency was very clearly marked during the first few years after emancipation; the small holdings were parts of plantations, and there were manifest tendencies towards the development of communistic rights on the part of the freedmen of the several plantations. It was not to be expected that these tendencies should survive the establishment of a completely free society; it is, however, not impossible that some plantations are still held in common by their freedmen, as they were six or eight years ago. Again, the decay of the New England towns deserved consideration in an essay of this sort. It results from a twofold movement: a centralizing one, which leads the dwellers on the farms to move into the villages, and which drains the country towns to build up the cities; and an economical one—which is, indeed, dispersive—a movement from the hard and unremunerative labor of New England to the rich lands of the West. These movements are independent of each other. It is every way best that these rocky hills should be left to become pasture and forest; on the other hand, the rapid centralization suggests more serious and threatening problems. Another question which arises is as to the tendency of land itself—whether this, too, is becoming centralized, like everything else. Is the abandoned land in New England bought up by a few capitalists; and if so, will this be a source of political power? Are the farms in the West getting into fewer and fewer hands? Are foreigners taking the place of native citizens in the ownership and cultivation of land, both West and East? On the whole, one would say that if native Americans are leaving the farms and thronging to the cities, it is because they are needed there to perform, on the whole, a higher order of services to civilization; and that, if land is coming into a few hands, there is no danger of its being the source of excessive political power, so long, at least, as the great corporations stand as they do. It is not the possession of land, but the existence of a landed aristocracy, with special privileges and powers of jurisdiction, that is perilous to freedom.

We have indicated a few of the points that an essay upon the Tenure of Land in the United States ought to take up. In regard to the rest of the book, we have little but grateful commendation. We have indicated one subject in relation to France which we wish had been followed out; the essay on Ireland, too, needs for its full comprehension some such historical discussion as Mr. Seebohm's in the *Fortnightly Review*. If we went on to wish for essays upon the southern and northern countries of Europe, and upon the relics of Roman agrarian institutions in Italy, France, and Spain, or for a sketch of the primitive systems of land tenure in the Celtic countries similar to those given by Mr. Morier and Mr. Fancher for Teutonic and Slavic communities, we should be indicating materials for another volume as large as this.

NUMEROUS POETS.[*]

I.

THE books in metre are doubtless the class of books most apt to accumulate upon the editorial table and lie there unreviewed. Not to speak of the poetical collections made into gift-books for the holidays, nor of the volumes of "favorite poets" and "household books of poetry," which are apt to be not very different in different years, nor of the new editions got out for various reasons or on various pretexts, there are also the many volumes, more numerous with each year, containing the cultivated verses of the man of cultivation, which having everything else but not the indescribable something, make no very peremptory call for description and criticism; and, still more numerous, there are the many, many volumes—these, too, being not so different from their predecessors in other years—in which the new aspirant sends out his venture watched with so many hopes and appealing for a welcome often so far other than gods and columns are able to give it, that these volumes, too, like the rest, are often suffered to lie without welcome at all. But putting together familiar names and obscure new ventures of little value or none, and works the fame of which is long established and which no number of new editions or of designs by well-known artists can ruin or injure, we will endeavor to say a few words about each of the books of poetry which remain over from last year unnoticed by us.

The thin volume with the title of "Ivy Leaves" contains a great deal that we feel sure will please many readers as being well-finished verse infused with poetry, and a great deal that we should think might be found very consolatory by many devout and wearied hearts which, needing consolation, are accustomed to seek it in the truths of Christianity, but hardly to find it without the sympathy and help of others. Miss Atkinson's prelusive verses indicate with sufficient distinctness the prevailing tone of her book, which if hopeful is hopeful with a borrowed hope and strong in another's strength:

> "This Ivy grew upon the dear church wall,
> Clung loving round its pillars, crept across
> The colored splendors of its window fair,
> And leaned where it could feel the organ thrill
> Which shook our hearts too with its harmony.
>
> "This Ivy hung above the sacred porch
> And made the carven arches bright and fair
> With little creeping sprays of tender green,
> A memory of summer in the snow,
> The joy of Christmas lingering all the year.

---

[*] "Ivy Leaves. By Mary Ellen Atkinson." Philadelphia: J. B. Lippincott & Co. 1870.

"Our Poetical Favorites. By A. C. Kendrick." New York: Sheldon & Co. 1872.

"Lyrical Poems. By Francis Turner Palgrave." London and New York: Macmillan & Co. 1871.

"Songs of the Heart. Selected from many Sources." Illustrated by T. Moran, R. S. Gifford, Mrs. Hallock, Miss Ledyard, Hoppin, McEntee, etc. New York: C. Scribner & Co. 1872.

"Imogen, and Other Poems." Boston: B. B. Russell & Co. 1871.

"Poems. By Wm. Allen Butler." Boston: J. R. Osgood & Co. 1871.

"Admetus, and Other Poems. By Emma Lazarus." New York: Hurd & Houghton. 1871.

"Landmarks, and Other Poems."_ By John James Piatt. New York: Hurd & Houghton. 1872.

"Under this Ivy I have entered in
From all the tumult of the outer world
Into the quiet of my Father's house,
From all the heat and burden of the day
Into the joy of peace and holy rest.

"Under this Ivy I have passed again
Out from the sacred stillness and the songs
Of happy worship to the work-day world,
Refreshed and strengthened. For dear memory's sake
I pluck these Ivy leaves to take with me."

So her verses, too, are ivy-leaves rich in associations with the church, where she has found "refreshment, light, and peace,"

"And filled her heart with music sweet and calm."

Readers who are indifferent to such considerations as have moved Miss Atkinson to most of her singing will perhaps like best the poem called "The Nixie," which, though not out of key with its companion pieces, owes more to the moral imagination than they, and is less purely the product of religious feeling.

"Our Poetical Favorites" is a volume of handy size, containing more than four hundred pages and, we should think, nearly as many separate poems and parts of poems. It should therefore contain the poetical favorites of a great many persons whose favorite pieces are different, and favored for different or opposing reasons; and should contain, besides, one would say, the poetical favorites of a great many people who are not very fond of poetry. Both these things which on seeing it one would expect it to do, Mr. Kendrick's volume does in fact do. That it contains all the poetical favorites of the persons fondest of poetry, or very many such favorites, we would not say. It is a popular collection, consisting of such pieces of standard poetry as have been approved by the consenting voices of the average taste and the educated taste, and, with these standard pieces, many such poems as find their way from newspapers, song-books, and volumes of current minor poetry into the collections of readers who make scrap-books. Mingled with the other pieces are many hymns. There are few readers, however, who may not find the volume good and useful. Any reader of poetry may profitably spend half an hour now and again over the semi-poems, which in the eyes of most are the best and truest poetry. Neither "Jamie's on the Dark Blue Sea" nor "Look on me with thy dark brown eyes, Philip my King," is probably a favorite poem with Mr. F. T. Palgrave; but it is pleasant enough to have them at hand, along with "A Soldier of the Legion," and the like. But in view of the fact that there is a "second and enlarged" edition of "Our Poetical Favorites," and the fact that other editions will no doubt succeed this, we feel impelled to say to Mr. Kendrick that we think he has already erred in the direction of too easy inclusion, and that to suppose that "a work of triple the size could scarcely exhaust the treasures of this department of our literature" is, in our judgment, a mistake which tends to the injury of his book. What is meant by "this department of our literature"? Not surely all the smooth verses that anybody may write which may succeed in getting into print.

Mr. Palgrave's "Lyrical Poems" is an original volume of verse by the well-known compiler of "The Golden Treasury of Songs and Lyrics," and if we can promise the reader of the original verses none of the delight, we can assure him of some of the concomitant pleasures, which he has had in using the "Treasury." Rarely is there in Mr. Palgrave's verse anything that strikes the chords which answer to poetry, but there is an elevating refinement of feeling, a precision of not very weighty thought expressed with niceness, an instinctive withdrawal from all that is coarse of texture and of low nature rather than a lofty remoteness from all but high things, an elegant simpleness of workmanship, and—for a nearest approach to poetry—an occasional sweetness of sentiment, as of the sentiment of conjugal love-making or of paternal affection, which will all be found very agreeable by most readers already familiar with Mr. Palgrave. There is also, as there could hardly fail to be, some verse amid Mr. Palgrave's lyrics which embodies good criticism; and we may add that of this some strikes us as being fair criticism upon a number of Mr. Palgrave's contemporaries who hold the opinion that we of to-day can be some other sort of Greeks in literature than Greeks not worth having and at the same time spoiled moderns. And these might plead against Mr. Palgrave's criticism in "The Ancient and Modern Muses" some of the expressions in his dedication, which is addressed "to the immortal memory of Athens." The dedication is a regret that the liberalism of to-day is in certain respects inferior to that of immortal Greece, and, so far, is an incitement to that waste of strength of which many of the younger poets have afforded examples. Much more encouraging than the regrets of the dedication—

"That unfantastic strain
Void of weak fever and self-conscious cry,
Truth bold and pure in her own nakedness,
What modern hand can try,
Tracing the delicate line twixt More and Less?"

—much more likely to promote effort and activity in the direction of the true development of the modern literary spirit, are words like these, from "The Ancient and Modern Muses":

"But we who work with smaller skill
And less refined material mould
—This close conglomerate English speech,
Bequest of many tribes that each
Brought here and wrought at from of old,

"Residuum rough eked out by rhyme,
Barbarian ornament uncouth—
Our hope is less to last through Art
Than deeper searching of the heart,
Than broader range of uttered truth.

"One keen-cut group, one deed or aim,
Athenian Sophocles could show,
And rest content:—but Shakespeare's stage
Must hold the glass to every age—
A thousand forms and passions glow

"Upon the world-wide canvas. So
With larger scope our art we ply,
And if the crown be harder won,
Diviner rays around it run
With strains of fuller harmony."

This seems to us to be in the main proposition perfectly sound and serviceable. We do not know that we care much about what is said as to the relative merits of the Greek and English tongues, because we shall be unwilling to believe that Mr. Palgrave has ever found the Greek so ductile to every thought, sentiment, and emotion of his mind and spirit as that it was a means of expression for him in comparison with which his native English was stiff and cumbersome. Yet, if he has not, and if, moreover, he does not know, either, what would have become of the Greek tongue had the Athenians of pure blood been able to perpetuate their race down to these days of steamships in the Ægean, and Greek patriarchs of the Holy Eastern Church at Athens, and a King George from Thule reigning over Lacedæmon and Thebes, we do not see how it is very pertinent to the question in hand to bring the "material moulds" into comparison. The true statement of the case would seem to be, as Mr. Palgrave says, that

"Our hope is less to last through Art"

—of the Greek type—

"Than deeper searching of the heart,
And broader range of uttered truth";

and this is not only our hope, but it is the burden laid upon us, and from it there is no escape. Mentioning as good examples of Mr. Palgrave's more popular manner such pieces as "The Old Year," "The Three Ages," "Now and Ever," and "Eugenia," we take leave of our author by quoting these two pretty stanzas, "To a Child," which hint not unfairly of Mr. Palgrave's range and the degree of skill with which he works within it:

"If by any device or knowledge
The rosebud its beauty could know,
It would stay a rosebud for ever,
Nor into its fulness grow.

"And if thou couldst know thy own sweetness,
O little one perfect and sweet!
Thou wouldst be child for ever,
Completer whilst incomplete."

"Songs of the Heart" is an illustrated Christmas and New Year's book, and is the third volume of the reissue of Folk Songs, of which "Songs of Life" is the first and "Songs of Home" the second. The series is to include one other volume called "Songs of Nature," and when that is issued we shall have the original volume of "Folk Songs" in four illustrated volumes, embellished after designs by American artists, and, moreover, enlarged by the addition of new poems. In this volume, for example, we have Mr. E. C. Stedman's pretty poem of "The Doorstep," which appeared a couple of years ago for the first time, and there are also three new poems taken from *Scribner's Monthly*, of which one, "Making Port," has much unconventional vigor of description, and another, "Love's Young Dream," is clever enough as *vers de société*, as agreeably redolent of New York as a Brady's photograph of the sexton of Grace Church, or a card of invitation to a ball in honor of the Grand Duke Alexis. As to its merit as a collection of poems, "Songs of the Heart" is such, considering the use for which it is intended, that we do not feel called upon to praise it or to blame it. It is better than the publishers might justifiably have made, and it might have been made better without trouble or without danger to its chances of sale. We glance at the table of contents, and see on one page, in the order here preserved, the names of Tennyson, Browning, Wordsworth, Mrs. Norton, Dobell, Leigh Hunt, Maria Brooks, W. S. Roscoe, "H. H.," M. E. Dodge, N. A. W. Preist, J. G. Holland, George Macdonald, Lytton, "H. H." again, Dunlap, and sixteen others of about equal and equally various merit. Our principal fault-finding would be directed against the designers, we believe. Mr. Hoppin having to design a picture to illustrate Leigh Hunt's pretty verse about a prettier incident which occurred in the course of his acquaintance with the Carlyles, might have done better than represent Mrs. Carlyle, in "Jenny Kissed Me," as a youthful maiden kissing her toothless grandfather. And there was a remarkable carelessness about fitting the picture to the meaning of the poem in the case of Mrs. Hallock's design for "Too Late I Stayed." Similarly bad is the illustration of Waller's "Girdle," and bad for other reasons, and really disagreeable enough to have their disagreeableness pointed out, are the illustrations to "Dolly Sullivan," "James Mellville's Child," and "A Musical Box."

We hardly expect to be believed, but the author of "Imogen" prints a volume of verse, seriously intended, of which this is a favorable specimen:

> "Soon came the banquet,
> And the guests were ranged around;
> While at the head the host
> Presided like a prince.
> The smoking joints he cleaved with his unsheathed sword:
> The showered blows fell thick and fast,
> Quick as the eagle's wing that smites
> The unresisting air in mortal agony."

Of Mr. William Allen Butler's book, the best known verses, those called "Nothing to Wear," are likewise the best—though for that matter they are not different from many others of their author's verse, except in being more fortunate of their subject, which invited to an easy exercise of obvious satire, and evoked from Mr. Butler what it suggested to the average satirist of the newspapers:

> "Miss Flora McFlimsey, of Madison Square,
> Has made three separate journeys to Paris,
> And her father assures me each time she was there,
> That she and her friend Mrs. Harris
> (Not the lady whose name is so famous in history,
> But plain Mrs. H. without romance or mystery)
> Spent six consecutive weeks without stopping
> In one continuous round of shopping—
> Shopping alone, and shopping together,
> At all hours of the day, and in all sorts of weather,
> For all manner of things a woman can put
> On the crown of her head or the sole of her foot,
> Or wrap round her shoulders or fit round her waist," etc., etc.

The serious pieces which are here published with these and some similar comic pieces are of no distinctive character.

Miss Emma Lazarus gives us a volume of poetry nearly all of which is of promise either for what it is or for what it is not. Among the pieces of the latter sort we count the greater number of poems in her volume, because of their freedom from the common faults of youthful writers of verse, and especially youthful female writers of verse. In each case, either her selection of her subject, or else her grasp of it and her thoughtful way of dealing with it, whether wisely chosen or not, indicate more than common ability, and separate her from the writers of the ordinary sentimental verses adorned with imagery more or less successful. Among the pieces which we think are to be praised for positive merits of their own are those composing a series which the author names "Epochs." These are in a way sentimental poems; but there is in them a naturalness of sentiment, a force and apparent honesty, united with a certain artistic reserve, of expression, a firm hold on the realities of feeling amid temptations to morbidness of feeling, which altogether seem to us worthy of marked praise and to augur well for the writer's future. Of the "Admetus," the "Tannhäuser," the "Lohengrin," and the "Orpheus" the execution is to be commended, we think, rather than the choice of subjects or anything that the author imports of her own into the old tales. Like her translations, they probably have done her more good as practice pieces than they will do any one else. It is perhaps worth while to say that Miss Lazarus informs her readers—the imputation of plagiarism having been brought against her in private circles—that "Admetus" was completed before the publication of Mr. William Morris's "Love of Alcestis," and "Tannhäuser" before the same gentleman's "Hill of Venus." The disclaimer was hardly necessary, we should say, outside of the private circles. Miss Lazarus's blank verse is not strictly her own; a poet's mastery of that most difficult metre comes later; but the tiresome diffuseness, the ill-judged archaisms, and the cloying smooth sweetness of Mr. Morris's versification Miss Lazarus is far from. And as for the subjects, whose are they not that chooses to take them?

Mr. Piatt's volume called "Landmarks" takes its title from its first half-dozen poems. Of all these we may say that their pervading feeling is that with which a certain sort of Western man, who can partly remember the pioneer days of the Middle West, now regards or recalls the vestiges of the past while around him he hears the roar of the railroad trains and the clatter of machinery, and sees the lights of the city beside the stream where he knows the smoke of his father's solitary chimney was once all that dimmed the prairie air. A certain sort of a Western man, we say, for there is a retrospective pensiveness about Mr. Piatt's poetry that one does not think of as the feeling which would agitate most Western men engaged in contemplating internal improvements. The wheat-sheaves cut by the sickle, the old stage-coach and the baiting tavern, Mr. Piatt's muse takes to more kindly than to the six-storied hotels and the "through lines" and McCormick's reapers, of which we have no doubt he approves during business hours. Cheerful enough, however, is the sonnet that closes the series of poems we have mentioned. The poet paints an escutcheon for some one of the new States which are arising in the West, and the picture drawn by him of the present and future of yet another Ohio will serve also as a picture of the past and present of the Ohio in which he writes:

> "Far off a young State rises full of might:
> I paint its brave escutcheon. Near at hand
> See the log cabin in the rough clearing stand;—
> A woman by its door with steadfast sight,
> Trustful looks Westward where, uplifted bright,
> Some city's Apparition, weird and grand,
> In dazzling quiet fronts the lonely land,
> With vast and marvellous structures wrought of light,
> Motionless on the burning cloud afar:—
> The haunting vision of the time to be,
> After the heroic age is ended here,
> Built on the boundless still horizon's bar
> By the low sun, his gorgeous prophecy
> Lighting the doorway of the pioneer."

This seems to us good, and as good as anything else in Mr. Piatt's volume, though in the other poems there is much of pretty fancy. The best thing about the volume, perhaps, is that its contents, be their worth much or little, are Mr. Piatt's own. It is easy to exaggerate the value of this quality in poetry; but it is not easy to exaggerate its rarity in poetry not of the higher order, and in virtue of possessing it Mr. Piatt's poetry has a claim to remembrance, and he to the thanks of his readers.

"THE SPEAKER'S" PENTATEUCH.*

THE idea of the work before us was conceived, as the preface informs us, some eight years ago by the veteran Speaker of the British House of Commons, the Right Hon. J. Evelyn Denison, who felt that "there was a want of some commentary upon the Sacred Books in which the latest information might be made accessible to men of ordinary culture," and in which every educated man "might find an explanation of any difficulties his own mind might suggest, as well as of any new objections raised against a particular book or passage." These few words explain the real, or at least the principal, object of the work. It is to form a bulwark of defensive criticism, erected against sceptical attacks originating in "the changing phases of physical, philological, and historical knowledge." The Speaker consulted on his project the Archbishop of York, who undertook to form a company of divines, each of whom was to expound the portion of Scripture "for which his studies might best have fitted him." The Canon of Exeter was chosen editor. The work was divided into eight sections, of which the volume before us—about 930 double-columned and very neatly printed large 8vo pages—embraces the first. For cases of dispute the Archbishop of York and the Regius Professors of Divinity of Oxford and Cambridge were appointed a committee of reference. It was decided to reprint the Authorized English Version, without alteration, with the marginal references and renderings, and to amend in the notes all translations of passages proved to be incorrect. Subjects involving much research and fuller illustration were to be treated in separate essays at the end of each chapter, book, or division. This was in brief the plan of the Commentary, and it has been adhered to under many expected and some unexpected difficulties. Three contributors, two of whom had undertaken the commentary of Exodus and Numbers, died before the publication could be begun, which considerably augmented the labor of the survivors. Of these, the Bishop of Ely, E. Harold Browne, has contributed to the first volume the general introduction to the Pentateuch, the introduction to Genesis, and the commentary and critical notes to the same book; the editor, the introduction to Exodus, the commentary and notes to the first nineteen chapters of the latter book, and three comprehensive essays "On the Route of the Israelites from Rameses to Sinai," "On the Bearings of Egyptian History upon the Pentateuch," and "On Egyptian Words in the Pentateuch"; Samuel Clark, Vicar of Bredwardine, the commentary and notes to the last twenty-one chapters of Exodus, and the introduction and the commentary and notes to Leviticus; and T. E. Espin, Rector of Wallasey, the introduction to Numbers, a portion of the commentary and notes to the same book—the rest being by the late Vicar of Barrington, J. F. Thrupp—and the introduction and the commentary and notes to Deuteronomy.

That a work published under such auspices, with such aims, and with such literary forces and resources at its disposal, represents both a great deal of orthodoxy and a great deal of learning, need hardly be stated. To illustrate the former, it will suffice to notice that the writer of the general introduction to the Pentateuch, destined chiefly to vindicate Moses's authorship of it, finds it "extremely probable that the very autograph of Moses was . . . stored up first in the Tabernacle and afterwards in the Temple" (p. 11); that in the history of creation he sees "that which was very probably the ancient primeval record of the formation of the world," and "may even have been communicated to the first man in his innocence" (27); that he is "led to conclude that the Deluge is described as from the point of view of an eye-witness" (p. 75) and that in the narrative of that event we have "in all probability . . . the very syllables in which the patriarch Shem described to the ancestors of Abraham that which he himself had seen and in which he had borne so great part" (p. 76); and that it seems to him probable that in the times preceding the collection of the Hebrew Scriptures and their paraphrases even "a Targum on the Pentateuch would easily be handed down memoriter" (p. 14). Conclusions and beliefs of this kind being, even in this critical age, not rare in books calling themselves critical, we may be allowed to state them without an attempt at refutation. The arguments used for the defence of views so extreme, though of very unequal value, and not at all novel, are mostly very ably presented. In general, however, we may say they are apt rather to strengthen than to create belief. A portion of the Canon of Exeter's plea for Moses's authorship of Exodus—that contained in the second paragraph of the introduction to that book, and drawn from the characteristics of the narrative and of the lawgiver—is, if not convincing, at least very strong. Another, presented in the following paragraph, which makes the account of the ten plagues of Egypt a proof of the antiquity and authenticity of the book, is at least equally feeble, to use a very mild expression. Some points of the general introduction are equally infelicitous. Thus we hear that "*nothing* points to Joshua as the writer of the Pentateuch" (p. 19), an assertion which is easily refuted by a comparison of Deut. xxix. 10, 11: "You stand this day all of you before the Lord your God; your captains of your tribes, your elders, and your officers, with all the men of Israel, your little ones, your wives, and *thy stranger that is in thy camp, from the hewer of thy wood unto the drawer of thy water,*" with the account (Josh. xxiii. 2) of the call "for all Israel, and for their elders, and for their heads, and for their judges, and for their officers," by Joshua, who had received the Gibeonites and made them "hewers of wood and drawers of water for the congregation" (Josh. ix). And here we must still further remark that the substitution of one letter for another in the Hebrew text will change the words of Deut. rendered in the Authorized English Version "your captains of your tribes" (Heb. *shibtekhem*) into "your captains, your judges" (*shofetekhem*), the very words of the corresponding passage in Joshua—the Hebrew having the same word for "captains" and "heads."

---

* "The Holy Bible according to the Authorized Version (A.D. 1611), with an Explanatory and Critical Commentary, and a Revision of the Translation by Bishops and other Clergy of the Anglican Church. Edited by F. C. Cook, M.A., Canon of Exeter." Vol. I., Part I.: Genesis—Exodus. Vol. I., Part II.: Leviticus—Deuteronomy. New York: Charles Scribner & Co. 1871.

In the same way, we are told (p. 19) that "Samuel . . . . is nowhere presented to us as a legislator," in face of the Biblical statement that when appointing the first king "Samuel told the people the manner of the kingdom [in the Heb. text, *mishpat hammelukhah,* the law of royalty], and wrote it in a book [in the original, *bassefer,* in *the* book], and laid it up before the Lord" (1 Sam. ix. 25). And again we hear (p. 19) that "David is as little likely as Samuel to have had time for composing the Pentateuch or drawing up its sanctions," for "he was a man of war, and though the darling and the hero of his people, yet by no means exercising that kind of control and influence which is needful for one who would impose a new code of civil and religious laws"—as if Justinian and Napoleon had elaborated their codes with their own pens, in times of profound peace, and had been revered as saints by their nations, far above David, who had only such men as Gad, Nathan, Asaph, Heman, and Jeduthun to aid him in his labors, and to vindicate him before Israel. Strange to say, while the Bishop of Ely overlooks the prosaic *bassefer* (in *the* book) quoted above, and referring to a book kept before the Lord, he finds (p. 10) in the *hassefer* used in the elevated style of Isaiah (xxix. 11, 12), a mention of *the* book, viz., of the Law, and in that mention an argument for the antiquity of the latter, and changes (p. 10) the "they shall lick the dust like a serpent" of the Authorized Version (Micah vii. 17) into "they shall lick the dust like *the* serpent," in order to have an allusion to the serpent of Paradise, as if nouns with the definite article were never used in Hebrew in an indefinite sense. Now, the very chapter of Isaiah which he quotes from contains a number of examples to the contrary: "As when an hungry man [Heb. *hara'ab, the* hungry man] dreameth;" "as when a thirsty man [*hatztzame, the* thirsty man] dreameth;" "into a fruitful field" [*lakkarmel,* into *the* fruitful field]; "for a thing of nought [*battohu,* for *the* thing of nought]. The argument for the pre-Mosaic origin of the name Jehovah (p. 26) drawn from the form of the verb underlying it is still more fallacious. "In Hebrew," we are told, "the verb is *always hayah,* though in Syriac and Chaldee it is always *havah.* A name, therefore, derived from *havah,* and existing in ancient Hebrew, must have come down from a time prior to the separation of the Hebrews from their kindred Aramæans, *i. e.,* not later than the time of Abraham." But the truth is that while the Chaldee has only *havah* for *to be,* the Hebrew has both *hayah* and *havah,* and that the latter form occurs not only in Ecclesiastes (ii. 22) and Nehemiah (vi. 6), where it may be an Aramaism, but also in Genesis (xxvii. 29) and Isaiah (xvi. 4).

Without entering into a close examination of the single notes and comments, or of the special treatises contained in the "Speaker's Commentary," we must observe, in general, that the work is, on the whole, very ably and elaborately done; that the notes are specially remarkable for clearness and conciseness; that the value of the criticisms is often impaired by foregone conclusions, to which the results of enquiry must be adapted; that some of the essays are characterized by a timidity of judgment which betrays the compiler; and that, in spite of many imperfections, this revised English Bible cannot fail to be acknowledged as one of the foremost publications in this field. Among its minor imperfections is a lack of uniformity in the English equivalents for Hebrew and Egyptian words. Compare, for instance, *Zebach* (p. 496) with *chelev* (p. 500) and *nabhi* (p. 654), in which *b, v,* and *bh* represent one and the same Hebrew sound; or "Zal*ou*" with "Zar*u*" (p. 466), and the often repeated "Shas*ou*" with the equally frequent "Aper*u*" in the Egyptian essays. Of misprints and slips of the pen, too, occur such as *be'aroth* (Heb.) for *me'aroth* (p. 464); *meberoth* (Heb.) for *mekheroth* (p. 492); *tocakhoth* for *tokha'hoth,* and *elleh* for *eleh* (p. 791); *seer* (Heb.) for *sheer* (p. 18); *kinnur* for *kinnor* (p. 57); "the Persian *greifen*" for "the Persian *girifthen* or *grifthen* (Ger. *greifen*)" (p. 52). The note on "*Ur of the Chaldees* (p. 98) opens with the false statement that "there is great diversity of opinion as to the site of this city, except that it was in the southern part of Babylonia"—a statement refuted in the following sentences.

CASTILIAN DAYS.[*]

"CASTILIAN Days" is not so much a book of travel as a collection of essays on a number of topics to which Mr. Hay, being in Spain, naturally gave some attention and concerning which, being a ready and willing writer, he naturally set himself to write. The result of his observation and activity is a more than usually readable book, from which one may pleasantly learn something of Spain as she is, while at the same time learning something about Mr. Hay's opinion as to the necessity of establishing a republic in Spain; as to the malign influence of Catholicism on Spanish well-being; as to the works and ways of Spanish politicians and statesmen; as to the Spanish character, and the causes of its being what it is; and as to various other matters which are matters of opinion or of fact, and of which Mr. Hay treats with a clearness and forcibleness which leave his reader in no doubt as to the conclusions at which he has arrived. We have not the knowledge of Spain, present and future, that qualifies us to form a satisfactory judgment, but we have found ourselves, as we read, reserving our assent to more than one opinion of our author's. Here, for instance, is one which is of constant occurrence through the book: In January, 1870, the true course for Spanish statesmen, says Mr. Hay, was once for all to discard the idea that any good was to be got from a constitutional monarchy, that form of government being "a compromise with tradition, unworthy of the time," and useless in the attitude of free choice in which Spain at that time stood. Then, the absolute monarchy being an evident impossibility, there remained the republic, and the republic, says Mr. Hay, was "the only logical solution," and the one having more and better chances than any other of giving the country peace. This may turn out to be so; meantime, one cannot but think that the Spaniards themselves may properly be presumed to know something of what kind of a government they think they want; that though the ignorance of Spaniards concerning the advantages of a republic is disgraceful, that is no reason for at once making Spain into a republic, but rather an appreciable reason for not doing so at present; and that Spanish statesmen may go so far as to concede to Mr. Hay, as one of them did, that America is fortunate and enviable in having no traditions, and yet may go on to demand for Spain Mr. Hay's "compromise with tradition, unworthy of the time"—as the time goes in some of the countries outside of Spain. All things considered, and considering especially the fact that there is not any republic in Spain, one thinks that Mr. Hay might have done well to keep in his mind a saying of another interlocutor of his, a pessimist, who remarked that Spain would no doubt have the republic sooner or later, and added that the only trouble would be for the first five or six hundred years.

There are several other things in "Castilian Days" besides the author's generous rather than well-judged zeal for the abstract republic which indispose one to go fully along with him, and make one wish that a writer of such aptitude and cleverness were more careful and restrained. For example, the Pope of Rome is the Scarlet Woman no doubt; and the Protestant cantons of Switzerland surpass in prosperity the Romish cantons; but in spite of those and similar truths for which we also are strenuous, Mr. Hay might advantageously have considered a moment before observing incidentally, while talking of Spanish doctors, that the mass for the sick is "a ghastly mummery" and is injurious to patients—irrespective, it seems, of the fact that a sick Spaniard may have views as to the efficacy of the mass different from those entertained by an American Protestant in good health, and may thrive on the celebration of it, while the effect on us or on Mr. Hay would be highly prejudicial.

---

[*] "Castilian Days. By John Hay." Boston: J. R. Osgood & Co. 1871.

However, in spite of some interferences with the reader's pleasure, "Castilian Days" is a very readable book—so trustworthy is Mr. Hay's sense of what will agreeably engage the attention of the general reader without jading it, so interesting is the nation which he describes, so good were his opportunities of close observation of the political leaders who have been of especial interest of late, and so much more clear and lively than is common is his way of expressing himself. Very well, for example, is it to find in a book of travel such a chapter as that entitled "A Field Night in the Cortes," in which Mr. Hay describes the personal appearance of the chiefs of the various political parties, tells intelligibly what was the question under discussion and how the issue was made up, gives the substance of the debate, shows us how the ministry is trembling on the verge of parliamentary ruin, and then calls up General Prim to speak:

> "The Marquis of Perales, Vice-President, said as Silvela took his seat, 'The President of the Council of Ministers has the word.' Prim slowly rose, holding his eye-glasses in his gloved hands. His face was as colorless and impassive as that of a mummy. There was a rustle of movement, as the house was wide awake bent forward to catch his first words. They were full of soldierly bluntness: 'I am not going to discuss this law. I know nothing about these matters, and never talk about things I do not understand. I have full confidence in the Minister of Hacienda, and so believe this law is a good one; this opinion is shared by my companions in the government.' Nothing could be more simple and frank than these words; yet they were deeply pondered and perfectly fitted to the occasion. No art could have improved them. They at once enlisted the sympathy of his followers, and set an example of party discipline. He continued, expressing his inability to understand the cause of this attack from the Liberal Union: 'I can understand the opposition of M. Tutau; the Republicans desire the fall of the present government; and that of M. Muzquiz also, for the Carlists wish the disappearance of this Cabinet and this Chamber; for the same reason I was not surprised at the assault of M. Canovas.' Here his voice and manner, which had been as mild as that of an undertaker's, suddenly changed, and he said with great dignity and solemnity, turning to the Unionist faction, 'But I cannot understand—I declare it with the sincerity of an honest man—the attitude of the gentlemen of the Liberal Union, because, though my distinguished friend, M. Silvela, has clothed his opposition with beautiful and elegant forms, still opposition, and of the rudest, it is, which his lordship makes, not only to M. Figuerola but to the whole government.' He continued for some time, showing the disorganizing and disastrous results that would follow the Unionist attack, declaring that the Cabinet would immediately resign in a body. He recounted the efforts he had made to prevent the rupture, and his voice and utterance had something almost pathetic as he narrated his fruitless endeavors to find some ground for agreement. But as he closed a sort of transformation came over him. He seemed to grow several inches taller. He stood straight as a column, and his voice rang out like a trumpet over the hall: 'They present us the battle. There remains no more for me to say than Radicals! defend yourselves! Let those who love me follow me!' What tremendous power there lies in the speech of a man of action! If any deputy but Prim had said these words, how coldly they would have fallen. But from him they were so many flashes of lightning. The house was ablaze in a second. The Radicals were cheering frantically. It was a battle-field speech, and had its deeply calculated effect. The phalanx was fused into one man. As the cheering died away, Topete was seen to rise from his seat by Prim and take him by the hand in sign of farewell. The gallant sailor uttered a word of energetic protest too low to be heard in the tumult, and then passed over to his friends of the Liberal Union. It was now their turn to burst out in a shout of defiance. They surrounded the Admiral, embracing and welcoming him. For some minutes this wild agitation reigned in the Chamber. There was an excited tremor in the voice and bell of the President as he rung and shouted his unavailing appeals for order."

Then follows a brief description of the eager voting, and of the salvation of the ministry by a majority of six.

Good, too, is the chapter entitled "The Cradle and the Grave of Cervantes," with its description of the university, and its account of Sor Marcela and her poetry, so touching for what it implies and so good in itself. Perhaps there may be in this chapter rather more of the tendency towards fine writing which some tastes will have noted in the passage just given above. Probably to this tendency may be due a noteworthy error, originally made by Victor Hugo if we recollect right, which has more than once been corrected: Mr. Hay speaks of Cervantes as having prepared himself to die on the 17th of April, at which time he had been expecting his death to take place, but as having waited six days longer in order that his soul might be accompanied to the shades by the soul of Shakespeare, who died on the 23d. Protestant England, however, had not at the time of Shakespeare's death accepted the reformed calendar, and it was on the 23d of April, old style, that Shakespeare died, so that Cervantes's waiting, being done in Catholic Spain, was without the intended effect.

Other excellent parts of the book are the unhackneyed chapter on the hackneyed subject of bull-fighting, and the still better chapter describing a miracle play—a subject which is for the moment almost as hackneyed as the other, but which Mr. Hay makes interesting, as may appear from this brief extract, which gives, on the whole, a fair specimen of the contents of the volume. The scenes of the play have been described effectively, and these remarks follow:

> "A curious observation is made by all foreigners of the absence of the apostles from the drama. They appear from time to time, but merely as supernumeraries. One would think that the character of Judas was especially fitted for dramatic use. I spoke of this to a friend, and he said that formerly the false apostle was introduced in the play, but that the sight of him so fired the Spanish heart that not only his life but the success of the piece was endangered. This reminds one of Mr. A. Ward's account of a high-handed outrage at 'Utiky,' where a young gentleman of good family stove in the wax head of 'Jewdas Iscarrit,' characterizing him at the same time as a 'pewserlanimous cuss.'
>
> "'To see these Mysteries in their glory,' continued my friend, 'you should go into the small towns in the provinces, uncontaminated with railroads or unbelief. There they last several days. The stage is the town, the Temple scene takes place in the church, the Judgment at the city-hall, and the procession of the Via Crucis moves through all the principal streets. The leading *rôles* are no joke—carrying fifty kilos of wood over the mud and cobble-stones for half a day. The Judas or Gestas must be paid double for the kicks and cuffs he gets from tender-hearted spectators—the curses he accepts willingly as a tribute to his dramatic ability. His proudest boast in the evening is *Querian matarme*—'They wanted to kill me!' I once saw the hero of the drama stop before a wine-shop, sweating like rain, and positively swear, by the life of the devil, he would not carry his gallows a step farther unless he had a drink. They brought him a bottle of Valdepeñas, and he drained it before resuming his way to Golgotha. Some of us laughed thoughtlessly, and narrowly escaped the knives of the orthodox ruffians who followed the procession.'
>
> "The most striking fact in this species of exhibition is the evident and unquestioning faith of the audience. To all foreigners the show is at first shocking and then tedious; to the good people of Madrid it is a sermon, full of absolute truth and vivid reality. The class of persons who attend these spectacles is very different from that which you find at the Royal Theatre or the Comic Opera. They are sober, serious *bourgeois*, who mind their shops and go to mass regularly, and who come to the theatre only in Lent, when the gay world stays away. They would not dream of such an indiscretion as reading the Bible. Their doctrinal education consists of their catechism, the sermons of the curas, and the traditions of the church. The miracle of St. Veronica, who, wiping the brow of the Saviour in the Street of Bitterness, finds his portrait on her handkerchief, is to them as real and reverend as if it were related by the Evangelist. The spirit of enquiry which has broken so many idols, and opened such new vistas of thought for the minds of all the world, is as yet a stranger to Spain. It is the blind and fatal boast of even the best of Spaniards, that their country is a unit in religious faith. *Nunca se disputó en España*—'There has never been any discussion in Spain'—exclaims proudly an eminent Spanish writer."

The High Mills. By Katherine Saunders. (Philadelphia: J. B. Lippincott & Co. 1872.)—This story differs from most in the fact that it has nothing to do with love. To be sure, there is a line at the end of the book which announces the ringing of wedding-bells, but it seems as if it had strayed into that place from some other novel, as there is nothing in the tale itself to justify or to make the reader demand the usual ending. The whole story is of a man who, out of contrition, gives up his life to those whom he has wronged. The mysterious reason of this course is very well kept by the author, and we prefer not to disclose it to the reader, although the novel is not one of the conundrum kind, as they might be called, in which all interest is lost as soon as the plot is made clear. It is rather a study of a not particularly interesting character in very peculiar circumstances, and thus it lacks one means of attracting readers which a love-story has to perfection, that, namely, of interesting the reader by a certain reference to his own position in regard to one of the most idealized facts of human existence. Every true remark about love, every good love-story, will be of interest to almost every one; but a novel that does not treat of this passion has to find enough material that brings it into the same universal relation to us all before it can be counted a success. Balzac has done this by analyzing and drawing some of the stain of the old Adam which clings to every one, and the result is a work which may be of the greatest merit, but yet leaves a distaste in the reader's mind that is more terrible even than the grim reality, as if our minds were unconsciously more idealistic in their action in regard to what we know than is the realist with regard to what he only imagines. Without by any means comparing our author with Balzac, it may be said that we have here a very different treatment of the question. We watch the struggle of the hero to escape from the meshes his own folly and misfortunes have wrought around him, and always without having our sympathy misdirected; the struggle is a heroic one, and the success complete. But, while it may be said that the book has good tendencies, it is also open to the objection of a certain heaviness in the management of the details, so that the total effect of the story is marred by inartistic construction. Many of the characters are well drawn, and not without humor. The book, too, contains some good descriptions. On the whole, it can be recommended to those who may be tired of the novel of social complications, and who care for something more serious than the small-talk of flirtations. This may not be a great work of art, but it is a sincere and not wholly unsuccessful effort to treat a serious subject with care and respect.

Through the Looking-Glass, and What Alice Found There. By Lewis Carroll, author of "Alice's Adventures in Wonderland." With fifty illustrations by John Tenniel. (New York and London: Macmillan & Co. 1872.)—It is seldom that the appearance of a child's book attains the dignity of a literary "event," but this distinction the long-promised and long-delayed sequel to "Alice's Adventures" may certainly lay claim to. That it brings some disappointment, at least to the older readers and critics, can hardly be doubted, though it has perhaps all the excellence of the former work as a true picture of a shifting dream; and the notion of a Looking-glass Land, with its inverted ways, is certainly better than the original rabbit-hole labyrinth. Alice, too, remains the same well-bred, self-possessed, courageous child, under all circumstances, and her little talk, before and after her dream, to her kittens, is as charming as it is nicely studied and cleverly sustained. Wherever we meet Alice, indeed, the book cannot be called devoid of interest; but recurring once more to the comparison with her "Adventures," we should say that the first half only of the "Looking-Glass" is altogether worthy of the author's lively genius. The last six chapters, with a few exceptions, are much below the level of the first six, in which, indeed, there is nothing so funny, to our mind, as the supper with the March Hare and the Hatter in the "Adventures." On the other hand, "Jabberwocky" and "The Walrus and the Carpenter" are hardly surpassed by any of the absurd poetry of the earlier work. Mr. Tenniel's illustrations, as before, leave nothing to be desired, while they do a great deal to lighten the latter portion of the story. They are particularly felicitous in showing how, along the briny beach,

"The Walrus and the Carpenter
  Were walking close at hand;
They wept like anything to see
  Such quantities of sand:
'If this were only cleared away,'
  They said, 'it *would* be grand.'"

And how, as the little oysters stood out of breath and waited in a row,

"'The time has come,' the Walrus said,
  'To talk of many things:
Of shoes—and ships—and sealing-wax—
  Of cabbages—and kings—
And why the sea is boiling hot—
  And whether pigs have wings.'"

And, finally, when the wicked meal had been begun, how

"'I weep for you,' the Walrus said;
  'I deeply sympathize.'
With sobs and tears he sorted out
  Those of the largest size,
Holding his pocket-handkerchief
  Before his streaming eyes.

"'O Oysters,' said the Carpenter,
  'You've had a pleasant run!
Shall we be trotting home again?'
  But answer came there none—
And this was scarcely odd, because
  They'd eaten every one."

Mission Ridge and Lookout Mountain, with Pictures of Life in Camp and Field. By Benj. F. Taylor. (New York: D. Appleton & Co.; Chicago: S. C. Griggs & Co. 1872.)—We do not remember any newspaper correspondence from the front, during the war, which would be worth reprinting to-day for the *facts* it contained; but the author of the sketches now reprinted in the book before us trusted chiefly to his fancy in his letters to the Chicago *Evening Journal,* and a fancy is as good now as it was then. These scraps are mostly mere notes suggested by what the author saw rather than reproductions of historical scenes and events, the poetical turn of the writer's mind leading him to reflective and imaginative comments evoked by the reality rather than to a statement of the bare reality itself. He describes but one battle which he witnessed, that of Mission Ridge, and even in this his fancy rather than his eye is called into play. He is rather too rich in the color of his descriptions to be serviceable as an eye-witness: the moral elevation at which the poet stands is too far above the level of the battle-field. But what he writes in this sketch, as in the others, is interesting if only because it carries the reader back to the high resolve and ardent patriotism which reigned in the purest atmosphere of loyalty during the late rebellion The letters seem more like fine writing now than they did then, when there were sons and lovers and brothers at the front, and constant telegrams of their dangerous doings there; and a whole book in a strain more or less emotional is certainly harder on the writer than a column or two in a daily newspaper, with prosaic columns to right and left.

The author seems to have been in full sympathy with the rank and file, and he was very successful in seeing and describing their best side. He has caught the spirit of humor which pervaded the army, and in one instance he brings it out so well that we will quote him in illustration of a trait which was oftener a sense than an expression that could be carried away in words. It seemed to satisfy itself with reflection and to await patiently the opportunity to find a vent, and then perhaps in only a couple of words, which would hit or miss according to the hearer's ability to understand them. The scene is in a Western camp, where General Halleck was well remembered, and where, it may be supposed, he was thought to be not quite a Napoleon I. To save explanation of the soldier's real employment, we will say that he was cleaning his musket. The paymaster was coming with his greenbacks:

"An epitaph for a modern paymaster can be easily stolen from Halleck's sweetest little poem, as thus:

'Green be the turf above him.'

Just finishing the inscription, I read it and the explanation to a rough boy near by. He looked up with 'Old Halleck write that?' 'Fitz-Greene,' said I. 'That's what's the matter,' said he, and worked away at his musket again."

Border Reminiscences. By Randolph B. Marcy, U. S. Army. 12mo, pp. 396. (Harper and Brothers.)—General Marcy's book is a portfolio filled with sketches of life upon the frontier. His "Reminiscences" are mostly of the humorous order, and depict the odd characters of remote army stations. Here are described the major of the old régime, the braggadocio, the eccentric cadet, the army belle, and the practical jokes and drolleries which make up so large a part of station life during times of peace. We are shown, too, some well-known Southern characters. In one anecdote "General Sam Houston" figures amusingly. Houston had not a little trickery in his composition; and on a certain occasion he had promised his support, in an approaching Texan election, to each of two opposing candidates for office. He was a frequent visitor at the farm-house of one of these candidates, a Mr. W——d. One morning this gentleman astonished the General by showing him a letter, in Houston's own handwriting, in which he had denounced his entertainer to the opposing candidate, and urged the latter to make every effort to defeat him. Houston saw that he was caught in an unpleasant predicament; however, he read the letter very carefully in order to gain time. Perceiving, at last, "that it would be useless to deny its authenticity, he turned up his eyes with a most puzzled and bewildered expression, saying at the same time in soliloquy, 'That handwriting certainly resembles mine; but, if I wrote it, how does it happen that I cannot remember anything about it? That's what bothers me!' After a moment's reflection, he went up to W——d with the letter open in his left hand, placed it before his eyes, and, significantly shaking the index-finger of his right hand at the paper, said: 'Who would suppose that I could ever have got so beastly drunk as to write such an absurd letter? You, my dear W——d, know me too well to believe for an instant that this letter expresses my real sentiments.'" Some of the stories of Major C——s, the Munchausen of a frontier post, are equally amusing. General Marcy's style is often weak and verbose, and the illustrations of the book have little merit. But in spite of its imperfections it has a certain interest as describing a phase of life that is peculiar, we believe, to the American frontiers; and we can imagine that it will be even more interesting a hundred years hence to some maker of history than it is to us to-day.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*	
Berean Day-Book for 1872	(Carlton & Lanahan)	
Collins (M.), Two Plunges for a Pearl, swd	(D. Appleton & Co.)	$0 75

THE MORAL OF ACCIDENTS,

AND

OTHER DISCOURSES.

"SERMONS FOR MY CURATES."

By the late Thomas T. Lynch. Edited by Samuel Cox.

"We can only give the merest glimpse of the beautiful passages in which it abounds."—Literary World.

"This volume is one of the noblest legacies the Christian Church has received for many years."—Freeman.

"The world will now find out that a prophet had lifted up his voice in the heart of modern London comparatively disregarded; and that a ministry exercising transcendent influence over a few sympathetic minds, the spiritual work of a great poet and philosopher, the subtle wit, delicate humor, and piercing satire of a gifted man, are things of the past. This volume makes us feel how incalculable is our loss. We accept it reverently; we commend it heartily and tenderly to our readers."—British Quarterly Review.

For sale by all booksellers, or will be mailed, post-paid, on receipt of price by the Publishers,

GEORGE ROUTLEDGE & SONS,
416 Broome Street, New York.

MAGAZINES FOR 1872.

J. B. LIPPINCOTT & CO. respectfully invite the attention of the public to the two following valuable English Monthlies, for which they have taken the American agency:

THE CONTEMPORARY REVIEW.

A MONTHLY JOURNAL OF
LITERATURE, SCIENCE, AND POLITICS.

"The Contemporary Review" is unequalled in its peculiar department of literature by any similar periodical. It embraces among its contributors the most able writers and deepest thinkers of England, and the sterling value of the Review is evinced by its extended reputation and influence. As an index to its character, attention is invited to the following

CONTENTS OF JANUARY PART.

1. On Hibernicisms in Philosophy. By the Duke of Argyll. 2. The Church of the Future. By the Bishop of Tasmania. 3. Evolution and its Consequences. A Reply to Prof. Huxley. By St. George Mivart. 4. The Idealism of Milton. By Prof. Dowden. 5. Moral Philosophy and Savage Life. By Prof. Calderwood. 6. The English and Scotch Churches. By Prof. Tulloch. 7. John Huss and the Ultramontanes. By Rev. A. H. Wratislaw. 8. On Words in Mental Philosophy. By Prof. Maurice.

TERMS: Yearly Subscription, $7 50. Per number, 75 cents. With Lippincott's Magazine, $10 50 per annum.

THE ST. PAUL'S MAGAZINE.

A MONTHLY OF

LIGHT AND CHOICE READING.

Edited by ANTHONY TROLLOPE.

Fresh, brilliant, and apposite articles, by writers of taste and experience, form the staple of this magazine. The piquancy and variety of its matter render it one of the most attractive periodicals of the day. Two highly attractive serial stories, "Septimius," by Nathaniel Hawthorne, and "Off the Skelligs," by Jean Ingelow, are begun in the

JANUARY PART; CONTAINING,

1. Septimius. By Nathaniel Hawthorne. Part I. 2. The Latest Tournament. 3. Literary Legislators. By Henry Holbeach.—I. Mr. Disraeli. 4. Clipt Wings. By Katherine Saunders. 5. Among the Hebrides. 6. The Last of the Hangmen. By Robert Buchanan. 7. The Art of Beauty. 8. Off the Skelligs. By Jean Ingelow. Part I. TERMS: Yearly subscription, $3 50. Per number, 30 cents. With Lippincott's Magazine, $6 50 per annum. For sale by Periodical Dealers generally.

J. B. LIPPINCOTT & CO., Importers,
715 and 717 Market Street, Philadelphia.

IN PRESS.

THE BRITISH QUARTERLY REVIEW

FOR JANUARY.

Containing valuable Articles by

PROFESSOR SEELEY, E. A. FREEMAN

(THE HISTORIAN), AND

DR. GINSBURG,

OF THE OLD TESTAMENT REVISION COMMITTEE.

Price $4 a year.

Blackwood and the Four Reviews, only $15.

REPRINTED BY

THE LEONARD SCOTT PUBLISHING CO.,
140 Fulton Street, New York.

IMPORTANT NEW WORKS,

ISSUED BY

SCRIBNER, WELFORD & CO.,
654 BROADWAY,
NEW YORK.

I.

HIGHLY IMPORTANT SCIENTIFIC WORK:

SPECTRUM ANALYSIS,

IN ITS APPLICATION TO TERRESTRIAL SUBSTANCES AND THE PHYSICAL CONSTITUTION OF THE HEAVENLY BODIES.

Familiarly explained by Dr. H. SCHELLEN.

Translated from the second German edition by Jane and Caroline Lassell. Edited, with Notes, by William Huggins. With colored plates and other illustrations, including copies of Angstrom's and Kirchoff's Maps. One large volume 8vo (662 pages), elegantly printed on toned paper, cloth extra, $12.

II.

EASTLAKE'S NEW BOOK.

A HISTORY OF THE GOTHIC REVIVAL.

An Attempt to show how far the Taste for Mediæval Architecture was retained in England during the last two centuries, and has been redeveloped in the present. By CHARLES L. EASTLAKE, Architect, author of "Hints on Household Taste." In one volume imperial 8vo, with numerous illustrations. Price, cloth extra, gilt top, $13 50.

III.

PARIS UNDER THE COMMUNE.

THE SEVENTY-THREE DAYS OF THE SECOND SIEGE.

By JOHN LEIGHTON, F.S.A. A new edition in crown 8vo, gilt top, $4. Illustrated with upwards of forty Wood-engravings descriptive of Incidents of the Siege, with nearly thirty portraits of Communist Leaders and of the Hostages who were sacrificed, with nearly thirty Sketches taken on the spot, delineating features of Paris now swept away, and with a Map indicating the Public Buildings and portions of the city damaged or destroyed.

FAMILIES OR YOUNG PERSONS Wishing to Study Abroad, and obtain the Purest German or Hanoverian Accent, can find the comforts of a home in an officer's family in Hanover.

Distinguished resident Professors of Languages and Music.

TERMS, $38 PER MONTH, GOLD.

References given and required.

Address:
MRS. C. GIESECKE,
Königstrasse, 13, Hanover,
PRUSSIA.

SALESMAN or BOOK-KEEPER.—A young and trustworthy man, who has had experience, desires employment in either of the above positions. Can furnish good references.

Address, G., P.O. Box 6732, New York City.

T. DE WITT TALMAGE'S NEW BOOK.

Ready Saturday, Feb. 10, and for sale by all Booksellers in the United States.

THE ABOMINATIONS OF MODERN SOCIETY.

☞ Heavy advance orders, having compelled great increase in the editions, delayed the issue for a few days; but all orders up to this date are now ready.

The nature and scope of this most significant book from the noted Orator and Reformer may be seen by a glance at this list of its Contents:

"The Curtain Lifted" (the Great City as it is); "Winter Nights"; "The Power of Clothes"; "After Midnight" (or, Scenes within and without); "The Indiscriminate Dance" ("Sociables," Public Balls, etc.); "The Massacre by Needle and Sewing Machine" (All about Shop-girls, Sewing-women, etc.); "Pictures in the Stock Gallery" (or, How Stock Gamblers gamble); "Leprous Newspapers"; "The Fatal Ten Strike"; "Lies—White and Black" (Commercial and Social Falsehood); "Some of the Club-Rooms"; "Flask, Bottle, and Demijohn"; "The Gun that Kicks over the Man who Shoots it Off" (Blasphemy); "The House of Blackness of Darkness" (the "Social Evil"); "The Good Time Coming."

One beautiful volume 12mo, price $1 50. Sold by all book and news dealers, or sent to any address on receipt of the price, by ADAMS, VICTOR & CO., Publishers, 98 William Street, New York.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 15, 1872.

The Week.

THE flurry over the threatened withdrawal of England from the Washington Treaty has almost subsided. In fact, on this side of the water it can hardly be said that there has been any flurry, the principal newspapers having, after the first day, treated the whole affair with great coolness, and, indeed, exemplary impartiality, which has made the excitement in England look a little ludicrous. The talk of war was, however, always absurd, as there is nothing more to fight about, and considerably less disposition to fight than there was a year ago. It is a great mistake to suppose, however, that the uproar in England is a mere device of political partisanship, got up by the Tories to confound the ministry. There is not a shadow of proof of anything of the kind. The press of all parties is unanimous in the outcry. But there is no doubt that the Tories are taking advantage of it, and that Mr. Disraeli has used it with most unfortunate effect by taunting Gladstone into the ridiculous declaration of his intention to resist "the preposterous demands" of the American case to the last. If the Treaty breaks down irretrievably, probably nothing will contribute more to this deplorable result than this bit of rhetoric.

The Amnesty Bill has been defeated in the Senate, through a variety of influences, not the least potent being Mr. Sumner's attempt to tack on to it his Civil Rights Amendment, securing persons of color admission on equal terms to inns, public conveyances, cemeteries, and theatres. Some object to his amendment on general grounds, others on constitutional grounds, and others through dislike of the negro, and some who are really opposed to amnesty pretended to be opposed to it solely because the amendment was tacked on to it. The only noteworthy incident in the debate was a tussle between Mr. Carpenter and Mr. Sumner over the Declaration of Independence, of which Mr. Sumner convicted Mr. Carpenter of having spoken disrespectfully, and quoted against him certain passages from Petroleum V. Nasby of a scathing character, whereat Carpenter smiled in a sickly manner. At the bottom of the great contention was a difference of opinion as to whether the Constitution should be interpreted by the aid of the Declaration, which is one of those points on which any man's opinion is respectable. If the majority are willing, the Constitution may be interpreted by the aid of the Bible, "Butler's Analogy," the "Spirit of the Laws," the works of Swedenborg, or any other book that may be agreed on. Once the historic view of the intent and meaning of the framers of any document is thrown aside, there is unlimited choice as to the manner in which it shall be construed, but the decision must always rest with the majority, a fact which deprives constitutions interpreted in this way of most of their value.

The Education Bill, as passed by the House, provides that the proceeds of the public lands shall form a perpetual fund to be called the "National Education Fund," to be composed of half the revenue derived each year from the land sales, and invested in five per cent. United States bonds—the interest of this fund and half the proceeds of the land sales of the previous year to be distributed among the States and Territories on the basis of population between the ages of four and twenty-one, but during the first ten years the distribution to be made in the ratio of the literacy of the various populations; that the local legislatures must first pledge themselves, before receiving their share, to provide free education for their children between the ages of six and sixteen, and to apply all money received under the act in accordance with its conditions; that fifty per cent. of the amount received the first year, and ten per cent. during subsequent years, may be devoted to the establishment of normal schools; that each State and Territory shall be entitled to every apportionment after the first, which shall have made the above provision for the education of its children, shall have applied the money already received in the prescribed manner, and shall have made a full report of the number of its schools, teachers, and school-houses owned and hired, the daily attendance at its schools, and the amounts appropriated for free schools by its legislature; that the money shall only be paid to such State or Territory on the certificate of the Commissioner of Education that these conditions have been complied with; but there lies an appeal from his decision to Congress, and, pending the trial of the appeal, the money lies in the Treasury, or, if the decision of Congress is adverse, it goes for that year into the general fund, but the money is not to be withheld for any failure to provide mixed schools for black and white children, or for the provision of separate schools. In case of loss, or misapplication of funds by any State or Territory, its claims under the act are suspended till the loss is made good. The Circuit Court of the United States has exclusive jurisdiction of all offences committed under the act. The clause with regard to mixed schools is justly objected to, on the ground that it contains an implied censure of such schools, and yet does nothing either to promote or prohibit them.

The most startling incidents of the week in home politics are the announcement, which we foreshadowed in our last issue, that the President has directed Secretary Boutwell and Collector Arthur to provide some substitute for the general-order system of the New York Custom-House, and that Colonel Forney has resigned the Collectorship at Philadelphia. The abolition of the general-order system is an excellent thing, and it is none the less valuable for being the result of "the Schurz-Fenton trick." But it must be confessed that it would do the President more credit if it had not come as the result of an investigation which his friends have stoutly opposed and in every way obstructed and belittled. In fact, it is impossible to avoid the conclusion that had "the Schurz-Fenton trick" not been successful, we should not have had this great reform. We trust Messrs. Schurz and Fenton will continue their "tricks," and that they all may be as fruitful as this first one.

Colonel Forney's resignation is a slightly mysterious occurrence. When the Colonel declares himself against an Administration, whether directly or by implication, the anti-Administration press always says that he has "cried halt!" The last time he "cried halt" was about a year ago, and the occasion of his doing so was the movement against Mr. Sumner, which was supposed to have affected the New Hampshire election injuriously. He shortly afterwards received the Philadelphia Collectorship, which enabled him to resume his onward march and to swallow the civil-service reform. From his recent outspoken approval of this reform, we presumed he might be counted on to trudge away throughout the campaign; but he has, we are told by the opposition papers, now "cried halt," again, and they draw from it the conclusion that he thinks the Administration is in rather a bad way, and wishes to draw off till he sees how the conflict is going. The Administration organs, on the other hand, maintain that he has resigned simply in order to be able to give the Administration more independent support as a journalist. His letter of resignation makes no proffer of devotion to General Grant personally, but the New York *Times* says he has also written a private letter, in which he expresses the intention of working for the President's renomination.

The Citizens' Municipal Reform Association of Philadelphia called a public meeting on Wednesday week to protest against the corrupt government of that city, and against the fraudulent nomination and election of the regular Republican candidate in the

Fourth Senatorial District. There was a large attendance and a great deal of enthusiasm, and it was made to appear that Philadelphia is controlled by rings, both local and at Harrisburg, whose audacity compares favorably with that of Tweed & Co. It was resolved to increase the Association's Committee on Abuses to thirty, and various reforms were called for in the electoral machinery and in the pay of clerks of courts, receiver of taxes, city treasurer, and district attorney. Col. McClure made a speech among the rest, promising proofs of "official and individual movements to perpetrate wrongs and defeat justice, even in its own sanctuary, that would appall the citizens of Philadelphia." The only allusion to Grant was made by Mr. B. F. Brewster, who renominated and re-elected him on the spot; but he also gave the most pointed expression to the chief significance of the meeting—its open confession that Republicans may be divided into two classes, the honest men and the knaves, and that the sooner the former resume control of the party, the better. In Missouri, this discrimination is called "hostility to the Administration"; in Congress, "a Schurz-Trumbull trick"; in Philadelphia, it yet remains to be characterized by those who think washing was invented only for Democratic dirty linen. The courts, meantime, have made short work of the City Treasurer and his illegal sureties, and for the moment the political atmosphere is a good deal clearer than it was.

The Custom-house investigation, after proceeding for thirty days in this city, was adjourned to Washington, where it will sit again the 19th of February. The most important evidence during the last ten days has been that of Mr. P. G. Jayne, one of the delectable body called special agents, and occupied in making seizures. He was very frank and cheerful in making his disclosures, and seemed to take a good deal of pride in his calling and in his manner of following it, and yet what a calling it is as he described it! His share of "moieties" and other perquisites and rewards for making seizures and discovering frauds, since 1869, was, he confessed, over $100,000 on the Treasury books, and, after sharing the spoil with assistants, amounted to nearly $80,000 net cash—in other words, a considerable fortune for a man of his class. To understand what this means, it must be remembered that it was in this man's power, on "a general warrant," which there was no difficulty in obtaining, to enter any merchant's office with a band of followers of his own kind, seize all the books and papers, and examine them at his leisure either for proof of the charge on which he was acting or for proof of anything else that he could find; and to put himself on the track he was in the habit, he confessed, of bribing clerks and book-keepers to give him information about their employers' business. When he came on anything in the books which, though not what he was looking for, was likely to be serviceable, he used it, or, in his own expressive language, if he was "fishing for bull-heads and caught a trout, he did not throw it back in the stream." Describing his "legitimate methods of extracting the truth" from persons against whom he was proceeding, he said he first "tried to reason with a man, telling him how wicked he had been, and advised him that it was his best way to tell him frankly the whole truth; if that failed, he held up the terror of the law"; but he refused to go into further details. He acknowledged that it was not uncommon for a pair of handcuffs to be lying on the table when he was conducting his examinations, and for him to "play with them" and put them on his own wrists in the accused person's presence. He threw some curious light on the way in which purity was promoted in the Custom-house under Tom Murphy. He found out a debenture officer stealing a case of goods off a Custom-house cart and substituting a box of shavings, and reported him to Murphy, but all that happened to the culprit was his removal to another department of the Custom-house, where he actually remained in office till about a month ago, although the offence was committed last summer. He also told of a weigher, whom he had detected in fraud and reported, being removed for a year, but being afterwards restored to the service, in which he now is, by Murphy.

Mr. Sumner has spread a new cloud over the Administration sky, by moving for a select committee to investigate some scandalous charges against the War Department, in the matter of the sale of Government arms and ammunition to the French during the late war. The charges have been brought to light by the recent investigations of the French National Assembly into the transactions of M. Place, the French consul at this port during the war. It appears that the Messrs. Remington, the noted rifle manufacturers, were employed to furnish arms to the French, and after selling all they had on hand themselves, tried to purchase from the War Department, which declined to sell them, knowing them to be acting for the French, and also declined to sell to one Squire, knowing him to be their agent. But they got over this difficulty by putting forward a Mr. Richardson, their lawyer, with whom the War Department dealt freely, not only selling him 40,000 altered Springfield rifles, but setting the Government cartridge factory to work to make cartridges for him. These facts Squire communicated in high glee in an official letter to the President of the Armament Committee at Tours, in December, 1870, in which he said "they had the strongest influences working for them, which will use all their efforts to succeed." But this is not all, nor the worst. It appeared from the report of the Secretary of War last year, that the receipts from the sales of ordnance stores in 1870 amounted to $10,000,000; but it appeared from the report of the Secretary of the Treasury for the same year that he only received from this source $8,286,131 70, leaving a difference of over $1,700,000, which Mr. Sumner wishes to have accounted for. It appears, moreover, that the French Government paid for these arms and ammunition $11,000,000 gold, or, at the then rate of exchange, $14,000,000 in currency. There is here, then, a difference of $4,000,000, and the French Government asks our Government very plainly to find out who got it.

The answer of the Administration organ to these charges, thus far, is that Schurz and Sumner are in a conspiracy against the President, and are animated by the basest motives; that behind them is an acute, dexterous, cunning Frenchman, named the Marquis de Chambrun, who is semi-officially connected with the French Government, who has supplied Sumner with the materials for his charges, and put him up to making them. Chambrun's theory is that some army officer has been guilty of gross corruption in the matter, but the Secretary of War says he has always refused or failed to accuse any officer in particular. The charge of selling arms knowingly to the French Government the Secretary denies flatly; he only sold them to private individuals, Richardson included; but he acknowledges that he took the unprecedented step of setting the Government factory at work to make cartridges, and justifies it on the ground that it was necessary "to effect the sale" to Richardson. He denies also, all knowledge of "any influence exerted in favor or for the success of any transaction between the United States and Mr. Squire." The matter certainly calls for searching enquiry, and we sincerely trust that when we get at the truth we shall not be told that General Grant has been imposed on by bad men. The Leet affair has quite as much of this sort of defence as the public can stand. One of the qualifications of a President is the ability to prevent "bad men" from imposing on him or abusing his confidence. The head of this Government certainly needs perspicacity enough to cut short the career of such a personage as Leet in less than three years, and without the aid of sixty days of Congressional investigation.

"Supporting the Administration" is sometimes very trying work for journalists. It is so at this moment. Here is the "Custom-house investigation," for instance, which has resulted in unearthing an enormous number of abuses. The Administration papers opposed it ardently; then they said it had revealed nothing worth mention; but now they say that the Administration is going to reform all the abuses it has brought to light, and that the President is far more disgusted by them than we hypocritical reformers. It is very severe upon honest writers to have to do all this tumbling. Their life in the Whitewashing Department is very hard and unhealthy. It was not difficult to give Murphy a coat, particularly before the investigation; but then he has been followed by a long procession of doubtful characters, of whom it is really almost impossible to make a creditable job. Leet, for instance, presented himself in such a begrimed condition that he could not be made presentable, so he was passed on as "improper" and "indelicate." Now comes Terwilliger, who has long filled the office of Deputy Collector of this port, and in that capacity was a powerful aid to Murphy in "controlling primaries." He also takes a deep interest in State politics, so deep that he had himself elected Clerk of the Senate, in which capacity he received over four thousand dollars last year from the State printer. To the carnal eye, this sum appears to have been blackmail; the printer says it was given for proof-reading on official documents, but would have been given if he had read no proofs; and Terwilliger himself says it was a "gratuity".

There has been a vigorous attempt made by the Administration press to belittle the Convention of "Liberal Republicans," which met lately at Jefferson City, Miss., by asserting that it did not by any means represent the powerful body of seceders who elected Gratz Brown and Carl Schurz two years ago, and was largely attended by Democrats. Colonel W. M. Grosvenor, the late editor of the St. Louis *Democrat*, and Chairman of the Liberal Republican State Committee, writes a long letter to the New York *Tribune*, showing that no Democrats attended it, and that counties which cast 75,859 of the 104,771 votes which elected Brown and Schurz were represented at it; and he shows, moreover, that nearly all the leaders of the bolt of 1870 were present, and took part in the proceedings. It is a significant fact, in more senses than one, that the late Connecticut Democratic Convention adopted a large portion of the "Liberal Republican" platform, almost word for word, nominated on it a man who had advocated the war to put down the rebellion, and loudly cheered the name of Lyman Trumbull.

The death of Senator Grimes, who died suddenly at his home in Iowa on Wednesday, the 7th instant, took the country by surprise. His health, which was prostrated three years ago, he has since been sedulously nursing, and it was thought to be so fully restored that his friends had begun to urge his return to politics, and at the moment of his death some of them were pushing him as a favorable candidate for the Presidential nomination. And though Mr. Grimes was better known to the Northwest than to the country at large, and though he was best known to the country at large as a man who had been most violently and disgracefully abused for faithfully obeying his conscience, there need be little doubt that it might have been a happy thing for the party and the country if he had lived to be the next Republican candidate, so distinguished was he by ability, so irreproachable in character, so versed in politics, so little uncorrupted by a long term of political life, and so immovably independent. Of his firm independence he gave the country one conspicuous proof, and, now that he is dead, and has left behind him in our politics so many men without firmness of conviction, without courage to face clamor, it is nothing less than a duty to speak with gratitude and praise of his admirable firmness and honesty. "Since he did not believe that Andrew Johnson was guilty, as charged in the articles, it was incomprehensible to him that any man should think it his duty, as a partisan, to vote for conviction." We can all remember, doubtless, how it was that we rewarded him. Him and Mr. Fessenden, while they were alive, and some others who are still living, we were going to read out of a party which, had they done their duty as partisans, as some of us understood a partisan's duty, would, some time since, have passed out of power, if not out of existence. It is not a lesson that we can afford to forget, and there are, perhaps, special reasons why it should be borne in mind just at present.

The assassination of the Governor-General of India, the Earl of Mayo, by a Mohammedan convict, following so close on the assassination of Judge Norman by a Hindoo fanatic, is exciting some uneasiness in England with regard to the condition of her Indian possessions. There are some fears of an outburst of Mussulman bigotry, which, though not dangerous to the empire, would of course fill the lives of English residents with the bitterness of insecurity. There has been for some years a good deal of religious movement among the Hindoos, but, curiously enough, it has been carrying them into Mohammedanism rather than Christianity, the simplicity of the Mohammedan faith and its social usages making it highly attractive. The general result has been a rather rapid renewal of Mussulman ascendency, which, if accompanied by unusual religious exaltation, would be very dangerous. We know too little as yet, however, about the circumstances of the Earl of Mayo's assassination to be able to draw inferences from it of much value. The Earl himself was an Irishman, who had displayed considerable ability in Parliament as Lord Naas, but had surpassed the expectations of his friends as an Indian administrator.

Much the best news that has for a long time come from Germany is that of the retirement of Von Mühler, the Cultusminister, from the Prussian Cabinet. For the ten years he has held his place, he has been the best-hated member of the Government, and his continuance in office to this time has been possible only because greater questions—first, of military reorganization, and then of German unity through life-and-death conflicts with Austria and France—have more immediately engaged the national attention. Behind him he had at last only the junkers and the clericals, for he had long ago served all the purposes of Bismarck, to whom he was undeniably useful during the long struggle from 1862 to 1866 between the popular representatives and the royal prerogative. With the end of foreign war and domestic division, Von Mühler's functions resumed their natural importance, and the new controversy with Rome demanding a minister capable of resisting clerical aggression in church and school, he has been thrown overboard with little ceremony—though ostensibly in consequence of an issue with the Landtag—amid rejoicing not unlike that when a bad king dies and a worthy prince succeeds to the throne.

The ridicule which has been heaped upon Von Mühler, and which has been thoroughly merited, might cause one to overlook the man's natural ability, which is not small. He was the son of a Prussian Minister of Justice, liberally educated, apparently accessible to new ideas, and not suspected, when called to the Cabinet in 1862, of the narrow bigotry which has since distinguished him, and which has even been stigmatized as fanaticism. Another circumstance, it is now seen, was overlooked, and that was that he was married to a woman capable of directing, as she has virtually done for a whole decade, the school and church policy of the leading state in Europe. She has illustrated the wisdom of the priesthood in basing their power on the influence of women, and if she has enjoyed her irresponsible control of affairs in the interest of the clericals, she has the singular retribution of having her name publicly linked with her husband's in the parting maledictions of an outraged and long-suffering people. "Heinrich and Adelheid—Herr von Mühler and his wife," says a leading German newspaper, and one of the soberest, "have been laid with the dead. A ten years' régime, for which it would be hard to find a parallel in Prussian history, so strange and pernicious was it, has come to an end."

HOW THE TREATY HAS BROKEN DOWN.

WE take it to be doubtful if anything further will be done for the present, if anything is ever done, under the Treaty of Washington. But we may take it for granted, also, that some time or other, be it early or late, another attempt will be made to settle in the forum of reason the differences which have for the last ten years divided England and America. When we consider what is the nature of the difficulty which has now suspended the arbitration, we may safely conclude that it will not suspend it very long. It does not consist in the demand by the United States, with the serious intention and expectation of getting it, of anything which Great Britain refuses to concede. All that the United States ask is that they may be allowed to claim something which they confess they do not expect to get, and all that England insists upon is, that this little ceremony may not be gone through in her presence. The deadlock is, in short, one in which Swift or Voltaire would have delighted, and to do it full justice the pen of Swift or Voltaire would be necessary. The whole civilized world rejoiced mightily when, last summer, it was announced that the two nations which stand in the foremost rank of political progress, had found a more excellent way of ending even the fiercest international controversy than marching against each other with guns, "making a noise," as Voltaire said, "with two little sticks on an ass's skin tightly stretched." But the civilized world had only to wait six months to see the great tribunal which was then erected for the preservation of peace arrested in its action by one of those disputes which disturb the harmony of garrison mess-rooms, and furnish the raw material of duels. The philosophers have to put up their wisdom, and the lawyers stow away their lore, till Mr. Gladstone agrees to let General Grant ask him for $1,500,000,000, which he assures him he does not expect him to pay, and which Mr. Gladstone swears before high heaven he never will pay, come what will.

It may be worth while, in the interest of future negotiations, before the subject passes from the public mind, for those who deplore this imbroglio, not more for the delay it causes in the restoration of good relations between England and America than for the injury it inflicts on the general cause of peace and good-will, to consider well what it is that has led to the failure of the Treaty, and in what the failure of the Treaty consists. In the first place, it ought to be remembered that the assertion which is being repeated in so many of the newspapers, that, as long as the United States offer to submit the whole controversy to the arbitrators—the claim for consequential damages as well as other claims—England has no just ground of complaint, is justified neither by the history of the controversy nor by a consideration of the nature of the process called arbitration. Arbitrators do not occupy the position of a court of justice having jurisdiction independently of the will of the parties. You can take a man before a court of justice on any claim you choose to urge; you can only take him before arbitrators on such claims as he is willing to submit to them. The object of the Treaty of Washington was twofold: first, to provide that there should be arbitrators; and, secondly, to furnish the issues which the arbitrators should try. The Geneva Board has no more right to examine the conduct of America generally, or the conduct of England generally, than to try the Queen's title to the crown or the justifiability of the Southern Rebellion. Its business, and sole business, is to give judgment on points submitted to it in common accord by both parties. Neither England nor America has any right to lay any claim before it on which England *and* America have not agreed to accept its decision as final and binding. It is, therefore, nothing to the purpose to say that the Board is a very competent body to decide whether the United States are entitled to consequential damages; this is no reason why the United States should submit a claim for consequential damages. The question we have to ask ourselves is whether England agreed that the claim for consequential damages should be submitted. If we answer this question in the negative, the other question, whether it would not be, or have been, a wise thing to submit it to the Board, is one about which we need not concern ourselves.

Now, we believe, after a candid perusal of all the reports, that the English negotiators did not intend that any such question should be submitted. When Mr. Sumner first produced this claim, it created great excitement in England. The English were a good deal ridiculed by us for getting so much agitated about it—for, said our press, and said Mr. Sumner, and said his friends, "We do not expect you to pay this enormous loss. We know we cannot put it accurately into dollars and cents, and cannot prove by ordinary methods that you caused it. We simply set it before you to give you some idea of the extent to which we feel that you have wronged us, and to convince you that it is useless to hope that you can allay our resentment by a simple acknowledgment of indebtedness in money, to be set off by claims from British subjects for damage done during the war. You have done us a national wrong, and we must have some atonement for the nation over and above the compensation paid to individuals in money." In fact, both sides went into the negotiation finally on the understanding that the basis of the Treaty should be—1. The separate discussion and settlement of the *Alabama* claims; 2. The payment by the book of all losses, capable of computation in money, caused by the various Confederate cruisers; 3. The offer of some moral atonement or expiation for the wrong done the nation at large. What the nature of this atonement should be was not clearly ascertained in anybody's mind; but a simple apology or expression of regret was something suggested by the analogy of private life, and something for which the American people naturally and reasonably looked. In addition to this, Dr. von Holtzendorff proposed—and, whether designedly or not, his proposal was adopted by the negotiators at Washington—that England should, by way of expiation, join the United States in accepting certain rules, settling the duty of neutrals, which should thereafter render clearly illegal such acts or omissions on her part as the United States complained of.

There is no doubt that it was well understood by the English negotiators at least, and Sir Stafford Northcote expressly declared in his place in Parliament after he got home, without protest from this side of the water, that the claim for consequential damages was excluded by the Treaty, and that England had succeeded in wiping out all that side of the American complaint which was known as the "sentimental side"—that is, that portion of American wrongs which, from their immensity or their nature, did not admit of computation in dollars and cents. If this were not true, the apology and the acceptance of the *ex-post-facto* rules were a simple act of humiliation on her part which had absolutely no influence on the controversy whatever, as it left the United States just where they were, still angry, still unsatisfied, and still claiming everything they ever claimed. The general belief was—and the terms of the Treaty and the language of the protocol appear to justify it—that the United States were going before the arbitrators in a friendly spirit, claiming damages for all injuries wrought by the various Confederate cruisers—the amount of which the Treaty expressly provided should be ascertained separately in the case of each vessel—and these damages were to be awarded either in a gross sum or item by item. The total amount the American Commissioners estimated at about $20,000,000. The total amount of the "consequential damages" would be, however, as nearly as one could estimate them, from $1,500,000,000 to $2,000,000,000. No mention of any such sum was ever made. If the American Commissioners felt themselves really entitled to such a sum, and expected to get it, they were guilty of neglect of duty in not asking for it, or in letting it be understood that it could be satisfied by the payment of $20,000,000. If they did not expect to get any such sum, and did not feel themselves entitled to it, their claiming it in the "Case," if it results in breaking up the Treaty, and defeating the real object of all the negotiations, was a mistake. We believe it was put in simply as a rhetorical means of impressing the arbitrators with the strength of the American case; but, if so, it is difficult to justify its being allowed now to stand in the way of real business—in the way not only of the United States getting all they ever expected, but in the way of a settlement of the highest importance to the peace of the world and the industrial interests of the two countries.

There is one other ground on which the friends of peace may freely protest against the course things are taking. The system of deciding international quarrels by arbitration, of which we have been considering this Treaty of Washington the happy beginning, cannot stand and succeed, unless it is carried out in sober earnest and with a conscientious avoidance of shams—that is, unless all the parties to arbitration solemnly refrain from submitting any question on which they are not prepared to accept the decision of the arbitrators as conclusive and obligatory. The tribunal must not be used for the trial of "feigned issues" or sham claims. Nations must go before it not as smart attorneys, but as moral persons, asking nothing they do not hope to receive, and do not believe they are entitled to, and disputing nothing on which they are not prepared to bow to an adverse judgment.

Now, if this be a fair statement of the functions of such a tribunal, and of the spirit in which litigants should approach it, what are we to say to a proposal that, the very first time it sits, a first-class power should appear before it to defend itself against a claim of over $1,500,000,000, alleged to be incurred by a breach of the neutrality laws—that is, a claim for a sum larger probably than the cost of a bloody war, larger than any nation has ever yet paid a conqueror as the price of national existence, and larger than Germany has exacted from France after one of the most crushing and remorseless overthrows recorded in history? Of course England would not pay such a sum on the award of any tribunal; no people with an army or a fleet would pay it to an equal; it would, therefore, be almost an offence against civilization to ask the first Board of Arbitration ever set up to go through the farce of hearing her liability on such a claim seriously argued and solemnly decided. The Devil of War could not desire a better mode of bringing the whole principle of International Arbitration into contempt, of perpetuating that supremacy of the sword over what is weightiest and most solemn in human affairs which has been the great scourge and shame of the civilized world.

It must not be forgotten, too, that the proposed enquiry would not simply be futile, but frivolous—as frivolous, perhaps, as any enquiry in which a body of serious men ever engaged. No speculation of the Schoolmen was ever airier than an attempt to ascertain the effect on the hopes and fears of the six or seven millions of men engaged in the rebellion against the United States of the escape of the Confederate cruisers from English ports. By what testimony could we prove whether it had any such effect? in what scales could we weigh it? Are not the nature, extent, and force of the moral influences which kept the South in the field, like the moral influences which act on all large bodies of men, things which are known only to the Ruler of the Universe? Is there in history anything more preposterous than a grave proposal to have them analyzed and measured by lawyers and accountants? Moreover, although we may satisfy ourselves, for the purposes of historical judgment or philosophical speculation, that England was really responsible for "the prolongation of the war," if we attempt to estimate her responsibility in damages, we must distinguish between the influence of her acts and that of all other possible causes of the prolongation of the war. To fix the amount she ought to pay, the arbitrators would have to examine Grant's strategy in the years 1863–4, and decide whether it was in the highest degree effective; to examine Lincoln's and Stanton's policy, and decide whether it was sufficiently conciliatory; to weigh the influence of the articles of the New York *World* and Chicago *Times*, and of the speeches of Mr. Vallandigham; and, in short, all other agencies which could by any possibility have stimulated Southern hopes or allayed Southern fears. In fact, to ask any human tribunal to say what agencies prolonged a great war, and in what degree each contributed to such prolongation, is to ask it to solve one of the most inscrutable of all the problems presented by human affairs.

THE COPYRIGHT QUESTION.

THE difficulties which surround the international copyright question have received some illustration during the past week from a movement set on foot among the publishers in support of what is known as Mr. Appleton's bill, which proposes to give foreign authors the same rights as American authors—that is, copyright in the United States—provided they employ an American publisher, and provided American materials are used in the manufacture of the book. The meeting at which this bill was adopted, however, was not by any means a full representation of the publishing interest. Philadelphia, for instance, sent no delegates, and several of the publishers present did not vote—some for one reason and some for another. Mr. Appleton's plan forms a middle ground between the position of the International Copyright Association of this city, to which most authors give in their adhesion, and that of the Philadelphians. The former asks for the plain and simple recognition, without ifs or buts, of the foreign author's property in his books, provided the country to which he belongs recognizes in a similar manner the American author's property in *his* books. The Philadelphians, on the other hand, while conceding that an author owns his ideas as long as he keeps them to himself, declare that if he gives utterance to them, they become, like light and air, the property of the human race; but, to make assurance doubly sure, they also declare that even if he does own them, he ought not to be allowed to sell them here, as that would not only discourage American industry, but raise the price of books on American readers. In short, they are opposed to all copyright. This theory, which was, we believe, originally concocted by Mr. Henry C. Carey, and has been defended by him in a pamphlet of extraordinary absurdity, like the "cursed-be-Canaan" theory of the origin of slavery—and, indeed, like all theories which furnish a plausible reason for not interfering with a profitable abuse—has, as might have been expected, found considerable acceptance, and is, perhaps, the most serious obstacle with which the friends of international copyright have to contend. As far as "natural right" goes, there is no distinction whatever between literary property and any other property. If I have a natural right to anything, I have a natural right to what I produce, and other people desire, and are willing to pay for if they cannot obtain it without paying for it. Moreover, it is not "ideas" in which an author has property under any theory of copyright. In discovering that ideas, when enunciated, become the property of the human race, the Philadelphia philosophers have lighted upon a mare's nest. Nobody claims property in ideas. An author's property lies in the clothing of his ideas in language; it is of this clothing books are composed; it is this clothing which publishers sell and make money on, without the slightest scruple; and it would have no market value if it had not all the incidents of property. We have just as much right to walk into a publisher's store, and clear his shelves of his last new book, on paying him the bare cost of production, as he to take an author's manuscript, or his printed work, and reproduce and sell it for his own benefit. He is perfectly welcome to distribute Dickens's or Mill's ideas among the human race as much as he pleases, but if he undertakes to sell the forms of expression in which Dickens or Mill produced them, he owes the author a share of the profits.

The difficulty there is, and has always been since the invention of printing, in securing respect for literary property—of the absence of which the Philadelphia theory is simply a coarse and frank expression—is a remarkable illustration of the extent to which the security of all property is dependent on purely utilitarian considerations. The natural sense of justice, one would say, would be quite as much offended by a man's carrying off a book which has cost me years of labor, and selling it at a profit and pocketing the money, as by his running off with my painting or my carved chair, and disposing of them in the same manner. But, as a matter of fact, society does not as yet look on the two acts in the same light, and for two reasons: one is that the idea of property apart from corporeal possession is of comparatively recent growth, and maintains its ground in the minds of a considerable portion of the community with great difficulty. Of this, the reluctance with which even tolerably honest men, as men go, restore lost property to its owner is a familiar illustration. In all the earlier stages of civilization, whatever a man owned he kept in his custody, and could defend *vi et armis* if need be. As civilization, and security, its attendant, grew, he took his money out of his chest and kept it in the bank; he became the owner of indivisible shares in all sorts of enterprises, and of books which were read all over the world. His money in bank, and his shares in railroads and canals, and his rights under trusts, jurisprudence and public opinion speedily took charge of, because these were kinds of property of which everybody felt he might himself any day become possessed. But property in books is a kind of property which not one man in a million ever dreams of possessing. The owners of it have always been, and will always be, a small and peculiar class, and the property a peculiar property, and therefore the failure of society to protect them has not seemed likely to endanger the security of other classes of possessions, and it is consequently very difficult to get society to trouble itself about their special interests.

The other reason is that, in the opinion of many people, the consideration by which society is so powerfully influenced, that without security in the enjoyment of the fruits of their industry men will cease to produce, ought not to operate in the case of authors, inasmuch as authors, and especially good ones, are sure to produce whether they are protected or not. Genius, we are told, does not care for money, and, money or no money, is sure to find expression; therefore there is no occasion to trouble ourselves about its getting its due reward in dollars and cents. There is, however, a great deal of valuable literary work done by men who are not geniuses, and there is a great deal of genius turned away from literary production by the reflection that it is poorly paid. Moreover, it is not permissible for us to speculate about a man's motives for working when called upon to pay him wages. It may be that he works for the love of work, and would work whether he was paid or not, but with this consideration the legislature has nothing to do. We owe it to the general cause of morality and social order to see that he gets his reward if he chooses to call for it; and this is a peculiarly binding obligation when the commodity he produces is a vendible commodity, and is dealt in by others. If an author chooses to make his book a voluntary contribution to the civilization of his time, well and good. If society chose to declare that all books would be so regarded, and that nobody would be permitted to make anything out of the circulation of them, there would be something to be said for it. But there is nothing to be said for a policy which throws the burden of philanthropy on the author, and leaves the printer and publisher the sweets of profit; and no community can avoid being demoralized by systematically denying one class of men all reward for the products of their labor, while allowing another class to make these same products an article of commerce. We say this in perfect familiarity with the quibble which makes the commercial value of a book consist largely in the paper, print, and binding; those who use it, however, know perfectly well that, if what the author has contributed to it were taken out, it would bring simply seven cents per pound or thereabouts. At the bottom of the disinclination of many people to give the foreign author protection, or, in other words, at the bottom of the difficulty about international copyright, lies this hazy condition of the public mind about all literary property. If the popular morality were in a sound condition on this point, there would be no more readiness to take the books of foreign authors without paying for them than to plunder foreign insurance companies or strip newly-landed travellers. It is not because Dickens and Thackeray were Englishmen that we did not want to pay them for their work, but because they were authors, and because we were in some doubt whether any author ought to be paid for his work; and because, so few of us being authors, we concern ourselves very little about the sorrows of the class.

But, as far as American publishers are concerned, considerations of another kind come into play in dealing with the question. To accept the standing offer of complete reciprocity which England makes—that is, to give the English author copyright in the United States without conditions—would be tantamount to giving a monopoly of the great American market to English publishers for all English books. For it must be remembered that, although it would be open to the English author to employ an American publisher if he chose, in practice there is no doubt he would employ his own countrymen in preference to foreigners, acquaintances in preference to strangers, and houses near his home in preference to houses three thousand miles away, doing business in the jurisdiction of foreign courts. So that the practical result of reciprocal copyright would be that American publishers would be deprived at one blow of the most important branch of their business apart from the publication of school-books. For the melancholy truth is, that American authors are neither prolific enough nor held in sufficiently high estimation to make it possible for American publishers to get a living out of the trade in American books. If they lost the privilege of dealing in English books on their own terms, we presume it is no exaggeration to say that half of them would be ruined. A very large proportion of them, therefore, oppose international copyright in the interest of self-preservation. They are not willing to surrender the American market to the English publisher, and there are as yet but few American copyrights with which they could carry the war into England. So they say, in reply to all arguments based on the abstract justice of the thing, that they are unwilling to be sacrificed to abstract considerations of any kind, and that, moreover, it is not for the interest of American literature that they should be sacrificed. They say that it is for the national advantage that there should be American publishing houses on American soil capable of bringing the works of American authors before the world; that, in the absence of such houses, every American who had anything to publish would have to carry his manuscript to London; and the country would, in all that regards literature, sink into a condition of colonial dependence which would in the long run be as injurious to the author as to the publisher. That this is a strong argument against anything like sudden or violent change in the existing conditions of the book trade there is no denying. Interests that have grown up under the protection of law or public opinion ought not, even if indefensible on moral grounds, to be hastily or inconsiderately dealt with; and we believe that a process of transition perfectly harmless to American publishers, and making a near approach to complete justice to foreign authors, might be found in an arrangement by which anybody should be at liberty to republish a foreign author's works in this country on paying him a royalty. There are doubtless some practical difficulties in the way of such a measure, but we have as yet heard of none that are not trifling, and they are such as attend the enforcement of all copyright laws.

Let us say, in conclusion, that there could not be a more striking illustration of the way in which people are deceived by names than the notion that, as long as we do not have to go to Europe for our printing and binding, we preserve ourselves from colonial dependence on England in literary matters. The fact is that there could not be a stronger proof of the depth of that dependence than the plea put forward by the publishers, that they could not live if they could not get English copyrights for nothing. Our independence is not secured by getting all our books printed in New York or Boston, but by getting our thinking done in New York or Boston. As long as our thinking is done in London and Paris, we shall be intellectually colonial, no matter where we do our printing and binding. To secure literary independence, what is wanted is native thinkers; and our conviction is that there is nothing which contributes so much to keep down literature as a profession in the United States, to make American poets, novelists, and speculators inferior to those in Europe, and to keep the people of the United States in a condition of mental vassalage to the Old World, in spite of their political emancipation, as the long refusal of the nation to give native writers the stimulus, encouragement, and protection that would come from compelling native publishers to pay foreign authors for their works. No matter how great the difficulties which surround honesty, stealing in the long run is never profitable.

ENGLAND.

LONDON, Jan. 26, 1872.

THE political horizon has just now a stormy aspect. The Dissenters have been holding a grand conference at Manchester, and are lashing themselves up to a very angry state of mind. They have come near to proclaiming open war against Mr. Gladstone's Government, and considering the immense political influence which they exert, there can be no doubt that their defection would be an almost fatal symptom. At present, indeed, they are willing to leave him place for repentance. One gentleman, I observe, last night, was kind enough to intimate an opinion that Mr. Gladstone was almost emancipated from "the gall of bitterness and the bonds of iniquity"; and several members of the Cabinet are held to be in a still more hopeful position. The great disappointment is the apparent defection of Mr. Forster, a gentleman whom every one acknowledges to be as straightforward as he is able, but who, in the Dissenters' opinion, has taken a view of the education question entirely incompatible with the true Liberal theory. The cause of all this wrath is simple enough. Mr. Forster, as well as the other members of the Government, sincerely believed, as I have no doubt, that the system which they founded would embody a satisfactory compromise, and would not give a decided start to any one of the rival denominations. It has as a matter of fact worked quite differently. The Church of England was already in possession of the ground. A year's grace was given, during which time any denominations were at liberty to found schools under the old regulations, which would be taken into account in estimating the educational deficiencies of the country. The Church of England exerted itself warmly, and the consequence is that in many districts it is considered to have supplied all the educational wants, and the act will in them not come into operation at all. Another rule, allowing the school-boards to pay the fees of children at denominational schools, will tend in its practical working to be of great assistance to the bodies already in possession of the ground. The effect of these regulations, which was not foreseen, or at any rate not taken into account, has been that the Church of England and the Roman Catholics have reaped the chief benefit of the act, and that Dissenters, so far from finding themselves raised to an equality with their rivals in educational matters, are probably placed at an additional disadvantage. Undoubtedly, this is annoying, and no argument as to the theoretical fairness of the arrangements goes far to pacify men who see that the arrangements, however fair, tell against them most seriously in practice.

By way of complicating the situation, Cardinal Cullen has just been putting forward in an extravagant form the claims of the Irish priesthood to have the whole educational system of the country placed in their hands. The effect of this claim upon the English Dissenters will certainly not be of a calming character; and Mr. Gladstone will have a very difficult course to steer if he intends at once to conciliate the Irish members who are under pressure from the Catholic priesthood, and the English members who are under pressure from Dissenting ministers. The mode in which he decides to deal with these conflicting claims will probably determine the nature of the political warfare of next session. The position is plainly one of extreme difficulty. The confidence which Mr. Gladstone once possessed has been superseded by an almost morbid state of suspicion on the part of a large body of his supporters. Any error of judgment may lead to a catastrophe; and it is impossible for the keenest-eyed of prophets to say what new combinations of party may be in store for us. Mr. Gladstone, like M. Thiers, is coming to rely rather overmuch on the undeniable difficulty of producing any plausible candidate for succession to his power.

One suggestion that is made by an extreme party is that he should boldly take up the question of the liquor-trade. By avowing himself as a thorough-going supporter of the Permissive Bill, it is suggested that he would call out a sufficient amount of enthusiasm to carry him over all his other difficulties. I cannot believe in the prescription, nor in the probability of its being adopted. A vigorous attempt, however, is being made to get up an agitation on the subject. Mr. George Trevelyan, who gained credit—very deservedly—with his party for resigning office when the tendency of the Government Education Bill began to reveal itself, and who has since taken a conspicuous share in the discussions on army reform, has now thrown himself into the Permissive Bill agitation. His last performance was at a meeting in Exeter, where the eminent Bishop, Dr. Temple, took the chair. The publicans had taken care to pack the meeting, according to a precedent which, I ought to say, has become rather too common of late. A violent disturbance took place. A bag of flour, hurled by a powerful arm, nearly knocked the Bishop off his legs. A distinguished wrestler — Exeter, you may remember, is the capital of one of the great wrestling counties, Devonshire — applied his toes with characteristic skill to the shins of some of the advocates of temperance. In short, the meeting resolved itself into a bear-garden, owing to the blackguard conduct of a certain number of roughs, believers in the old British melody which denounces supernatural penalties upon the eyes of those "who would rob a poor man of his beer." Demonstrations of this kind are not likely to be permanently favorable to the cause which they are intended to support; but they are some proof that the agitation is beginning to take root in the country. It must be said, however, that it will divide the Radical party. Professor Fawcett, whom even his opponents admire as a consistent and unflinching supporter of his creed, lately stated to his constituents that, sooner than vote for the Permissive Bill, he would never again enter the doors of Parliament; and the same views are shared, though they are not often so openly expressed, by all who admit the intellectual guidance of Mr. Mill, and hold that it is an act of unjustifiable tyranny to prevent sober men drinking at all, in order that drunkards may not drink too much. Professor Fawcett, I have no doubt, will stick by his convictions; but the opinions of most of the virtuous are observed to conform rather more rapidly than might be wished to the views of their constituents; and there is clearly a current running just now in favor of some kind of liquor law. How strong or how permanent it may be, remains to be proved.

Allow me, in concluding this letter, to say a few words upon a subject which I see discussed in one of your recent articles: What is the real meaning of that outburst of loyalty which was provoked by the Prince of Wales's illness? Was it indicative, as official people say, of the profound attachment of the British people to their ancient monarchy, or was it merely due to the natural feeling of sympathy with a young man struggling for life? As you justly remark in the article to which I refer, no individual can judge very confidently of the feeling of several millions of people. Still, I will venture to give you my own theory, and you may take it for what it is worth. I should say, then, that amongst the most highly educated classes, such enthusiasm as existed was chiefly due to the feeling of personal sympathy. Nearly everybody to whom I have spoken has been disgusted by the exaggerated bombast in which the newspapers generally indulged, and very little edified by the general behavior of the public. But then people who read the *Saturday Review* are not the class from whom it would be wise to expect any warm enthusiasm. Going a step lower, we come to the shop-keeping class, to the people whom you meet in omnibuses and second-class railway-carriages, who look upon Mr. Dickens as the greatest of all writers, not excluding the Evangelists, and whose favorite organ is the *Daily Telegraph*. They, of course, are generally loyal, after the fashion of the class everywhere, though their loyalty partly consists in admiration for an institution which "encourages trade," or, in other words, brings grist to their mill. Just at present they have been scandalized both by English trades-unions and Parisian Communists, and are very strongly convinced that a revolution would be a very costly affair, and not very likely to improve their position. The British publican, grocer, or tailor is in a fit of more than usual dislike to disturbance of all kinds, and the "Conservative reaction," so far as it really exists, is doubtless to be found in this social stratum. The Prince's illness gave them a very excellent opportunity for indulging in such sentiment as they love. They really enjoy the true old British-lion platitudes which people of a higher rank are too cynical and people of a lower rank too uncomfortable to enjoy. Finally, our present masters, if they knew their power, the artisans and the laboring classes generally, doubtless caught the excitement and were willing enough to express sympathy for the representative of the nation. Just now they are in a good humor; business is unprecedentedly active; wages are rising and the hours of employment falling; the workmen have had unparalleled success in all the demands recently made on their employers; pauperism is falling off, and is now something like 25 per cent. less in London than it was at this time last year. Under such circumstances, there is little bitterness of feeling waiting for expression, and people are quite ready to be good-humored and sympathetic. You may judge whether such a description—if accurate—implies that the recent outburst of loyalty rests on any deep substratum of feeling. My own opinion is that it shows very little indeed. By the time the Prince has got well and shot a few more pigeons, we shall be rather ashamed of our enthusiasm; Sir Charles Dilke and Mr. Odger will be once more in the ascendant; and though I do not believe, as I never have believed, that the Republican sentiment is at all strong in the country, I fancy that our loyalty will speedily subside to something very near freezing point.

A PHOTOGRAPHIC EXHIBITION.

LONDON, January 16, 1872.

THE recent exhibition of the Photographic Society of London has been a curious demonstration of the economic value of scientific discovery. It only wanted one of the original examples of the sun pictures by which Daguerre opened the gates of light to industry, to complete, perhaps, the most pregnant lesson of the worth of inventors—to every one but themselves—which the generation affords. I can remember the first daguerreotypes taken in New York, and can, with much allowance for shortcomings of memory, compare them with the multiplicity of results of almost absolute perfection now produced as I saw them gathered in the exhibition just closed. And whatever may be said on the score of taste and artistic originality, it is certain that, taking the whole range of photographic production, the English are far ahead of any other nation in technical excellence. In landscape and that kind of taste which is the genuine artistic element in photography, there is no comparison between fine English work and any produced elsewhere. The combination landscapes in the exhibition, by Robinson and Cherrill, are, in good taste and exquisite manipulation, in the happy rendering of skies, with all the multiplicity and delicacy of cloud form—fleecy "mackerel sky," drifting scud, or piling cumulus—all that one can conceive of a photographic record of the flitting, evanescent, never-to-be-repeated and unpainted cloud scenery. They are surprisingly perfect, and the ensemble of landscape and sky, though printed from separate negatives, taken at different times and places, is so complete that no one but a practised painter could, in certain cases, detect the duality of the impression. Some of the lovely old English landscapes (for which, I believe, most New Englanders retain a hereditary instinctive love, like that which Indians are reported to have for the original seat of power of their tribe) by Bedford are not less remarkable for their technical perfection, and some small views, by Messrs. Gordon and Cooper, amateurs, but distinguished for executive successes in the landscape department, are really quite all that can be expected of landscape photography under present conditions of science.

Nothing, indeed, in the history of the art in England (elsewhere, too, perhaps) is more remarkable than the amount of progress and discoveries made by amateurs, who bring to the practice cultivated tastes and refined perceptions with leisure and wealth to devote to their experiments. Most of the improvements in the dry processes are due to them, and most of those in the apparatus either directly to their ingenuity or the demand they make for improved and portable apparatus. Photography has, in fact, become not only a great business, giving occupation to thousands of workmen of all grades of intelligence, but the favorite amusement of thousands besides, for whose convenience and interest more than for professional photographers the ultimate refinements of its practice are brought out, so that certain branches of the trade exist by the amateurs alone. The manufacture of apparatus is carried to such perfection that one may carry in the hands all that is necessary for a day's work, all folding and packing together into the corner of a portmanteau. Then establishments for the preparation of sensitive dry plates give a supply of ready-made material which keeps for years, and with which a tourist has always at hand, without any drawback of chemical preparation, everything necessary for preserving photographic reminiscences of the tour. There is no excuse for any person gifted with average manual dexterity not becoming sufficiently conversant with the art to enable him to make complete record of scientific, topical, or picturesque features of everything worth seeing and remembering, and at a cost actually less than he would be able to do it with his own manufacture of the materials or transportation of chemicals. Four or five different makers of dry plates and many more of portable apparatus reduce by their competition the cost of all these things to a minimum, and every traveller may now illustrate his own books photographically and pack everything requisite for a year's voyage in a space less than eighteen inches cube.

Amongst these notable mechanical results, one of the most notable is the pantoscopic camera of Johnson, one of the most accomplished mechanical geniuses whom photography has attracted into its service. It is a panoramic camera, which by a most ingenious mechanism sweeps the whole landscape in, and takes it on a plane surface, embracing on one negative one third of the circle. The exactitude of its operation is as singular as the beauty of its results; and I am surprised that our photographers have not used it for those great scenic landscapes which are the most noteworthy of the features of American nature—Niagara, the Yo-Semite, and our mountain and lake scenery, which, if not Alpine in their grandeur, have still a certain unique sublimity and interest which they will not have a hundred years hence. The pantoscope begins at one end of the view desired, and goes round the horizon as one sweeps it with a telescope, the plate moving with a corresponding motion through the arc, which might be a circle if it were desirable.

In portraiture the English have not the general success which they attain in landscape. In manipulation they are not equal to the Americans, and in artistic feeling to the French and Germans—the best portraits in the exhibition being by a Berlin house. But one or two of the English professionals, notably Blanchard, are eminent in technical success. Rejlander, a naturalized Swede, and Mrs. Cameron have a kind of accidental freedom and lucky success which is not notably good photography, yet suggests good art, in an alien language. The enamel portraits on porcelain of Henderson are in another way remarkable proofs of English excellence in manipulative qualities, and in view of the questionable permanence of photographs, it seems desirable that the portraits of modern greatness (could we only decide at present what is worthy the title) should be enamelled for future preservation.

The mechanical and permanent printing processes deserve especial mention as of a great future interest. Thus far the autotype has been unrivalled in the quality of its work. It is based, as your readers most likely know, on the property which light possesses of rendering insoluble gelatine impregnated with a chromate. The gelatine thus treated is held by the effect of the light with any pigment which may be combined with it, while the portions unaffected are washed away, showing the white background. For its admirable reproduction of the drawings of the old masters in the original colors this process is already well known, but its inequality of result and the necessity of light to carry it on make it far short of what is desirable for commercial use. Of the printing processes, no one has yet been found to equal the autotype in quality of the print. The nearest approach has been with the photo-relief of Woodbury, in which the insolubility of gelatine above alluded to is employed to make a mould in relief, which, being filled with a transparent ink, transfers its charge to printing paper. But this fails where great expanse of white skies or other unbroken surface occurs.

The genuine printing processes, in which a surface is produced fit to receive printer's ink and transfer it by pressure, are numerous, and the results, as shown in the exhibition, are very interesting, but they are all immaterial modifications of one, the original chromated gelatine process of Tessie du Motay, in which the relief formed by the swelling of the gelatine after exposure under a negative to light is employed as a relief to catch and hold the ink. These modifications all have the quality of flatness and dulness in the extreme shadows, and want of delicacy in the larger gradations. For ornamental work, or subjects in which the detail pervades the whole subject, as architectural ornaments and copies of drawings in line or engravings, nothing can be better than some of the results here shown; but in portraiture they are worse, resembling a print from a worn-out lithographic stone, and there is a great want of brilliancy and a general unsatisfactory appearance which I much fear will never be overcome by this process. Woodbury is now developing a new application of the same principle as an engraving process, some heads by which in the exhibition are quite equal to and resemble ordinary mezzotint engravings. I do not know the details of the process.

In the reproduction of paintings, the Germans as yet carry the palm—the Berlin Company's photographs from the original pictures of the old masters leaving nothing to be desired except color, and really rendering all that can be seen in the originals of expression and drawing. They have taken the complete series of the Louvre, the Pitti, Berlin, and National Galleries, and are about to add those of the Dresden, for which permission has hitherto been withheld. The Madonna di S. Sisto will probably be the most interesting of all the reproductions of this kind yet taken, the subtlety of expression of this picture having hitherto, it is said, defied copyist and engraver. W. J. STILLMAN.

Correspondence.

COLONEL LEET'S SALARY.

TO THE EDITOR OF THE NATION:

SIR: In its issue of 25th inst., the *Nation* has fallen into an error of fact relative to Mr. George K. Leet which, besides being unjust to him, may mislead the public in relation to a principle, and which seems worthy of correction. He is spoken of as, at one time, "drawing both the pay of a colonel in the army and of a clerk in the War Department." After previous service as a captain of volunteers, Mr. Leet was appointed an assistant-adjutant-general, with the rank of major, in March, 1866, which position he held until his discharge in August, 1870. He was a lieutenant-colonel by brevet, and therefore a colonel by courtesy in conversation; but brevet rank carries no pay. His duties during the most, if not all, of this time were in connection with the Headquarters of the Army and the War Department, and, like those of all other adjutants-general, were what is known as bureau or clerical work.

He therefore may have been described as "a clerk" by some one unfamiliar with the technical distinction, but it must immediately occur to the *Nation* that no officer of the army, even though he may discharge two entirely distinct sets of duties, as is sometimes the case, can receive pay for more than one office. Mr. Leet's pay during the period mentioned could not have exceeded that of a major of the staff. W.

January 31, 1872.

A WESTERNISM EXPLAINED.

To the Editor of the Nation:

Sir: In your paper of January 18, under the head of "Hoosier Schoolmaster," you say "to crate a person" is a phrase that you find incomprehensible. It was the custom thirty years ago in frontier communities to "crate a drunkard," that is, to put a crockery crate over him, and then subject him to various indignities, some of which will not bear description. This discipline, which was usually administered by boys and young men, was looked upon as a substitute for the "lock-up," and had the tacit approval of the older men. The writer has often witnessed the operation of "crating a person," and believes the custom described was the origin of the phrase.

D. A. H.

New York, Feb 6, 1872.

Notes.

THE spring publications of Messrs. Dodd & Mead will embrace the deferred work on "Corals and Coral Islands," by Prof. Jas. D. Dana; "The Miracles of Faith;" and "Bible Lore," by James Comper Gray.——"Memoirs of John Quincy Adams," edited by Charles Francis Adams; Edward Whymper's "Scrambles among the Alps"; "Philadelphia and its Environs"—illustrated; and "Black-Robes; or, Sketches of Missions and Ministers in the Wilderness and on the Border," by Robert P. Nevin, are in the press of J. B. Lippincott & Co.——Messrs. Ginn Bros., Boston, announce "Allen & Greenough's Latin Grammar"; "A System of Drawing," by the late John S. Woodman, of Dartmouth College; and "Our World," a Grammar-School Geography, by Mary L. Hall. ——Messrs. D. Lothrop & Co., Boston, have in press a number of religious works for the young: "Old School-Fellows, and What Became of Them"; "Soldier Fritz, and the Enemies He Fought"; "Dr. Plassid's Patients," etc., etc.——The *American Builder and Journal of Art*, published at Chicago, and now in its fourth year, has, we are glad to see, survived the fire. It is a journal of considerable promise, and one that we wish well to. It is something to have fairly established a journal honestly devoted to architecture, with a standard which, if not the highest, gets higher as the journal goes on, showing that the editor has an open mind. He has undertaken what the American Institute of Architects and its many chapters seem never to have contemplated; and, while we still have urgent need of a thoroughly good illustrated journal of architecture and the allied arts, we give the praise it deserves to this Chicago effort to come as near the best as it can. ——The third volume of the "American Bibliopolist" (J. Sabin & Sons) is just come to us from the binder's hands, a stout octavo of 550 and odd pages. This publication, though nominally addressed to book-buyers, furnishes a large amount of curious and entertaining information for all lovers of literature, and may be relied on for fair dealing with the trade and the public. It is not the mouth-piece of any set, and its criticisms of catalogues and book-sales are refreshingly independent and piquant.

—Mr. Bayard Taylor's "Illustrated Library of Travel, Exploration, and Adventure," published by Messrs. Charles Scribner & Co., brings this firm into the field so well and wisely worked by the Harpers, but in a somewhat different way. The object of the series is, to use the words of the prospectus, "to furnish a clear, picturesque, and tolerably complete survey of our present knowledge of lands and races, as it is supplied by the narratives of travellers and explorers, especially those of our own times." It would seem to depend upon the editor how much or how little wholesale reproduction there shall be, and how much compilation. Of the two volumes that have already appeared, the first, on Japan, is compiled chiefly from M. Humbert's account of that country, while the second, Gordon Cumming's "Wild Men and Wild Beasts," is a simple reprint, without note or preface from the editor. Both volumes are freely illustrated, and that on Japan has a tolerable map, but neither has an index. In these two latter respects the series is susceptible of improvement which would very greatly enhance its value. The labor of indexing, we are well aware, may equal or exceed that of editing, and it is not cheap nor easy to procure. As for maps, however, the development of photography offers numerous methods of copying them at a low cost, and we hope to see the day when, instead of the reader's being obliged to refer to a large and flimsy folded map at the end of a book of travels, he will be served as often as the text requires with so much of the map as the narrative is immediately concerned with. This could be effected with much greater economy of space than might be imagined, even if a portion of every second page were appropriated to it. The apparently useless repetition would fix in the mind as nothing else could the geographical relations involved; and the details once mastered, the general map would show their connection and complete the lesson.

—The abstract of proceedings of the American Philological Association at New Haven last July has been printed in the usual simple form, and will be found good reading. We have particularly enjoyed Dr. Fitz Edward Hall's defence of the "Imperfect Tenses of the Passive Voice in English," that is to say, specifically, of the phrase "is being [built]." After disproving the so-called absurdity of it, Dr. Hall says: "To pronounce the locution 'unidiomatic' implies a wholly new definition of *idiomatic;* and as to 'being opposed to the genius of the language,' that is a sounding phrase which has no philological value." He goes on to draw a parallel between *is being built* and the word *its*, which we know to be not very old, and to have given a shock to purists on its introduction, and which "involves a worse violation of sound principle and analogy" than the verbal phrases. Seven of the papers here enumerated relate to the Indian dialects of this country, and are all interesting. That on "A Mode of Counting, said to have been used by the Wawenoc Indians of Maine," by J. H. Trumbull, deserves mention as a neat and convincing exposure of a fallacious hypothesis put forward by Dr. J. G. Kohl, of Bremen, whom, by the way, this pamphlet errs, as we ourselves did lately, in speaking of as dead. We believe the report of his decease to have been false. The association will hold its next annual meeting at Providence, on Tuesday, July 24, and persons intending to read papers on that occasion should send early notice, as usual, to the secretary, Prof. Geo. F. Comfort, of this city.

—Once in so often the city authorities of Cambridge, Massachusetts, take into consideration the possibility of taxing the property of the University there situate, and the University authorities on their part protest, alleging that the hundreds of students whom the colleges and schools attract to the town spend much money among the inhabitants, that many persons of large means are drawn to the vicinity of the college as a favorite place of residence, and that the lands adjacent to the college yard are made more valuable by its neighborhood. To these protestations the reply of the common-councilmen is, that the collegiate property in Cambridge is valued at two millions of dollars; that the estates owned by the University are about seventy acres in area; and that every year the University adds to its estates. The common-councilmen might have gone further, perhaps, and said that so uneconomical has been the management of the city government during the few past years that they would be very glad indeed to lay hands upon the college revenues. We have, at any rate, heard charges of extravagant management brought against the city, and we believe it is like a good many of its sister cities throughout the Union in having been compelled to "run a reform ticket" at its last election, and in having felt compelled to elect the reform candidates. And the University may furthermore plead on its side of the question that it is like all other great universities in that it is not, from a mercantile point of view, successful; that indispensable though its work be, its revenues are not of themselves sufficient to allow of its keeping its doors open to students; and that if it is to be above the need of begging money — or rather, if it is to cease being altogether too heavy a weight on the charity of its private friends — State aid in some form it must have. But, after all is said in behalf of the University, we think it must strike every one as unjust that two millions of college property should lie untaxed in the middle of so small a city as Cambridge. After setting down on the credit side of the college's account with the city all the items insisted upon by the college officials, there still is apparent proof, which we venture to say investigation would show to be real and perfect proof, that Cambridge is made to pay out of her municipal pocket a disproportionate share of the subvention which it is, as we think, beyond question the State should pay, but of which Cambridge should pay very little more than her strictly ascertained share. It is to her peculiar honor that Harvard University should be within her borders; but it is greatly to the general honor, glory, and profit of the State of Massachusetts also that so ancient and far renowned a university should be the vivifying root of that educational system to which may be directly traced so much of the material prosperity of Massachusetts, as well as so much of her distinction among the States of the Union, and, indeed, among the nations of the earth. The State, it seems to us, has hitherto been generous at the city's expense, and there is little wonder that the city grumbles.

—A scheme has been broached in the *Illinois State Journal* which looks to the establishment in every State of a College of Military Science, and to an annual subsidy from Congress of $10,000 to pay the salaries of a professor of military tactics, another of military engineering, a drill-master, band-master, and armorer. West Point, further, is to be made of higher grade, "a military high-school of the nation," receiving a part of its students from the graduates of the military colleges. This scheme seems to us to have only the merit of pointing out an obvious defect in our military academy, viz., that it is employed in teaching at a disadvantage elementary knowledge which had much better be acquired elsewhere, and consequently receives pupils whose capacity has not previously been tested, and who, on account of their youth, are exposed to temptations greater, in spite of discipline, than are encountered in non-military institutions. A highly desirable reform would be so to raise the standard of admission as to require a full collegiate education in candidates for the lowest class. This would, to be sure, limit the range of selection for Congressmen, but it would send fewer dunces to West Point; and it might even be provided that the nation should pay for the preliminary collegiate training, on condition that the candidate should be chosen by competitive examination. The Illinois scheme would, on the contrary, weaken our present colleges instead of strengthening them, and raise up another host of half-paid professors and feebly endowed schools, from which deliver us.

—One of the cleverest of late *jeux d'esprit* is contained in the last *Saint Paul's Magazine*, and will amuse all readers of "The Last Tournament"—except possibly Mr. Tennyson, and those of us who have been enthusiastic over the recent political activity of Sir Charles Dilke. It is a parody on "The Last Tournament," and at the same time an attack on Sir Charles and his friends, the attack, doubtless, being the author's primary object, but the goodness of the parody being what gives the performance most of its interest for American readers—though there is a satisfaction, too, in seeing a noisy and inconsiderate gentleman very soundly admonished. In many parts of "The Last Tournament," Mr. Tennyson has so managed matters as no doubt to cause great discouragement to intending parodists, but the writer in *Saint Paul's* makes a gallant struggle, and merits a good deal of commendation. The reader has probably not forgotten the maimed churl:

"But on the hither side of that loud morn,
Into the hall staggered, his visage ribbed
From ear to ear with dog-whip weals, his nose
Bridge broken, one eye out and one hand off,
And one with shattered fingers dangling lame;
A churl, to whom indignantly the king:
My churl, for whom Christ died, what evil beast
Hath drawn his claws athwart thy face?
Man was it who marred heaven's image in thee thus? or fiend?

"Then sputtering through the hedge of splintered teeth
Yet strangers to the tongue, and with blunt stump
Pitch blackened sawing the air, said the maimed churl,
He took them and he drove them to his tower . . .
. . . .
The Red Knight he . . ."

Of this remarkable passage we think the reader most inveterate against parodies may well enough be willing to see a little fun made. Our parodist thus deals with it:

"But on the other side of the great day
Preceding that, or less ambiguously,
The morning just behind the day before,
To Carlton House there staggered eagerly,
With broken nose and one black jellied eye,
His teeth knocked down to his œsophagus,
His raiment rent, his face with filth besmeared,
A churl, to whom Sir William angrily:
My churl, for whom I've passed so many bills,
What ails thee? who hath spoiled heaven's image here?

"Then, with his loose teeth rattling in his throat,
Like dice within a box, spluttered the churl:
O William, this maimed likeness thou dost see
Is Codger's," etc., etc.

Codger—who is Mr. Odger, we suppose—goes on to tell Sir William that it is Red Bradawl (Mr. Bradlaugh) who has inflicted upon him such complicated mayhem, whereupon Sir William says that

"The land is full of curs, lean Communists,
Mad atheists, watery spouters,"

and departs to do battle against "Red Bradawl, that most bastard knight," and his horde of "duffers," leaving "Sir Foster, mightiest of my knights" (Mr. Forster) to judge the approaching tournament. This tournament is the Tournament of the Dead Loyalty. We have not space to tell the story of the poem, which, in general, may be said to follow that of its original with all desirable closeness, while occasionally there is marked felicity in securing parodical coincidences. Of the characters, "Bernalet," the fool, is Mr. Bernal Osborne; "Sir Boblo," Mr. Robert Lowe; "Sir William," Mr. Gladstone; "Sir Tyke," Sir Charles Dilke; and "Queen Mobbe," wife of "Sir Bull," does duty for Mr. Tennyson's Isolt, wife of King Mark. This is the opening of the satire:

"Bernalet, whom the Irish for a joke
Had made mock knight of William's Table Round,
At Westminster, within the gardens there
Skipt, snapt his fingers, chuckled, smoked his weed;
When to him, on the prandial side of noon,
Sir Tyke, a something addleheaded knight,
Hard-grained, dull-eyed, no genius, somewhat pale
From thoughts of brickbats whirling round his head,
Stept forth, and grasping in his dexter hand
A Red Cap, with a circlet labelled "Guy"—
Said, 'Wherefore dost thou chuckle so, Sir Fool?'

"For William and Sir Foster, riding once
Through England, with great Boblo in their rear,
Pricking full speed upon a bicycle,
Saw on a doorstep, wailing in the wind,
An infant, red and bare as Gloucester cheese."

"Ginx's Baby" Mr. Forster at once pronounces this infant to be, but Mr. Lowe declares it no babe of Ginx's but the bastard child of the caitiff Sir Sans Culotte, and says that its real name is Democracy. The great queen, receiving the foundling from Sir William, names it by a new name, "Loyalty," and strives to rear it, but it dies, and the "Tournament of the Dead Loyalty" is held that some one of the knights may win the fool's cap. This Sir Tyke easily carries off, and taking it to Queen Mobbe, he is by-and-by kicked down stairs by Sir Bull.

—The purchaser of the January *Saint Paul's* will find in it, besides the satirical poem after Tennyson, one or two other papers that may assist to justify him in his outlay. Mr. Henry Holbeach, a man of letters favorably known also under the pseudonym of "Matthew Browne," and, we believe, by still other designations, contributes the first of a series of articles on "literary legislators"—Mr. Disraeli being his subject this time. The subject is, one would say, rather too much for the author; but that might have been expected, for while there have been plenty of people competent to put aside as inadequate and even silly much that all kinds of English writers have said about Mr. Disraeli, there are very few people whom one would set down as competent to make an adequate explanation of his character and show us the secret law which governs his remarkable combination of qualities. What is at the bottom of the nature of a man who exercises himself now in the invention of "the Asian mystery," or "Young England," now in a retort which masters his enemy and the House of Commons, and becomes historical; who is to-day the easy victim of anybody's satire for a novel of which it would kill Mr. Gladstone to be thought the author, and to-morrow, with his grandiose nonsense all forgotten, beats the Liberal party before the country, takes away from it its own cherished political treasure, and passes a reform bill that equally disgusts Lord Derby and Earl Russell; who is sincerely denounced by many men as a mere political trickster, and yet, by his worst enemies, if he can be said to have any bad enemies, is more than half believed to be always true to some definite theory of his own; who is admitted to be fluent in speech, even eloquent; and who, on so great an oratorical occasion as the speech-making on the death of the Duke of Wellington, plagiarizes by wholesale from the oration made by M. Thiers on the death of Marshal Gouvion St. Cyr; who appears to care little for power, yet spends a laborious life in seeking it; who is a politician who has always been full of "views" and social theories, and yet who, though an untitled Jew, is at the head of the bucolical Conservative party in a country so little "viewy" as England. This is undoubtedly a character hard to translate into plain prose; and which it is none the easier to translate that Mr. Disraeli is undoubtedly a humorist; nor any the easier either that, though a humorist, he is apparently unconscious that often he is fully as absurd as Thackeray's absurdest presentation of him. One is sometimes tempted to think of him as a humorist not unconscious of his bathetic attitudes, but indifferent to them, or even finding a humoristic gratification in being whatever he likes, and nevertheless at the same time governing the English while mystifying them. Then, again, it is impossible sometimes not to think of him as being sincere—though his faith is never glowing—in all the things that seem to us his weaknesses. Mr, Holbeach's essay will be found interesting, though one hesitates to think it exhaustive. Were there no other thing in his essay to commend, we might commend Mr. Holbeach's advice to his fellow-essayists to lend no countenance to the growing fashion of using personalities in commenting upon public men and analyzing their motives. Mr. Holbeach's practice, however, is imperfectly consonant with his precepts. For example, the remark about Mr. Disraeli's relations with his wife is respectful and well meant, but what delightful passages we shall get by-and-by from some well-meaning gentlemen of the press when they come to imitate it and follow Mr. Holbeach in never being personal, except when they can honestly praise one's wife or one's charming daughter.

—We find in the *Academy* of January 15 a review of Roesler's "Romanische Studien," which gives a very interesting summary of the views of the author in regard to the origin of the Wallachians or Roumanians. These people, inhabitants of ancient Dacia, speak a language which is derived from Latin; and it is the common theory that it has come down by direct transmission, from colonies planted in this province by Trajan and his successors. Mr. Roesler, however, appears to have proved "that the forefathers of the present Roumanians did not live in Dacia, but in ancient Moesia [south of the Danube] and other parts of the Haemus peninsula, whence they migrated across the Danube to their present seats not much earlier than the thirteenth century.” It is certain that the greater part of these Dacian colonists were removed south of the Danube after the province of Dacia was abandoned by Aurelian in 272; and that the name went with them, two provinces south of the Danube being called *Dacia ripensis* and *mediterranea*. The Wallachians maintain that a considerable portion of the colonists still remained north of the Danube, and that the present nation is descended from these. To this Mr. Roesler's reply is that there is absolutely no evidence of the existence of a Romance-speaking people north of the Danube “from the third to the thirteenth century,” while there is abundant evidence of a Wallachian population called by this name as far south as Thessaly. This is traced back to the sixth century, and exists at the present day. The strongest argument, however, is found in the language. This is full of Greek elements, which can hardly have made their way to the present Wallachia; while the Slavonic elements are Bulgarian rather than Russian, and “until the seventeenth century, the Bulgarian language was the only one used by government and the church.”

—The fourth centennial of the birth of Copernicus has revived the ancient discussion whether he was a German or a Pole. The Germans insist that Thorn, the place of his birth, was a German town when Copernicus was born, while the Poles say that it was not annexed to Germany until seven years afterwards; and they prove that his parents were Poles, and that he entered his name as a Pole at the University of Padua, and that all his life he never ceased to display an attachment to his native Poland, its customs and its laws. The Poles have always honored Copernicus as one of their grandest names. It is not many years since they raised a statue to his memory in Warsaw by public subscription, and two others have been erected in Cracow. The anniversary will be celebrated on the 19th of February, 1873, at Posen, and great preparations are making for the interesting event.

NUMEROUS POETS.[*]

II.

RETURNING again this week to our pile of unreviewed poetry, we take up first a volume in which are published all of Mr. Bryant's poems previously known to the world, together with some few that have not appeared in any former collection. They are arranged, Mr. Bryant tells us, in the order in which they were written, “The Ages” and “Thanatopsis” being the first, and the last being some pieces which have appeared within a year or two—the latest products of half a century of devotion to poetry. We have been struck as we read at one perusal the poems of the poet's youth, middle life, and old age, by the singular unity of feeling, thought, and style which pervades the long series, and which is so marked that one would say the “Thanatopsis,” written before the poet attained his majority, might have been the production of his age, and that the “Planting of the Apple Tree” might as well have been assigned to his twentieth year as to his sixtieth or seventieth. From the beginning there is the same steady love of nature, and of nature moralized and solemnized by thoughts of man's duties, man's wrongs, man's sufferings, man's melancholy transitoriness in the presence of the eternal earth, which must, we suppose, be taken to be the characteristic mark of Mr. Bryant's poetry; throughout there is the same ardor for liberty or exultant, eloquent applause of liberty and indignant hate and condemnation of tyranny; the same resignation, almost pensive and sad, but too self-collected to be called pensive and sad, or even to be named resignation; and throughout there is the same sure, sober finish of method and style. Perhaps the latest pieces are to be spoken of as less austere in the loneliness of their communing with nature than the earlier, as giving clearer recognition than the earlier to the truth which is hinted in these stanzas of the “Invitation to the Country,” written in 1855, and which in 1825 would hardly have been so written, we fancy:

“Yet these sweet sounds of the early season,
  And these fair sights of its sunny days,
Are only sweet when we fondly listen,
  And only fair when we fondly gaze.

“There is no glory in star or blossom
  Till looked upon by a loving eye,
There is no fragrance in April breezes
  Till breathed with joy as they wander by.

“Come, Julia, dear, for the sprouting willows,
  The opening flowers and the gleaming brooks,
And hollows, green in the sun, are waiting
  Their dower of beauty from thy glad looks.”

But whatever slight qualification of our remark may be necessary, no qualifying clause is needed for the assertion that the equality of the poet at each stage of his long career to himself at each other stage is a remarkable and even astonishing phenomenon in the history of literature. It may, nevertheless, be that the poetry of Mr. Bryant's later years will be found to require less of clarification than the earlier poetry to free it from mere eloquence, and from verses made on set themes—such as the Indian, the Greeks, and so forth; and moreover it may be, despite what we have said, that when the clarification is complete, it will be found that a higher mark was reached in the poems of Mr. Bryant's early manhood than in the later poems. Certainly, bearing in mind his peculiar powers and their legitimate bounds, one might well doubt if anything in the “Later Poems” can be placed so high as the “Waterfowl”—“lone wandering but not lost”—the “Summer Wind,” “The Hurricane,” the “Forest Hymn,” “The Prairies,” the “Hymn of the Sea,” and the beautiful “June.” The “June” may almost be said to be the finest of all, and to have in it more at once of Bryant and of beauty than any other of the poems. It is, to be sure, the poet of “the melancholy days, the saddest of the year,” and of the unnumbered dead “where rolls the Oregon,” and of “the stormy March,” who thus gazes on the sky of a New England June; but the poem is beautiful and June-like, nevertheless:

“I gazed upon the glorious sky
  And the green mountains round,
And thought that when I came to lie
  At rest within the ground,
'Twere pleasant that in flowery June,
When brooks send up a cheerful tune
  And groves a pleasant sound,
The sexton's hand my grave to make
The rich green mountain turf should break.”

One is tempted for a moment to the injustice of quoting the other lines:

“ . . . .
His part in all the pomp that fills
The circuit of the summer hills,
  Is that his grave is green.”

And the more widely popular and taking poems, as “The Battle Field,” “The Death of the Flowers,” “The African Chief,” are also to be counted among the poems of Mr. Bryant's youth and promise. But what surpasses the mellow sweetness, the serenity, the chastened melancholy, of the “Thirty Poems,” his latest original gift to us?

At this frozen season, when belief in summer weather is a little faint, it is pleasant, sitting before the fire, to read Mr. Weeks's poetry and let it quicken one's faith in the return of the springtime and the season of blossoms:

“More soft and white and light,
  More fragrant than the snow,
The cherry flowers are falling
  And floating to and fro
About the happy trees,
  And happy birds are calling
Each other, and the breeze
  Is listening, loth to go.

Or it might be read in the spring days themselves, with spring sights and sounds to comment the pages:

“When first the spring grasses
  Take motion and glisten,
In sun-litten masses
Where through the brook passes
  And shimmers and sings;
When first the birds woo me
  To linger and listen,
And watch them upspringing
  On wonderful wings.”

With its flow of easy music and its suggestion of the physical enjoyment of outdoor existence, Mr. Weeks's poetry recalls and will accord with the sensations of springtime; but perhaps it is as an aid to faith, or as a sympathetic companion beneath the cherry boughs, that it is best—better than when it is taken independently of the fireside and brookside commentators, and made to depend without extrinsic aid upon its own capacity for giving vivid and accurate pictures of nature. “With Nature” and not “Nature,” Mr. Weeks names that part of his volume of which we are speaking, and we think he has rightly named it. Yet we are inclined to think that we like the poetry best when external nature is most prominent in it, or when we have in it Mr. Weeks in the enjoyment of external nature and expressing his delight in it; we care less for it, we believe, when the poet goes on to tell us the thoughts and feelings with which the objects of nature inspire him. For in this sonnet, which seems to us excellent, we may see the mood in which the poet habitually takes his second look at all that comes before him. “The

New Narcissus" is the title of it—the Narcissus not of fable but of present fact:

" Given up for all the unprofitable day,
O'er the ship's side that moves not in her place,
To lean and look and languidly to trace
On the slow glass of the receding bay
The troubled image of a troubled face;
Or, with vague longing up and down to pace
The narrow deck, and of the far away
Swift ships that glisten with momentary spray
Ask what avails a little larger space
Of insufficient ocean—this is he
Whose stranded life, too careful to be free,
No dreams deliver and all thoughts betray
To hate the calm that holds him in delay,
To doubt the wind that calls him to the sea."

This is not a mood that can be called healthy, or anything but unprofitable. Whether "too careful to be free" is the right description of it, or "too willing to be bound," one would say that, after all, for man it is servitude that is freedom, some servitude of some kind; that until our wings shall be grown it will be wise in us to concede that there is such a thing as the unattainable; that our ability to get glimpses of it, and to perceive its unattainableness, does not diminish the wisdom, rather increases it, of putting resolutely aside too much thought about it, while we select something less than the impossible to be accomplished by us in these less than eternal years—"this bank and shoal of time" where, for whatever else we were placed upon it, we were probably not placed to scan the horizon.

Mr. Weeks's poetry abounds in pretty fancies—of which perhaps some readers will declare that too many of them have relation to a certain well-known passion. But they all are delicate in sentiment and poetical, and the expression of them leaves nothing to be desired. Indeed, Mr. Weeks's work throughout is finished with an elegance consonant with the refinement of the matter, and, barring a line here and there which seems to have been caught from poets whose natural voice is not so different from his that he may not pretty safely assert it to be his natural voice also, we have nothing but good words for his mode of speech. Omitting to quote any of the pieces in which Mr. Weeks uses classical personages—he is not at all of the modern pseudo-classical school—and omitting with emphasis to quote a poem called "The Mist," we will make room for one of the little fancies we have just mentioned. "Greenhouse Flowers" is its title, and it will be found, we think, to have more of the fragrance of the roses than of the watering-pot:

" 'Tis too late to find her flowers
Such as I would rather give—
Such as sad and sunlit hours
Equally have taught to live.

" How can these that never guessed
How the evil helps the good—
How can these to her suggest
Aught of what I wish they could?

" How can these that never felt
Doubt and fear and hope deferred,
Ere the snows began to melt,
Ere the frozen earth was stirred;

" How can these that never thrilled
In the midst of their distress,
With the hope of hope fulfilled—
How can these my thought express?

" Yet, because perhaps they may
Please her once or twice to see,
Let them go and have their day,
Happier than they ought to be."

In reading "The Student's Dream," which comes to us from Kentucky, we have more often found ourselves inclined to give our respect to Mr. Miller as a man than as a poet, and we have formed such an opinion of him as to believe that he will not fall out with us on that account. Here is one of his vigorous sonnets, which we quote for its boldness of criticism and for its exemplification of the value of some kinds of the criticism that proceeds by comparison. It is a sonnet to Milton, with a comparison disadvantageous to another poet who has treated of Satan:

" Since those primeval years when prophets spoke
By Him inspired who made and rules the whole,
No man hath shown profounder depth of soul,
And with a nobler tongue the silence broke
Which else had lain for ages like a yoke
Upon the world. *Nor didst thou, like a mole,*
Approach to hell by creeping through a hole,
As Dante did; but face to face thou spoke
To God for guidance, and essayed to go
As to Goliath David went when he,
Saul's armor lying idle in his tent,
Went clad more stoutly with sublime intent.
Thou strode a god with ample step and free;
Thus heaven beheld, and told thy vision so."

The South has produced much poetry not so good as this; and we are bound to say that in "The Student's Dream" itself there is much that is not so good.

In "Reveries of Song," the first twenty-five pages end with the end of a romance called "Lady Leonore," which begins with these verses:

" Sir Harold was a knight in years long lost,
Who boldly fought with sword and lance of steel—
A braver man ne'er walked the plains of war:
Upright and honest, and each morn and eve,
Upon the battle-field beside his couch,
Lifted in prayer his voice and prayed to God,
'Whate'er betide, Thy Holy Will be done!'"

Sir Harold confesses to the Lady Leonore that he loves her, but she affects to think, or really does think, that he loves "to win the battle of the field" more than he loves her, and tells him so, at the same time flinging into the sea some scented flowers. Sir Harold stands gazing at her with tears in his eyes, and as he does so, a gaudy butterfly sporting about here and there in an uncertain way alights upon the flowers which the lady has thrown into the water. With this the first scene closes. In the second it is night, and dark for a while; but by-and-by the moon breaks through the mist, clearing it away and shining upon the ocean and the walls of Castle Clare. By its light, Sir Harold, who is on the beach, sees floating upon the waves "the precious prize, culled by the fingers of his Leonore," that is to say, the flowers. He plunges in to possess himself of them, and manages to swim out to them and seize them, but, being all in mail, his exertions are too much for his strength, and he is drowned. With this accident, and the falling of the mist, the second act closes. On the following morning Lady Leonore, with her attendant maids, walks along the beach, and sees approaching shore a boat rowed slowly by two fishermen. They have brought in the body of a youthful knight. Leonore at once recognizes in him Sir Harold, whom she had so lightly dismissed as not being sufficiently in love with her, and who, she now plainly sees, has met his death in the attempt to secure the bouquet thrown away by her at their last interview; for that or a similar bouquet is discovered in his bosom, and on its being taken out and the petals opened, the same butterfly which had been observed to alight on the flower came forth,

" And sailed on gilded wings right through the air"—

leaving no doubt of the identity of the flowers, and transfixing the lady with remorse.

In the volume entitled "The Music Lesson of Confucius, and Other Poems," we have for the most part a republication of poems which Mr. Leland first gave to the public some years ago. There are, however, some new ones, of which several were written during the war of the rebellion; but there are not enough of these, and not enough in any one of them, to alter the general character of the volume. How to characterize it precisely we hardly know. It has verses of the German romantic kind; patriotic verses, such as a literary member of a Union League might have written in celebration of the emancipation of the negroes; verses patriotic and military, such as might have been written in camp by the late Colonel Halpine; verses rendering Eastern legends; verses accounting for the nature of various perfumes, as Frangipani and Cologne-water, which might have been written for albums by command of the ladies owning them, or contributed to the late Mr. Willis's *Home Journal;* verses describing various types of female beauty, as Miriam, a Jewess, Luise, a maiden of Normandy; love verses after the manner of Heine; satirical verses, comic verses, and sentimental verses. They all are facile, most of them are clever, and some give some indication of the possession, by moments at a time, of a poetic capacity early overlaid by the influence of the author's reading and his admiration for other writers. Apparently, too, it was sure of its death sooner or later from the facility with which its possessor could turn out innumerable rhymes on all kinds of subjects, for any reason or none, and into each set of which he could put a spark of the fire which might perhaps have made a flame could he have kept it together. Some of the Breitmann ballads and the translations of Heine will still be thought by far the surest supports of their author's literary reputation, while the pieces in the volume before us will be sufficient evidence that in his day a semi-literary, semi-social reputation might very well have been his. The volume might be commended to officers of the army and navy.

"Saint Abe and his Seven Wives" is a fluent satire directed against Mormonism, or rather against polygamy. It is not without desert as work in "dialect," though it is better in its sketching of the characters whose traits the "dialect" indicates; but it appears to give evidence that it was done with haste. This, however, is seen rather in the general slightness of the fabric than in the versification, which is vigorous, easy, and smooth. Doubtless it was inevitable, the subject being what it is and the method of treatment adopted being dramatic and realistic, that the reader should get from the book a very high and coarse flavor of vulgarity; that, at any rate, is what he does get; and the author must have a singular notion of what promotes "jollity," which state of feeling is what "Saint Abe and his Seven Wives" is intended to promote. At this rate, Mark Tapley made a capital mistake when he stopped short at Cairo, instead of keeping on till he found Utah.

Mr. Longfellow's new poem is said to form the first portion of a trilogy, of which the other two parts are "The Golden Legend" and "The New England Tragedies," the design of the whole work perhaps being to insist upon a certain view of the character and mission of Christ, and to make an exposition of his relation to the state of religious thought at different stages of its development within the Christian church and outside of it. In this view, it would be Mr. Longfellow's contribution to the Christology which is so prominent a study throughout the religious world of to-day. We have not gone over the three poems together; nor shall we trust to our recollection of the two that are not before us as we write, nor to our understanding of the one that is, so far as to attempt any estimate of the whole work. This initial drama, "The Divine Tragedy," simply puts into verse the New Testament narrative of the teaching, persecution, and crucifixion of Christ. The verse is as agreeable as was to have been looked for from our author; the literalness with which the Gospel words are transferred into the poem is surprising; and we should say that the reverence of the believer is in as little danger of a shock from such freedom as the poet allows himself in the intercalated parts as it is from the handling of the Scriptural story. Of the intercalated parts, considered as poetry, the most that could have been asked was that they should be at once fine poetry and fine poetry of such sort as not to jar in the least upon the mind in key with the inspired Word, while the least that could have been accepted was that they should be tolerably good poetry and should not offend in this latter respect. The lesser requirement, at any rate, seems to us to have been almost perfectly met. That the greater has been met we are not prepared to say, and, indeed, after such consideration as we have been able to give, we are decidedly of opinion that it has not. It is proper, however, to defer forming definite judgment even of a part of an important work till the whole has been considered with care. To the religious reader, as distinguished from the reader of poetry—and perhaps we should say as distinguished from the theological reader also—we judge that we are safe in promising pleasure from Mr. Longfellow's latest work.

One might imagine that when a person has written a poem which within a year or two a dozen other persons stoutly declare that they themselves, severally, wrote, the real writer might begin to have suspicion as to the poetical value of his production. It has not been observed, so far as we know, that there is a popular disposition to assume the responsibility of poetry of a high class. Suspicion of this kind has not clouded the mind of Mr. J. W. Watson, who is at present rejoicing that he is at last left in undisputed enjoyment of his title to the authorship of "Beautiful Snow." It is a very sentimental piece, very good-hearted and not very hard-headed, and a sort of hand-organ pathos that it has it grinds away at with a persistency and certainty of note that fit it for the most untuneful audiences. The fate of "Beautiful Snow" most others of Mr. Watson's poems might very well share, we should think; and we do not know why it would not be rather an encouraging sign than otherwise if the authorship of half a dozen of them were to be claimed by numbers of writers in every State in the Union.

Mr. Henry Abbey's ballads show a marked improvement over the former volume of his that we remember. They are of a sound moral tone, they have been worked at with conscientiousness, and not improbably they may do good. We are, however, not able to say that we think the time and labor expended upon them has been well bestowed. Still less can we say so of the time and labor expended upon such works as "Short Stories for Short People" and "Thistledown." We are aware that something may be said in behalf of the composition of such verse as a means of cultivation; and it is not without some satisfaction that one sees even thin libations poured out before altars which are at least not consecrate to base and deformed deities. And doubtless the practice of verse-making, even of very bad verse-making, may be defended as being at least anti-materialistic. So, too, we remember, the gloomy rigor of the old New England Sabbatical Sunday has been defended on the ground that no matter how absurd or even cruel it was, the Puritan Sunday was an institution which one day in seven rescued men and women from immersion in gross material cares. But New England has found a way of escaping from week-day sordidness without making divine things grotesque or odious, and it is greatly to be wished that numbers of our anti-materialists in metres of the other kinds might take example by their congeners of the long-metre type. And indeed, it frequently occurs to the reviewer that room might be found among given numbers of our young poets for a good deal of the poor despised materialism itself. Take, for example, the case of the author of "Leonore," above quoted.

"P. R. S." is a writer who for some two or three years has amused himself, he says, by "popping away through the columns of the *Evening Post* at sundry objects of a general, though it may be an ephemeral interest." Almost all his topics are decidedly of ephemeral interest, and it might have been as well if he had been content to leave his verses in the corner of the newspaper where they first saw the light; but they are better worth binding than most similar productions, being spirited in versification and not without sharpness. Persons who are still interested in the "Tyng Case," or the Loew Bridge across Broadway, or the Boston Musical Jubilee, or Mrs. Stowe's book on Lord Byron, and similar topics, may here find them treated of in fashion such as this. The lines contain "A Recipe for a Poem in Dialect":

> ' Take, for your hero, some thoroughbred scamp,
> Miner, or pilot, or jockey, or tramp—
> Gambler (of course) drunkard, bully, and cheat,
> *Facile princeps* in ways of deceit;
> So fond of ladies he's given to bigamy
> (Better, perhaps, if you make it polygamy);
> Pepper his talk with the vacant slang
> Culled from the haunts of his pestilent gang;
> Season with blasphemy, lard him with curses,
> Serve him up hot in your dialect verses."

Mrs. Celia Thaxter's verses have for a principal merit that they suggest by means of an accumulation of separate images the scenery of a Northern sea-coast. They less often give us these images made into a coherent and beautiful poem or picture, without a moral at the end, but this also Mrs. Thaxter can do. We believe we present a favorable specimen of her work in quoting the poem called "Seaward," which is the poem of her small collection that we like best, as on the whole having more unity and less moral than most of the others, while equal to almost any in picturesqueness:

> "How long it seems since that mild April night,
> When, leaning from the window, you and I
> Heard, clearly ringing from the shadowy bight,
> The loon's unearthly cry!
>
> "Southwest the wind blew, million little waves
> Ran rippling round the point in mellow tune,
> But mournful like the laugh of one who raves
> That laughter of the loon!
>
> "We called to him while blindly through the haze
> Uprose the meagre morn behind us, slow,
> So dim, the fleet of boats we scarce could trace,
> Moored lightly just below.
>
> "We called, and lo, he answered ! Half in fear
> We sent the note back. Echoing rock and bay
> Made melancholy music far and near,
> Sadly it died away.
>
> "That schooner you remember? Flying ghost,
> Her canvas catching every wandering beam
> Aerial, noiseless past the glimmering coast
> She glided like a dream.
>
> "Would we were leaning from your window now,
> Together calling to the eerie loon,
> The fresh wind blowing care from either brow,
> This sumptuous night of June!
>
> "So many sighs load this sweet inland air,
> 'Tis hard to breathe, nor can we find relief.
> However lightly touched, we all must share
> This nobleness of grief.
>
> "But sighs are spent before they reach your ear,
> Vaguely they mingle with the water's rune,
> No sadder sound salutes you than the clear
> Wild laughter of the loon."

WATSON'S REPORT ON THE BOTANY OF THE GREAT BASIN.*

THE second volume of Reports illustrating the Survey of the Fortieth Parallel under Mr. Clarence King has just been published by the War Department as one of the professional papers of the Corps of Engineers, to whose supervision the explorations were assigned. It is numbered the fifth of the series, the third having been a report on the mining industry of the region. The other volumes, which will be three in number, if the original plan is carried out, are to discuss the zoölogy and the geology; and there is also to be an atlas of topographical and geological charts. The region which this survey has examined is a belt of land about one hundred miles broad between the Sierra Nevada, on the eastern borders of California, and the Rocky Mountains on the western confines of Colorado. The work is a study of "The Great Basin" of Fremont and the other early explorers, and is especially important in its relations to the progress of settlement and industry along the route of the Central and Union Pacific Railroads. Mr. Sereno

---

* "Geological Survey of the Fortieth Parallel. Clarence King, Geologist. Vol. V., Botany; by Sereno Watson, aided by Prof. D. C. Eaton and others." Washington, 1871. 4to, pp. 525.

Watson was the chief collector of botanical specimens in this region, and he has also been entrusted with the preparation of the Report before us, which was chiefly drawn up in the herbarium of Professor Eaton at New Haven, with the latter's constant co-operation, and with occasional aid from Drs. Gray, Torrey, and other well-known botanists. Several of these gentlemen have contributed descriptions of those classes of plants in which they are particularly interested. Forty engraved plates and a very clear outline map of the traversed routes are inserted in the volume.

Such a work, chiefly made up of the specific descriptions of the plants of the region, is primarily of value to the professional botanist; and Dr. Gray, in the last number of the *American Journal of Science*, has half-promised to review it from this point of view; but the introductory chapter is of great interest to the general reader, and has besides an important bearing upon the question of introducing cultivation into that uninviting region. As a portrayal, too, of the aspects of nature, and especially of the vegetation of a lofty arid region, it is admirable, and we propose to sum up in a few paragraphs the statements which it gives us in respect to the physical structure and the plants of a very curious and interesting part of our national domain still but imperfectly described in the books of travel and of geography. The term "Great Basin" is an obscure and unsatisfactory designation popularly applied to the vast interior plateau which lies between the Sierras and the Wahsatch, separated by moderate hills from the Snake River Valley on the north, and blending on the south with the desert of the lower Colorado. Its general elevation is from four to six thousand feet above the sea level, and although it contains vast tracts comparatively flat, there are also numerous lofty parallel chains of mountains running nearly northwest and southeast, varying from 1,000 to 6,000 feet above the valleys, and occasionally rising to nine or ten thousand feet above the sea, or, in other words, as high above the plateau as the White Mountains above the ocean. There are two main depressions in this region—one at the eastern base of the Sierras; the other, the Great Salt Lake Basin to the west of the Wahsatch Mountains. The water supply of these basins is quite limited, in proportion to their area, and the lakes are strongly saline. The East and West Humboldt and Toyabe Mountains, rising to the height of 10,000 or 12,000 feet, receive considerable snow-falls in winter, and in summer are subject to more abundant rains. The climate is very dry, with cold winters and hot summers, the annual rain-fall being roughly estimated at eighteen inches.

Now, in this arid region there is a peculiar vegetation. No portion of the district, however desert in repute and in fact (except the limited alkali flats), is destitute of some amount of vegetation even in the driest seasons; but on the plains, the foot-hills, and the mountain slopes there is a monotonous sameness of aspect, characterized by the absence of trees and grassy greensward, the wide distribution of a few low shrubs, and the prevalent gray or dull olive color of the herbage. The mountains are in large measure as free from trees as the valleys, and are often more naked, because of the dwarfed character of the shrubs. There are some exceptions to the absence of trees, for example, the Truckee Valley, and in some of the mountain cañons. Those which are found rarely exceed 40 or 50 feet in height, and are very knotty and cross-grained. Some striking illustrations of the contortions of the fibre are given by Mr. Watson.

The flora, like the country, is naturally described in two groups—the valley flora and the mountain flora. In the former are included plants peculiar to alkaline regions, few in number; the fresh-water aquatic and meadow species; and plants peculiar to the drier valleys and foot-hills, by far the larger class. In the mountain flora 393 species were collected, fifty-five of which (mostly new) are not known to grow beyond the limits of the Basin. The number of alpine and subalpine species equals that of arctic and subarctic. The Wahsatch and Washoe Mountains are not included in the statements just made, but they were studied by Mr. Watson. Thirty-three introduced plants are described. The flora of the basin is, on the whole, regarded as indicating a distinct botanical region, a large portion of Pacific species stopping abruptly on the eastern slope of the Sierras, and a like line of demarcation being visible at the Wahsatch. Of the 1,140 species given in the list of the Basin, Wahsatch, and Uintah, 60 per cent. are found on the Pacific slope, about the same proportion do not pass eastward beyond the Rocky Mountains, 15 per cent. approach the Mississippi or Saskatchewan, and 25 per cent. approach the Atlantic, 17 per cent. are Mexican or southern, and 15 per cent. arctic.

The practical value of researches like these is often overlooked or unappreciated, but they have an important bearing upon the question of the possible agricultural development of the country. The deficiency of water is great, but with a moderate supply for irrigation in the growing season, there is no difficulty in securing good crops of cereals and vegetables in any of the valleys and lower cañons of the territory. On the other hand, with the present supply of water, most economically employed, it is thought that not over 1,000 square miles could ever be brought into cultivation in the 34,000 square miles of Northern Nevada examined by the Survey. In Western Utah, and in the more southern portions of the Basin, the relative amount must be less. In Eastern Utah the water supplies are larger and more constant from the Wahsatch Mountains. For grazing purposes the region is not adapted. The possibility of cultivating without irrigation some forms of woody vegetation is discussed, and the opinion is expressed that either existing species or others more serviceable may at some future time be profitably cultivated. Some experiments were made to ascertain the sources whence the plants derive their moisture, and the conclusion was reached that it is from the soil and not from the atmosphere; and this natural resource of the vegetation favors the possibility of the successful introduction of orchard, vineyard, or other tree-culture in those now desert territories.

We have recently adverted to the charge of extravagance brought against the manufacture of these handsome reports, and need only repeat that we have no sympathy with it. As we do not believe, however, that the usefulness of such works should be limited by official generosity and discrimination in distributing them, we should be glad to have a part, at least, of every edition sold in open market at as moderate a price as can be afforded. At present the volumes are rarely, if ever, to be obtained except as a matter of favor from those in authority.

SOME RECENT NOVELS.*

MANY of our readers will remember that very pretty story, "Dorothy Fox," and will be glad to see some more work by the same author. The first volume of our list contains ten or a dozen short tales from her pen, some of which are very good, while others, apparently, belong to her earlier work, and only have this undue prominence given them on account of the success of the longer novel. But if they are not all equally good, they have in common certain merits which are rarer in stories than is pleasant for either writer or reader. Love, and occasionally jealousy, is the burden of them. There is no complex plot to baffle us, no great wit to fascinate us, nothing but a pretty tale, told with considerable humor, and with such a gracious enthusiasm that one is interested even in the flimsiest of the sketches. "The Blue Bell of Red-Neap" is rather longer than the rest, and may be taken as a very good example of the author's merits, which are simplicity, naturalness, and delicacy.

Of "Wilfrid Cumbermede" we cannot say that it is either simple, natural, or delicate. It is the autobiography of a self-perplexing casuist—a favorite character of Mr. Macdonald's, by the way—who allows himself to be governed in his mode of life by his dreams, and hence, as might be expected, fails in almost everything he undertakes. If we enquired the reason of Mr. Macdonald's popularity, as this book tempts us to do, not for the first time, we should find it, we think, chiefly in his continual reference to solemn subjects. Along with it is a deliciously vague so-called philosophy, which also may win admirers. For example, in "Wilfrid Cumbermede":

> "No one can deny the power of the wearied body to paralyze the soul; but I have a correlate theory which I love, and which I expect to find true, that while the body wearies the mind, it is the mind that restores vigor to the body, and then, like the man who has built him a stately palace, rejoices to dwell in it. I believe that, if there be a living conscious love at the heart of the universe, the mind, in the quiescence of its consciousness in sleep, comes into a less disturbed contact with its origin, the heart of the creation; whence, gifted with calmness and strength for itself, it grows able to impart comfort and restoration to the weary frame. . . . The child-soul goes home at night, and returns in the morning to the labors of the school."

As good as anything of Mr. Macdonald's are his descriptions of scenery. As for his characters, they have all a pedantry if they are good, and a hopeless despair if they are bad. His heroes lack manliness—that is to say, reality; they are all shadows of men, as unlike men of flesh and blood as the ghostly element of his stories is unlike actual existence. There is an air of the sick-room about them all, as if they were the creation of an inexperienced fancy, rather than the results of observation. Mr. Macdonald has a certain power of imagination, but it is so warped by education or wilfulness that his books are continual disappointments. He coddles his characters. He is like a mother who would refuse her son of five-and-thirty a latch-key, and stand over him while he changed his shoes and stockings when he came in at half-past nine. Not that there is any necessity for introducing every crime in the calendar into a novel, though we fancy that Mr. Macdonald would have no very serious objections to doing it, but that a novelist who represents men simply as struggling to free themselves from Calvinism, without any human emotion except repentance, or more worldly interest than a superstitious awe of a nightmare, fails pitiably as an observer and as a chronicler of human nature. His novels will please the inexperienced; whether they will do them good is another question. We do not believe that even his warmest admirers will be highly pleased with "Wilfrid Cumbermede," although its faults are shared in a greater or less degree by all his other works. The account of Wilfrid's infancy is beyond all measure tedious, and that of his later years is hardly better.

---

* "John Thompson, Blockhead. By Louisa Parr, author of 'Dorothy Fox.'" Philadelphia: J. B. Lippincott & Co. 1872.

"The Blue Bell of Red-Neap. By the author of 'Dorothy Fox,' etc." New York: Geo. Routledge & Sons. 1871.

"Wilfrid Cumbermede. By George Macdonald." New York: Chas. Scribner & Co. 1872.

"The Sylvestres; or, The Outcasts. By M. de Betham-Edwards." Philadelphia: J. B. Lippincott & Co. 1872.

"Two Plunges for a Pearl. By Mortimer Collins." New York: D. Appleton & Co. 1872.

"Can the Old Love? A Novel. By Zadel Barnes Buddington." Boston: J. R. Osgood & Co. 1872.

"The Sylvestres" is the title of an interesting novel by Mrs. Betham-Edwards. It is the story of a young English lady, with property and a mind of her own, who gets interested in socialism, or more truly, perhaps, in some socialists, whom she has met abroad, and who come to her in England in abject poverty. She puts them on their feet, gives them a farm, and falls in love with one. We will not tell the story, but wer ecommend it to our readers. The leading socialist, Père Sylvestre, is admirably drawn, with just that apparent exaggeration which in fact is only realism. There is not a word of ill-nature or of fanaticism in the author's treatment of this subject, and that in itself is singularly meritorious in a work that treats of socialism. It is a very good example of the method of applying fiction to a "topic of the day." It does not pretend to settle any questions, but is a proof of how much more efficacious a straightforward, unaffected representation of the matter is than any special pleading, however eloquent. It may be well to say that the book is by the author of "Dr. Jacob" and of "Kitty," and that on the whole it is better than either.

"Two Plunges for a Pearl," by Mortimer Collins, is one of the numerous English novels of society, differing from hundreds of others only in the novelty of its plot. There are two heroines, twin sisters, one of whom, when they are left penniless at their father's death, becomes an actress and the other a maid-servant. They are both pursued by wealthy aristocrats, and both make good marriages at the end of the book. All the characters have sonorous names—"Launcelot Lydiard," "Ianthe Murray" and her sister "Rosalind," etc. The most unpleasant thing in the book is the vulgar cynicism, the ostentatious worldly-wisdom, that "Ouida" is so famous for, and in which it might be well that she had no rival.

"Can the Old Love?" is the question in the mind of Mrs. Zadel Barnes Buddington. Judging from the novel, one would say that they could do very little else, and that it is a pity that they have nothing better to do. The first hero is sixty-three years old; he has a wife twelve years older, and falls in love with a girl of sixteen, who does not return his affection, however, and he dies either of a broken heart or of old age. In the rest of the book, which is put together without any apparent system, we have several other love affairs; occasionally a young man gets a smile thrown at him, but men over fifty are the only ones unlucky enough to win the remarkably offensive heroines. It is thus that a young lady of twenty describes her lover of fifty-two to a lady over sixty, but as sentimental as a girl of sixteen:

> "'I do not think he is handsome, at least he is not called so; but, though he looks older than he is, he is not plain. He is good, or fine looking, rather. His hair is touched with gray; but he has a quantity of it, and it is dark, with an odd, wavy line running through it. His eyes are a warm shade of dark brown, very expressive, bright, and of the kind that I call searching. A stern rather than a gentle eye, yet capable of emitting rays . . . .'
>
> "'True artist,' said Lady Hope, tenderly smiling. 'You paint *con amore*. You enjoy your picture as it takes shape from your fancy. Your voice caresses as softly as it describes smoothly,'" etc.

With a trace of worldliness, however, very unusual in any except the villains of the story, Lady Hope "with gentle seriousness" says:

> "At the first glance, it would seem more usual, more natural, that some younger man should have won your love. It would seem that youth should mate with youth. You are now nearly twenty. When you are fifty, in the prime of middle age, ten years younger than I am now, he, if living, will be eighty-two. In a great majority of cases, to be eighty-two is to be helpless and imbecile."

The heroine replies:

> "No soul can die. It *may* sink; but it *must* rise. It may *seem* lost; but it *will* be found. It thinks and loves; and these things preserve, expand, perfect it. . . . I love a soul," etc., etc., etc.

Old Parr himself would have been a prattling boy beside this wise maid. We will not more than mention the grosser faults of the novel, which make it one of the most unpleasant that we have ever read. It has no plot, and besides its general silliness there is a certain amount of coarseness which probably comes from inexperience determining not to be prudish. The result is not gratifying. To see the difference between a good story and a fatally bad one, one need only compare Mrs. Buddington's work with the sketch, "How it all Happened," by the author of "Dorothy Fox." There are very different ways of treating the same subject.

Lectures on the Science of Religion; with a paper on Buddhist Nihilism, and a translation of the Dhammapada or "Path of Virtue." By Max Müller. (New York: Chas. Scribner & Co.)—In regard to the first half of the contents of this book, we expressed ourselves at some length in No. 276 of the *Nation*. We shall, therefore, now confine ourselves to the latter portion, and can hardly do better than to make it the occasion of calling attention to a short review of the author's theory of the Buddhist Nirvána, which has lately appeared in Ceylon from the pen of Mr. James D'Alwis. In 1857, Professor Müller held the view that Nirvána meant annihilation—an opinion held by all the profoundest Buddhist scholars—as may be seen by his essay on the Buddhist Pilgrims in the first volume of his "Chips from a German Workshop," and in the next chapter on the meaning of the term Nirvána. In an essay on Buddhism, written in 1862, but placed in the volume immediately before that on the Buddhist Pilgrims, we find that his view has changed. He acknowledges (Am. reprint, p. 229) that Buddhist philosophers may have held this opinion, but that it cannot have been generally received. On the next page, however, he says that he cannot even bring himself to believe that such was the belief of the reformer of India, *i.e.*, Buddha. The reasons that he gives seem to us to be singularly shallow. We quote them. He is unable to believe that—

> "The teacher of so perfect a code of morality, the young prince who gave up all he had to comfort those who were afflicted in mind, body, or estate, should have cared much about speculations which he knew would either be misunderstood or not understood at all by those whom he wished to benefit; that he should have thrown away one of the most powerful weapons in the hands of a religious teacher—the belief in a future life; and should not have seen, that if this life was sooner or later to end in nothing, it was hardly worth the trouble which he took himself or the sacrifices which he imposed on his disciples."

A very lofty morality does not necessarily imply conventionally proper metaphysical opinions, nor is the greatest charity inconsistent with the logical carrying on of one's investigations for their own sake, and it is to be hoped that religious teachers, of all men, should seek to extend their influence rather by what they consider to be the truth than by what might be especially useful as a "powerful weapon." The last remark sounds strange as coming from one who has studied Buddhism, and is sufficiently refuted by his own words on page 248, where he shows how in their belief they escaped, by means of Nirvána, transmigration and the misery of living. In his preface to the "Dhammapada," he returns to the charge with solider arguments than likes or dislikes, namely:

> "1. That though the Abhidhamma Pitaka favors the negative view, the affirmative may easily be proved from the Sutta and Vinaya, and especially from the Dhammapada. 2. That the Abhidhamma is of no authority, and contains the notion not of Buddha but of his followers. 3. That it is stated that Buddha saw his disciples after attaining Nirvána, and even after death; and that therefore Nirvána is not extinction of existence. 4. That the expressions used for Nirvána in the Dhammapada convey a sense of rest, immortality, eternity, etc., and therefore Nirvána does not mean nihilism."

This statement of his case, which is a perfectly fair one, we quote from Mr. D'Alwis's preface to his review; in the body of his book he proceeds to examine Professor Müller's arguments in order, and the result is their complete refutation. In the first place, he proves that the Abhidhamma properly belongs to the discourses of Buddha, and that the three baskets, as the different parts of the code are called, should be regarded as one whole. Moreover, that the negative side of the question may be proved from the Sutta and Viñaya, as well as from the Dhammapada; "that the non-existence of an Absolute Creator, and of a soul, was the foundation for the Buddhist doctrine of Nirvána; and that, therefore, there could be no condition of the soul after the final 'destruction of the elements, and the germs of existence,' or Nirvána." The third point, he shows, rests only on legendary tales, and is in direct contradiction to the canon which Professor Müller himself says must be our only authority. The fourth point he disproves at some length by showing the difficulty inherent in all the attempted definitions of Nirvána, the inaccuracy of Max Müller's interpretations, and that the expressions used in the Dhammapada, when taken with the other admitted doctrines of Buddhism, do clearly prove that Nirvána meant nihilism. We have not space to give a more thorough synopsis of what is already very condensed in form; but we desire to call the attention of the many readers of Max Müller to a book that might otherwise escape their notice, and which deserves to be read in conjunction with his work, that is necessarily so much more widely known. The main argument against the nihilistic view of Nirvána is the *a priori* one, that it cannot be true, that it is against human nature. To this the Buddhist replies, that to be sure it is not a view that recommends it to the general mind of mankind, but that it is only the direct, logical, necessary sequence of their pessimistic view of the universe. For it is to be borne in mind that although Buddhism more than any other religion resembles Christianity in the purity of its morality, yet it differs most widely in its ontology. It is atheistic, it denies the existence of the human soul—indeed, it might not be wholly inaccurate to call it, in a word, the religion of despair, as compared with the hopefulness of Christianity. On account of both its close similarity and wide differences its study is peculiarly interesting, and every work that facilitates such research is of great importance. Professor Müller is a brilliant guide; but, at times, he pays for his brilliancy by errors that comparatively obscure men may correct, as Mr. D'Alwis has here done. The title of his book is: "Buddhist Nirvána: A Review of Max Müller's 'Dhammapada.' By James D'Alwis, Member of the Royal Asiatic Society. Colombo: William Skeen, Government Printer. Ceylon. 1871." It may be had through Trübner & Co.

Macaronic Poetry: Collected with an Introduction by James Appleton Morgan, A.M. (New York: Hurd & Houghton. 1872.)—This volume affords another proof of the endeavor after better designs in binding and ornamentation which the Riverside Press has recently been said to be making. It is certainly tasteful in appearance, and of excellent example to our other Presses, most of which will neither give us prettily bound cloth books nor volumes in paper covers, to be kept in paper or to be put into other dress, as may please their owners. Having said this much in praise of what the publisher has done for Mr. Morgan's book, we must remark that, though a press may win credit by attention to the external appearance of the books it issues, the chief glory of a good press is thorough and learned proof-reading, and that inattention to this weightier matter of the law is not atoned for by zeal as to the mint and anise and cumin; rather this zeal aggravates the error. Mr. Morgan's title-page is very pretty, but its red and black letters, printed from fonts of handsome type, ill compensate for the two or three mistakes in the easy Latin of the dedication, or for making *virorum* in the title of the famous "Epistolæ" into *viorum*.

Of the contents of the book not much needs to be said; the author, having retained since his Freshman days at Yale College a fondness for macaronic verses and similar literary performances, now not very possible outside of colleges, has for some years amused himself by collecting specimens of these "literary follies," as Hallam declares them, or these pastimes and relaxations of the man of letters, as Mr. Morgan prefers to call them. Mr. Morgan's reader may find in his book examples of the work of the pangrammatists, the lipogrammatists, the makers of acrostics, telestics, and mesostics, the alliterators, the palindromists, the anagrammatists, the rhopalic verse-makers, and the various other blowers of literary glassware that is without use, without beauty, and, although quaint, too laborious and trifling to make the artisan's ingenuity pleasing enough to secure favor from a taste much above being delighted by rebuses and enigmas. They are things, however, that always have interest for the rather unprofitably curious, and that have some interest for the literary investigator, though this latter will find Mr. Morgan's collection desultory and inexhaustive. Perhaps we can, as well as in any other way, give some notion of the compiler's work by reproducing part of a piece which does not appear in his volume, but which is worthy of a place in it, and may serve to illustrate the character of its contents. We do not know where we first found "Tonis Ad Resto Mare," and we make whatever apology is necessary for detaining the attention of the unskilled reader upon a stanza of it:

> "O mare æva si forme;
> Forme ure tonitru;
> Iambicum as amandum,
> Olet Hymen promptu;
> Mihi is vetas an ne se,
> As humano erebi
> O let mecum marito te
> Or ητα βητα πι."

"Tony's Address to Mary" is the translated title of this production, which is to be read by dropping the h's—and if it please God, as the saying is. It is fair to say that Mr. Morgan's readers, if they find in his volume many things about as well worth attention as this that we have quoted, will also find many well-known things, less slight if essentially no more respectable, as, for instance, the double-barrelled pun,

> "Mantua væ miseræ nimium vicina Cremonæ,"

which, according to hoary and unvenerable tradition, was made by Dean Swift on the occasion of a lady's mantua knocking down a Cremona violin. There is also a reprint of three alliterative mediæval Latin poems, the "Pugna Porcorum," the "Certamen Canum cum Cattis," and the "Hugbaldi Ecloga de Laudibus Calvitii," of which the first contains no word that does not begin with a "p," and the others none that does not begin with a "c." But, on the whole, the reader inclined to be pleased with "Tony's Address to Mary" will be the reader most pleased by Mr. Morgan's collection.

LEGENDS OF THE PATRIARCHS
AND PROPHETS.

Current at the East. By BARING-GOULD. Post 8vo, $2. (Nearly ready.)

NEW YORK, THURSDAY, FEBRUARY 22, 1872.

The Week.

THE House of Representatives has, during the week, voted the repeal of the duty on tea, but has refused to repeal the duty on salt and coal—in other words, done what it ought not to have done, and left undone what it ought to have done, and what it undertook to do last session. The Committee of Ways and Means is rather indignant at having the work of reforming the tariff taken out of its hands in this way, but nobody thanks it, for there is not much disposition to venture on any general measure. The tea duty is taken off because it tickles the popular fancy, although it is valuable to the revenue, and the salt and coal duty is left on because the high-tariff men look upon it as the outworks of their system. The House Committee has agreed to report a civil-service reform bill, making it a misdemeanor for a member of Congress to recommend persons for office unless he is asked for his opinion. Is there not some danger that this may be so evaded as to increase the labors of the Departments—that is, that members of Congress will treat a failure to ask their opinions as offensive and a ground of quarrel with the Administration? There is great curiosity over the forthcoming appointment to the Philadelphia collectorship. Under the reform in the civil service, the vacancy ought to be filled by promotion, but the Pennsylvania politicians laugh consumedly over this idea, and say the rules will be "suspended" in order to put in "the right man," as they were suspended in the case of McClellan, the Troy collector. He found himself "decapitated" without cause assigned, and, claiming the benefit of them, learned that they had been "suspended" in order to get him out. This reminds one of Judge Hogeboom's ruling about "momentary insanity" in the Cole case. He held that a man might be sane up to the moment in which he fired a shot at an enemy, during which he might be insane, and then become sane again as soon as the ball had struck. So the civil-service rules may work beautifully up to the moment that somebody is going to be turned out; then they stop for a few moments till he is gone, and then resume their faultless movements once more. Leet still retains his place, as "improper" and "indelicate" as ever.

The sale-of-arms controversy, as some call it, or the "Schurz-Sumner trick," as it is probably called by others, has made considerable progress since last week. There appears no doubt that the discrepancy between the amount acknowledged by the War Department and that acknowledged by the Treasury can be explained by some difference in the mode of keeping their accounts, but the fate of $4,000,000 which the French paid and the Treasury never received, remains to be discovered, and on this no light has as yet been thrown. There are two reasons for looking sharply into the matter; one is the natural curiosity which every citizen feels in these times to know what has become of so large a sum of money, and the other a proper desire to know whether it in any way accounted for the "influence" of which Squires boasted in his letter to the President of the Armament Committee, and which enabled him, he said, not only to purchase the arms, but to get the cartridges made for them. Mr. Schurz, in a masterly speech on Tuesday, rendered an escape from investigation impossible.

The weakest point in the affair of the arms is the disregard of the law displayed in the sale of rifles, and above all in the manufacture of cartridges. The resolution under which the sale was made authorized the sale simply of "old cannon, arms, and other ordnance stores now in possession of the War Department, which are damaged or otherwise unsuitable for the United States military service or for the militia service of the United States." The rifles sold, however, were not damaged or unsuitable. They were good Springfield breech-loaders, many of them altered, but as good an arm as the needle-gun. For the manufacture of cartridges for them, there was not a shadow of authority of any kind.

A kind of compromise has been reached in the matter of international copyright between the Copyright Association and the friends of Mr. Appleton's measure, by which the bill of the former, offering copyright to foreigners on terms of reciprocity, is saddled with the condition that the book must be produced by an American publisher. It is hardly worth while to enumerate in detail the various objections to this. Our own recent suggestion, which, however, we did not originate, that anybody should be at liberty to reproduce the works of a foreign author on paying him a percentage on sales, is pronounced by the *Times* "obviously absurd," on the ground that "the principle on which it is based" would, if carried out, make it also obligatory on anybody who borrowed a book or newspaper instead of buying it, and derived "benefit" from its perusal, to pay something to the author or publisher. "The principle" on which our suggestion was based—and we offered it not as the best thing possible, but as something worth consideration—is the principle of all copyright, viz., that anybody who takes the product of an author's brain, and makes it an article of trade for his own profit, should be compelled to pay the author. To anybody who sees in this an argument for making anybody who borrows a book for his own perusal also remunerate the author, we can think of no better reply than that made by the expressman to the Widow Bagley in Mark Twain's story, "Have it your own way; it ain't for me to contradict." The *Evening Post* pronounces the plan unconstitutional, because it would, in reality, be the imposition of "a tax" on a particular class for the benefit of an individual, and that individual a foreigner. This deserves consideration, but we can hardly undertake to discuss it in a paragraph. But we may say, *en passant*, that if literary property be property at common law, like any other property, the unconstitutionality is difficult to see. On the same principle, does not the State, by making everybody who gets dry goods at A. T. Stewart's pay him for them, impose "a tax" on a large body of persons for Stewart's benefit? Ought Stewart to be exposed to indiscriminate pillage in order to avoid odious distinctions?

The Congressional Committee appointed to enquire into the condition of the States lately in rebellion detailed sub-committees to each State, and the reports of all have now been presented. The report of the General Committee finds that the Ku-klux organization originated in 1866, and confirms most of the charges brought against it, with which the public is already familiar. As regards the condition of the negroes, it says their relations with their former masters seem to be those of confidence in all other matters than politics. The refusal of their masters to co-operate with them naturally threw them into the hands of adventurers. Many of them were elected to offices the duties of which they were, through ignorance and inexperience, totally unfitted to discharge. "In legislative bodies, this mixture of ignorant but honest men," says the report, "with better educated knaves gave opportunity for corruption, and this opportunity has developed a state of demoralization on this subject which may and does account for many of the wrongs of which the people justly complain; and the demoralization is not confined to one race, nativity, or political creed." In short, the report gives a most deplorable picture of the condition of the South. One amusing and yet melancholy proof of the utter destruction of public spirit among the old planting class is afforded by some of the evidence given by members of this class before the Committee. General M. C. Butler, one of the leading men of the old aristocracy of South Carolina, and the independent candidate for lieutenant-governor in 1870, testified that "if he had land to sell, and could sell it by buying a State senator for $500, he would do so." Dr. R. M. Smith, another gentleman of the same class, and a Democratic member of the Legislature to boot, declared that he "could see no wrong in bribing a public officer, and compared the transaction to the purchase of a mule." The fact is that the contempt of these men for the now governing class, which was great enough at the outset to make good government very difficult, has been intensified by the ignorance and corruptibility of the negroes and carpet-baggers; and they protect themselves against their excesses in the usual way of rich men—by buying them up. It will probably be a long while before anything like healthy political life will be witnessed in the majority of the Southern States.

One sub-committee devoted its attention to the condition of Southern finances, and its report, as might be expected, is the sorriest of all, and, as might be expected also, South Carolina makes the worst figure of all the States. Governor Scott answered promptly and cheerfully the enquiries addressed to him regarding the State debt; but as his accounts of it were varied and contradictory, the committee pronounce them unworthy of attention. Our old friend, Niles G. Parker, the State Treasurer, being 'cuter than Mr. Scott, "kept dark," as the sporting men say, and took no notice of the investigators. Governor Bullock, of Georgia, was very high and mighty, and refused to answer in the interest of "State rights," and the impeccable Reed of Florida, now under impeachment, took the same ground. The committee makes some curious but necessarily loose calculations as to the loss sustained by the South during and in consequence of the war, and calculates that it came out of the struggle in 1865 with a burden, including Confederate debts, State debts, commercial debts to people at the North, and other liabilities of all sorts, amounting in round numbers to $3,000,000,000. The report somewhat comically gives the amount with the greatest nicety, not in dollars only but in odd cents—its figures being $2,976,145,955 90. It calculates the amount devoted by the North to purposes of Southern relief in 1865 at $13,000,000.

But if nearly everything that the committee has to say about the immediate past of the South is sufficiently discouraging, there is at all events some cause for satisfaction visible in the immediate future. Mr. Edmunds, of Vermont, may continue to wait for "authentic information" that some of the Southern State governments have been corrupt and rather expensive; but except him and a few other innocent people, there is nobody at the North who does not now admit that the Republican party of the North, as soon as General Grant has secured the delegations to the Republican Convention, or at all events directly after the Presidential election, however that may turn out, will have to drop all responsibility for the Republican party as at present organized in the South, and that will be half the battle that must be fought before the Southern State governments get back to common decency. Holden, of North Carolina (impeached and removed from office for robbery); Bullock, of Georgia ("wanted"); Scott, of South Carolina (one of "the forty thieves" of the State); Clayton, of Arkansas; Warmoth, of Louisiana (at the head of a State Government that, like North Carolina, South Carolina, and Florida, doubtless must repudiate); Reed, of Florida (now on trial for stealing railroad bonds), have at last proved too much for the Republican stomach, and have finally disposed of the "loyal" form of government and probably of carpet-baggism. It was sure to come, because ignorant thieves can seldom rule impoverished American communities for many years together, but it is proper to rejoice when at last it has come, and the sight of Reed on his trial is a great reason for hope and encouragement.

It is a cause for peculiar as well as great satisfaction that Governor Reed is at last brought to book, for he is quintessential carpet-baggism—the thing itself. A broken-down politician, he was given an office under the Treasury Department for the apparent reason that he had a relation who had been among the earliest of Northern judges to declare the fugitive slave law unconstitutional "in his State," which had a "Personal Liberty Act." The office took him to Florida, where, being attached to the commission for the sale of lands for non-payment of direct taxes, he had an opportunity to begin the sort of operations which have brought him where he now is, and which may perhaps, with the blessing of heaven, take him a little further in the same general direction. In other Southern States, the carpet-bagger who wished to control the State had to have some strength of some sort; but in poor Florida, out of the stream of modern life, peopled by an apathetic, ignorant population, a man like Reed, destitute of sense, courage, and knowledge, had only to be loyal and make promises to the negroes, and be in possession of an office, military or civil, under the Federal Government, in order to capture an entire community, and, as the late Fisk phrased it, proceed to exercise his talent for "rescuing other people's property." This one talent Reed had, but not, it appears, in sufficient measure, and his own Legislature has unanimously impeached him. And by the way, in view of his career and present position, which is symptomatic of that of the party in the Southern States, what should be the weight of "regular" Republican delegations in the approaching Convention?

The Terwilliger affair has ended in Terwilliger's resignation before the Senate Committee appointed to enquire into his doings had made its report. He did not acknowledge that he had done anything wrong, but said that the "unusual sensitiveness of the public" about the kind of thing he had been doing made it advisable for him to retire. What he had been doing, according to the report of the committee, was taking twenty per cent. on the bills of the State printer from November 15, 1869, to August 1, 1870, amounting in all to $4,638 05. His defence was that he received this money under a usage which had prevailed for several years; but it appeared in the evidence that it had only prevailed for ten years, or, in other words, during the period in which Mr. Terwilliger has himself been clerk of the Senate, namely, from 1860 to 1869, so that he originated the "usage" himself. Of this usage the committee say very properly "that the practice of receiving a per-centum by the Clerk of the Senate on printing done for the State is highly reprehensible, as being pernicious in its tendencies, wrong upon principle, and manifestly against public policy." Of course it is. It is precisely the same in principle as the usage under which for many years back nobody having a bill against this city could get payment without submitting to a heavy discount for the benefit of the officials through whose hands it passed; in other words, it is the practice on which Tweed and his brother thieves grew rich, and which finally grew into the practice of presenting large bills against the city which were wholly fraudulent.

Turning to the Administration organ, the *Times*, to see what it thinks of the affair, we find "that it affords it no pleasure to see a gentleman of excellent character, of good abilities, and hitherto much esteemed by a large circle of friends, compromised in any way, but especially in such a way as this. The sum paid to Mr. Terwilliger, a little over $2,000 a year, is contemptible; it would not corrupt a door-keeper. Mr. Terwilliger was told that it was part of the just perquisites of his office. . . . Mr. Terwilliger would have been thought very eccentric had he refused to take it. But for all that, the custom is a vile one," etc., etc. There, you see, there is nothing in the matter at all. Here was an innocent who had been "inside politics" a great many years, taken up to Albany, made Clerk of the Senate, and told by some bad men that he ought to levy twenty per cent. on the bills of the State printer, and that it would look queer if he did not. So to avoid an appearance of oddity, he did so, but, bless you, it was hardly worth his notice. The next year this cherub was down in New York acting as Tom Murphy's confidential "deputy," and helping him to "control primaries," but ill-luck taking him back to his old post, the malignants attacked him, and he had to resign to save trouble to the Senate.

Dr. Woolsey has written an article in the *Independent* on the Treaty difficulty in which he comes to the conclusion: that there is little as yet that is definite to guide us with regard to the impressions of the British members of the High Commission;

but that, judging from the protocol, "there was no obligation in honor laid on our Government to make no mention of indirect losses in the case." On the other hand, looking at the provisions of the Treaty, and particularly those which define the mode of assessing the damages, he finds the balance of probability on the side of the British view. He asks, "What part in the prolongation of the war, or in the transfer of the American commercial marine to the British flag, and in the enhanced payment of insurance, can be assigned to each vessel? Would it not need something," he says, "beyond any guesses of lawyers, beyond any differential calculus, to determine this?" He expresses, in conclusion, the hope "that an end is to come to these claims [for indirect losses] now; if not, an end is likely to come to the faith in international arbitration which has gladdened the hearts of so many." Judge Nott's criticism, on another page, is worthy of attention.

We must remind Dr. Woolsey, as regards the English understanding of the Treaty, that Earl Granville, the Foreign Secretary, and Lord De Grey, in explaining and defending it before the House of Lords, June 12, 1871, immediately after its conclusion, stated that the present Treaty had over the Clarendon-Johnson Treaty the great advantage that under it the claims for indirect damages "entirely disappear," owing to its "more limited reference." Sir Stafford Northcote, who was one of the High Commission, made a similar statement in the House of Commons. These declarations elicited no protest or correction from this side of the water, either official or unofficial, and they prove beyond question, it seems to us, what the understanding of the British Commissioners was. Whether this understanding, or misunderstanding, was justified by the protocol or Treaty is another matter, on which there is, and will always be, considerable difference of opinion, not only between Americans and Englishmen, but among Americans and Englishmen. That it exists makes one thing certain, and that is, that the negotiations were greatly mismanaged, on the English side, in not expressly excluding these claims; on the American side, in not expressly including them—or, in other words, in leaving any room for doubt in the minds of reasonable men that it was the intention as well as the right of the United States to bring them up before the arbitrators; for this is one of those cases in which to doubt is literally to be damned. If it were a common lawsuit before an ordinary court, it might make no difference, but it is not a common lawsuit before an ordinary court. As we pointed out last week, neither party can be dragged before the arbitrators. He must, if the arbitration is to be of any value or weight, go voluntarily, and he must go on issues which he fully understands and has agreed to submit, and on which he is willing to abide by the decision of the tribunal. The arbitrators cannot give judgment by default and issue execution. The whole proceeding is, in short, a moral proceeding, to the validity of which clear comprehension and undoubted consensus on both sides are necessary at every step. If these do not exist, there is no use in wrangling over the wording of the Treaty. There is only one thing to be done, and that is, go to work again over the claim for "indirect damages," and see if a satisfactory arrangement can be made. If it cannot, then there remains the usual resort — to kill and mutilate a large body of Americans and Englishmen—count the corpses, bury them in shallow graves, in their bloody clothing, and crow over the number of them; burn and waste a great amount of property, and squirt a great quantity of abuse at each other through the newspapers. After about two years of this we should probably have a treaty in which the "consequential damages" would never be mentioned, and after which they would never trouble anybody any more.

The view that there has been shocking blundering on the part of their own negotiators is the one which is now uppermost in the English mind, and the press has abandoned the task of berating the Americans for that of berating the Ministry, which is certainly in a wretched "fix," whatever view one takes of the matter. If the Treaty does not stand, they are face to face with the *Alabama* difficulty in a more unpromising, if not in a more serious form, while to go before the arbitrators to defend themselves against such claims as are laid down in the American Case is more than they dare attempt. Mr. Tom Hughes has in the meantime witten a letter to the *Tribune*, which has rather injured than helped the English side of the controversy—if for no other reason, through its outspoken expression of want of confidence in the arbitrators, on the strange ground, among others, that one is an ardent Republican and some do not speak English, as if we had the advantage on either of these points. There are only two defences of the English position that are worth mention. One is that the Treaty is ambiguous in its terms, and that the American interpretation of it is a surprise; the other, that England cannot honestly submit to the arbitrators a point on which she would not obey the award if it went against her.

M. Thiers had no sooner got over his quarrel with the Assembly about taxing raw materials, than he fell into fresh trouble over the navigation laws as M. Pouyer-Quertier proposes to amend them, for the benefit not less of the shipping interest than of the military marine. Foreign ships coming from any port of the Mediterranean are to pay seven francs and a half per ton; those coming from non-European countries on this side of the Cape of Good Hope, fifteen francs; from beyond the Cape, twenty francs differential duty. The measure had no sooner been proposed, however, than the Government found itself plunged in the difficulties of which Mr. Schenck used to have such a dismal experience, in the old days when he was every month piling on the duties. In the first place, Austrian ships are exempt from this duty, under a treaty concluded with her in 1866, and which does not expire till 1873, and eight other nations share the same privilege under the favored nation clause in other treaties. So that, for one year at least, the tax would not reach the shipping of the principal maritime powers of Europe. Then, as usual, up jumped various French "interests," and demanded exemption each for itself. The deputy from Martinique demanded exemption for French colonial produce, on the ground that the people of Martinique ought not to be put on the same footing as Englishmen and Belgians, and got it. Then the agricultural interest demanded exemption for all ships carrying guano, and got it; and then the manufacturing interest demanded exemption for ships importing corn, and got it, at least for all times of scarcity; so there is little left of the navigation laws. The Assembly agreed to everything joyously, knowing as little of political economy as M. Thiers himself.

The only interference of Government with the Pope's appointment of bishops in Italy, under the settlement effected last year, is in requiring them to present their credentials for verification. The Roman Curia, being resolved to resist to the last the *modus vivendi* proffered it, has forbid the new bishops to go through this form, and the consequence is that they are thrown into embarrassments from which they have been obliged to appeal to the Pope for relief. Without the required concession to the Government they are in danger of being cut off from the enjoyment of their benefices, and this being clear enough and not to be blinked, Cardinal Antonelli at first promised to send a certified copy of the Papal bull in each case, which might be submitted to the authorities, but was informed that this would not be received, when he fell back on his absolute refusal to allow the originals to be presented. The threatened destitution of the bishops thus thrust forward into martyrdom still weighed upon the Papal conscience, or was steadily kept before the Pope's view, with the result of drawing from him an appropriation of $8,000 a month in aid of such bishops as should be deprived of their revenues, though it was admitted that the sum was not adequate to their necessities. However, it was the best that the Papal Treasury could provide, and even this subsidy would last but a year and a half, at the end of which time, if the condition of the Church had not improved, they must look to Providence for support. With these childish manifestations of temper and obstinacy, the Pope and his counsellors make a pretence of warding off the inevitable.

LAWLESSNESS IN HIGH PLACES.

THE Washington correspondent of the *Tribune* remarks, commenting on the French arms affair, that "it is said by independent Republicans and Democrats that there has been all through this Administration a growing tendency to disregard law, and conduct the affairs of the Government independently of its restraints." If the independent Republicans and Democrats say this, they say something which, if not wholly true, has a great deal of truth in it. It may be that there has not been on the part of the Administration a *growing* tendency to disregard the law, but there has certainly been a steady tendency. The Government at Washington came out of the war with habits of lawlessness contracted, and perhaps unavoidably contracted, during the war. Four years of "military necessity" and suspended habeas corpus and steady denunciation of the courts for real or suspected interference with military operations, no matter how necessary they may be for the successful conduct of those operations and the salvation of the country, play sad havoc both with popular and official respect for that old-fashioned barrier against "short cuts"—the law of the land. There is no use in crying over this. It forms one of the objections to going to war, but it forms also one of the inevitable sequelæ of war. It furnishes a reason for dreading and refraining from war as long as possible, but it does not, any more than the loss of life or destruction of property, furnish a reason for not going to war at all under any circumstances, as some Democrats seem to think. But it is the duty of all good citizens when war is over to do what they can to bring officials back to the ancient ways, and revive in everybody's mind as fast as possible that reverence for legal enactments and judicial decisions without which no political system ever has lasted or ever can last long.

It was the duty of the Republican party, as the party in power and the party which carried on the war, to have addressed itself to this business with even more zeal than to the business of paying off the national debt. It is hard for a candid man to say that it did so. On the contrary, it is very difficult to deny that it encouraged the Administration to persist in its lawless military way of looking at its duties. The Impeachment trial, a strictly legal proceeding, was conducted as if such a thing as law was unknown, and as if no man need look any further than his own breast for rules of conduct in any exigency of life; and any one who then talked of law as something binding on his conscience was assailed with the foulest abuse. Mr. Grimes, just deceased, was a victim of this outburst of mob fury, and Mr. Fessenden's death was certainly hastened by it.

One of the very first acts of the present Administration was to add to the Supreme Court two new judges, chosen avowedly because they were known to hold certain fixed opinions on a matter in litigation between private parties before the court, and with the view and intention of having a judgment already given in that litigation reversed by the aid of their votes. What made the matter all the worse was that that judgment bore hard on certain great corporations whose counsel one of the new judges had been, and that the relief it granted was granted to creditors under contracts which had for several years been deliberately violated. It would be impossible to put into an article in a newspaper all the moral objections there were to this performance. Among the political objections to it were these: that it was directly calculated to destroy the confidence of the country in all subsequent decisions of the court, or, in other words, to destroy the popular respect for the whole of that enormous branch of American jurisprudence which is embodied in judicial decisions; that it was really an interference by the Executive alone—an interference, too, such as royalty in its worst days has never attempted—between private suitors about a matter of property, the President having used his authority to affect the result of the suit almost as directly as if he had sent a military force to prevent the execution of a writ or to intimidate the judges on the bench; finally, that it was a direct and open tampering with the constitution of the Supreme Court, on grounds of *what seemed to the President* public policy, and in preparation for *what he thought* a probable contingency (the necessity for legal tenders in some other war)—he in fact constituting himself sole judge of the whole matter. The affair roused a good deal of indignation, but the Republican party, as a party, winked at it. We are glad to see that the "Independent Republicans" have taken up this great usurpation in their platform adopted at Jefferson City, and trust that it will not be overlooked at Cincinnati.

A President who had successfully exercised his discretion in this way was hardly likely to be in a modest frame of mind, and was not likely to be filled with a very profound respect for the law or lawgivers. But Congress, far from doing anything to bring him back to a healthier and more constitutional view of his duties, then armed him with authority such as has never been bestowed on a constitutional ruler in any age or country, by giving him power to suspend the habeas corpus over half of the Union, whenever in his judgment it should be necessary. The suspension of the habeas corpus, being practically a suspension of the law, is a serious measure, to which resort should only be had in the gravest crises, but certainly the legislature alone should, in a law-abiding country, be competent to say when the crisis had come. At this moment, this unprecedented discretion is lodged in General Grant's hands. He has not abused it, it will be said. Perhaps not; but does anybody suppose it has increased his respect, or the respect of his followers, for the Constitution and the laws?

We shall not comment on the San Domingo movement, high-handed as many of its features were, inasmuch as it was resisted, and successfully resisted, by Congress. But is it surprising, after all this, that when Mr. Boutwell came to place his new loan, and found the provisions of the law under which he was acting inconvenient or objectionable, he should, instead of waiting to have it altered, have totally disregarded it, and have acted on his own discretion in a matter on which the legislature allowed him no discretion whatever? And does anybody seriously suppose that other managers of the public finances, after seeing his disregard of the law unblushingly pronounced wholly blameless by a solid party vote, will be any less scrupulous than he, whether they are as upright and well-meaning or not?

We need not wonder, then, that the War Department, having received permission by resolution to sell damaged arms, should not only go to work to sell as good arms as ever were made, but should actually manufacture ammunition to accompany them. Somebody, in this case—we do not know who it was—only did what the President did in the matter of the legal tenders and the Supreme Court, and what Mr. Boutwell did in the matter of the loan—that is, substitute conclusions of his own as to what was desirable or advantageous, for the will of the nation, as plainly expressed in legislation. General Grant either knew and did not care, or did not know, which is nearly as bad, that a court packed by the President, to render decisions in support of what he considered good policy, was not a thing contemplated by the Constitution or by the American people; and Mr. Boutwell probably knew very well he was breaking the law, but he felt that his judgment was better than that of the law-makers, so he followed his judgment and disregarded theirs.

The disease is one which is running through the country, and has seized on functionaries, both State and Federal, in every direction. As might be expected, it shows itself in its gravest form in financial matters, but it is not confined to financial matters. The judges, the sheriffs, the governors, and the mayors are all exercising their discretion in all sorts of ways for "the good of the people," and letting the statute lie in their drawers. We have had a worse outbreak of the distemper in New York than elsewhere, but the type grows more malignant as time wears on, and it is time something was done to stay the plague. We want "a government of laws, and not of men"—an ancient phrase, associated with many great traditions, but which, in our day, is becoming a mere rhetorical commonplace; and unless we greatly mistake the signs of the times, something will be done before long to give it back its old force and pregnancy. When one sees the outburst of *personal* devotion which a Presidential candidate calls forth, one hardly needs any argument to prove the necessity of curtailing discretion in every direction.

SOME CIVIL-SERVICE FALLACIES.

ONE of the stock arguments against the civil-service reform is based on the assumed folly of demanding a high grade of intelligence for filling an office the duties of which are a matter of pure routine. The sympathy of the public is continually appealed to by portraying the treatment of some poor John Smith who has applied for an humble office, and is rejected by the examining board because he knows nothing of the history of Greece or the geography of Asia. Notwithstanding the defects of his book-learning, he has proved his abilities to perform all the duties of a copying clerk. He has a mother or a sister depending on him for support, and he has travelled a thousand miles to seek the office. He goes before the board in full confidence of his ability. And, after all, notwithstanding his faultless handwriting, and his accuracy in copying, he is discomfited and sent back home because he cannot tell who Pericles was, or what rivers flow into the Caspian Sea! Whereupon the public is expected to become indignant with the pedagogues who examined him, and to protest against the introduction of any such tests of qualifications for office.

Judging from the frequency with which this picture is presented to the public, we may infer that great numbers of intelligent people really think that poor Smith is hardly used, and that it would be an act of kindness towards applicants for office if Government would not require any qualification beyond ability to perform the duties of the office they were seeking. To see the fallacy of this view, it is only necessary to reflect that John Smith's competitors, one of whom must prove successful, are entitled to as much sympathy as he is, and deserve the office as much as he does. If he does not get the office, some one else must—Brown, for example; and if he (Smith) had succeeded, poor Brown would have failed, and would have been entitled to all the sympathy that Smith now gets, and the system that rejected him would be subject to all the objections denounced against that which rejected Smith. In a competitive examination, the question is not shall Smith be accepted or rejected, but whom shall we accept—Smith, who can do nothing but copy letters, or Brown, who, besides copying as well as Smith, proves his education and general intelligence by telling who Pericles was, and naming the rivers which flow into the Caspian? As only one man can be appointed to a single office, and as all applicants but one must be rejected under the one system as well as another, the question whether the lucky man shall be Smith, Brown, or Jones is one for the Government itself to decide in the way most conducive to its own interests. When politicians invent some way by which every man who wants an office may have it, there will be some cause for complaint that poor John Smith fails to get one, but no sooner.

The same fallacy is frequently couched in the form of a squib, representing the candidate as undergoing examination in all sorts of abstruse subjects. If we analyze these jokes, we find that the man is always supposed to fail, for no one would see anything ridiculous in the appointment of a good scholar merely because he was such. If some politician should find that every clerk and messenger in the State Department could read Laplace, translate from any European language, name all the Roman Emperors, and explain every principle of international law laid down by Grotius or Vattel, and should make this state of things the basis for ridicule and denunciation of the system which allowed men with so much knowledge to be appointed to office, the laughter he might excite would not be entirely sympathetic. But, if these clerkships are really filled, and if no one is "passed" who cannot do all this, the logical consequence is that they are filled by just this class of men.

The next argument in point of frequency is that success in passing an examination is, after all, an imperfect test of ability to perform the duties of a clerk, and that the most brilliant competitor may fail on the test of actual trial. The Civil-Service Commission tacitly admit this when they provide for a period of probation. Glad as they would have been to inaugurate the millennium, it is quite clear that they did not hope to do it. Sensible men will not, however, refuse to move forward because they cannot at once reach this happy state, but will be satisfied with anything which is a decided improvement on the present. The practical question is not whether the new system is a perfect one, but whether it is better than the old one. We do not ask whether intelligence is an infallible criterion of ability, but which is the better criterion, intelligence or pertinacity? Shall we prefer ability to read French, or ability to lead a dozen Irishmen from their grog-shop to the polls? Since we must take some one on trial, shall we try a young man because he is studious and intelligent, or because he is a particular friend of his member?—because he can describe a steam-engine, or because he can pack a primary meeting? Shall we prefer soundness in arithmetic or political soundness? When the question is put into this its true shape, there are few who will openly declare themselves opposed to the reform. If any proof is wanted that the new system is an improvement on the old one, it is to be found in its results. In organizing the Census Office two years since, the subordinate positions were all filled by competitive examination, and though there was much complaint of the system at the time, we know none who pretend to deny that the work of the office is done more efficiently than before. The same remark would apply to the Patent Office but that it never has been a political machine.

In our illustrations, we have given the politicians the strongest possible case by supposing the examinations to be of the most scholastic character. In fact, however, far from approaching this extreme, the danger is that the examining boards will so far yield to the clamor of the John Smiths as to err in the opposite direction, by giving too much weight to the commonplace qualifications necessary in the lower grades by which it is expected all will enter, and too little to the wide scholarship, general culture, and scientific training which is necessary worthily to fill the higher grades of positions to which all will be eligible. Viewing the higher education as a mere ornament is one of our prevailing vices of thought, and the fact that it is to the interest of our Government that all who operate its complicated machinery should know as much and understand as well as possible, is very apt to be lost sight of. While we cannot expect to fill our twelve-hundred-dollar clerkships with the greatest men of the age, we do insist that if any youthful Grotius is found to be a candidate, he shall be secured for the position; something which cannot be done without some test which shall distinguish him from the competing crowd.

FRENCH PROTESTANTISM.

PARIS, February 2, 1872.

POLITICS are only the outward expression of certain deep and inner forces. It is for this reason that when the political aspect of a country is very perplexing, there is some hope of coming nearer the truth in studying its religious life. It must always seem very extraordinary to an Anglo-Saxon witness of French history that Protestantism has ceased to play any part in it. The history of the French Protestants is one of the proofs that might can be stronger than right, and that even ideas can be successfully destroyed by the sword. Such a confession is painful; but the Protestant idea has been, I am afraid, completely extinguished in France: not that there are not a few Protestant churches left in it, in Paris, in Nismes, in a few other cities, but they remain, as it were, on the ruins of the old Huguenot Church, like isolated columns testifying the ruin of a temple. There is no life in them; no spirit of propagandism; no real desire to make proselytes. They seem to be satisfied with their isolation; they only wish to be forgotten. The Protestant Church of Paris is very wealthy, being chiefly composed of bankers, most of them of Swiss or Alsatian origin. It has a consistory where the Calvinists and Lutherans meet; for it is one of the curious characteristics of the organization of the Protestant churches in France, that the organic law of Napoleon which rules them seems completely to ignore the fact that there are several confessions of faith. Napoleon found it convenient that the state should pay the ministers of all religions; a Mussulman in Egypt, he was a Catholic in Rome. He decreed that all the Protestants should form a consistory, and have a synod, a sort of small parliament. In Paris, Monod, who was a strong Calvinist, was obliged to meet constantly in the same council Coquerel, who belonged to the broadest Evangelical Church. These two men, who are now dead, were for a long time the two great lights of our small Parisian Protestant Church. Monod was extremely eloquent; he had a nervous style, which reads somewhat like that of Bossuet (and I could not imagine any higher praise); he had also a depth of conviction, a seriousness, which produced some effect even on his enemies. Coquerel, the father of Athanase Coquerel, who has lately been travelling in the United States, had an easy eloquence; he was very fluent, too rhetorical, and what the French call unctuous. These two men gave for a time some life to the consistory, but as this life was dissension, the Catholic witnesses of the struggle were not much edified by discussions which to them appeared merely a struggle for power. I ought to mention a third name, Martin Paschoud, who, now very old and broken, has been in his time a very remarkable preacher, only his Protestantism drifted by degrees not only towards Unitarianism, but towards a nondescript form of Christianity, which had ceased to have any limits or lineaments. Martin Paschoud undertook to create a "Universal Christian Alliance," into which entered Catholics, Protestants of all shades, Russians, and, if I am not mistaken, Turks. His Christianity, which admitted Renan as well as the French Catholic bishops, was merely a sentimental sort of philanthropy, employing the phraseology of the New Testament instead of that of political economy or of statistics.

Now, without entering into any criticism of M. Martin Paschoud's universal religionism, I confess that I do not see how it can become an instrument of religious reform. Men are so constituted that they will only make great efforts for a very determinate and fixed idea. Monod, narrow and bigoted as he was, made more impression upon the general French mind than Coquerel by his benevolent evangelism, and than Martin Paschoud, who was seen hand-in-hand with infidels and with Catholics. The misfortune of the Protestant Church is that it has always been divided, though it never was really sectarian—by which I mean that there has been no organization of the different parties which divided it. It has had a disturbed and, as it were, indistinct life, without any strong and well-defined organism. See what a curious arrangement the French love of equality has produced. As there are several parties in the consistory, you would have thought, perhaps, that each party had its own churches. Not at all. There is a regular rotation of the ministers from one church to another. Every month a card is printed, which tells you that on such a day the Reverend —— will preach at the Oratoire, the next Sunday at the Rue Roquépine, etc. As it is impossible to follow a minister from one place to another, the result is that there is no congregation in the true sense of the word. There can be no communion between a certain number of men and women and an individual whom they have chosen or accepted as their spiritual guide. There is no continuity whatever in the lessons which fall from the pulpit. A more absurd arrangement, one more calculated to pulverize, as it were, religious teaching, and to create in the community a state of indifference, can hardly be imagined. It creates in the Protestant public a sort of torpid equilibrium which nothing can disturb. The church which is no longer inspired by a strong faith becomes more and more worldly and *genteel*. Lately, there has been an effort to separate the Protestant churches from the State. The law, as it still exists, precludes the existence of free churches; and it is only owing to the tolerance of the Government that the free chapel of the Rue Taitbout is allowed to exist. M. de Pressensé is the apostle of the *free* church. He is a very respectable man, with strong convictions, somewhat chimerical in his views, but more preoccupied with politics than with religion. He is a member of the Republican Left in the Chamber, and his duties keep him most of the time in the Chamber.

This predominance of the political passions has gone far to neutralize the most eminent members of the Protestant Church. The government of the church, between the narrow limits which have been marked by the state, is left to a body half clerical and half laic. The most illustrious of these lay members of the consistory is M. Guizot. He is of Nismes, which remains still one of the strongholds of Protestantism and of Calvinistic opinions; but his political passions, which are strongly conservative, have finally brought him over to the defence of the temporal power of the Papacy. In his "Meditations on Religion" you will find that his faith does not live in a sphere superior to the troubled current of politics. General de Chabaud-Latour, who is another member of the consistory, belongs also to the conservative party. He is one of those Protestants who are so afraid of political agitation that they have come to dislike also religious agitation. This want of activity, this inertia, this dislike of the popular passions, seems to me the characteristic trait of French Protestantism. It is highly respectable, but cold and distant. Under our so-called Republic, and under the state of siege which has become the normal state of Paris, I know that there is not much liberty of association or of meeting. But what a field would there not be for real apostles in this enormous working population of the French faubourgs, which lives in a state of rebellion against Catholicism! The Communists have shown that they considered the clergy as their great enemy. It would require much courage to meet these pagans of modern civilization, who have no other God than their animal instincts, and who have been sedulously taught by the Revolutionary writers that the "Declaration of the Rights of Man" of Robespierre was the only gospel in which they ought to believe.

I have often told my Protestant friends that Belleville and Montmartre were the places where they ought to send their missionaries. The Rue des Rosiers, where two old generals were shot, the neighborhood of the prison of La Roquette, are places as shut to Christianity as the wilds of Africa. The Catholic Church has still some hold on these pagans. By the splendor of its ceremonies, by its monuments, by the memories and associations of centuries, it speaks to the imagination of the people even when they profess to hate its priests. But Protestantism is to them an empty word—they do not understand its true meaning. The populace is always engrossed by some show of power, and Protestantism in France cannot make such a show. It could only gain the hearts of the people by great efforts, by persecution; and the tolerance of the state never gives it the halo of misfortune. Among those who have not become indifferent to religious questions there is very little hope of ever bringing to life again the Protestant Lazarus. The long struggles of the wars of religion, Saint Bartholomew, the cruel persecutions of Louis XIV., which in their time were applauded by all cultivated Frenchmen (read Mme. de Sévigné's Letters), the new teachings of the French Revolution, have been successive blows which Protestantism has not resisted. While some thinkers attempt to moralize the Revolution and to establish a sort of deistic rationalism, the rest would be contented with breaking the bonds which unite French Catholicism with Rome, to throw it back into the old channels of Gallicanism, which is a more austere sort of Catholicism, more rational, with a smaller admixture of Mariolatry. But all these attempts seem vain. While Catholicism is becoming daily more ultramontane, and has submitted to the new dogma of the Vatican Council, rationalism is becoming more and more positivist, less and less deistic and ideal. Spiritualism seems defeated in the church and out of the church. The doctrines of the Internationale are the grossest and coarsest expressions of a naked materialism. The Catholic Church has perhaps gained more visible empire; it has worked upon all the instincts and interests which are hostile to the communistic instincts; but it has become more and more pagan, contracted, and sensual. The Roman rites have been everywhere introduced; the old Gallican prayer-books have been in all the sees replaced by the Roman prayer-book.

The religious state of the country explains all its misfortunes. In losing the Huguenot element, the old provincial nobility, which was neither revolted nor submissive, France lost the power of self-control, of self-government. Here and there you meet some remains of the spirit which inspired Henri de Rohan, but how seldom! I remember stopping once in the midst of the Plain of the Beauce, in a solitary mill: on the walls of the mill I saw, to my great surprise, some verses of the Bible. The miller informed me that he was a Huguenot; for generations his family had been living on this solitary spot, far from any minister, from any church. He seemed to me like a phantom of old France of the sixteenth century. Who can wonder if, in a few years, his sons or grandsons become either Catholics or infidels? The misfortunes of France may perhaps bring some moral revolution. We no longer believe in the Revolution as our fathers did. Rousseau, the Vicaire Savoyard, and the school of the rights of man, have lost much of their credit. Let us hope that some day a new spirit will revive the Protestant churches of France, and that our children will not repeat, as we can hopelessly, with Alfred de Musset, "Je suis venu trop tard dans un monde trop vieux."

NOTES FROM BERLIN.

BERLIN, Jan. 30, 1872.

THERE are many in the United States who will receive the announcement of the death of Professor Trendelenburg with a sense of personal loss, for he possessed in a remarkable degree the power of transferring his own personality to his pupils and friends. For forty years a lecturer upon philosophy in the University of Berlin—first as *Privat-Docent*, and, since 1837, as a regular professor—he retained to the last that magnetic influence which marked the opening of his career, and always attracted an eager throng to his lecture-room at the unconscionable hour of seven in the morning in summer and eight in winter. It was not his teaching alone, but his manner, spirit, and character, that gave him this extraordinary popularity through two generations. He was a model of frankness, sincerity, kindliness, conscientiousness—of manly, earnest devotion to truth. With him the ethical was the highest end in philosophy and for humanity, and his "Naturrecht auf der Grundlage der Ethik" is, on the whole, the best expression of Trendelenburg both as a philosopher and as a man. He revived the philosophy of Aristotle, but infused into this the spirit of Christian theism. In this work especially—the "Naturrecht"—his very style reflects the purity and nobleness of his character. As a teacher, he was more critical than constructive, and he expended his strength upon the analysis of existing systems rather than in the synthesis of a new philosophy—as, for instance, in his "Beiträge zur Geschichte der Philosophie" and his "Logische Untersuchungen." Into such criticism he carried the clear, keen, rigorous method of a mathematical mind. But Trendelenburg had also the elements of a positive system. Against the idealism of Hegel, he maintained that conceptions (*die Begriffe*) are not self-originated, but are the product of contemplation (*Anschauung*) —the inner spiritual vision reproducing the outward, and from this refining its own abstractions. Hence he was wont to say, "Human thought lives by *Anschauung*, and must die of hunger if compelled to feed upon its own entrails."

Unhappily for himself and for us, he overstimulated his own brain with the uninterrupted contemplation of philosophical questions, until, about a year ago, a stroke of apoplexy warned him to prepare for the close of his work. Nevertheless, he persisted in lecturing almost to the day of his death, which took place on Wednesday, January 24, in the seventieth year of his age. As one of his colleagues expressed it, the instrument with which he worked so faithfully, his brain, caused his death. On that very day the journals announced his decoration by the King as a Knight of the Order of Merit, for his eminence in science and art. For twenty-five years he had been the indefatigable and most acceptable Secretary of the Berlin Academy of Science. His funeral took place on Saturday, January 27, at the new chapel of the Dom-Kirche in the Müllerstrasse. This chapel is in a remote suburb of the city, and the weather was unpropitious; yet there was a large gathering of professors, students, and men of position and of science to pay the last tribute to one so universally honored and beloved. An appropriate address was delivered by Professor Kleinert, and several chorals were admirably rendered by a quartette from the *Dom-Chor*.

To pass rather suddenly from philosophy to art, all Berlin is agitated by a new sensation in the opera, in which Lucca was the heroine. Indeed, it was what our royal guest, Prince Arthur of England, who witnessed it, might call "a nice bit of a row." For years Lucca has been the queen of the opera, the favorite of Berlin, the pet of the court—indeed, one might say of courts, since her popularity is even greater at St. Petersburg than at Berlin. But the past season has brought a new star upon the stage in Frau Mallinger, who first in the absence of Lucca began to rise to her place as the favorite singer, and since Lucca's return has challenged comparisons somewhat invidious toward the queen. In short, each prima donna now has her partisans, and the two factions may be likened to those of the Louisiana Legislature in their unscrupulous zeal. Lucca has been accused of *hauteur* toward Mallinger and her retainers, and of dictation and unfairness behind the scenes. Last Friday evening the two rivals, for the first time, appeared upon the stage together. The entrance of Lucca (as *Cherubim*, by the way) was the signal for tumultuous applause, but this was answered by a prolonged hiss--a sound which her ears had never before heard. She exclaimed energetically, "*Ungezogenheiten*"—unmannerly impertinence—and bolted from the stage. The curtain fell, and the house was in an uproar. After a while the curtain rose, and Mallinger was about to sing, when the spunky little *Cherubim* reappeared, stepped energetically to the middle of the stage, and in a clear, loud tone said, "I am conscious of no wrong, and see nothing in what I have done for which to blame myself." Everybody was carried away by her pluck, and the applause was frantic. The opera went on, and at the close of it Lucca's carriage was drawn up before the court entrance to the Opera House—a distinction said never before to have been conferred upon any artist. The affair has resulted in the triumph of Lucca. Both she and Mallinger tendered their resignations to the manager; Mallinger was at once released from her engagement, but Lucca's request was refused; she remains queen of the Berlin stage, and awaits an ovation in the "Huguenots." It is reported that she has been offered a hundred thousand dollars for a six-months' engagement in the United States.

Berlin is paying in enhanced prices, in the growth of speculation, and in the general unsettling of society, the penalty of her sudden promotion to an imperial capital. It will be well for her and for Germany if she can avert the perils of that political centralization, with its attendant social demoralization, which has wrought the ruin of Paris and of France. There is no longer a question of cheap living in Berlin; the previous question has been sprung upon every householder—how to live here at all? Rents have advanced in much the same ratio as in New York from 1863 to 1868. Five years ago, I hired in a fine house *Unter den Linden* a spacious parlor facing the street, and two bedrooms, modestly furnished, for 30 thalers a month. Such rooms in that street now command from 100 to 200 thalers monthly, according to the floor or the furniture. A third floor on the Linden, unfurnished, which four years ago rented for 700 thalers, now brings 2,400. Of course the rise is greatest in the central part of the city, but it is felt in every quarter. Several of my friends have been compelled to quit homes that were endeared by the associations of years because some outsider had overbid them in rent. Others are obliged to content themselves with half a dwelling (or *Wohnung*, in distinction from a *Haus*) or to rent out one or two rooms of their own scanty lodging. A friend entreated me not to pay the landlord what he demanded for a vacant floor in the same house with herself, because such an advance upon the previous rent would be followed by a levy upon all other tenants in the same building. People of moderate incomes are in mortal terror of being turned out of doors.

One cause of this is the frequency with which real estate changes hands through the spirit of speculation. A house purchased before the war for 40,000 thalers was lately sold for 92,000, and the new owner has since refused 200,000 thalers for it. He has notified the tenants of such an advance of rent that every occupant will perforce quit the house on the 1st of April—the Berlin "moving-day." In another case, a new proprietor hinted at an increase after April. A second-floor tenant, reluctant to pay 300 thalers, proposed to take the upper floor, then assessed at 200. But an artist in possession, wishing to secure his light, at once offered 300 thalers to keep his rooms, whereupon the owner notified the second-floor tenant that 400 thalers would be the rate after April, and every suite of rooms was raised in the same ratio, yielding an increase of 2,000 thalers in the rental of the entire house.

As for spacious and elegant apartments, such as an English or American family would be content to take, or even to look at, these will readily command from 1,000 to 2,000 thalers a year, and even more, according to local advantages. These figures, though quite moderate to the average New York tenant, are enormous for Berlin, which, in respect to business and to private fortunes, is relatively a poor city, and makes this a much dearer residence than London. In such attractive districts of London as Canonbury and Highbury Park, or Herne Hill and Upper Tulse Hill upon the other side, one can obtain a commodious and elegant house, with a garden, or in the vicinity of a park, for from £60 to £70 a year; and the necessaries of life are cheaper in London than in Berlin. Here everything has followed the advance of rents; and, to make matters worse, since the 1st of January the new system of weights and measures, uniform throughout Germany, has gone into effect; and though each new weight and measure is smaller than its fellow of the old system, the dealers charge the same rates for the new as for the old; thus mulcting the buyer at the rate of about 20 per cent. All housekeepers are grumbling, and the poor are suffering, but there is no redress. The principal hotels have advanced full 40 per cent. upon the rates of five years ago.

Amusements feel this general fever of appreciation. If one would enjoy Ulmann's Artistic Concert, he must pay 2 thalers for a seat; if he would hear Lucca in "Faust" or the "Afrikanerin," he must pay at the office 3 th. 10 sg. for a place in a box, and 2 th. 5 sg. for a seat in the parquet; and to this must be added from a half-thaler to a thaler for the services of a Dienstman or Commissionär, or to a speculator for standing two or three hours in the crowd before the ticket-office. This brings the cost of a good opera night up to the Nilsson prices in New York. In short, the world over, one must pay the best prices for the best things. No "International League" can reverse that law.

This rapid advance of prices is not due here, as at Dresden, to the influx of a large colony of English and Americans; for English and American colonists produce hardly a ripple upon that tide of immigration which is rolling in upon Berlin at the rate of 2,000 a week. It is the fact that Berlin is henceforth to be the head of all Germany, that the imperial court is here, that the parliament of United Germany meets here, and has resolved to make this its home by erecting here a national parliament house, and that by consequence capital, trade, wealth, pleasure, fashion, enterprise, adventure, all gravitate to this as their natural centre. There are not houses enough to provide for this sudden expansion of population, and though new districts are being opened on the outskirts of the Thiergarten and beyond the Potsdam Bridge, yet the high price of land and the present cost of building put new houses beyond the reach of persons of moderate incomes. It is upon salaried men and persons of fixed income that this pressure comes most heavily; but it is felt in all domestic arrangements. Men hesitate to marry because of the high rents and the upward tendency of the necessaries of life. Many are talking of moving out of the city; but this would change the habits of society, especially in the two interests most dear to a Berliner—his home and his amusements. He could no longer have his mid-day dinner with his family, and he could no longer spend his evenings at the concert, the *Conditorei*, the opera, or the theatre; and such a revolution would soon be followed by a counter-revolution in favor of hotel-life in town. Moreover, as yet the railway accommodations are not adapted to suburban life. The railway stations are on the outskirts of the city, and to a German a walk of twenty minutes to the cars seems a serious undertaking; but there is talk of building a common station in the heart of the city.

Old Berliners are complaining of the effect of this enormous growth of population upon the manners and even upon the language of the people. The past three years have witnessed an increase of nearly 150,000, making over 800,000 by the recent census. The native-born inhabitants are already in the minority; and there is reason to fear that in time Berlin will become a city for only the very rich, the very poor, and the speculators and adventurers who prey upon society, and will be the gathering-point for all the worst, as well as the best, political and social elements from the whole Germanic Empire. As yet, however, I have not heard either a republic or women's suffrage proposed as a remedy for this new social economy.

AN AUSWANDERER.

Correspondence.

PRESIDENT WOOLSEY AND CONSEQUENTIAL DAMAGES.

TO THE EDITOR OF THE NATION:

SIR: There is, as it appears to me, in the recent article of President Woolsey's in the *Independent*, a fallacy, which, coming from a scholar so eminent and a mind so just, is entitled to what few fallacies are, a refutation. It lies in the following paragraphs:

> "Or, to come to the especial difference of opinion between the two Governments, might not the United States say: 'We consent to the English understanding and interpretation; let it rule in regard to the province of the tribunal at Geneva. But, in consistency with that opinion, we shall regard the results of the proceedings of that Board as a full, perfect, and final settlement of the claims (Article XI. of the Treaty) that relate to direct injuries. But the claims we have made, as it respects indirect injuries, are not thereby settled, and we shall reserve them for a more convenient season'? The British Government, then, ought to contemplate, if its interpretation is to prevail, the possibility of a batch of new claims, which were beyond the province, as it maintains, of the existing Court of Arbitration.
>
> . . . .
>
> "As we have said, if indirect and consequential injuries were not to be submitted to the arbitrators, then the United States did not, by making no mention of them, abandon them, and may resume their claims on this account. This, then, is the dilemma—they were or were not included in the submission. If they were, they must be considered, and Great Britain cannot withdraw from the arbitration or refuse to abide by it. If they were not, why can they not, after a longer or shorter sleep, wake up again?"

The fallacy here may be shown best by illustration.

If I strike a man, he may sue me and claim his direct damages, the doctor's bill, or his "consequential" damages, the indignity, or both. But if I am beyond the jurisdiction of any court in which he can seek redress, so that I cannot be sued without my own consent, I may stipulate that, should I voluntarily appear in a designated tribunal, his demand shall be limited to the direct damages which he has sustained. Should some dispute arise before I thus appear in court as to the construction of the stipulation, I may still refuse to appear, or may agree that its construction be left to the court, or insist that it shall be understood to limit my liability to the direct damages. Assume, now, that I thus insist, and that with this understanding we go to trial, there being, if you choose, declarations and asseverations on his part as to his right to demand, here or hereafter, consequential damages. If he should successfully prove that I struck him, and that his doctor's bill was $100, and for this amount a verdict should be rendered and judgment entered, the wrong I did him would become merged in the judgment, and the matter in controversy be for ever at an end.

It is the word "claims" in the Treaty whence all the trouble and confusion flow. But it must be understood that this word embraces two distinct things: first, the cause of action; second, the damages, be they direct or consequential, springing therefrom. The fallacy consists in taking a part for the whole—a resultant for the injury—an effect for the cause—in saying that the claims (meaning thereby the causes of action with their consequential damages) survive, when in fact the claims (meaning thereby the causes of action) are dead.

I am aware that the controversies of nations are not in all things governed by the analogies of municipal law, and that the principles of international law must be applied untrammelled by many of its restrictions; but there can be no system of law on earth that will allow a controversy to be prosecuted to judgment, the judgment to be paid, the payment to be accepted, and one of the parties to remain free to revive the controversy because he did not recover all that he demanded. *Interest reipublicæ ut sit finis litium* is a maxim applicable to controversies between governments as to controversies between men; and "if there be any one principle of law settled beyond all question it is this, that whensoever a *cause of action*—in the language of the law—*transit in rem judicatam*, and the judgment thereupon remains in full force and unreversed, the original cause of action is merged and gone for ever." So said the Supreme Court against the United States in a suit where they were plaintiffs (11 Peters' R., p. 100). If we suffer England to atone for injuries inflicted, the atonement blots them out, be it little or much; if the wrongs which we complain of expire in the award of the international tribunal, a future claim for their consequential damages will be but their vexatious ghost. Respectfully yours,

CHARLES C. NOTT.

WASHINGTON, D. C., February 16, 1872.

Notes.

A PHILOZOIC essay, by Col. E. B. Hamley, entitled "Our Poor Relations," is announced by J. E. Tilton & Co., of Boston.

—A recent English writer, having spoken of the "foundation" of principles upon which a certain political party is standing, pauses to amend his expression, and says that for the word "foundation" he will substitute a forcible Americanism, "platform," as being better suited to the flimsiness of the structure in question. Like some other "Americanisms," this is not to be called an Americanism at all. For a time in the course of its existence it has been actively used in this country while not used in England; but formerly it was used in England; it is sure of being used there again; and we do not know where is the authority to pronounce it an Americanism and refuse it a place as a recognized English word of good standing and repute. Most probably it came into common use on this side of the water at the time when our New England communities were agitated by theological discussions over various forms of Calvinism—discussions which resulted in "platforms," as the "Plymouth Platform" and the "Saybrook Platform," modelled on the set of propositions so familiar to English as well as American divines under the title of "The Geneva Platform." It is altogether likely that our politicians took the term from the theologians, the church and the politicians being in those days quite as closely connected together as in our time; but had they liked they might have found other than American and theological warrant for its use. Hooker among English Churchmen employed it, and so did Bacon among English politicians; and if our platform-makers had been readers of plays they might have found it in "Sir John Oldcastle," one of the "doubtful" plays of Shakespeare. The conspirators in that tragedy show Sir John a statement of their grievances set forth item by item, which they present to him as "the platform" of the new league. But, in fact, so excellent a metaphor requires no one's authority or defence, and is to be thankfully accepted as a welcome addition to the language wherever spoken.

—A novel mode of emending the text of our English classics with special reference to Shakespeare's text, is described in the *Athenæum* of January 27, by Mr. William Blades. That a large proportion of the obscure passages are attributable to printers' blunders there can be no doubt; but Mr. Blades confines himself chiefly to such as naturally arose from what the printers call "a foul case"—the *case* being the set of boxes from which the types are picked, and into which they are distributed. Careless distributing is the principal cause of fouling, but this may also arise, since the case is slanted, from the slipping down of type from an over-heaped box above to the next lower. This contingency is the one most relied on by Mr. Blades, who, after explaining it, shows by a diagram the arrangement of "upper case" and "lower case" respectively in Shakespeare's time, indeed, down to the commencement of the present century. Double letters (or logotypes) prevailed much more extensively than at present, and affected the arrangement considerably. The scientific order now employed, for instance, places the *e* at the bottom of the case instead of at the top, as being the letter most used, but the positions formerly assigned *t* and *a* correspond with their importance as the second and third letters of the alphabet. We shall give but a single illustration of Mr. Blades's hypothesis. Promising that, in the lower case, the box for *o* ranged above the *a*, we have only to suppose an *o* to have slipped down among the *a*'s to arrive at the change proposed (*Macbeth*, v. 5):

> "Were they not *forc'd* with those that should be ours,
> We might have met them dareful, beard to beard."

"The word *forced*," says Mr. Blades, "should be read *farced*. . . The enemy's ranks were not *forced* with Macbeth's [natural] followers, but *farced* or filled up." This, perhaps, is not a favorable specimen of emendation, inasmuch as *forced* for *enforced* seems no great stretch of meaning; but it exhibits well enough Mr. Blades's ingenious *modus operandi*.

—For a long period, perhaps from the days of Heminge and Condell themselves, we suppose it has been true of the English stage as of the Continental, that no play of Shakespeare's has been acted without curtailment or alteration. The vast changes which have taken place in the manners and occupations of society; the decline of the theatre in importance, together with the steady improvement in public taste, requiring greater perfection in the mechanical adjuncts of dramatic representation; and, finally, the moral differences between this age and the Elizabethan, have all combined to render Shakespeare unfit for literal performance. Life is now too short, the tax upon the scene-painter and stage-carpenter too severe, and the offences against decency too numerous and too gross, to leave us any choice between tinkering and total neglect. Besides, the fact of a traditional stage version of Shakespeare's plays nigh two centuries old is evidence of defects in them apart from those considered above. Managers, playwrights, and actors have all had a share in this version, which we speak of as a whole as distinguished from the original as a whole, although outside of the same theatre any given play of Shakespeare's may hardly have been twice represented in exactly the same way. The great "stars" have freely cut the text to suit themselves, now to subordinate still more the parts of other actors, and again to heighten, by condensing and unifying, the dramatic effect. That any consistent and scholarly attempt at reducing and adapting to the stage the complete works of Shakespeare has ever been made in our language we are not aware.

—In Germany this attempt is now being made by M. Oechelhäuser, one of the officers and a leading founder of the Shakespeare Society, who has studied devotedly, and with true poetic sympathy, the works of Shakespeare, and in his "Essay on King Richard III." had already sketched the principles which should guide one in a task like the present. These principles he discusses anew in the first of the eight volumes that have thus far appeared. They are, in general terms, that "nothing organic should be changed, nothing essential should be rejected, and of course nothing unnecessarily invented and added." Of the success with which he has observed these conditions, it may be said that it is admirable so far as regards omissions and condensation, and that in the main, too, his own additions, to serve as bridges where the connecting link has been dropped, are satisfactory enough. As the rule, of course, these additions have consisted at most of a verse or two—as little as would suffice. It is only when filling a longer hiatus that the want of genius becomes manifest. This happens notably with the trilogy of Henry VI., where Herr Oechelhäuser condenses, with a great deal of skill, three plays into one, prefacing it with some seventy verses, which explain the situation, in a dialogue between York and Salisbury. The editor intends to adapt all the plays of Shakespeare except *Titus Andronicus, Timon of Athens, Measure for Measure, All's Well that Ends Well*, and *Two Gentlemen of Verona*. Of these it would seem hardest to part with *Measure for Measure*. but, though one of the most enjoyable in the closet, it is unfit for the boards, the plot being such as no audience would endure. The volumes already issued contain *Richard III., As You Like It, Hamlet, Henry IV., Richard II., Midsummer-Night's Dream, King Lear*, and the *Taming of the Shrew*. We venture to suggest to Shakespeare Societies in England and in this country whether the English stage might not, with no great labor, be enabled to profit by Herr Oechelhäuser's labors, and a standard version be thus arrived at which would materially promote a Shakespeare revival.

—The Washington correspondent of the Cincinnati *Commercial* having been commanded by his superior officer to make an article on the statuary and paintings of the Capitol, and having himself no knowledge whatever of the plastic arts in any of their forms, proceeded to consider how he should set about obeying orders. Very soon he bethought himself that he had once had a slight acquaintance with a gentleman whom "no one will deny a place among the eight or ten distinguished American sculptors," and out of him the correspondent resolved to chisel, so to speak, two columns and a half about the art objects of Washington City. Not every man of resources must be a newspaper correspondent, but every newspaper correspondent must be a man of resources, and this correspondent betook himself at once to the Capitol grounds to waylay Dr. Horatio Stone, the sculptor to whom reference has been made, and to make him produce the required matter for the letter. This he succeeded in doing, though not to his entire satisfaction. What he wanted was a spicy article, containing anecdotes about the statues, and telling how much each piece cost; but, instead of this, the doctor persisted in discoursing "like a lecture," declining to produce any anecdotes, and referring his young friend to the "appropriation bills" for the "items of prices." It is true, the correspondent admits, that "the presence of the various works which he talked about added greatly to the interest of his conversation"; but still the conversation was, he feels, too much like a lecture. It is borne in upon him, as our fathers used to say in "meeting," that he must somehow contrive to give it more of interest for the readers of the *Commercial*. And now, do any of our readers figure him to themselves as casting about for a means of accomplishing this result? Did he beat his brains for ideas, do they imagine, and give himself some trouble to find a way of making the doctor's transcendentalism readable? If any do so figure him, they thereby reveal their own complete ignorance of the newspaper correspondent's habits. Our friend, they may be sure, gave himself no concern on this point, being too practised a fellow of his craft not to know precisely what the occasion called for. He just took his pen and wrote down for the second head of his discourse these three words, in small capitals, HOW HE LOOKS, and then proceeded to give his readers a little of that sub-variety of anthropology in which the correspondents greatly joy themselves, and which consists in giving an impudent detailed description of the nose, bust, front teeth, ears, hair, legs, clothes, under-clothes, ear-trumpet, and "personal appearance" generally, of any officer of the coast survey, sister of charity, metaphysician, acting assistant adjutant-general, senator's wife, senator, philosopher, politician, panel thief, or what not, any of whose acts or remote ancestors may for the moment be undergoing discussion. As to how the victim in this particular case looks, we learn that—

> "He looks better than ever. Age has strengthened his face while taking from it none of its softness. His hair was light brown [formerly], which mixes well with gray, and is worn rather long and negligently. His beard is full and long, and streaked plentifully with gray. The same fine, sensitive, nervous, discriminating face remains, and the same head which overruns with poetic genius."

—Dr. Stone, we are told, would not attract a stranger by his appearance, because he is not a person who obtrudes himself on people—a trait of character in which he does not resemble a gentleman whose name our correspondent may learn by calling at this office—but "give him half a chance" and he is a most agreeable companion, and converses very instructively and very freely. We may believe, then, we suppose, that our correspondent's memory failed him in his attempt to carry off the doctor's two columns of conversation in this instance, for it is two columns of matter as to which we can make oath, without perjury and without mental reservation, that it deserves to be memorable even in the history of art-criticism in the District of Columbia, and no one can say more than that. We do not intend quoting any of it, nor saying anything further about it, except to beg our correspondent—and some other people—to give a moment's consideration to one or two propositions which may almost be pronounced self-evident: Of all the millions of men, there are rarely two on earth at any one time who are able to do perfectly every possible thing within the compass of human power; who perfectly comprehend every field of human activity, and who are competent to talk to their fellow-creatures upon every known topic; most of us, then, may honestly and without shame confess that as to certain subjects we are incompetent to speak, and that beyond peradventure we shall go to our graves before we have acquired the right to talk about them; that among these subjects sculpture and painting are in the cases of a majority of men so certain to be included, that no man until after long observation and study is justified in doing anything else than distrusting his own judgment and consenting to be taught by what long ages have said; that, finally, the conversation of sculptors suspected of being eighteenth-rate or even eighth-rate or even fourth-rate is to be violently suspected as but a bad means of instruction, and indeed worse than worthless. Going back to the business of anthropologizing his subject, our correspondent—who, if he has some of the tricks of his trade, is nevertheless, let us say, a very good correspondent—informs us that hereafter, before he engages in conversation with Parson Newman about himself (the Parson), or with Mullett about fire-proof buildings, or Grant about horses, or Ben. Wade about the conduct of the war, or Thurman about the Constitution, or Professor Hayden about the Yellow Stone country, or Dr. Horatio Stone about art, he'll take care to have a good deal of time on his hands, these gentlemen, apparently, being understood to be prolix when discussing these several topics. We advise him, so far as Dr. Stone is concerned, to have as little time as possible on his hands when next the doctor turns the conversation in the direction of Signor Brumidi, and Colonel Trumbull, and Mr. Greenough's Washington, and the "coats of arms" of the various States, and the architecture of the Federal District.

—Two petitions, asking for a commutation of the sentence of deportation passed on Elisée Reclus (the well-known author of "La Terre," lately reviewed in these columns), on account of his complicity with the Commune, have been signed by the leading men of science in England, and addressed respectively to the Board of Pardons at Versailles and to M. Thiers himself. These appeals, joined to similar ones from members of the French Academy, would seem well-nigh irresistible. There is, perhaps, no excuse for the fatal error into which M. Reclus was betrayed, and his example as a man of learning and of unusual intelligence may deserve the severe penalty decreed for it, but his previous character powerfully pleads for any mitigation of his sentence consistent with the public welfare. He became a Communist from having long been a socialist by conviction, and yet this destructive alliance was not incompatible with conscientious scruples against eating meat, on the ground that man has no right to kill his fellow-creatures. In private intercourse he was distinguished for warm-heartedness and amiability, and only his social theories could have led him at last into the company of assassins and *pétroleurs.* Elisée Reclus was born in Roussillon, at the foot of the Pyrenees, in 1829, and received his early education at Neuwied, in Rhenish Prussia, and his later at Berlin in 1850, having from the first given proofs of a precocious and powerful intellect. Unlike the majority of his countrymen, he learned foreign languages with facility, speaking German as if it were his native tongue, and being also master of English, Spanish, and Italian. He first attracted the attention of the scientific world by his contributions to the *Revue des Deux Mondes*, which followed a four years' absence from France, two of which were spent in this country, chiefly in Mexico. If a harsh punishment is still deemed necessary for him, simple banishment, while answering all the demands of justice, would preserve for science this eminent disciple.

—The number of publications relating to the siege of Paris and the Commune is on the increase in France, though the military history of the second siege, and final overthrow of the Commune, is thus far very meagre. While Bazaine is still unconvicted of treachery in the surrender of Metz, a history of the Mexican expedition is about to appear, in which the Marshal's ability as a soldier will be brought out in a striking manner—as the announcement goes. The narrative will be complete, and of considerable interest, as having been written by a staff-officer to a Minister of War. More agreeable to mention are works which pertain to the moral and political reconstruction of France: in the latter field, "La Réforme électorale en France," by E. Naville; "Du Suffrage universel et de la manière de voter," by H. Taine; "Les Limites du Suffrage universel," by R. Rondelet; in the former, "De l'enseignement des Langues vivantes dans les lycées," by Eugène Baret; "Les Langues vivantes avant et après la guerre," by Henry Montucci; "De l'étude de la Langue allemande dans les établissements publics d'instruction secondaire en France," by J. N. Charles. The two authors last named are professors of the modern languages in the Paris lyceums. A renowned explorer of American dead languages, the Abbé Brasseur de Bourbourg, has just published a *catalogue raisonné* of his private library—"Bibliothèque Mexico-Guatémalienne, précédée d'un Coup d'Œil sur les Études Américaines." This collection embraces 80 manuscript volumes on the languages of Mexico and Central America, 60 grammars and vocabularies, and 80 other historical documents. Among these 20 relate to the *Maya* language of Yucatan, 25 to the *Nahuatl* of Mexico, 14 to the *Quiché* of Guatemala, etc., etc. The catalogue ought to be accessible to every student of the Central American languages; but in this country we fear they might be counted on the fingers of one hand. Of much more general interest is the index which the conductors of the *Revue des Deux Mondes* will shortly publish, and which will include, says the *Academy*, "notices of the authorship and circumstances under which the more remarkable articles appeared during the forty-two years that the *Revue* has been identified with the best literary workmanship in France."

—An ever-interesting episode in modern history, the burning of Moscow, has been called to mind by Count Anatole de Ségur, whose mother holds a deservedly high place as a charming writer for the young. She was the daughter of the late Count Rostopshin, Governor-General of Moscow in 1812, and it is his life that his grandson has undertaken to write, or rather to compile, from documents preserved in his family ("Vie du Comte Rostopchine"). It is well-known that Rostopshin, after he had become famous, resided for a number of years in France, where he published a pamphlet to exculpate himself from the charge of having ordered the firing of the Russian capital. This disavowal seemed strange to his countrymen, not only because they regarded the destruction of Moscow as a glorious act of patriotism, but because they remembered that in his passage through Germany he had allowed himself to receive extraordinary attentions offered expressly on account of it. They knew, too, that he had fired his own country-house in the suburbs of the city on the approach of the French, and that in the evacuation of Moscow he ordered away all the fire-engines. M. de Ségur, for his part, admits that Rostopshin thus prepared for the conflagration, but acquits him of having given orders to that effect. The fact was notorious that the burning of the town had been openly declared necessary in case the enemy occupied it, and that Rostopshin had as openly manifested the same disposition. His bulletins and proclamations, however, never alluded to the subject; but, on the contrary, urged the duty and security of defending the city, and apparently in perfect sincerity. Field-Marshal Kutusoff encouraged him in this illusion at the same time that he and his generals, with one exception, were unanimous in deciding for the abandonment of Moscow. Rostopshin was, intellectually considered, a man of recognized ability, and it is a pity that his rule at Moscow was tarnished by acts of atrocity at which even the mob revolted when asked to participate. They will be found narrated at pp. 12–19 of Vol. I. of the late Nicholas Turgeneff's "La Russie et les Russes." The burning of Moscow and that of Chicago have naturally been compared. The latter was, of course, a much more terrible event than a premeditated removal with which fire had no necessary connection as a cause. Nevertheless, the number of homeless in the former instance was by far the greater. Out of 300,000 inhabitants of Moscow, only 60,000 awaited the arrival of the French. Turgeneff tells a ludicrous story of the chief of police, who migrated with the rest, and made report to the Emperor in the usual official forms, according to which he wrote: "I have the *pleasure* of informing your Majesty that the French have occupied Moscow," etc.

—There is abundant evidence to show the settled hostility of the ruling class in China to foreign residents, and to convict officials, high and low, of the most unscrupulous attempts to inflame the ignorant populace against them, either directly or indirectly; and there may be said to have been an unbroken series of mob violence, or excitations to mob violence, ever since the Tien-tsin massacre. It cannot be denied that this state of things affords reasonable ground of alarm to the foreign colonies and to the more or less isolated missionaries—much greater, indeed, than if it were clear that the Imperial Government were planning a crusade of expulsion, instead of merely encouraging resistance to foreign intercourse while keeping within the letter of the treaties. The latest manifestation of this anxiety which has come under our notice is a letter from the Rev. J. V. N. Talmage, at Amoy, written last September, to Gen. Le Gendre, U. S. Consul at that port, and published as a pamphlet at Hongkong: "The Anti-Missionary Movement in South China; more especially in the Amoy District and adjacent localities." The writer endeavors to show that the Chinese opposition to the Christian religion is directed against it chiefly as a foreign religion, and that it affords the Government the readiest means of exciting odium against foreigners in general. This would appear to be the state of the case, since the allegations brought against the missionaries and their doctrines are specimens of the most deliberate and malignant lying conceivable. Nevertheless, precarious as may be the safety of foreign residents, a broad view makes evident a steady progress on their part during the past ten years, and a prospect of greater security hereafter. Every factor of Western civilization, however slight, tells against Chinese barbarism and exclusiveness, as patient waiting will show. The coast telegraph already laid will do much both for security and progress, and we observe that the introduction of that recent invention, the road-steamer, to run between Taku and Tien-tsin, is anticipated with rejoicing, as likely to open the way for railroads, for which the country is perfectly adapted. Meantime, the French negotiations which ensued on the Tien-tsin massacre promise to improve the standing not only of foreign residents but of foreign diplomatic representatives in China.

MR. LECKY ON IRELAND.*

THIS volume contains four essays first published anonymously many years ago, and in now reproducing them with an introduction, Mr. Lecky says "he is yielding in part to the request of many friends in Ireland and elsewhere who have been good enough to regret the difficulty of procuring them, and in part also to a feeling that at the present moment their appearance might not be wholly useless or inopportune," and in part, we suppose, he might also have added, to the belief that the growth of the author's reputation will now secure them an amount of attention which, when they first saw the light, they were far from receiving. It would be a great mistake, however, to set them down among "the early efforts" of distinguished men which the enterprise of publishers so often rescues from oblivion, and which are luminous only with a reflected light. They are solid and valuable contributions to the literature of one of the most melancholy subjects of which historian or philosopher is called on to treat, and we doubt much whether anybody who wrote on it many years ago would find now so little to revise in his judgments and so little to regret in his prophecies as Mr. Lecky does. He has written an introduction, too, which contains his latest opinions on the great and apparently hopeless question of Irish discontent, and they are opinions which, even if not very encouraging, are very suggestive, and they deserve the attention of everybody whom Irish discontent is likely to affect—and what corner of the earth have the waters of that bitter fountain not reached?—as those of a class of Irishmen whose voices are now seldom heard on Irish affairs, and whom the insane policy of England has robbed of all influence over their own countrymen, and yet who are probably the only men in existence who look at the Irish question with enough sympathy with the Irish people to understand it, and enough sympathy with the rest of the world to talk rationally about it.

---

* "The Leaders of Public Opinion in Ireland: Swift, Flood, Grattan, O'Connell. By William Edward Hartpole Lecky, M.A." New York: D. Appleton & Co. 1872.

The story he tells in the shape of four essays on the career and character of four great Irishmen—Swift, Flood, Grattan, and O'Connell—is that of the growth and degeneration and, we might almost add, the extinction of public opinion in Ireland. Swift called it into being; Flood fostered and watched over its growth; Grattan made it a power strong enough to secure Irish independence; under O'Connell it achieved its greatest triumph, and then declined rapidly. It can now be hardly said to exist. The ravings of the Fenians and the curses and grumblings of the Ultramontane priesthood are not the voice of a nation.

To understand what it was that these four men accomplished we have to bear in mind the state of things with which they had to deal. We gave a brief account in these columns (No. 276, Oct. 13, 1870), in a review of Mr. Prendergast's "Cromwellian Settlement of Ireland," of the condition of Ireland after the subjugation by Cromwell and the subsequent reconquest by William III. The flower of the Catholic or native population were dead or gone into exile; the best lands were divided among the English settlers, composed in the main of Cromwellian and Williamite soldiers. The Treaty of Limerick, which closed the struggle with James II., stipulated for the religious freedom of the Catholics. It was deliberately and immediately violated as soon as signed, and the "penal code" was passed by the Irish Parliament, composed of English colonists, the English Parliament setting them the example. The English legislation against the Catholics under William was indeed worse than the Irish, many of the most atrocious of the Irish statutes being simply transcripts of the English ones. We hear less of the English persecution simply because the English Catholics were a mere handful, whereas in Ireland they formed the bulk of the population. The first step in this legislation was taken in 1691; the first measure of relief was passed in 1768; but Catholics were not put on a footing of complete equality with Protestants, as regards civil rights, till 1792. During the intervening century, they suffered from disabilities of which Mr. Lecky gives the following excellent summary:

> "By this code the Roman Catholics were absolutely excluded from the parliament, from the magistracy, from the corporations, from the bench, and from the bar. They could not vote at parliamentary elections or at vestries. They could not act as constables or sheriffs or jurymen, or serve in the army or navy, or become solicitors, or even hold the positions of gamekeeper or watchman. Schools were established to bring up their children as Protestants; and if they refused to avail themselves of these, they were deliberately consigned to hopeless ignorance, being excluded from the university, and debarred, under crushing penalties, from acting as schoolmasters, as ushers, or as private tutors, or from sending their children abroad to obtain the instruction they were refused at home. They could not marry Protestants; and if such a marriage were celebrated, it was annulled by law, and the priest who officiated might be hung. They could not buy land, or inherit or receive it as a gift from Protestants, or hold life annuities, or leases for more than thirty-one years, or any lease on such terms that the profits of the land exceeded one-third of the rent. If any Catholic leaseholder by his industry so increased his profits that they exceeded this proportion, and did not immediately make a corresponding increase in his payments, any Protestant who gave the information could enter into possession of his farm. If any Catholic had secretly purchased either his old forfeited estate or any other land, any Protestant who informed against him might become the proprietor. The few Catholic landholders who remained were deprived of the right, which all other classes possessed, of bequeathing their lands as they pleased. If their sons continued Catholics, it was divided equally between them. If, however, the eldest son consented to apostatize, the estate was settled upon him, the father from that hour became only a life-tenant, and lost all power of selling, mortgaging, or otherwise disposing of it. If the wife of a Catholic abandoned the religion of her husband, she was immediately free from his control, and the chancellor was empowered to assign to her a certain portion of her husband's property. If any child, however young, professed itself a Protestant, it was at once taken from the father's care, and the chancellor could oblige the father to declare upon oath the value of his property, both real and personal; and could assign for the present maintenance and future portion of the converted child such proportion of that property as the court might decree. No Catholic could be guardian either to his own children or to those of another person; and therefore a Catholic who died while his children were minors had the bitterness of reflecting upon his death-bed that they must pass into the care of Protestants. An annuity of from twenty to forty pounds was provided as a bribe for every priest who would become a Protestant. To convert a Protestant to Catholicism was a capital offence. In every walk of life the Catholic was pursued by persecution or restriction. Except in the linen trade, he could not have more than two apprentices. He could not possess a horse of the value of more than five pounds, and any Protestant, on giving him five pounds, could take his horse. He was compelled to pay double to the militia. He was forbidden, except under particular conditions, to live in Galway or Limerick. In case of war with a Catholic power, the Catholics were obliged to reimburse the damage done by the enemy's privateers. The legislature, it is true, did not venture absolutely to suppress their worship, but it existed only by a doubtful connivance, stigmatized as if it were a species of licensed prostitution, and subject to conditions which, if they had been enforced, would have rendered its continuance impossible. An old law which prohibited it, and another which enjoined attendance at the Anglican worship, remained unrepealed, and might at any time be revived; and the former was, in fact, enforced during the Scotch rebellion of 1715. The parish priests, who alone were allowed to officiate, were compelled to be registered, and were forbidden to keep curates, or to officiate anywhere except in their own parishes. The chapels might not have bells or steeples. No crosses might be publicly erected. Pilgrimages to the holy wells were forbidden. Not only all monks and friars, but also all Catholic archbishops, bishops, deacons, and other dignitaries, were ordered by a certain day to leave the country; and if after that date they were found in Ireland, they were liable to be first imprisoned and then banished; and if after that banishment they returned to discharge their duty in their dioceses, they were liable to the punishment of death. To facilitate the discovery of offences against the code, two justices of the peace might at any time compel any Catholic of eighteen years of age to declare when and where he last heard mass, what persons were present, and who officiated; and if he refused to give evidence, they might imprison him for twelve months, or until he paid a fine of twenty pounds. Any one who harbored ecclesiastics from beyond the seas was subject to fines which, for the third offence, amounted to the confiscation of all his goods. A graduated scale of rewards was offered for the discovery of Catholic bishops, priests, and schoolmasters; and a resolution of the House of Commons pronounced the prosecuting and informing against Papists 'an honorable service to the government.'"

The Protestants, who were all men of English descent, formed about one-fifth of the population, and it might have been supposed that England would have spared no pains to attach them to the mother country, and to make them an instrument for the absorption of the island into the English political and social system, or, in other words, for making it an integral part of the British Empire in fact as well as in law. She did nothing of the kind. On the contrary, they rapidly became, like all the other colonists, objects of jealousy, suspicion, and even persecution. Everything that a depraved ingenuity could suggest was done to alienate them. Not only was their legislature kept in abject dependence on that of Great Britain, but the Irish Protestants were systematically excluded from all the high offices in the gift of the Crown. The lord-lieutenant, chief secretary, and other prominent political officers were always Englishmen. During the whole of the eighteenth century, no Irishman held the archbishopric of Armagh; of the eighteen archbishops of Dublin and Cashel ten were Englishmen. The lord chancellor was nearly always an Englishman, and so were a large proportion of the bishops and judges. The parliament was at the same time controlled by a system of corruption which has no parallel in political history, except Walpole's and Tweed's. It contained 300 members, of whom 216 were returned by rotten boroughs; and of these 200 were returned by 100 individuals, and nearly 50 by ten. One peer returned sixteen members, another fourteen, and these patrons the Government bought up wholesale. The Irish pension list was as large in proportion to the resources of the population from which the money was drawn as that of Louis XV., and it was used partly in debauching the legislature and partly in rewarding English or foreign adventurers or creatures of the Government. The mistresses of George I., and the Queen Dowager of Prussia, and the Sardinian ambassador who negotiated the peace of Paris, were quartered on it, and it was increased at the pleasure of the crown.

But this was not all, or the worst. A deliberate attempt was begun in 1663, and persisted in for more than a century, at the destruction of all Irish industry, and it was an attempt which involved Catholic and Protestant in a common ruin; and when we consider how largely character is the result of hereditary industrial training, it is impossible to doubt that the recklessness and improvidence which had, by the beginning of this century, come to be considered essential traits of the typical Irishman, were the result of this really atrocious legislation. On the restoration of peace and security in 1663, the Irish began to raise cattle and export them on a large scale to England, their only market; an act of the English Parliament of that year prohibited the trade absolutely. In the same year Ireland was excluded from all trade with the English colonies. In 1696, the law was made more stringent by prohibiting all direct importations from the colonies into Ireland—the principal colonies being those of North America, and Ireland being peculiarly well situated for intercourse with them. The Irish then began to raise sheep and go into the wool manufacture. An act was passed in the English Parliament in 1699 forbidding the exportation of Irish woollens to England or any other country. As the manufacture had reached a point of considerable prosperity, this was a frightful infliction and plunged the people in the deepest distress. They then turned their attention to the linen manufacture, which the English Government professed to look on with a favorable eye, and, if they did not encourage it, at least suffered it, but it was not till 1777 that Irish linens were admitted to the colonies, and they were not, even then, admitted to England. There were a great number of minor restrictions placed on Irish industry; to mention only one—the export of glass, of which the Irish began to manufacture the coarser kinds, to England or any other country, was prohibited by special statute.

It was in the midst of this prostration that Swift first roused the sentiment of nationality in the breasts of the Protestant colony, for the Catholics were mere broken-spirited serfs, who aspired to no part in the political life of the country, and were no more thought of as capable of taking part in it in Swift's day than if they had actually been slaves. The first symptoms of resistance to English oppression were shown by a handful of men, not over half a million in all, whose political morals the mother country had done her utmost to ruin, both by pecuniary corruption and exclusion from high office, and by unrestricted indulgence in class tyranny. It is the story of their struggle during fifty not inglorious years that Mr. Lecky traces, and a more instructive story one does not often read. They wrested from Great Britain, between Flood's appearance on the scene in 1759 and the passage of the Act of Union in 1800, the abolition of all legislative restrictions on the commerce and industry of Ireland, the legislative independence of the Irish Parliament, the release of the Irish courts from the control of those of England, the irremovability of the Irish judges. They effected the emancipation of the Catholics from almost all their disabilities, and this voluntarily, heartily, and in the teeth of much English opposition. They produced, in the persons of Flood, Grattan, Burke, Plunket, and Sheridan, orators and statesmen who, either in the Irish or English House of Commons, held positions for which political history may be said to offer no parallel. Two of these orators, Grattan and Burke, have left the only political speeches which anybody now reads for instruction, and which nobody can read without receiving much instruction; and if we have to except Burke's hostility to the French Revolution, and Flood's hostility to the American Revolution, there was no great movement of their day which the world now recognizes as really progressive which did not receive their hearty support. Flood's aberrations on the subject of the American war we may pardon when we find that John Wesley opposed the repeal of the Penal Laws. Flood failed, when transferred to the English House, but failed only through an accident. He got up with the intention of making a few remarks on an Indian question, and the rush of members in from the lobbies to hear him when they learned that he had risen was so great that he was excited and flattered into attempting a set speech on a subject with which he was not familiar. The result was disappointment which he never got over. But Wraxall's statement, "that the slow, measured, and sententious style of the enunciation which characterized his eloquence, however calculated to excite admiration it might be in the senate of the sister kingdom, appeared to English ears cold, stiff, and deficient in some of the best recommendations to attention," furnishes a curious illustration of the extent of the change which Irish oratory has since undergone.

This remarkable display of fertility in political talent on the part of the Irish Protestants, under extraordinarily unfavorable circumstances, promised the happiest results for the future of the country. But it alarmed England, and the Act of Union was pushed through by the most disgraceful corruption, while complete Catholic emancipation, which the native reformers had been pushing, was indefinitely and perfidiously postponed by Pitt, in deference to the king's bigotry. These things, combined with the growth of a strong anti-Catholic feeling among the Protestants, as the result of the Evangelical movement in the Church of England, gave the national movement a purely sectarian character. The agitation begun by O'Connell had the immense advantage of rousing the self-respect of the Catholics, and achieving complete political equality for them, but it divided the two creeds as they had never been divided, and gave the leadership of the masses wholly into the hands of the priests, and, through this, allied Irish liberalism with reaction on the Continent, and made hostility to England and fidelity to the Pope the two solitary planks in its platform. In the meantime, the educated laity have wholly abandoned the arena of purely Irish politics, and have thrown themselves eagerly into the field which England opens up to their ambition. Irishmen are now carrying off more than their share of the prizes of the civil service, and have invaded the English bar with such success that they have, or had very recently, five of the twelve English judgeships, and a few years ago put a chancellor on the woolsack (Lord Cairnes) to whom none deny the foremost position among English lawyers. Of seven great Indian soldiers and administrators of whom Mr. Kaye has told in his "Lives of Indian Officers," Barnes, Neill, Connolly, Todd, Pottinger, Lawrence, and Nicholson, the last three were Irishmen. In short, the cause of Irish nationality, which Flood and Grattan served so splendidly, has been abandoned by the class from which these great men sprung, and is now served exclusively by the blatant adventurers who head the Fenian raids. The country has never in its history been materially so prosperous as it is now; its administrative system is admirable, taxation light, the judges pure and able; but the political sentiment of the people is thoroughly debauched. What agencies will purify or elevate it, it would be hard to see—probably education, if the priests do not get hold of it. Mr. Lecky is not very sanguine evidently.

HOLLAND'S "RECOLLECTIONS OF PAST LIFE."*

IT would be easy for the reader who knows something of Sir Henry Holland's very remarkable career to expect a great deal more entertainment from this volume than it will afford him. Sir Henry, born in 1788, and now, in 1872, still living, in nearly full possession of his faculties; who, in the course of almost a century of life, has visited every European capital many times, has eight times visited the United States, and four times visited Constantinople and the East; who has made three tours in Algeria, two in Russia, several in Sweden, Norway, Spain, Portugal, Italy, and Ireland; who has sat and told stories with President Lincoln, been the household physician of Queen Caroline, campaigned in the Peninsula with Wellington, visited Napoleon III. at Chislehurst, danced in the same set with King Joachim Murat before Waterloo, and visited Mount Vernon with the Duke of Edinburgh after the impeachment of President Andrew Johnson; who knew Lord Alvanley, and the wits and rakes of the Regency, and who was the friend of Prince Albert, Encke, Leverrier, Bond, and Arago; who knew Doctor Johnson's Mrs. Piozzi, and has a friendship with Mr. Thurlow Weed and Mr. Evarts; who, in short, knew everybody—Sir Walter Scott, President Buchanan, Sydney Smith, Queen Hortense, Talleyrand, Palmerston, Wordsworth, Praed, Lushington, Macaulay, Lady Holland, Canning, Thiers, Castlereagh, General Meade, Byron, Drouyn de Lhuys, Pozzo di Borgo, Cuvier, Gay-Lussac, Godoy the Prince of Peace, the "Maid of Athens," the Emperor Nicholas, Coleridge, Sismondi, Mrs. Somerville, Jefferson Davis, Whewell, Rogers, Augustus Schlegel, Edward Everett, Poniatowski, Bobus Smith, Ugo Foscolo, Ali Pasha, Mr. Grote, Dumas, Webster, Benjamin Constant—such a man after such an experience of such a length ought to be, and probably is, the depositary of a fund of reminiscence and anecdote such as is not possessed by any other man in existence. Evidently, too, Sir Henry has always been of an eminently social turn, and has had the will, as well as the best opportunities, to enjoy society. Very early in the course of his professional life he determined that he must never allow his work so to engross him as that he should not be able to give two months of each year to travel; and having made this resolution in the interest of health, long life, and the happy exercise of all the powers of his mind, some of which demanded regular travel into strange lands, he made the further resolution, in the interest of social enjoyment, that, during the ten months still remaining to him of his year, his earnings should never amount to more than a certain sum, and the whole of his time should never be mortgaged to his patients. Such being his social disposition and social habits, his abilities as an observer being more than commonly good, and his opportunities of observation unequalled, it is only natural for the reader to expect much, even a vast deal of biographical sketching, having high interest, or, indeed, high value, and an addition nowise contemptible to the store of English and foreign biographical anecdote. Both of the anecdote and of the biographical sketching the volume contains some, but compared with the amount of either that might have been expected by the reader least sanguine of entertainment, there is exceedingly little. But what little there is of either is good enough to make one wish for more. Excellent, for example, is this characterization of Lady Holland—a person who was not exactly such "a vision of delight" as she might have been supposed had history no other account of her than that transmitted by the Reform Bill Whigs. Lord Dudley's account of her has an air of veracity which does not impress one in Lord Macaulay's "orating" about the queenly hostess of Holland House, and we confess sincere gratification with Sir Henry Holland for departing so far from his usual safeness as to "serve out" this uncomfortable lady, who has so long been in the enjoyment of honor and renown. She is decidedly of bad example, especially in these days when women are in open revolt; though, for that matter, it is her own sex that would have made short work with her, we fancy. Here she is:

> "The master-hand here was that of the mistress, Lady Holland—a remarkable woman in every way, well-remembered by all who knew her—difficult to describe to those who did not. Supreme in her own mansion and family, she exercised a singular and seemingly capricious tyranny even over guests of the highest rank and position. Capricious it seemed, but there was in reality *intention* in all she did; and this intention was the maintenance of power, which she gained and strenuously used, though not without discretion in fixing its limits. No one knew better when to change her mood, and to soothe by kind and flattering words the provocation she had just given, and was very apt to give. In this latter case, indeed, she was aided by a native generosity of mind which never failed to show itself in kindness where

---

* "Recollections of Past Life. By Sir Henry Holland, Bart., M.D., F.R.S., D.C.L.," etc., etc. New York: D. Appleton & Co. 1872.

> kindness was wanted. In my long and intimate knowledge of Lady Holland, I never knew her desert an old friend, whatever his condition might be. Many things, seemingly wilful and incongruous in her, might be explained through this happier quality of mind blended with that love of power which, fostered by various circumstances, pervaded every part of her life. The influence she exercised was doubtless aided by large general reading, of which she made sedulous and skilful use. Her management of conversation at the dinner table—sometimes arbitrary and in rude arrest of others, sometimes courteously inviting the subject—furnished a study in itself. Every guest felt her presence, and generally more or less succumbed to it. She was acute in distinguishing between real and false merit, and merciless in her treatment of the latter. Not a woman of wit in words, she had what might well be called consummate practical wit in all her relations to society. Once only, and that very late in life, she spoke to me of the labor she underwent in maintaining the position thus acquired. The information was not necessary. My own observation had already made me well but silently aware of it.
>
> "My personal relations to Holland House, fostered by much previous intercourse in Italy, were of the most agreeable kind from the beginning, and the lapse of time in no way altered them. Despite Lady Holland's imperious rule in all matters of society, I was a guest almost at my own bidding, and often passed the night at this picturesque old mansion, abounding in so many recollections of men and times. My profession doubtless served in some degree to maintain this intimacy. My politics, never much more than neutral, and rather tending to the other side, had certainly nothing to do with it. The political visitors of Holland House were of course almost exclusively of the Whig party; though it was always matter of rejoicing to Lady Holland when she could catch a stray Tory to mingle with them.* But political party was better leavened by the admixture of literary men and eminent foreigners, who under her invitation found place at this table. Lord Holland himself came to it each day wholly ignorant whom he was to find there; but greeting all alike with his genial smile, and animating all by the charm of his conversation, and by a flow and felicity of anecdote peculiar to himself; the effect heightened by his own enjoyment of it. He sat always at a corner of the dinner-table, to which I doubt whether he ever himself ventured to invite a guest. The writings he has left behind him give no just or adequate idea of Lord Holland's abilities or of his admirable qualities in social life. They present that disparity which is often so strangely marked in faculties seemingly the closest in relation; of which disparity his uncle, Mr. Fox, was himself a remarkable instance. The tongue is often much more eloquent in style than the pen." (Pp. 228–231.)

And, further, in obedience to the precept *audi alteram partem*, and out of consideration for the fact that hero-worship has perhaps done about as much harm to the world as the heroes have done it good, it may be well to quote this about Coleridge, who, beyond doubt, if he had a band of bitter and scurrilous detractors in his own time, had also a band of very fluent and faithful friends whose somewhat partisan laudations of him may probably be none the worse when diluted a little. Sir Henry Holland, who was a man of sense, attainments, and good temper, thus remarks upon the celebrated conversations:

> "These brief notices of some of the patients of fifty years' practice might be largely multiplied if made to include literary and scientific men of the time. Taking poets alone into account, I may speak of my relation both as physician and friend to Walter Scott, Wordsworth, Campbell, Moore, Frere, Matthias, Sotheby, Praed, Luttrell, William Spencer, Joanna Baillie, Lady Dacre, etc. With Byron, Southey, Rogers, Crabbe, and Bowles, I was intimate, but not professionally. I saw Coleridge more rarely, and never took a place among the worshippers at his shrine. I recollect him only as an eloquent but intolerable talker; impatient of the speech and opinions of others; very inconsecutive, and putting forth with a plethora of words misty dogmas in theology and metaphysics, partly of German origin, which he never seemed to me to clear up to his own understanding or to that of others. What has come out posthumously of his philosophy has not removed this imputation upon it. I suspect his 'Table Talk,' as we have it in the very agreeable volume bearing this title, to have been sifted as well as abridged by the excellent judgment of the editor." (Pp. 205–206.)

Here is an interesting anecdote of the christening of the planet Neptune, a ceremony of which Sir Henry was a witness. He casually heard of the discovery of the new-comer, and hastened from Bremen to Berlin that he might get a glimpse of it. But the night was a night of floating clouds, and Neptune was invisible:

> "Frustrated in this main point, it was some compensation to stay and converse with Encke in his own Observatory, one signalized by so many discoveries—the stillness and darkness of the place broken only by the solemn ticking of the astronomical clock, which, as the unfailing interpreter of the celestial times and motions, has a sort of living existence to the astronomer. Among other things discussed while thus sitting together in a sort of tremulous impatience, was the name to be given to the new planet. Encke told me he had thought of Vulcan, but deemed it right to remit the choice to Leverrier, then supposed the sole indicator of the planet and its place in the heavens—adding that he expected Leverrier's answer by the first post. Not an hour had elapsed before a knock at the door of the Observatory announced the letter expected. Encke read it aloud; and, coming to the passage where Leverrier proposed the name of Neptune, exclaimed, '*So lass den Namen Neptun sein.*' It was a midnight scene not easily to be forgotten." (Pp. 298–299.)

We are quoting rather more than it is fair to quote from a volume no larger than this one, but we cannot forbear laying before our readers a picture which it is to be wished Milton could have seen:

> "While speaking on astronomy, I am tempted to notice a spectacle, having a certain association with this science, which I do not remember to have seen recorded either in prose or poetry, though well meriting description in either way. This spectacle requires, however, a combination of circumstances rarely occurring—a perfectly clear Eastern and Western horizon, and an entirely level intervening surface, such as that of the sea or the African desert—the former rendering the illusion, if such it may be called, most complete to the eye. The view I seek to describe embraces the orb of the setting sun, and that of the full moon rising in the East—*both above the horizon at the same time.* The spectator on the sea between, if he can discard from mental vision the vessel on which he stands, and regard only these two great globes of Heaven and the sea-horizon circling unbroken around him, gains a conception through this spectacle, clearer than any other conjunction can give, of those wonderful relations which it is the triumph of astronomy to disclose. All objects are excluded save the sun, the moon, and our own globe between; but these objects are such in themselves that their very simplicity and paucity of number enhance the sense of the sublime." (Pp. 305–306.)

If these "Recollections" are less readable than they might have been, their author is not without an excuse, which, while it does not indeed fully account for their shortcoming in this respect, does partly account for it, and which is highly honorable to his character. It would appear that he has been the physician of most of the distinguished persons with whom he has been on friendly and intimate terms, and that as regards most of his intercourse with them he would find it troublesome to say to how much of it belongs the character of the intercourse of friends and over how much the veil of professional secrecy should be thrown. Rightly he lays down the professional maxim that the relation of the physician to his patient is a sacred relation, and if he has maintained this rule too strictly, his error is, at all events, an error on the right side, and one which, whatever innocent pleasure a larger construction of the rule might have given us, we shall all be easily able to pardon. This certainly is not the time when we should make haste to condemn even an excessive delicacy about telling to the public all a man knows about his friends and their affairs. Sir Henry's scrupulosity even led him to the extreme of not keeping a journal of any of the ordinary events of the day, lest thus there might creep in some danger of a breach of his professional duty, so that it happened, when he came to compile his memoirs for his children, that he found his memory must be his principal reliance. But he thinks it almost a duty to distrust conversations or speeches reported after long lapse of time, and does not like to ask the reader's credence for stories in any way dubious; so, for this and the other reasons above given, and for the additional reason that he considers himself unskilled in anecdote, the storehouse of his memory does much less than it might to enliven his pages with anecdote.

But the mere spectacle of such a life is of itself necessarily interesting. Its length alone would make it remarkable, but it is the life of a man who, at eighty-four, can say that but for the loss, inevitable as time goes on, of many endeared to him by the ties of family and friendship, he can point to no serious misfortune—in the course of fifty years of practice no ill-health sufficient to prevent his attending to the maladies of others; no unretrievable mistakes, such as many men have to recollect; no reverses in business, such as fall to the lot of most; no wearing labors; no disappointed ambition; full and free intercourse with the wise, the good, the distinguished, and the great; entire and lifelong exemption from pecuniary cares; and, he says in conclusion, "what may well rank higher in the scale of earthly blessings, my children have never been other than a source of satisfaction and happiness to me." The book is one that we can most heartily commend.

BOOKS OF THE WEEK.

* "Mr. Gifford's wish was a very reasonable one, that they could 'get up a Holland House on the Tory side of the question.' Lady Holland seldom failed in attaining an object she desired. But this occurred in the case of Lord Dudley, whom she vainly sought to obtain as a guest at Holland House. I rather think there had been some previous quarrel in Italy. But when I once accidentally asked Lord Dudley the reason, I recollect his answer to have been, that 'he did not choose to be tyrannized over while he was eating his dinner.'"

Fine Arts.

FIFTH ANNUAL EXHIBITION OF THE WATER-COLOR SOCIETY.

THE present exhibition of the Water-Color Society is an encouraging one. The institution is evidently wide-awake, and its members have not yet learned the art which certain older societies have learned—how to make an annual exhibition of pictures without pictures. Here are drawings in number sufficient to cover the walls of the North Room, the East Room, and nearly half the wall-room of the Corridor, and many of them are of excellent quality. It would have been as well, we think, to have given up the whole Corridor to the drawings, since, by doing so, all of them could have been so hung as to be perfectly seen. It would not then have been necessary to hang any of them above the second row. Not that we have any great fault to find with the way in which the Hanging Committee has done its work. The drawings are on the whole fairly treated. In only one instance do we think there has been anything done that can reasonably be called injustice, and if it happens, as it unfortunately does, that a most deserving artist is the victim, we are sure that it is the result of accident, and that it is only necessary to point it out to have it corrected. We allude to the way in which Miss Margaret McDonald's two drawings are hung. This lady is so exceptionally excellent a workman, and sends so seldom to the exhibition, and sends so little when she sends at all, that we do not like to have her work put where we cannot give it all the study it deserves and get from it all the pleasure it is capable of giving. In the present exhibition she has but two drawings, and, to begin with, they have been changed about, so that it is not easy to find them. No. 474, "Cereus Speciosissimus," which should hang in the Corridor, is in the East Room, and No. 382, "Wild Flowers," which ought to be in the East Room, is in the Corridor. No. 474 is so brilliant in color and so strongly painted that it is perhaps well enough where it is, but the "Wild Flowers," a small drawing, a pretty subject, and as well painted as anything in the exhibition, is hung out of all reason high, and cannot be seen, much less judged, at all. So with the two drawings by Mr. Henry Farrer, a most earnest, painstaking young artist, which are hung on either side of the smaller of Miss McDonald's. One is a drawing of a peach, the other of a branch of plums, and this is all that can be made out. If they were to be hung at all, plain common-sense would have dictated that they should have been put where their delicacy and careful workmanship could be fairly seen and studied. It is not Mr. Farrer, we presume, who has given the slightly satirical name in the Catalogue to his No. 470, and yet we can hardly think the discourtesy belongs at the door of the types. Such jests, however they may serve to relieve the hard work of a Hanging Committee, ought not to be allowed to go further. It is a poor impertinence to fix them in a catalogue.

In the North Room, beginning near the entrance from the Corridor, we find a drawing by Mrs. Carson, No. 197, "Kalmias." There is a good deal of this lady's work in the exhibition, and as, in spite of its entirely unartistic quality, it is not without a certain merit of intention, we think it worth noticing. There is an evident attempt at faithfulness to nature, and an effort to look at her with the artist's own eyes, and these characteristics are something. But, then, this faithfulness is only carried to a certain arbitrary point of completeness. Thus, in No. 197 we have a twig of Kalmia with the flowers and leaves painted, weakly, perhaps, but with considerable care and accuracy; there can be no doubt as to what plant the lady means to show us, nor as to the species either. But here she stops. The twig is lying on some moss-covered rocks which edge a pool of water, but the moss and the little vine that runs through it are not like real moss and a real vine, but rather like what might be dressed out in a window of a seller of artificial flowers to allure those town-ladies who think they love nature. The rocks, too, are not in the least like real rock, nor the water like real water. The artist would see for herself how artificial her drawing is if, for one entire season, she would study out of doors, and strive to copy as literally as possible something that she should see, and if, at the end of her task, which could not fail to be a pleasant one, she would compare the result with the work of to-day. Even in this work, unsatisfactory as we must pronounce it, there is something that indicates the power to be more natural and interesting. But if, for whatever reason, it should not be possible for her to go directly to nature, she can study her at second-hand in the work of Miss L. A. Poë, one of whose drawings, No. 274, "Raspberries," hangs directly over one of her own, No. 298, "Pyrola." This beautiful piece of work is a specimen of the results that may be expected from a faithful study of nature. Another example of Miss Poë's skill is close at hand, No. 281, "Fruit Piece," and certainly very little work of such excellence both in drawing and color has been done thus far in America. Like all good work, it is without pretension, and announces itself in the quietest of tones. It is evident that the artist has a native refinement which gives her the power to feel the beauty of lines and colors, but this has been strengthened in her by close observation and steady training of eye and hand. The elder Hunt himself, we almost dare to say, never drew nor painted better chestnuts than those in the corner of No. 281. We may remark by the way that those who would like to see more of this lady's work may find it, where we first saw it, at Mr. Schaus's print-shop. He has, or had, several specimens quite as good as either of those which Miss Poë has sent to the exhibition, and also some drawings by two ladies who do not figure at all in the catalogue, Miss Victoria Ely and Miss De Golier, most delicate and skilful workers both, whose drawings would have been welcome in the present exhibition. We do not ourselves care much to see fruits and flowers treated as subjects for drawings or pictures to be framed and hung upon walls. The proper field for such work is the illuminating of books or the decorating of panels in furniture, and it were much to be wished that there were liking enough for such things with our people to make it worth while for Miss Poë, or Miss McDonald, or Miss Fidelia Bridges, or Miss Eddy, or Miss Bigelow, or the other ladies we have mentioned, to devote their charming talent to such work. There used to be opportunity given for such decoration in old times. We have seen old harpsichords in this country which had the panels over the key-board painted very beautifully with flowers, and many of our readers have seen harpsichords in Europe where not only these portions of the instrument, but the whole inside of the cover, is painted in an elaborate manner. As a rule, there is no uglier piece of furniture in our houses than the piano-forte. Every woman of taste wishes that she could be rid of the cumbersome monster, a sort of musical elephant; but if we could set either of these delicate-handed ladies at work at it, we could make a piano of pine wood that should be as pretty to look at when it is silent as delightful to listen to when it is being played upon. Then there is porcelain-painting, too; why will not some of these ladies try their hand at that? We must have such work attempted here some day, but it must come from individual effort, we think, in the beginning. If we wait for the manufacturers, we shall wait long, but any one who will try his or her hand at it will find it profitable.

Mrs. Chaney's work, "Chinese Asters," No. 291, "Pansies and Heliotropes," No. 294, "Wild Flowers," No. 442, is work done by a lady older in practice than those whose drawings we have noticed, but very inferior in all artistic points. This is the pure conventional work, of which we used to have so many examples furnished us by the decorators of prune-boxes and handkerchief-boxes before the makers of those articles began to substitute for these inoffensive suggestions of natural beauty flaunting portraits of brazen women. We are far from meaning to ridicule Mrs. Chaney's work by saying that this is the proper field for it. It is merely decorative, but decorative in a way that must get more out of fashion as people get fonder of nature. To be sure, if a Japanese has even a prune-box or a handkerchief-box to decorate, he is sure to give us something directly from nature, and with the stamp of its authority unmistakably imprinted on it. Mrs. Chaney's work has no such charm. Her flowers are only so near to nature in form as they might be drawn by any one who, in populous city pent, could get no nearer to her than she is brought by French *études* at so much a sheet. In color, they are quite wide of the truth—so dull and dingy that we must be glad the lady had not the making of the real flowers. But, then, we know very well that the "schools" teach her to subdue her tones and to hold brightness in horror. What the "schools" teach has a capital illustration in the East Room, where a drawing by Mr. D. Fowler hangs on the same wall with one by Miss McDonald. Mr. Fowler's "Cactus," No. 381, shows a wholesome fear of making the rash gazer wipe his eye, and has substituted an amiable brick-red for the triumphant scarlet of the flower as nature gives it to us. Miss McDonald, however, loving the scarlet, and desiring to communicate her pleasure, has given it back to us with the fearless force of nature itself. The best advice to be given to a young art-student is that which Mr. Whistler kindly furnished to a beginner: "Don't pay any attention to what the teachers say."

Other good work, on subjects such as we have considered in this article, is shown us by Mr. Charles H. Moore—"Dog-tooth Violet," No. 455. This is Mr. Moore's only contribution, and it is a pity that he could not have sent us more. We are glad, however, to get, in this anticipatory manner, a glimpse of the pretty flower, the nodding harbinger of the spring, that in a few weeks will be found thick-set in every plashy bit of brookside. "Geraniums," No. 143, by Lucy T. Bigelow, is strongly painted—the lady has a good eye for color; and Miss Gabriella F. Eddy's "Mayflower," No. 390, is an excellent study. So, too, are her "Nasturtiums," No. 443. Miss Fidelia Bridges has a drawing of "Daisies and Clover," No. 342, which, though a little unsubstantial, has nature in it, and evidence that her heart as well as her fingers was enlisted in the service of these plain dwellers in the meadow.

TAINE'S ENGLISH LITERATURE. 2 vols., $10.

LEGENDS OF THE PATRIARCHS AND PROPHETS current at the East, collected by Baring-Gould. Crown 8vo. $2.

A rich store of curious legends. One tells how, when the sons of Jacob came to seek bread of Joseph, and Benjamin was taken for the cup, Reuben became so enraged that the hair in his skin stood up like bristles and penetrated five inches through his clothes. Only a scion of Jacob could allay his wrath, and Joseph told Ephraim to touch him unawares, when all his power left him. Then Judah, who could roar so terribly as to be heard 500 miles off, and whose roar killed all whom it reached, threatened to lift up his voice and kill all in the land of Egypt. But Joseph, who could roar louder than he, shattered a pillar in the audience hall with his voice, and Judah subsided. Judah, we learn further, wore five suits of clothes, one above another, and when he got angry his heart swelled so as to burst them all. This is a fair example of the quaint matter of the book. Mr. Baring-Gould has put it in marvellously entertaining shape."—Trade Circular.

THE MYSTERY OF ORCIVAL.

A novel from the French of Emil Gaborian, by Geo. M. Towle. 8vo, paper, 75 cents.

TAINE'S NOTES ON ENGLAND (In March).

HOLT & WILLIAMS, 25 Bond Street, N. Y.

AN IMPORTANT NEW WORK.

A HISTORY

OF THE

GOTHIC REVIVAL:

An Attempt to show how far the taste for Mediæval Architecture was retained in England during the last Two Centuries, and has been redeveloped in the Present.

BY CHARLES LOCKE EASTLAKE,

F.R.I B.A., Architect;

Author of "Hints on Household Taste." Pp. 444, with forty-eight illustrations engraved on wood (thirty-six the full size of the page).

Imperial 8vo, cloth extra, gilt top, price $13 50.

CRITICAL NOTICES.

"The author pursues the narrative of its development in more recent times in a series of felicitous sketches, dwelling especially on the influence of Horace Walpole on the Georgian Era, with an account of Beckford and Fonthill Abbey on Sir Walter Scott, Sir Charles Barry, Mr. Ruskin, and other living cultivators of the mediæval style. In his criticisms, both of the principles of architecture and of prominent artists, builders, and writers, he displays a free and fearless pen, while his original suggestions bear the impress of modesty and intelligence, creating a strong prepossession in his favor. The work is crowded with illustrations of an instructive and valuable character, and is brought out in a style of remarkable typographical beauty."—N. Y. Tribune.

"M. Charles L. Eastlake here attempts successfully 'to show how the taste for mediæval architecture which lingered in England during the two last centuries has since been encouraged and developed.' Thus it will be seen that he deals with chapters in the history of art not only instructive as relating to the past, but also of immediate practical value in the present."—Boston Transcript.

"Mr. Eastlake's 'History of the Gothic Revival' ought to be interesting to architects in this country, where the later mediæval Gothic very largely prevails in public buildings and churches."—Phila. Press.

The above-named volume sent to any address, free of charge, on receipt of the price by the publishers,

SCRIBNER, WELFORD & ARMSTRONG

(Successors to Scribner, Welford & Co.),

654 BROADWAY, NEW YORK.

TWO German Ladies, residing in the City of Hanover, Germany, are prepared to receive a few young ladies as private boarders who wish a pleasant home while finishing their education in the excellent schools of that city. For particulars, apply to "I. D.," P. O. Box 2126, Philadelphia.

VALUABLE NEW BOOKS,

PUBLISHED BY

HARPER & BROTHERS,

NEW YORK.

THE LAND OF DESOLATION: Being a Personal Narrative of Observation and Adventure in Greenland. By Isaac I. Hayes, M.D., author of "The Open Polar Sea," etc. With Illustrations. 12mo, cloth, $1 75.

SHAKESPEARE'S HISTORY OF KING Henry the Eighth. Edited, with Notes, by Wm. J. Rolfe, A.M., formerly Head Master of the High School, Cambridge, Mass. With illustrations. Uniform with "The Merchant of Venice" and "The Tempest." 16mo, cloth, 90 cents.

TYERMAN'S WESLEY. The Life and Times of the Rev. John Wesley, M.A., Founder of the Methodists. By the Rev. Luke Tyerman, author of "The Life of Rev. Samuel Wesley." Portraits. 3 vols. crown 8vo, cloth, $2 50 per vol. Vol. I. just ready.

SMILES'S CHARACTER. Character. By Samuel Smiles, author of "Self-Help," "History of the Huguenots," "Life of the Stephensons," etc. 12mo, cloth, $1 50. (Uniform with "Self-Help.")

☞ HARPER'S CATALOGUE mailed free on receipt of Six cents in postage stamps.

D. APPLETON & CO.,

549 AND 551 BROADWAY, N. Y.,

Publish this day:

I.

A NEW ILLUSTRATED EDITION OF

COOPER'S NOVELS.

Commencing with

THE LAST OF THE MOHICANS.

By J. Fenimore Cooper. With new Illustrations by F. O. C. Darley. 1 vol. 8vo, paper covers, price75 cts.

Heretofore there has been no edition of this acknowledged head of American romancists suitable for general popular circulation, and hence the new issue of these famous novels will be welcomed by the generation of readers that have sprung up since Cooper departed from us. As time progresses, the character, genius, and value of the Cooper romances become more widely recognized; he is now accepted as the great classic of our American literature, and his books as the prose epics of our early history.

II.

QUEEN MAB.

By Julia Kavanagh. 1 vol. 12mo, price $1 25. Forming the third volume of the new edition of Julia Kavanagh's Novels. Volumes already published: "Nathalie," "Daisy Burns." Price, $1 25 each.

"There is a quiet power in the writing of this gifted author which is as far removed from the sensational school as any of the modern novels can be."

III.

APPLETONS' JOURNAL.

THE FEBRUARY MONTHLY PART. Price, 40 cents.

"The full merit of Appletons' Journal can only properly be recognized in the monthly parts. The admirable illustrations, the high literary tone, the never-failing variety of the work, are more effectively displayed when the issues of the month are bound up together, and the result is surprising even to the regular subscriber."—New York Evening Post.

D. A. & CO. HAVE JUST PUBLISHED:

RECOLLECTIONS OF PAST LIFE. By Sir Henry Holland, Bart. 1 vol. 12mo, 350 pages. Cloth. Price, $2.

LEADERS OF PUBLIC OPINION IN IRELAND: Swift, Flood, Grattan, O'Connell. By Wm. E. H. Lecky, M.A. 1 vol. 12mo, 320 pages. Cloth. Price, $1 75.

LITTLE DORRIT. Being the tenth issue of the "Handy Volume" edition of Dickens. Price, 75 cents.

THE HOUSEHOLD EDITION OF CHARLES DICKENS'S WORKS. First volume now ready. Price, paper covers, 50 cents; cloth, $1.

CHRISTIAN THEOLOGY AND MODERN SCEPTICISM. By the Duke of Somerset, K.G. 1 vol. 12mo. Cloth. Price, $1

DAISY BURNS. By Julia Kavanagh. Cloth. Price, $1 25. Forming the second volume of the new edition of Julia Kavanagh's Novels.

THE SENSES AND THE INTELLECT. By Alexander Bain, M.A. 1 vol. 8vo, 696 pages. Price, $5.

TWO PLUNGES FOR A PEARL. A Novel. By Mortimer Collins. 1 vol. 8vo, paper covers. Illustrated. Price, 75 cents.

THE KEDGE ANCHOR; or, Young Sailor's Assistant, appertaining to the Principal Evolutions of Modern Seamanship. By William N. Brady, Sailing Master U. S. N. Eighteenth edition. 1 vol. 8vo. Cloth. Price, $3 50.

VOLTAIRE. By John Morley. 1 vol. 8vo, 346 pages. Price, $3 50.

MOHAMMED ALI AND HIS HOUSE. An Historical Romance. By Louisa Mühlbach. With Illustrations by Alfred Fredericks. 1 vol. 8vo. Paper covers. Price, $1; cloth, $1 50.

Either of the above sent free by mail, on receipt of the price.

NEW BOOKS.

YESTERDAYS WITH AUTHORS.

By JAMES T. FIELDS. Comprising Reminiscences and Letters of Thackeray, Dickens, Hawthorne, Miss Mitford, and others. 1 vol. 12mo, $2 50.

This volume contains the series of papers published in "Our Whispering Gallery" in the "Atlantic Monthly," with many additions, including numerous letters not before printed. For literary and biographical interest, the volume is unique in American literature.

MOUNTAINEERING IN THE SIERRA NEVADA.

By CLARENCE KING, United States Geologist. 1 vol. large 12mo, $2 50.

Some of the chapters of this book have appeared in the "Atlantic Monthly," attracting marked attention by the deeply interesting scientific facts they described, the unworn freshness of the regions traversed, and the fluent vigor of narration. The volume contains many new chapters, and forms a most important and delightful addition to the literature of science and travel.

KATE BEAUMONT.

A Novel of Southern Society. By J. W. DE FOREST. 1 vol. 8vo. With Illustrations. Paper, 75 cents; cloth, $1 25.

This is the fifth volume in "Osgood's Library of Novels." It is a strong and faithful picture of Southern life, and goes far to justify those critics who call Mr. De Forest "the prince of American story-tellers."

BITS OF TRAVEL.

By H. H. 1 vol. 16mo, $1 50.

"A German Landlady," "The Valley of Gastein," and other Sketches of Travel in Europe by H. H., have won remarkable popularity by their freshness, picturesqueness, sympathy, and humor. The present book, comprising these and additional travel-pictures of like character, is one of the most attractive volumes in its department of letters.

For sale by all Booksellers. Sent, post-paid, on receipt of price by the Publishers,

JAMES R. OSGOOD & CO.,
BOSTON.

ECLECTIC MAGAZINE
OF
FOREIGN LITERATURE, SCIENCE, AND ART.

The March number of the ECLECTIC is just out, and is embellished with an excellent portrait, on steel, of Herbert Spencer, the celebrated English philosopher. In this number is begun "The Strange Adventures of a Phaeton," which will run through the year, and which promises to be one of the most brilliant and powerful stories recently published. It is by William Black, whose previous novels have earned for him an enviable reputation in America as well as England.

The leading article is a fine essay on "Mahomet," giving the results of the latest researches into his history, and written in a more popular and intelligible style than has usually been employed on this theme; next comes "The Early Life of Charles Dickens"; and among the other articles are "Strange News about the Solar Prominences"; "National Debts and National Prosperity"; "The Talking Animal," a very curious essay; "Quaint Customs in Kwei-Chow"; "George MacDonald"; "Spain: Her Manners and Amusements"; "The Haunted Enghenio"; and "Matrimonial Curiosities." The departments of Literary Notices, Science, Art, and Varieties are very full and interesting; and there is a fine poem by Dante Gabriel Rossetti.

Published by E. R. PELTON, 108 Fulton Street, New York. Terms, $5 a year; two copies, $9. Single numbers, 45 cents.

TWO NEW EDITIONS
OF
THACKERAY'S WORKS.

Profusely Illustrated with Steel Plates and Woodcuts.

I.

THE CROWN EDITION.

To be completed in 11 vols. crown octavo. Bound in extra cloth, $3 25 per vol.

II.

THE CABINET EDITION.

To be completed in 22 vols. crown octavo. Bound in extra cloth, $2 per vol.

Now ready, both editions of

VANITY FAIR,
PENDENNIS,
THE NEWCOMES,
THE VIRGINIANS.

Other works in active preparation.

"J. B. Lippincott & Co. are publishing the finest edition of Thackeray's works which has yet appeared in this country. With creamy, tinted paper of solid material, fair, clear type, generous margin, and, to cap all, with illustrations scattered profusely through the book from Thackeray's own hand—what more could be desired by the thousands who admire Thackeray as the prince of novelists?"—Boston Watchman and Reflector.

For sale by all Booksellers, or will be sent by mail, postage free, on receipt of price by the Publishers.

Published by J. B. LIPPINCOTT & CO.,
715 and 717 Market Street, Philadelphia.

STILL SELLING FIVE HUNDRED COPIES A DAY.

Everybody is reading that most popular Novel,

MY WIFE AND I:
OR,
HARRY HENDERSON'S HISTORY.
AN AMERICAN TALE FOR THE TIMES.
BY HARRIET BEECHER STOWE.

"It is one of her very best."—Scribner's Monthly.

"This, her latest work, is incomparably her best. It is a novel, and a very interesting one. It is full of thought, and purpose, and feeling."—Buffalo (N. Y.) Commercial Advertiser.

478 pages 12mo, Illustrated.
Extra Cloth, Stamped Cover. Price, $1 75.

J. B. FORD & CO., Publishers,
27 Park Place, New York.

JUST PUBLISHED.

12mo, cloth, red edges, pp. 288, price $1 50.

PASTOR IN-PAROCHIA. By the Rev. W. Walsham How, M.A., Author of "Plain Words," etc. Adapted to the use of the Book of Common Prayer of the Episcopal Church in the United States.

"A very useful guide in Pastoral Visitation. The present book, the editor modestly declares, is scarcely more than the arrangement and publication of materials collected, and to a large extent constantly used, by him during many years; and he trusts that what has been of practical use to himself may be the same to others, especially to the younger of his brethren. The contents are varied and numerous, and the Appendix especially useful. Like everything that proceeds from Mr. How, this book is of great value, and will be found an excellent companion to the clergyman in his arduous duties."—Church Opinion.

POTT, YOUNG & CO.,
Cooper Union, New York.

SHORTLY WILL BE PUBLISHED.

A DICTIONARY OF ENGLISH ETYMOLOGY. By Hensleigh Wedgwood. Second Edition, thoroughly revised and corrected by the Author, and extended to the Classical Roots of the Language. One handsomely printed volume medium 8vo, cloth, about 800 pages, double column.

MACMILLAN & CO.,
38 Bleecker Street, New York.

POPULAR AND STANDARD BOOKS,
PUBLISHED BY
SCRIBNER, ARMSTRONG & CO.
(Successors to CHARLES SCRIBNER & CO.),
No. 654 BROADWAY, NEW YORK,
IN 1871.

BIBLE (SPEAKER'S) COMMENTARY. The Pentateuch. 1 vol. roy. 8vo, $5.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 29, 1872.

The Week.

IN Congress, the discussion on the French arms sale has dragged its slow length along in the Senate, Mr. Schurz making the only speech in it worthy of attention, but his speech was really an admirable piece of debating, the ablest that has been listened to in either House for many a year. His retorts were exceedingly pointed, and his occasional turning of his adversaries' own guns on them was in the best style of the art. It was listened to as speeches are rarely listened to nowadays, and, as far as Messrs. Morton and Conkling were concerned, was overwhelming. Turning to the organ of the Administration, the *Times*, to see what it thought of it, we find that it pronounces Schurz an "unscrupulous demagogue," a "heartless demagogue," an "unscrupulous adventurer," "an office jobber," a "political charlatan," and "a dog"; also, that he is "subtle, cunning, and dangerous"; wholly un-American in spirit, "and a born destructionist"; and that "somebody ought to tie his leg to his chair when gentlemen are speaking." We commend these excesses of the organ to the careful attention of the President. They concern him more than any other man in the community.

Mr. Trumbull also took part in the debate, defending himself and his friends against the charge of converting these investigations into political attacks on the Administration, and he improved the occasion by taking up the platform of the Liberal Republicans, and, going over it clause by clause, gave in his adhesion to it as sound Republican doctrine. His doing so is not by any means the least significant sign of the times. The way in which the Administration Senators met these onslaughts was first by moving for an enquiry, aimed at Messrs. Schurz and Sumner, whether any Senator had been guilty of unlawful communication with any officer or agent of a foreign government, the penalty under an old law being fine and imprisonment. This gave Mr. Schurz the materials for one of the happiest strokes in his speech, when he asked the friends of the Administration whether things had really come to such a pass with them that they had to threaten anybody with a dungeon who proposed investigation into the conduct of Government officials. They next sought to throw odium on Mr. Trumbull by moving for a return of the number of recommendations to office made by the Senators from New York, Illinois, Missouri, and Nebraska, their theory being that Mr. Trumbull has made so many as to disqualify himself for the position of an advocate of civil-service reform.

The debate in the Senate is rapidly degenerating into a personal wrangle. The House, on the other hand, has been preserving a remarkable silence, whether owing to wisdom or interest in the struggle in the Senate it would be hard to say. The silence of some members at this juncture—Banks, for instance, and Butler—has something uncanny about it. There has, however, been some business done in a prompt and orderly way, such as ordering an investigation into the French arms affair, without debate; and there has been some wild voting on the tariff. A motion of Mr. Cox's to lower the tariff on pig-iron to $5 a tun was defeated by a coalition of the iron and tobacco men; but this skirmishing over the duties means nothing.

Colonel Forney, who has gone on to Washington "to restore harmony," has contributed to the Washington *Chronicle* a curious and interesting account of the circumstances which led to General Grant's first acceptance of the nomination for the Presidency. From this it would appear that General Grant, as indeed everybody knew, did not seek or even desire it, but that it was in a measure forced on him by the Republicans, to whom at the time he was a necessity. He raised the not unnatural objection that, if he accepted the nomination, he would have to sacrifice his military position, which was a life office with a good salary, and said, or caused to be said, that he could not afford to do this for less than two Presidential terms. In fact, to use Colonel Forney's words, "General Grant not only desired to remain President for two terms, but it was only on the assurance of his friends that he should be re-elected that he accepted the office at all." But now comes the remorseless *Tribune*, and shows that this same Colonel Forney, in this same *Chronicle*, both immediately before and immediately after Grant's nomination, advocated stoutly, energetically, and even beseechingly, the passage, before Congress adjourned, "of a One-Term amendment to the Constitution," and among the arguments he used in its favor was this: "General Grant is in favor of it, the party which supports General Grant demands it, and, above all else, public morality calls for it." "Public morality"! O Colonel, Colonel! Is it not true, you naughty man, that you knew perfectly well there was no chance of any such amendment being passed at the end of a session and on the eve of an election, and that you therefore clamored for what you were well aware you could not get?

The plea of an agreement between General Grant and the politicians that he should have two terms, if founded on facts, and if General Grant did not authorize or connive at Colonel Forney's use of his name as an advocate of the "One-Term Principle," will doubtless do something towards exciting personal sympathy for him. He did sacrifice the most attractive position in the public service for the purpose of obliging the party, but, if he sacrificed it under any such agreement as Colonel Forney describes, he became the victim of political "confidence men." The American people will hardly countenance arrangements by which the Forneys and Camerons pledge the popular vote four years in advance, no matter to whom.

The Collector at this port has at last been directed by orders from the President to reorganize the general-order business; "and in doing so to set aside political and personal interests;" and "the work is to be so arranged and conducted as to give the largest facilities to merchants with the least possible cost." The Collector has submitted a plan for this purpose which has been approved. This is what reformers have been laboring for, and laboring in vain, for the last three years. Had these instructions to General Arthur, which we presume involve the immediate disappearance of Leet & Stocking, been given even one year ago, not to a jobbing politician like Murphy, but to a respectable merchant, General Grant would be in a very different position from that in which he stands to-day. He refused to listen to those who told him that the way to be renominated was to give us good government, and did listen to the "Toms," who told him the way to get renomination was to set a smart man at work "controlling primaries." He now sees his error, and it is to his credit that he acknowledges it; but it would have been more to his credit if he had seen it without "the Schurz-Fenton Trick," two Congressional investigations, and three mortal years of Leet, and an uprising in this city against corruption. He has also appointed a respectable merchant, and not a politician, to the Philadelphia Collectorship, vice Forney, who is "crying halt" and "restoring harmony." This appointment ought also to have been made a year ago, but better late than never.

The *Evening Post* propounds the view that the public gains by the quarrels of the Fentonites and Conklingites through the *Times* and *Tribune* respectively, as each of these papers exposes the rascalities of its opponents, so that gradually the honest people are coming by their own. This is, we think, very true; but it is to be observed that the *Times* is three rascals in arrears, the *Tribune* having exposed Murphy, Terwilliger, Wood, and Cushman, while the *Times* has not yet got beyond "Hank" Smith. In fact, it meets the attacks on its friends mainly by the enquiry, "Why does not the *Tribune* attack Hank Smith?"—an important question, perhaps, but not very pertinent. Hank's case, it must be admitted, is peculiar. He is a Fentonite chief, or, as the *Times* would call him, a "Tammany Republican," and indeed belongs, like Murphy and others, to that large class of Republican politicians in this city whose notion of "politics" consists in "controlling primaries" and dividing "the plums," and who exchange winks with Tweed and his kind when they meet in public, and broad grins when they meet in private, after the manner of the Roman augurs. Hank was president of a savings-bank, which failed disgracefully, like several others, on the downfall of the Ring; and the committee which investigated its affairs reported that, besides general mismanagement, it discovered large loans to persons whom it was unable to find and feared were fictitious. One would suppose that, during this crisis in the affairs of the institution, Hank would be found at his post day and night, the sweat of anxiety and mortification on his manly brow, trying to clear his name and save as much as possible out of the wreck for the poor men and women who had trusted him. Nothing of the kind. He has been ever since the failure up at Albany lobbying, and, in spite of an admonition from the *Tribune* and daily attacks from the *Times*, refuses, or had refused when we last heard of him, to come down.

Both the *Tribune* and the *Times* enlighten their readers nowadays by giving them a column or so of passages taken from newspapers in various parts of the country, and headed "The Drift of Public Opinion," or "Public Opinion." We observe that both of these drifts are of the nature of a violent current—a mill-race, say—and that each sets in a direction exactly opposite to that of the other, for which as for other things there is a reason, no doubt. Thus the drift of public opinion, as indicated by the *Daily Saratogian*, quoted in the *Times*, is to the effect that "a new deal in the offices is all that the *Tribune* wants. If only all the present old incumbents were ejected and the nice fellows whom the *Tribune* knows put in, it would be all butter and molasses with the *Tribune*. That's what the matter is." To encourage the *Tribune* to keep up the fight with the *Times*, which the *Evening Post* approves, we will inform the *Tribune* that we have looked up the *Daily Saratogian* in the list of papers whose conductors support the Administration and hold Federal offices, and we find it stated that it is at present "butter and molasses" with the *Saratogian* to the extent of a postmastership with a salary set at $3,000 a year. It is stated that there are between seventy-five and a hundred other journals in this State alone in which "the drift of public opinion" would very probably be in the direction of the drift in the *Saratogian*, and we wish the *Tribune* would give us a full list.

The Ohio gentlemen who are dissatisfied with the present condition of the Republican party, and with the views and policy of its assumed leaders, have been interviewed, and have been very free in expressing their opinions—so free that one easily sees them to be Republicans of a type different from that illustrated by General Cochrane, who "would vote for the devil if he was the regular candidate." Ex-Secretary Cox, and Judges Stanley, Matthews, Hoadly, and Stallo are evidently capable of "drawing the line somewhere." Mr. Cox said that he wanted reforms, that he wanted them brought about within the Republican organization, and that he hoped to see them so brought about, but that this hope failing, he and his friends would "look to a new organization for the purpose of securing them." Being asked where he would get this organization, he replied that, in his judgment, "those who believe in the principles pronounced at the Missouri Convention should have a mutual understanding, and some formal co-operation." He wishes the next campaign to turn upon questions of administrative reform or finance, and old political cries to be discarded, while, at the same time, assurance shall be given that "all the proper results of the war" shall be sustained and adhered to. Judge Matthews said that his hope was to influence the Republican party to adopt the Missouri platform. We do not know, but we conjecture that Judge Matthews would demand of the Republicans not only the Missouri platform, but a candidate upon it who has not had three or four years in which to show that practically its principles are not his, and that he would not give his support to General Grant. Should the Republican party hold out no promise of reform, Judge Matthews hopes that the Democracy will see the necessity of giving up its organization so far as to join with those Republicans who think "the present course of the party ruinous," in nominating such candidates as Charles Francis Adams or William Groesbeck; or Mr. Trumbull or Mr. Chase, as Presidential candidates, would please him. Judge Hoadley said he disliked the present tariff, the present national banking system, and the condition of the civil service, and believed the people were ready to destroy them all, and that the time had come for an appeal to honest Democrats and honest Republicans. Judge Stallo said that, when he signed the call for the Cincinnati Convention, he did so with the understanding that, when it meets, the so-called Liberal Republicans shall divest themselves of any distinctively Republican character, and invite all men to stand by the platform of the Missouri Republicans.

These views of the Cincinnati gentlemen call, it will be perceived, for the careful consideration of several important questions—important some of them to Republican managers, some of them to Democratic managers, and some to the people as distinguished from the politicians. Will it, on the whole, be safe to leave the negro and reconstruction to themselves, and may the country, after 1874, fairly consider itself discharged from further attention to them? Are there some results of the war not "proper," to use Mr. Cox's word, and which the people may fairly wish wiped out? Are the Democrats to be trusted at all? Are there sufficient dissatisfied Republicans to give the next election, Presidential as well as Congressional, to the Democracy? Are they sufficiently dissatisfied to give it to the Democracy, no matter what the Democratic platform or who the Democratic candidate? Do the Democratic leaders count on a victory in any event, and without the need of going in the least outside of their own ranks, which, be it recollected, are not so much less numerous than the Republicans? What will be the feeling of the Protectionists as to the proposed new party? What that of the Free-traders? Here be questions, indeed; and how great is the general unreadiness to answer them may be seen in the general interest and the conflicting, doubtful feelings with which news from New Hampshire is awaited. There will then, perhaps, be something definite for somebody. But if the Democrats win, what will be its effect on them, and what the effect on the Republicans and their leaders? Meanwhile, the fight in that State is very hard and, we judge, very doubtful. "The news from New Hampshire is excellent," says our Administration paper, "and next week several more speakers will be sent into the State," so one does not know how excellent it is, and cannot tell till after the twelfth of March.

There has been a "Labor Convention" at Columbus, Ohio, which, owing to the rational and practical character of the nominations it has made for the Presidency and Vice-Presidency, is attracting more attention than such conventions usually do. It has nominated Judge Davis of the Supreme Court, and Governor Joel Parker, of New Jersey. The platform contains, however, the usual amount of queer finance and other queer things. It calls for the issue of legal-tender Government paper directly to the people without the intervention of banks, and convertible into Government bonds at $3 75 per cent. interest (the Convention overlooks the fact that the people have such a currency now, only it is convertible into five per cent. bonds);

for the payment of the national debt, "according to the original contract"; denounces the exemption of Government bonds from taxation; demands the free gift of the public lands to landless settlers; asks for such modification of the tariff as "will exempt articles of common use, which we can neither produce nor grow," and tax "luxuries and such articles of manufacture as, we having the raw material in abundance, will assist in further developing the resources of the country," whatever that may mean; denounces "Chinese cheap labor"; calls for an imperative eight-hour law; denounces great corporations; calls for civil-service reform; commends "the one-term principle" and general amnesty.

The important resolutions out of the eighteen composing the platform of the Indiana Republicans approve of the Ku-klux Act; express gratitude to the soldiers and sailors and willingness to pay their pensions, and give "a dig" to the Democratic party; approve of the foreign policy of the Government; approve of economy and of reduction of taxation, and again declare willingness to pay the pensions; call for "incidental protection" for Indiana coal and iron; approve of the financial policy of the Government; call for the abolition of useless offices and perquisites, and a reduction of salaries; oppose donations of public lands to railroads; demand protection for immigrants against the capitation taxes of seaboard States; approve of the "exposures" of corrupt officials, and denounce corruption generally; approve of free schools; approve of the efforts of workingmen to "vindicate their independence of class subordination"—whatever that may be—and declare that the Republican party is the only party that will help them; instruct the delegates to the National Convention to vote for Grant and Colfax. The resolutions are as pure specimens of the political dialect as we have seen for some time. We have given the meaning of them, as nearly as it can be got at by the average mind.

We have apparently entered on the second stage of the *Alabama* affair, in which each side is seeking some decent mode of escape from what everybody acknowledges to be a rather discreditable scrape. Our Government has certainly taken up the subject in much better temper and in a better spirit than the British Government. Two suggestions are reported "on good authority" as having been considered by the Cabinet at Washington as offering a way out of the difficulty. One is that the United States should "explain" that no award of money is expected under the "indirect damages claim," but it is thought desirable to submit it and get judgment on it, so as to put an end for ever and effectively to all controversy on the subject. The objections to this are, first, the one offered by Judge Nott in our last issue, that legally it is not necessary; and second, that an award made by arbitrators on the express understanding that no other would be submitted to by the parties, could not have any moral weight. It would not be regarded by the popular judgment as constituting a final and satisfactory settlement. Nothing can ever be a final and satisfactory settlement which is in ever so slight a degree a sham, and this settlement would be a complete sham, and would make the principle of arbitration ridiculous.

The other suggestion is that the question of the proper interpretation of the Treaty—that is, the question what points the British are, by the wording of the Treaty, bound to submit to the arbitrators—should be also submitted to the arbitrators. This is on its face sensible and attractive, but it does not dispose of all the difficulty. The Treaty is unquestionably ambiguous, and it is acknowledged on all hands that on a strict construction of it the United States has a very strong case. Nay, the best lawyers in England, Lord Cairns included, admit that it does not shut out consequential claims. Now, if the question of interpretation were submitted and decided in favor of the United States, and under this judgment the American claims were let in as they stand, and a decision were given against Great Britain on the consequential damages, would she submit? Everybody knows she would not. To go through the forms of arbitration with this knowledge in everybody's mind would, therefore, not relieve the proceedings of their sham character, although it might lead to a "settlement." In fact, we make bold to assert that all the diplomatists and lawyers in both countries are not competent to get the "consequential damages" claim *really* and *truly* before the Board by any amount of writing or speaking. All ingenuity and dexterity are wasted on this subject as long as it is certain that they would not be paid if awarded. The problem before us, if we want to prevent arbitration degenerating into a ghastly farce, is not how to get this or that claim before the Board, but to get the parties to abide by the decisions of the Board on such claims as are submitted to it.

Another difficulty in the way of this suggestion is that the British negotiators, to add to their other misfortunes, expressly refused to abrogate the Treaty of June 15, 1846, relating to the San Juan boundary, when requested to do so by the American Commissioners on the ground that the treaty might have been made under a mutual misunderstanding, and would not have been made had they understood at that time the construction which the other party put on the language whose interpretation was then in dispute. The British Commissioners declined the proposal, because they were firmly satisfied of the justice of their own view, but offered to submit the question to impartial arbitration. This has for them an unpleasant bearing on the present difficulty. The dispute going on as to whether Mr. Gladstone has or has not been ingenuous in his account of the date at which he became acquainted with the contents of the American case—whether a fortnight sooner or a fortnight later—is a curious illustration of the inadequacy of the conception which many people have of the magnitude of the controversy. Suppose it proved beyond question that Gladstone and all his colleagues were abandoned liars, how much nearer should we be to a satisfactory issue?

The French Assembly has been recently occupied with a question which illustrates strikingly the volcanic condition of French politics and the sense of insecurity about the future which pervades the community. A bill has been introduced and debated, and referred once more to the committee, making provision for the formation of a fresh government in case the present one was, as in 1851, overthrown by a *coup d'état*, and it was curious to see from the debate how little confidence there was in the ability of the people to devise any remedy themselves. The plan which met with most favor was the sending of delegates from the councils-general to some designated place, to form a new legislature, in case the capital was seized by a usurper; but it had to be abandoned before the objection, that if the place were designated beforehand the revolutionists would seize it, and then the government would not know where to go, and would presumably dissolve. The Left were opposed to any government made up of delegates from the councils-general, as those bodies are highly monarchical. There is little if any change in the general situation. The finances and the question of moving the government to Paris are the two main questions. On the former M. Thiers is having his own way, the Assembly having authorized him by heavy majorities to "denounce" the treaties of commerce with England and Belgium, which means, in practice, give due notice of an intention to abrogate them. On the matter of returning to Paris, he seems to have no preference, and the Right holds back, being apparently determined not to go back to Paris till they have a regular government—monarchical of course—to set up in it. The Orleans Princes, it is noticed, refrain from voting on this question, being anxious not to commit themselves, and, it is said, expecting, if the course of events gives them back the throne, to use the transfer of the Government to Paris as a trump card. A "fusion" with the elder branch is once more under eager discussion, and, owing to the increased sanity of "Henri V.," with greater chance of success.

THE GOVERNMENT AND THE PRESS.

THE Civil-Service Commissioners would have added to the value of their work, from a theoretical point of view at least, if they had, when drawing up their rules, formally disqualified all editors and publishers of newspapers, as long as they remained editors and publishers, from holding any office in the gift of the Federal Government. Of course, the practical objections to any such rule are obvious enough. It would have given mortal offence to the press and led to general denunciation of civil-service reform, and it would have worn the odious appearance of an attempt to disfranchise a body of men who, on the whole, are perhaps better fitted for office than most of their neighbors, and, though last not least, it might be pronounced unconstitutional. But it is none the less true that the employment of editors and publishers of newspapers in the civil service is an evil, and a growing evil, and that if the new rules shut them out indirectly even from the subordinate offices, it will be by no means the least of their benefits.

How it comes to be a growing evil is not difficult to explain. The principal functions of the press under a popular government are two in number—the supply of news and criticism of the government—not the "he-has-made-mistakes-as-who-has-not" style of criticism, but the incessant, vigilant, remorseless turning over, day by day, of the acts of men in power, with a view to calling the attention of the public to all sins of negligence, or ignorance, or intention which anybody entrusted with authority may have committed or may be proposing to commit, and the commendation to the public favor of such measures, passed or suggested, as the editor may deem commendable. This is not altogether agreeable work, and it is work which may be made to cover a great deal of prejudice and passion and resulting injustice, but it is unavoidable work. It is one of the various imperfect instruments by which the affairs of men in this democratic age have to be conducted. Newspaper critics are often unfair, just as ministers are often dull, and treasurers dishonest, and judges corrupt, and as trains run off the track, and steamboats blow up. The check on their unfairness, and the only check, is the condition of public sentiment. As the readers are, so will the newspapers be. The defence of public men against carping critics, who never have any facts to support their judgments and never have anything to propose in place of what they condemn, lies in the fact that the public speedily finds them out and will not buy their paper. In other words, groundless fault-finding in the long run does not pay, and ceases to injure the objects of it. So that, even where an irritable temper or personal griefs impel an editor to engage in it, he is generally conscious that, to insure success, there must be among the commodities he offers for sale, first and foremost, a tolerably sound judgment. His appreciations of men and affairs must be proved by events to have been on the whole reliable, and his charges must appear to have been supportable by facts, after making due allowance for the difficulty of getting at facts where one can neither send for persons nor papers. Of course, there are exceptions to these rules—anybody can cite half-a-dozen; there are newspapers which disregard them and yet thrive, just as there are defaulters who maintain their positions in society; but it is nevertheless true, taking the press as a whole, that a newspaper must be sincere and perspicacious to have influence, just as it is true that, taking society as a whole, honesty is the best policy.

How important this function of criticism is, is readily seen when we consider how completely the newspaper press has supplanted the other agencies by which public opinion was formerly moulded or directed. The clergy were, not very many years ago, active and influential politicians, who had much to do with the choice of candidates and the growth of parties; but the anti-slavery controversy was probably the last political struggle in which the pulpit will play a prominent part. There was a time, too, not very long ago, when leading statesmen at the North as well as at the South had real weight in shaping the popular judgment and presenting the issues on which it was to pass, but the war closed their reign. The last trace of it has almost passed away. To the honest pride with which New Yorkers once regarded William H. Seward, and listened to his utterances on national affairs, has succeeded the honest shame with which they witness the antics of Conkling and Fenton. Massachusetts consoles herself for the errors of her Websters and the coldness of her Adamses by the contemplation of Butler and Banks. The last traces of the régime of "great leaders" may indeed now be found in the columns of the *Tribune*, in the innocent and pathetic dirges which Horace Greeley sings once a year over the tomb of Henry Clay, and which sound as odd and even funny in the ears of the new generation as Berryer's death-bed apostrophes to "his king."

The place of all these has been taken by the press. It exercises the pulpit influence, the Clay-Webster-Calhoun influence, and even the parental and home influence, all in one, on the popular mind. It is, therefore, of nearly as great importance that it should be unbiassed and impartial as that judges should be pure. It is restrained, as we have said, from gross abuses by public opinion, but it may influence public opinion enormously in wrong directions without committing gross abuses; and this influence grows in strength with the growth of population and the gradual but rapid levelling of ranks and conditions. Anybody who wants to address the public in our time has to get license from the editors, and there remains not an individual in the community powerful enough to set them at defiance.

Now, the question which recurs oftenest for popular consideration, and which has most other questions wrapped up in it, is the question of the honesty and capacity of the actual Administration, and on this question the great body of the American people knows absolutely nothing but what it learns from the newspapers. Nearly every man has a newspaper, through which he sees the world as through a telescope. It supplies him with all the facts on which he bases his judgments of public affairs, and it colors those facts and comments on them in such fashion that he gets insensibly into the habit of taking its judgment for his own. The entrance of a large body of editors, therefore, into the Federal service, as postmasters, revenue collectors and assessors, or custom-house officers, or the contraction of obligations towards the Administration by newspapers, for advertising or other patronage, is a serious matter, because it converts the papers they control into thick-and-thin partisans of the Government, while pretending to be honest critics. There is, for instance, a newspaper in Missouri at this moment which once praised Carl Schurz to the skies as an honest, eloquent, and high-spirited politician, and helped to elect him to the Senate, but which, finding that it was likely, in consequence of this, to lose the Government advertising, wheeled right about within a week, and now denounces Schurz as dishonest, stupid, and mean; and nobody can get at its audience to refute it, for every editor may be likened to a minister in this, that he has a congregation to himself which nobody can address without his permission.

It would, of course, be absurd to say, or to suppose, that if editors do not get Federal patronage, their criticisms will be honest and judicial-minded. Editors are, after all, but men, and a great many of them are politicians, which is not a very fine variety of man. But every Administration is, during its term of office, on trial before the people, which forms the jury, and the editors are the judges, who submit the proofs and lay down the law. It is, therefore, of the last importance that, however base or mean they may be naturally, they should not exhibit that particular form of baseness and meanness which consists in taking bribes from persons whose conduct it is their business to investigate. We cannot make judges completely pure, do what we will; but it is none the less our duty to remove from their path every removable kind of temptation. We do not look for or ask for any legislation for the direct prevention of corrupting relations between the press and the Administration. Editors will doubtless appear less frequently in a reformed civil service than they have done in the service as it has hitherto been; and doubtless, also, if the President were confined to one term of service, there would be few "henchmen" found extolling in editorial articles his wisdom, goodness, and infallibility; but we can never prevent editors from being rewarded by office for helping candidates to get elected, except by the action of public opinion. It ought to be damaging to an Administration to give an office or advertising or other favors to a newspaper, and it ought to be disgraceful to a newspaper to take them except in the rare cases in which an editor has peculiar qualifications for a novel or peculiar duty; and that such will be the popular judgment eventually, we have no doubt.

THE NATIONAL EDUCATION BILL.

THE Educational Bill which has passed the National House of Representatives is a different measure in several particulars from that which was discussed in these columns a few weeks ago. Our remarks were then based on the original bill, as proposed by Mr. Perce on the 8th of January; but on the 15th of that month the same gentleman reported some very considerable modifications of the measure, and, a few days later, the House made still further amendments on it, and then, on the 8th of February, adopted the amended bill. We have already stated the principal conditions of the enactment as it now stands awaiting the action of the Senate. It is clear, however, that there is much misapprehension in regard to it, in consequence of the changes which have been made in it. As an instance of this, we are told that in the recent convention of the friends of agricultural and scientific education held in Washington, the bill *as reported*, and not the bill *as passed*, was constantly referred to. We advise all who are especially interested in the subject to read the bill in its true form, which the daily journals might advantageously reprint.

In discussing its merits, there is a fundamental question which thoughtful men are sure to raise, and that is, the general land policy of the Government. One person holds that the public lands should be retained as a part of the national capital to meet the unforeseen contingencies of the future; another contends that the nation should get rid of them as quickly as possible; another, that they should be reserved for actual settlers, and should never be so disposed of that speculators and middlemen could get advantages which should accrue solely to the occupant and cultivator. The bill before us does not touch any of these points. It does not prescribe the amount or the time of sales. It reserves to Congress the right to bestow land bounties, and leaves the homestead and pre-emption laws wholly untouched. It does not impair the power of Congress to confer land grants upon railroads, scientific schools, or any other object. What then does it accomplish? It consecrates all the money received from the sale of public lands to popular education. Instead of blending such funds with other income, it keeps them apart for the enlightenment of the people. To bestow a land-grant on a railroad will, therefore, if this bill should become a law, simply reduce by so much the amount which might otherwise reach the treasury for the support of common schools. In each new grant this "moral obstacle" must be overcome.

It is urged against the bill that its passage will be an assumption by the National Government of rights which belong to the several States. This is not so, as any one may see who will read it. The General Government will still have nothing to do with the establishment and management of schools in the various States of the Union. The bill simply requires as a condition of receiving the national bounty that each State or Territory shall provide by its own local laws for the free education of all its children between the ages of six and sixteen; that it will apply to this purpose all moneys received by the operations of this act; and that it will report annually the condition of its schools. All such questions as the establishment of normal schools, high schools, evening schools, truant schools; as the right qualifications of teachers, courses of study, times of session and vacation; as the amount of local taxation, method of collecting it, character of buildings, Biblical instruction, corporal punishment —in short, all the elements of "free popular education"—are left undefined, and open to local discussion and decision. The national treasury bestows a grant for a specific purpose—public instruction; each State is left free to decide upon its special system. Indeed, so far is the bill from interfering with "State rights" that one of its ablest advocates, Mr. Hoar, bases his appeal for it on the argument that its adoption will foster State rights, by preventing that tendency to centralization and imperialism which popular ignorance makes easy and probable. His speech on this subject is a very ingenious and telling response to the State-rights advocates.

For ten years, as the bill now reads, the distribution of the fund to the several States and Territories "shall be made according to the ratio of the illiteracy of their respective populations," as shown by the last preceding census. This clause may receive advantageously a little clearer explanation of what "the ratio of illiteracy" is to be, or, in other words, of what amount the more illiterate States shall receive; but the main intent of the phrase is clear. Here, indeed, in our view, is the chief merit of the bill. It is a generous offer to the South of redemption from ignorance. Where the darkness rests, there light shall be poured in; where social apathy prevails, tonics and stimulants shall be applied. It is easy for financiers to say that it would be better to vote a yearly allowance from the national treasury to aid the schools of the South; but such a direct grant could not possibly be secured. Every one knows that. The proceeds of lands, being a vague and variable sum, are much more readily bestowed. At the same time, they are to be given in a way which will quicken and strengthen local efforts.

There may be some minor points in the bill which require modification, but in its main features we are confident that it ought to pass as a just and philanthropic measure for the rescue of the Southern States from the horrid blight of popular ignorance which is now so threatening. The facts brought out by Mr. Hoar in his support of the bill, by Gen. Eaton in his report as Commissioner of Education, by the census of 1870, and by intelligent private observers, all point one way. Anarchy and barbarism are impending dangers in vast regions of the South; in some localities they are actual curses. What better can we do with that portion of our income which comes from the sale of lands than to direct it to popular instruction in the reconstructed States?

The disposition of the public lands is a constant and growing subject of controversy. There are probably few things, if any, which give so much impetus to what is called the "labor movement" as the widespread belief among the workingmen of the country that the national domain is being divided among unscrupulous speculators, without reference to the interests or aspirations of the poor. There is no way in which this delusion—if delusion it be, and we fear it is not—can be so well dissipated as by the appropriation of the public lands to educational purposes, because there is no other use of them on which there is nearly the same chance of agreement. Moreover, there is no use of them which is likely to conduce one quarter as much to the political security and prosperity of the country. Whatever falling off there has been of late years in the efficiency of administration, in the tone of public life and the character of public men, has been largely due to the growing weight in politics of ignorant people. There is no use in saying they are foreign-born or bred in slavery; that does not mend the matter. The important fact is that they vote, and produce children who will one day vote also, and that ordinary efforts, such as have hitherto sufficed to educate the children of the educated, will no longer suffice. Something not unlike mediæval night is settling down on some parts of the country through want of schools, and in others the healthy and intelligent public spirit which has built the Government up, and without which it cannot exist, is seriously declining from the same cause. It is high time that this descent were arrested, and we know of no nobler way of doing it than this bill offers.

ENGLAND.

LONDON, February 9, 1872.

PARLIAMENT has met, but has not at present begun any serious business. Mr. Denison, who has been Speaker for the last fifteen years, has resigned, has been duly thanked for his services, and is to receive the usual peerage. Mr. Gladstone and Mr. Disraeli have united in paying him compliments, and have not yet begun that warfare with each other to which we have been looking forward. The Queen's speech provoked a few epigrams from the opposition, but no really animated debate took place. Though the session has thus opened as quietly as usual, the symptoms of an unusually bitter struggle are neither few nor equivocal. I have at different times spoken of the difficulties which from one cause or another have been accumulating upon the hands of the Government. Two recent elections show that the state of feeling in different parts of the country is far from satisfactory. In the West Riding of Yorkshire, a Conservative has been returned, after a very close contest, owing to the defection of some of the Liberal party. In Galway, the advocate of home rule has been returned by a majority of more than four to one. Evidently a dissolution of Parliament would find the constituencies in a very different temper from that which carried Mr. Gladstone so triumphantly to power at the end of 1868. Nor, of course, is there any want of grievances amongst the various sections of his opponents. The only difficulty is to choose the most promising out of many different lines of assault. The policy of Government, so far as it is at present indicated, would seem to consist in pushing the Ballot Bill as vigorously as possible. If the House of Lords accepts it, the Government will have obtained a certain degree of credit with Liberal constituencies; and it is not likely that the Lords will encounter the odium of once more rejecting a measure which has been so long part of the established creed of the ordinary school of reformers.

Meanwhile, this and all other questions have sunk comparatively into the background. We are entirely occupied with the unfortunate misunderstanding about the Geneva Convention. I see that the New York *Herald* is good enough to assume that the excitement has been got up in this country precisely with the view of distracting attention from the various difficulties of the Government. I fancy that I need not seriously answer that suggestion to you: the ministers have neither the power nor the want of principle necessary for such a policy, to say nothing of the fact that if they had, no policy could be more contrary to their interests. It is true, that for the moment, we don't care much about the wrongs of Dissenters, nor the Ballot Bill, nor the licensing question, nor the Irish discontent, nor the appointment of Sir R. Collier, nor even for the last new scandal about Eveline Rectory—a scandal, I may say, which is so minute that I cannot make up my mind to fill your space with any explanation of it. Nothing is talked of but the American difficulty; and, moreover, there is a strong disposition to support the line taken by our Government. So far, Mr. Gladstone might congratulate himself on the result, if it were possible for so honorable a man to regard the misunderstanding with anything but profound dissatisfaction. Yet, in another sense, the ministry have cause to be more deeply sensible than any of us of the gravity of the misfortune. The arrangement of the arbitration was the one thing of which they had, we all supposed, a perfectly legitimate cause for taking credit to themselves; and this, which was their great boast, is now the performance for which, more than for any other, they stand in need of apology.

It is, however, too grave a question to be considered from a party point of view, and I only speak the general sense of men of all opinions when I say that an honorable and mutually satisfactory arrangement of the question would be worth obtaining at almost any sacrifice of party interests. I refrain, according to my usual practice, from discussing the rights of the question, on which you have all the necessary means of information as fully before you as I can have. I will simply endeavor to report what—so far as I can judge—is the ordinary tone of English feeling on the subject. Briefly, I may say that it is such as to make things very uncomfortable for anybody who is supposed to have American proclivities. We had all been indulging so freely in exultation at the admirable precedent set by two great nations of appealing to argument instead of force, that the collapse of the negotiation at its very outset comes upon us with double severity. The new era, it seems, of peace and conciliation is not only not opened as yet, but the opening will too probably be adjourned for an indefinite period by the catastrophe. We had supposed—whether we were right or not is, of course, open to discussion—that the American Government had tacitly withdrawn the claim for indirect damages. When the Treaty was attacked in the House of Lords, it was defended upon that express ground by our ministers. It is, however, generally admitted—so far as I can hear—that the words of the Treaty taken by themselves are susceptible of the American construction as well as of our own. This, for example, is the view of Lord Derby, whose opinion on such a point carries much weight. Mr. Gladstone, with his usual impetuosity, seems to have committed himself to a different statement; I have not, indeed, been quite able to understand his language, in which, as usual, the cloud of words rather tends to perplexity; but he apparently meant to say, though he also tried partly to unsay it, that the only possible meaning of the Treaty was that this class of damages was not to be referred to the arbitrators, and that any other interpretation implied something like dishonesty. It is to be regretted that the prime minister should have taken a tone which is not calculated to make things pleasant. If the Treaty has been so drawn that we could conscientiously believe that certain claims were excluded which you could as conscientiously believe were included in the arbitration, the misunderstanding is still deplorable; but at any rate there need be no imputation on the honor of either party; and so far there would be a better chance for arriving at more distinct agreement. On the other hand, the opinion that either party was guilty of sharp practice in the matter by deliberately misinterpreting words not really ambiguous is not soothing; and we can only hope that Lord Granville's despatches have been more judicious than the utterances of his leader in Parliament. However this may be, there is, I fear, little hope that the Treaty will be carried out. If the Russian Minister had been wiser, he need not have felt much alarm at the prospect of a better understanding between the two countries so long as negotiations are carried on in this fashion. To everybody who feels the importance of such an understanding, the whole affair can only be productive of bitter mortification. You may easily guess the nature of the language which is ordinarily used upon the subject.

The Yankees, says the true-born Briton, have been altogether too sharp for us; and that is only what we might have expected when we tried to deal with a set of radicals ruled by lawyers. We were in a position of unassailable strength after they had luckily rejected the Reverdy-Johnson Treaty. We had nothing to do but to fold our arms and say, Gentlemen, it is your turn to make the next proposal. Instead of that, Mr. Gladstone must needs be walking out of his strong position, falling about the neck of Brother Jonathan, and kissing him with effusion. Dealing with such acute antagonists, he ought to have known better than to have betrayed our extreme desire to patch up an arrangement. As it is, we have been rightly served. We have got into such a position that we cannot retreat without a superficial appearance of drawing back from our word, though our keen-witted antagonist is really the guilty party; he will take the tone of injured innocence, though the cause of all the mischief has been his unjustifiably sharp practice. As we have got into such a mess, our only plan is to draw back at all hazards, and take very good care not to lose our heads another time in a fit of cosmopolitan enthusiasm. And so saying, the Briton congratulates himself on not being such a fool as to believe in sentiment or brotherly love as between nations, and declares that he will never again talk platitudes about the common language, laws, and religion, or make any more references to our common interest in Shakespeare and Washington.

I shall not enquire what degree of justice there may be in this view of the case; I only give it as the common one. I may, however, add that there is, so far as I can judge, a general consent that the course taken by the Government was substantially the only one open to them. The *Times* endeavored at first to advocate the plan of leaving it to the arbitrators to decide upon the admissibility of the claims, and only protesting if their decision should be against us. Such a course, however, would be manifestly dishonorable, and the *Times* has come round to the general sentiment. Mr. Gladstone will, in fact, be supported by the country, although many people wish that the negotiation was in less impulsive hands.

We are all beginning to grow excited over the approaching thanksgiving service for the recovery of the Prince of Wales. I observe that there is a gentleman named Hall in the corporation of the town of Cambridge who persists in saying that, in his opinion, Providence did not interpose to save the Prince, and that his recovery was owing to the skill of his doctors. He and such as he are of course suppressed; and there will undoubtedly be a crowded congregation at St. Paul's who will take a more orthodox view of the influence of prayer. It is lucky that the thanksgiving is coming soon, or we should have almost forgotten our loyal instinct under the influence of the more exciting political events.

NOTES FROM BERLIN.

BERLIN, February 2.

THE Mint has just issued the first specimens of the new gold coin, the piece of 20 marks, which is to be the standard for the currency of all the German States. As a work of art, it does not compare favorably with the English and French coinage, and, as a standard, it falls just short of furthering the much-desired end of an international unit of currency. The new currency, to be sure, is based upon the decimal system; but this, as yet, is hypothetical, for the silver mark, the new unit, has not been coined, and the mark banko of Hamburg exceeds in value the proposed German mark by a little more than half. Each state of the German Bund retains at present its own currency, and with none of all the existing systems will the new coinage exactly tally. In Prussia, Anhalt, Gotha, Hesse-Cassel, Lippe, Oldenburg, Reuss, Schwarzburg, and Waldeck, the coinage is the thaler of 30 silber-groschen of 12 pfennigs each. The new mark equals 10 groschen, but a mark is to represent 100 pfennigs. In Saxony, Altenburg, Brunswick, and Hanover the thaler equals that of Prussia, and represents 30 neugroschen of 10 pfennigs each. In both these systems the new gold coin equals 6 th. 20 gro., so that the decimal reckoning is lost. In Mecklenburg the thaler represents 48 schillings of 12 pf. The thaler answers to that of Prussia, and so the new coin=6 th. 32 sch. In Lübeck, the mark courant and in Hamburg the mark banko represent 16 sch. of 12 pf., but for Lübeck the new coin of 20 German marks requires 16 marks 10 sch., and for Hamburg 13 marks 2 sch. and 11·56 pf. Bremen, again, has the pistole of 5 thalers gold, and the gold thaler of 72 groten of 5 schwaren. The new coin represents 6 thal. 1 grot. 2·74 schwaren. Bavaria has the gulden of 60 kreuzer of 4 pf., of which the new piece requires 11 guld. and 40 kr.

Here is endless work for bank calculators and endless profit for money-changers. It is expected, however, that each state will modify its own coinage, so as to correspond with the national standard, and thus bring the currency of all Germany to the decimal basis. This will be a great advance, but it will be the greater pity that the new coin does not harmonize exactly with that of England, France, or the United States. The exact ratios, calculated to decimal fractions by Kameke, will interest bankers and exchangers:

German gold piece of 20 marks,	English, 19 shil. 6·94 pence.
	French, 24 fr. 69·20 cent.
	United States, 4 d. 76·49 cents.

Mr. Ruggles will have to revive his Commission, to rectify this egregious blunder of Germany.

Prince Bismarck has declared the true policy of a constitutional government toward an ecclesiastical party in state affairs. The recent change in the *Cultusministerium* by the ejection of Dr. v. Mühler, who had held the office since 1862, and the appointment of Dr. Falk, has stirred the rancor of the clerical party throughout Prussia. Though Mühler is a stringent Protestant, his policy of using the state to further ecclesiastical interests pleased the Roman Catholic party as well as the high orthodox—whose spirit in this matter is one—and Catholic schools and convents were multiplying under his administration, to the displeasure of the liberals and of the people at large. The advent of Dr. Falk is hailed by the press generally as a sign that the Government inclines toward a true liberalism, and that religious questions are to be more and more separated from affairs of the state. A poet, punning upon the name of Falk, thus expresses the popular feeling:

"O, sei ein Falk mit hellem Auge
  Nach oben wie nach unten hin.
Voll Muskelkraft zu sich'rem Fluge
  Mit frei und treuem, deutschem Sinn,
Durchdringe düstern Dunst und Nebel
  Mit scharfem, unbestoch'nem Blick,
Und schaff' mit Gott uns Licht und Leben,
  Der *wahren* Freiheit gold'nes Glück."

The policy of the new minister, together with his church budget, gave rise to a sharp debate in the Chamber of Deputies, which extended through two days, January 30 and 31, and in which Prince Bismarck took a conspicuous part. He was accused of excluding the Roman Catholic party from its proportionate share in the Government, and the demand was openly made for a Catholic representation in the ministry. To this he replied, that he would exclude no one from office upon the ground of his being a Catholic; but, in fidelity to constitutional government, he must and would resist the appointment of any one to political office as a concession to his religious belief—that would be to change the state itself from a constitutional to a *confessional* government; the adherents of each religious confession must be carefully numbered, and proportionally represented in the ministry; and his Catholic critics might some day find themselves under a Jew as prime minister—that race having always evinced a marked aptitude for statecraft! This stroke of wit moved the whole House to hilarity.

Bismarck then put the case into this nutshell: He would gladly welcome a Catholic as a colleague; but the Catholics insisted upon making themselves a purely confessional party upon purely political grounds—a party which found it impossible to separate political concerns from the standpoint of its own confession; it appealed to electors as Catholics, upon the grounds of their faith, and for the interests of that faith alone; and upon these grounds it had arrayed itself against the Government both in Prussia and in Germany at large. But in a constitutional government, the ministry, being formed for political affairs and ends of public welfare alone, must be substantially a unit in its political policy; and such a government could not recognize an ecclesiastico-political party as having any claims upon the state or any function in state affairs. This distinction, so clearly put, so obviously wise and just, may be applied with equal force to some recent phases of American politics.

AN AUSWANDERER.

Correspondence.

A LABOR-REFORM THEORY OF CURRENCY.

TO THE EDITOR OF THE NATION:

SIR: It is a cause of deep regret to at least one of your readers that a journal which takes such broad and clear views of most subjects should be so narrow in its conception of the great question of the relation of capital to labor—a narrowness which, I am sorry to say, is not confined to the *Nation*. Indeed, the only paper which does appear to be properly impressed with the magnitude and importance of the subject is one for which, as well as for the persons whose name it bears, the *Nation* appears to have very little respect. This letter, in which I shall try to state what I consider the proper and legitimate tendency of the agitation now going on, is sent to you instead of the other paper I have mentioned, because "they that are whole need not a physician, but they that are sick." The doctrines herein set forth may, perhaps, startle you a little, but I assure you they are not much, if any, further advanced than those held by some leading minds and expressed weekly in the columns of the only paper that as yet dares to publish them. I will premise by stating one or two uncontrovertible propositions:

1. All men have a natural right to life, liberty, and the pursuit of happiness, therefore they have a right to possess the means of happiness. Among the most important of these means is *money*—not wealth, but at least the means of subsistence. Without such means there could be no happiness, no freedom of soul or body, and perhaps not even life.

2. The wealth of a nation is measured exactly by the degree to which its natural and material resources are developed and employed by its subjects, which term includes all, both citizens and aliens, who live upon its territory; and a proper census or examination would exhibit the actual wealth of our country at any time. This national wealth belongs in gross to the whole body, but in particle to every member of the body of subject workers.

3. A national currency should be based, not upon any fictitious standard, but upon the absolute wealth of the nation issuing the same.

As a result of the foregoing propositions, I think the Government, after ascertaining the wealth of our country at the present time, should issue to each citizen his proportionate amount of the currency which should be based thereupon.

This each citizen would spend for his subsistence, and when spent another amount should be issued to him. To prevent the acquisition of large fortunes, a graduated tax should be laid on incomes upon a scale which, though but slightly impairing small receipts, should sweep away *in toto* large accumulations. Thus there would be a constant flow of money from the Government, which, after providing for the wants of the citizens—for I would exempt aliens from the benefit of this law, however much they might contribute to the wealth of the country, thus making citizenship not only a moral but a material blessing—would return to the coffers of the Government after having done its work, by means of the income tax to which I have referred.

Thus pauperism would be destroyed, while there would be none of those colossal fortunes which now excite the anger of the working-classes and threaten to destroy our political fabric.

AN "ADVANCED" THINKER.

[We have never argued against the issue of "currency" to every citizen in any quantity he might desire, provided he paid the cost of paper and printing. As long as nobody was compelled to accept it in payment of debts or in exchange for the products of honest industry, we think the distribution of "money" of this sort would do no great harm, and, indeed, might do good by giving a practical lesson in political economy to some of the wise men of the labor-reform movement. The foregoing letter is valuable as an illustration of the curious haze which, in the minds of most of these philosophers, surrounds the term "based." They are constantly asking to have currency "based" on the total wealth of the nation, instead of gold or silver. The notion that you can "base" currency on anything you please which has intrinsic value, is as old as the French Revolution, during which currency was "based" on the confiscated church lands. What the reformers mean by "basing" currency on something, is really forming an estimate in your own mind of the value of the thing when issuing paper promises to pay to that amount. In this way a man might "base" currency on his furniture, his clothes, or anything else he might possess. He refrains from doing so for two reasons: one is that the people to whom he offers the currency ask not simply that it be "based" on something, but that it be convertible on demand into that thing; and the second is, that the courts gratify this unreasonable desire by authorizing the sheriff to find out what it is the gentleman has been "basing" his currency on, to seize and hand it over to his creditor. There are, however, no courts in which a nation can be sued; and when it is said that it "bases" currency on "the national wealth," what is meant is, that it has issued paper to the nominal value of its possessions of all sorts. This currency is not and cannot be convertible into "the national wealth," and therefore, in the economical sense, it has no basis at all except the good faith of the Government—that is, the willingness of the Government to convert it at some time or other into gold or silver. There is, therefore, no reason in the world why the labor reformers should "base" their currency on anything. As it is not convertible, it does not need a "base." It has no real connection of any kind with the national wealth; and the process of finding out what the national wealth is, in order to get at the right amount of currency to issue, is one of those little bits of childishness into which very big men constantly fall when they get a fallacy into their heads. The French assignats illustrate the whole matter. They were "based" on the confiscated lands—that is, they were issued with the vague belief that the confiscated lands could be used to pay them off; but as soon as it was found that this could not be done, they became worthless. Our correspondent's theory, that when a man has spent all his money the Government should supply him with more, is, we believe, gaining a strong hold on the minds of the working-classes, and, amusing as it sounds, is in the eyes of many of them in Europe assuming the place of a new gospel. There is only one antidote to it, and that is education in the nature and working of the social machinery.—Ed. Nation.]

THE REMEDY FOR OFFICIAL LAWLESSNESS.

To the Editor of the Nation:

Sir: Your article upon "Lawlessness in High Places," a melancholy subject of contemplation, is as true as it is forcible. But the important question is, Where is the remedy? General outcries of warning and appeals to patriotism, honesty, public spirit, etc., are of little practical use. It is safe to say that the nation, as a whole, will not in this century be purer or more patriotic than it is to-day; and if for ten or twenty years past we have been steadily sliding down hill, the expectation that the people will turn round in their tracks is chimerical. The only hope is to find some definite defect in our political machinery, which may offer a standpoint of reform. And the one most manifest is perhaps a synonym for the phrase you have employed, want of responsibility. Mr. Boutwell was deliberately whitewashed by the majority of Congress in his illegal action, because that majority dared not risk the supremacy of the Republican party. If Mr. Boutwell had been where any individual, placing principle above party, could have called him to personal account, he would have received a wholesome lesson for the future. If it be said that this does not explain the other instances which you adduce, I reply that this may be done by means of a corresponding defect, want of power—that is, of open legitimate power. While Congress is, what Mr. Edmunds once called the Senate, a cockpit (though, as the physical aptness of the comparison provoked the risibility of the galleries, he changed the word to "bear-garden") for personal encounter, legislation is at haphazard or controlled by private interests, and the Executive has no more power to procure laws, however important for the country, than any outsider, unless indeed by the corrupt handling of offices, which forms the greatest obstacle to civil-service reform. If President Grant had been able to introduce, by his officers, a law for the repeal or affirming of the Legal Tender Act, and to defend it before the country, he would before long have got a reply, for or against, from that power which is above the Constitution, and would not have required to use his appointing power corruptly; while, again, if there had been responsibility to individuals, he might have thought twice about so using that power. So of the suspension of the *habeas corpus* in the South. If the Executive had brought forward such a measure as applicable at a particular place and time, and had been held to a close and sharp responsibility to individuals, the evil might have been light. But as it is, certain private interests require a general power to be applied, and, having worked it through Congress, they put it upon the President in a lump, and rely for its exercise upon the protection from responsibility by a Congressional majority.

More power in the Executive that is open and honest, not secret and corrupt—the power to propose laws and defend them in the interest of the country against private and local interests—and more responsibility to an active minority in opposition which is now powerless, these seem to be the true points of attack.

You deprecate further the *personal* devotion to Presidential candidates. Our country is furnishing a new instance of what all history proves, that the enthusiasm of masses of men cannot be permanently excited by principles, but requires persons. Instead, therefore, of calling upon human nature to contradict itself and return to the love of principles, the way is to make this love of persons follow devotion to principles; that is, to place men so that their adherence to a principle may secure personal devotion. The final passage of the corn-law repeal in England was carried by the personal influence of Sir Robert Peel, Cobden, and other such men, and the Irish Church reform by that of Mr. Gladstone.

Suppose, for example, Mr. Boutwell were an earnest advocate of specie payments. We know that seventeen hundred national banks now have their fangs firmly fastened in the members of Congress, who, as the Chairman of the Banking and Currency Committee said last year, dare not look at any measure opposed to that interest. To combat it, a personal enthusiasm is necessary, and the Secretary of the Treasury should hold a place where he can wield that power, subject to a responsibility which could make that enthusiasm vanish with any taint of corruption, incapacity, or illegal exertion of power. G. B.

Boston, February 23, 1872.

"PROTECTION" FOR AUTHORS.

To the Editor of the Nation:

Sir: Although you have drawn the distinction on previous occasions on the point I make below, yet it would be conferring a favor on me, and, I think, on many of your readers, if you would explain more fully how your statements in a recent article of the *Nation* on the copyright question consist with your well-known and usual views on the free-trade and protection question. In that article you say that "what is wanted is native thinkers," and that that want is the reason of our dependence on the Old World for our thinking, and you express the conviction that—

> "There is nothing which contributes so much to keep down literature as a profession in the United States, to make American poets and novelists inferior to those in Europe, and to keep the people of the United States in a condition of mental vassalage to the Old World, . . . as the long refusal of the nation to give native writers the stimulus, encouragement, and protection that would come from compelling native publishers to pay foreign authors for their works."

Is not that the doctrine of protection? J. S. Currey.

Chicago, Feb. 22, 1872.

[All industries are carried on in civilized society on the assumption that the competition which regulates prices is competition between sellers who have acquired the commodities they offer for sale either by purchase or production. This amount and kind of "protection" all free bodies claim. The principle that the market shall not be open to anything in the nature of plunder or booty is indeed one of the bases of the social organization, and enters into all theories of political economy. If dealers in New York or elsewhere were in the habit of fitting out corsairs to seize and carry off iron, cloth, lumber, or any other commodity from the coasts or from the ships of foreign nations, and were to expose it for sale here at prices with which native producers could not compete, we should demand most heartily as much "protection," in the shape of Government interference, as would put a stop to the practice. Indeed, we do clamor for that protection daily, when we urge the police to be vigilant and the judges to be honest; and we find a strong argument for it in the eighth commandment of the Decalogue.—Ed. Nation.]

Notes.

A TREATISE on dreams, second-sight, somnambulism, spiritual manifestations, hallucinations, etc., entitled "Spiritualism and Animal Magnetism," by Prof. G. G. Zerffi; and "Lectures on the History of Art at the Government School of Science and Art at South Kensington," are among the announcements of Messrs. J. E. Tilton & Co., Boston.——Messrs. Ginn Bros. will issue at once in pamphlet form parts of Hudson's "School Shakespeare," beginning with the *Merchant of Venice*.

—Mr. Joaquin Miller—whose parents named him Cincinnatus Heine Miller—is the subject of a notice written by a friend of his for the *Overland Monthly*, and interesting as being probably a true story of a sufficiently checkered career, and one that would hardly be possible outside of the western half of this country. Born in 1841, in Indiana, when Indiana was a frontier State, Miller was an utterly untaught boy of ten years of age when in 1851 his father, who seems to have had the true pioneer blood, "pulled up stakes" for Oregon, two thousand miles to the westward of the Wabash district, and almost a wilderness. Young Miller was as restless as his father, and in all ways unpractical, and the California gold fever soon infected him; so when he was fifteen or sixteen he left the log cabin in the Willamette Valley, and betook himself to the mines. Of mining he was ignorant, and his life for four or five years was more varied than profitable, his professions being successively those of the "miner, astrologer, poet, filibuster with Walker, Indian sachem, and Spanish vaquero," the poet, perhaps, being as plainly manifest in the accounts he afterwards gave of his life at this period as in the verses which he produced. Of these one of his friends relates that Miller once showed him some of the pieces which he was constantly scribbling, and that on his being informed that he must reconstruct his poetry, observing metrical arrangement and limiting the number of syllables in a line, he exclaimed, "Oh! damn your rhythm and measurement. There's the ideas, and I know what poetic license means." He was now, however, to have something more of education; and when he reached his father's house, in 1860, with a bullet wound in his left thigh, another in his right arm, and several marks of Indian arrows on other parts of his body, he began, at nineteen, the study of the law in Lane County, Oregon, where in a few months, after some desultory reading in law-books and general literature, he "by some singular good fortune gained admission to the bar." He did not, however, it is added, "attempt to enter immediately upon the practice of his profession," for in the following spring came the rush to the Idaho mines, and Miller left the law for gold-hunting. He was not more successful than before, his temperament being enthusiastic and visionary, as one might suppose an astrological miner's to be; and want soon compelled him to take up a business for which his adventurous spirit and his wild experiences fitted him well. This was the business of conveying packages of gold dust and of letters from one mining camp to another, and from the camps to the towns where regular means of transportation could be had; and as the roads were infested by "road agents," all of Miller's Indian craft, Spanish horsemanship, and acquaintance with the Plains and the mines was necessary to the performance of his duties, which are said to have been efficiently discharged for the space of nearly a year, when his primitive express was supplanted. Returning again to Lane County, he became the editor of a Democratic paper, which in a few months was suppressed by the military authorities on account of its violent Secessionist doctrines. Of this journal a certain young lady of Port Orford was a poetical correspondent, and the new editor, pleased with her verses, very shortly paid her a visit at her place of residence, where on a Friday he first saw her, and on the Sunday following made her Mrs. Miller. This was in 1862, and in 1863 he was practising law in Cañon City in Eastern Oregon, and in 1864 we find him the efficient captain of a volunteer company organized to fight the Snake Indians, and victorious over them in a desperate engagement. More law practice followed this military episode, and in 1866 he was elected County Judge, and held the office till 1870. In that year he was a caucus candidate for a seat on the Supreme Bench of his State, but was defeated, was also divorced from Mrs. Miller, or rather she from him, and, gathering up his poetical manuscripts, which had been accumulating during his four years of judgeship, he sailed for London, to find fame and a publisher. He was at first unsuccessful in his pursuit, but a thin volume containing "Ina" and "Arizonian" being printed and privately circulated came to the knowledge of Mr. W. M. Rossetti, Mr. Frederick Locker, and Mr. Tom Hood, and they "at once recognized his genius and gave him their friendship and countenance." Mr. Miller is said to be now on a trip "through California and the tropics, gathering material for further literary efforts."

—The publishers of Worcester's and of Webster's Dictionaries have recently been engaged in a curious correspondence with Mr. A. S. Solomons, a respected Israelite gentleman of the District of Columbia. He begins by calling the attention of Messrs. Merriam to the fact that their dictionary contains "an intolerant definition" of a certain word. "Webster's" defines the verb "to jew" as "an active verb, meaning to cheat or defraud, to swindle"; and marks it as "colloquial." To this letter Messrs. Merriam make answer that the case of the verb in question is one of those in which an opprobrious sense is attached to a word without any offensive sense necessarily attaching to the original word; and cite "Jesuitical" as being in point. They add that they have ordered the remark "used opprobriously" to be appended to the definition. From Messrs. Brewer & Tileston, whose dictionary makes the obnoxious word mean "to cheat (colloquial)," Mr. Solomons received a note saying that the verb "to jew" has the authority of Shakespeare; that the intent of their dictionary is to give the orthography, pronunciation, and meaning of every word used by any English author of any notoriety; and that to omit the verb complained of would be to contradict the plan of the whole work. They are, however, perfectly willing either to omit it altogether or to condemn it as unjust. The correspondence proceeds at some length, and the likeliest upshot of the matter is that the obnoxious word will be omitted altogether from all future editions of both the dictionaries. We must say, at the risk of appearing illiberal and uncivil, which we think we are not in this instance, that this seems to us not the best conclusion which could have been reached. The word in question is now obsolete, except as a colloquialism which oftenest is in the mouths of low and mean men; and it is undoubtedly within the lexicographer's competence, and indeed is strictly his duty, to stigmatize it for what it is. But its place was once higher; it is historically a part of the language, and was used in good faith by persons who really knew the Jew as an accomplished bargainer and merchant, a man justly sharp at a bargain amid enemies who gave him all manner of injustice, sometimes too sharp if we allow ourselves to forget that he lived for ages amongst tyrannical robbers, against whom his money was his only protection. Why is this a thing that it should be sought to cover over and hide? Surely the Jewish population of the United States needs no such concealments. And if it does not need them, it would consult its own dignity, one would say, by not requesting them; just as equity would be consulted by not giving them if they are really needed. After all, however, there are things of more importance than lexicography—though we like to see lexicographers a little hard to convince of this—and it is agreeable to see in this correspondence the evidence of so much mutual respect and good feeling between Jew and Gentile, after feuds which have been so long, so cruel, and, the Gentile must confess, so much more disgraceful to the Christian than to the Jewish name.

—English publications and announcements begin again to assume their natural proportions. Those most noticeable in the sphere of religion are: "The Rise and Fall of a Rational Theology and Christian Philosophy in England in the 17th Century"; Ritsche's "Critical History of the Doctrine of Justification and Reconciliation," translated by J. S. Black; Reuss's "History of Christian Theology in the Apostolic Age," translated by Annie Harwood; "Lectures on the History of the Church of Scotland"; "Welsh Methodism," an historical sketch; "Saint Chrysostom: His Life and Times," by Rev. W. R. Stephens; and a new volume of sermons by Rev. Stopford Brooke. In books of travel we may commence with Mr. Hepworth Dixon's "The Switzers," which we find in one catalogue under the head of "Fiction"; and these following are worth mention: Captain Burton's "Zanzibar: City, Island, and Coast"; "Round the World in 1870," by A. D. Carlisle; "Egypt of the Pharaohs and the Khedive," by F. B. Zincke; "Recollections of Society in France and England," by Lady Clementina Davies; "Over Volcanoes; or, Through France and Spain in 1871," by A. Kingsman; "Across the Ferry: First Impressions of America, by James Macaulay; "South Sea Bubbles," by the Earl of Pembroke, with what is, in some sense, a companion book, "In Quest of Coolies," by James A. L. Hope; and "Sketches from Life amongst the Hakkas of Southern China," by Rev. E. J. Eitel. In history and biography we have, or are to have: Lamartine's "Twenty-five Years of My Life," translated by Lady Herbert; the fourth volume of Freeman's "Norman Conquest" and of Long's "Decline of the Roman Empire"; "The Celt, the Roman, and the Saxon," by Thomas Wright; "The History of Leicestershire in the 18th Century," by J. Thompson; "The Invasions of England," by Captain H. M. Hozier; Nasse's "Agricultural Community of the Middle Ages," translated by Colonel Ouvry; Vámbéry's "Bokhara: Its History and Conquest"; the Abbé Lamazou's "Place Vendôme and La Roquette," translated by C. F. Audley; the second volume of Lanfrey's "History of Napoleon I."; the Duc d'Aumale's "Princes of the House of Condé," translated by Rev. R. Brown; Dr. Karl Mendelssohn's "Narrative of Mendelssohn's Intercourse with Goethe"; "Memoirs of the Countess Leonora Christina of Schleswig-Holstein," translated by Miss Bunnètt; "Milton's Life in his Own Words," by Rev. J. G. Graham; "The Life of Sir Henry Lawrence," by the late Sir Herbert Edwards and Herman Merivale; "The Life of Robert Chambers," by his brother; "The Life and Miscellaneous Essays of Henry Thomas Colebrooke"; and "The Attic Orators from Antiphon to Isœus," by R. C. Jebb. In art, as important a publication as any is the new edition of Nash's "Mansions of England in the Olden Time"; and we note also: "English Artists of the Present Day," essays by Sydney Colvin and others; "The British School of Sculpture," by Wm. B. Scott; "Six Lectures on the Elements of

Sculpture," by John Ruskin; "Lectures on Christian Art and Symbolism," by Rev. R. St. John Tyrwhitt; and "Pictures by Daniel Maclise," with descriptions and a biographical sketch by James Dafforne. Under the head of miscellaneous we gather Browning's *idée napoléonienne*—"Prince Hohenstiel-Schwangau"; "Three Centuries of English Literature," by C. D. Yonge; Buckle's "Miscellaneous and Posthumous Works," in 3 vols. 8vo; "The Miscellaneous Writings of the late John Conington," with a Memoir; "The Moabite Stone," by W. P. Walsh; "Lectures on Legal Antiquities," by Cosmo Innes; a "Dictionary to the Anabasis of Xenophon," by Rev. Wm. Barrack; and a "Grammar of Pennsylvania Dutch," by Prof. S. S. Haldeman (to be published by Trübner).

—The last number of the *British Quarterly* we commend to attention as having a table of contents worthy of the best days of the English reviews, and as being likely to be of particular service to American readers. This we say mainly because of its article on the first Napoleon. We suppose we do not exaggerate much when we assert that in virtue of his history of Napoleon, disseminated through the country in our most popular magazine, the Rev. J. S. C. Abbott almost raised himself to the dignity of a public enemy, so much did he do to secure American admiration for a man whose character and career it is no less than dangerous for a free democratic people to admire. The *Quarterly's* article is said to be by Professor Seeley, a writer in whom it is not necessary to believe absolutely, but who is always suggestive or instructive, and who, whether or not he very often goes to the bottom of things, can always be read with intelligent pleasure. Mr. Seeley's object is to make good these three propositions which follow, and he particularly addresses himself to readers who give up Napoleon to reprobation as an unscrupulous and wicked statesman, sacrificing France and Europe to his military ambition, but who cannot withhold from him their respect, because they respect the French Revolution, and look on him as the great leader who carried out the Revolutionary programme. To such readers, M. Seeley undertakes to show, first, that the great lines of the Napoleonic policy were laid down, not by Napoleon himself, but by the Revolutionary governments which preceded him; secondly, that the Napoleonic policy was flatly opposed to all the great principles of the Revolution, though Napoleon was anticipated in his apostasy by the Revolutionary leaders themselves; thirdly, that upon this inconsistency and ambiguity in the conduct of the Revolutionary governments Napoleon rested. If he were obliged, Mr. Seeley says, to put the history of Napoleonic France into the smallest possible compass, he would abridge it by saying, first, that, by the *coup d'état* of Brumaire, Napoleon subjected France to a military government (which in effect the Terrorists had shown him how to do); secondly, that by the Concordat he had brought Catholicism back into France (imitating in this the Revolutionary governments, which never thought themselves absolved from the duty o somehow finding their subjects a religion of some sort or other); thirdly, that, like the Directory, he imposed military governments on the nations he conquered. We can assure our readers that they will find Mr. Seeley's article, which we cannot pretend to summarize, not only very well worth reading, but apparently far more easy of acceptance as regards its main thesis than many of them might at first be disposed to believe. He does not hate the Revolution as Mr. Goldwin Smith hates it, nor go the length of asserting roundly that the harm which it did far overbalanced the good; but he induces reflection on the point that we are too apt to attribute directly to the Revolution not only what of good itself accomplished, but also what of good was brought about by the resistance which it aroused; and that thus we are apt to give it credit which it would be about as reasonable to give to the oppressive Old Régime which excited the Revolution and without which that uprising would not have been possible. The reader will perhaps think that in this part of his work our writer is over-ingenious for a writer in a practical world, and is unfair to the Revolution, which was a human affair, and was not transacted *in vacuo*, and is to be looked upon as having taken place of necessity—which necessity is to be set against the harm it brought us, while the good it did constituted its mission, and is to be set down to its account undiminished. But that the personal character and conduct of Napoleon did not make Napoleonism a worse thing than it needed to have been, and that upon his personal character and conduct judgment is not to be had and sentence pronounced—that is another matter; and the case made out by Mr. Smith, M. Lanfrey, Mr. Seeley, and the other accusers, early and late, seems to grow plainer and plainer. In his view of Napoleon's character, by the way, Mr. Seeley appears to make too little of what seems to us clear, that a "note" of his character, and the principal note of it, is that intellectually he had an almost miraculous perception of the precise relation of means to ends, and of the point to be aimed at in order to effect desired results; and that, seeing this point with a sureness of eye which constituted his genius, intellectually considered, he drove to his end with a force of egotistic will so gigantic and overbearing, that he seemed to be will incarnate and resistless. Indeed, in the latter part of his life his power of will and egotism seemed to amount to a disease, and to have intoxicated him to his ruin, using him rather than being used by him. To so colossal a force it is hardly worth while, even in speaking of its pettier manifestations, to apply the name of vanity, as Mr. Seeley does, though doubtless the Emperor had something of the barbaric weakness as well as the barbaric strength that belonged to him as a Corsican —a breed scarce civilized yet. As Mr. Lowell remarks of the egotism of Goethe, it was so immense that it was sublime, and was to the egotism of other men as the limitless, vast Sahara is to a sand-patch.

—Besides Mr. Seeley's article in the *Quarterly*, we have read with pleasure one on "Mahomet," attributed to Mr. E. A. Freeman, but perhaps hardly up to his level; one on "Beethoven," by an admirer, who strangely enough doubts if the English will ever like him as well as they like Handel and Mendelssohn; one on "The Speaker's Commentary on the Bible," a learned notice; and one on "Catullus and his Translators," which charges Shakespeare with laziness, Goethe with being "a man of contemptible character," and goes into rhapsodical enjoyment over some dreadful specimens of English glyconics and other classical metres. Another writer in the *Review* makes an article on "An English Interior in the Seventeenth Century." He has laid hold of a manuscript diary kept by a chaplain, a simple-minded man, who lived in the Nonconforming household of Sir Thomas Barnardiston, in Suffolk, in the days of Charles the Second; but though the subject is excellent, the article, while pleasant in flavor, is but dullish.

—The year 1871 has been very barren of works in the field of historical literature, having produced hardly one of high rank. There are several revisions, which may almost pass as new works, of which we may mention especially Parkman's "Conspiracy of Pontiac," Michelet's "Histoire de France," the early volumes of which are being completely rewritten, Peter's "Geschichte Roms," Von Raumer's "Geschichte der Hohenstaufen," and Fessler's "History of Hungary." The last-named work is edited by Ernst Klein, with a preface by Michael Horváth; the tenth number, just published, comprises a part of the reign of Matthias Corvinus. Teuffel's admirable "Geschichte der römischen Literatur," which treats the literature by periods, as the outgrowth of the national life, belongs properly to 1870. Washburn's "History of Paraguay" has already been noticed in our columns. Bishop Hefele's "History of Œcumenical Councils" has reached its seventh volume, treating of the Council of Constance; it is written from a liberal Catholic point of view. The veteran Von Ranke has been led by the recent events to bring out the first volume of a history of "The German Powers and the Confederacy of Princes" (1780–90). The distinguished historical scholar, Ottocar Lorenz, also, has joined with W. Scherer in a history of Elsass, which has reached its second volume. Another learned work that deserves mention is Zoepfell's "Die Pabstwahlen vom elften bis zum vierzehnten Jahrhundert," in which the mode of electing Popes established and pursued in this period of the Papal supremacy is minutely related.

—Of collections of essays on historical subjects, we have Dean Milman's "Savonarola," and the recent volumes of Mr. Freeman and Mr. Froude. Historical biography, too, is well represented. The lives of General Greene and of John Milton have been reviewed in our columns; Mr. Christie's life of Lord Shaftesbury is also a book of merit. In books upon what may be called pre-historic history, there are Mr. Tylor's valuable work on "Primitive Culture," and Prof. Maine's "Village Communities"; and we may mention again the translation of Nasse's "Mediæval Communities in England." In the more remote fields of historical enquiry, the past year has produced some works of high merit. Sir Henry Yule has published a translation of the famous "Book of Ser Marco Polo," with notes and discussions. Mr. George Smith has given us a history of Assurbanipal, the greatest of the kings of Assyria (668-626), translated from the cuneiform inscriptions. From Mr. Edward Thomas we have a "Chronicle of the Pathan Kings of Delhi," derived mainly from coins; these were Mohammedan kings of the 13th and 14th centuries, at first dependent upon the Caliphs of Bagdad. A still more important work in this field is Prof. Dawson's "History of India, as told by its own Historians," from materials collected by the late Sir Henry Elliot; the third volume gives the native chronicles of the 14th century, down to the conquest by Timur in 1398. The third volume of Lange's "Römische Alterthümer" perhaps belongs rather with the first-mentioned group. This volume, while marked by all the minute learning and mass of references which characterize the earlier ones, is rather historical than antiquarian; it is really a constitutional history of the last century of the Republic, from the agrarian movements of Tiberius Gracchus to the victory of Octavianus. Wattenbach's treatise upon "Mediæval Manuscripts" gives much valuable information upon this subject. Above all, we must not fail to mention an invaluable work of Lorenz, "Deutschlands Geschichtsquellen im Mittelalter von der Mitte des dreizehnten bis zum Ende des vierzehnten Jahrhunderts."

—In the important department of "historical materials," the year 1871 has been very active; and one is astonished at the amount of work done in different countries in this direction. The Historical Manuscript Commission has issued its second report, with appendices and indices to both reports; in this they describe 101 private collections of papers, covering the whole field of English history, but particularly rich, it would seem, for the sixteenth century. Next to this, perhaps, in general interest, is "Die Recesse und andere Akten der Hansetage von 1256–1430," of which two volumes have been published, under the direction of Dr. Koppmann. It is, says Dr. Pauli, "an inexhaustible mine for researches in mediæval commerce, in the history of prices and tolls, in peaceful and warlike transactions of the period"; a book which "every civic library ought to possess." Of the numerous collections of mediæval documents published during the year, we will only mention cursorily the "Fontes rerum Austriacarum," Vols. 31, 32. and 34; "Urkundenbuch der Stadt Lübeck," Vol. 4, and similar publications for Lüneburg, Mecklenburg, Livonia, Breslau, and other parts of Silesia.

—The Abbé Gratry, who died on the 5th instant, was a member of the Academy, a professor at the Sorbonne, an author of repute, and well known in the European educational world, but he was best known in this country as the intimate friend of the eloquent Père Hyacinthe, whose liberalism has recently made so much stir within Roman Catholic boundaries, and so much more, it is probable, outside of them. The latest important act of Gratry's life was his "submission" to the dogma of the infallibility of the Pope—a doctrine which he had actively opposed, and as to which he had taken ground with those theologians who asserted that, unless history is to be set aside as a worthless record, the dogma is the merest invention. But apparently, if the logical outcome of Protestantism is, as the Romish Church alleges, the promulgation by every Protestant to every other Protestant of the dogma of the personal infallibility of each—if Protestantism in the last analysis means "none of your business," as Dr. Holmes remarks of it, so the logical outcome of essential Catholicism would appear to be that after he once gets going it's none of the believer's business what he believes. At all events, very many of the men who a year ago were declaring that to say the Pope had always been infallible was to write one's self down a dunce or else a wilful deceiver, have now accepted the decree of the Society of Jesus, and have become "reconciled." Of these Gratry is the convert most recently conspicuous, and his going over was made the theme of an interesting open letter addressed to him by his old friend Hyacinthe, who may be said to ask him therein, What is the condition of what you are "pleased to call your mind"? Gratry's reply, if any was made, was not, we think, given to the public, but some of his enemies and some of his friends will probably think they have got some light on his mental condition in a letter just published by Abbé Michaud, who insists that he can authoritatively declare what was the mental attitude of the late Archbishop of Paris, Darboy, whom the Communists shot. The Abbé alleges that four days before Monseigneur Darboy's arrest by the Commune, the Archbishop spoke to him as follows: "Inasmuch as an army ought not to rise against its officers, you should externally, in your official acts, submit to the infallibility of the Council; as for your conscience, you have enough intelligence, knowledge, and honesty to know what to do. They may say and do what they like, their dogma will never be anything but an ineptitude, and their council a council of sextons and vergers—*concile de sacristains.*" To this attack the true believers reply that this is all very well to say now that the Archbishop is dead and cannot speak for himself, and that what really ails the abbé is that he wanted to be made curé of the Madeleine in the place of the Abbé Deguerry, and when he was not became angry. To this Michaud rejoins that they may read him out of the Ultramontane Church if they like, but they cannot separate him from the Catholic Church; and that he shall absolve, marry, baptize, bury, celebrate the mass, and perform all other functions of a priest without regard to the persecutions of the Ultramontanists, who forbid his officiating unless he "internally" assents to all the dogmas of the faith. He is raising subscriptions to build a church, and appears to be in open revolt.

COUNT BEUST.[*]

AUSTRO-HUNGARY has now for some years been a home for free discussion and opinion. Parliamentary government is firmly established at Vienna and Pesth; and the Austro-Hungarian charters have been made similar to the constitution of England. Count Beust has succeeded in piloting Austria through the five darkest years of her history. Electoral reform; the breach made in the Concordat; the commercial treaty with England; the compromise with Hungary; and new institutions and laws being called into life, furnish evidence of his ability and honesty of purpose. To him is due in a great measure the difference between Austria as she was after Königgrätz, and Austria as she is to-day. Nevertheless, clouds still overhang the horizon. The Slavic agitation and the state of the national credit cast a dark and threatening shadow; and not only the statesman who would endow Austro-Hungary with lasting prosperity and contentment, but who would preserve her very existence as a nation, has problems before him as difficult as any which have ever called forth or taxed political genius.

Count Beust's well-known irritable and restless temper is accounted for by his having been bathed as soon as he was born in new wine, by an overzealous nurse; but, excepting this incident relating to his early youth, we have searched in vain through Dr. Ebeling's two stout volumes for facts of the slightest biographical interest—for something that might furnish a clue to the personal character and disposition of one who has taken so prominent a part in European politics. The Doctor has, moreover, buried his hero beneath such an impenetrable mass of official correspondence that Beust is frequently lost sight of altogether. Long disquisitions upon the internal affairs of a small German state from 1848 until 1867 are rather heavy in hand to all but the local disputants, and had far better been left in their original resting-places.

The other work before us, "A Political Sketch of Men and Events," is written with clearness and vigor, and, besides much valuable statistical information, contains ethnological, agricultural, and religious maps of the empire, and we earnestly recommend it to all interested in European politics. The author is an enthusiastic admirer of Count Beust, and although the intention of writing a panegyric is expressly disclaimed, yet that would not be an ill-fitting title of the book, which is, indeed, thought by many to have emanated from the Imperial Chancery at Vienna to serve a political purpose in England. The writer urges Austria's necessity as the cause of her reducing the interest on her public debt, and considers such a step to have originated in a choice of evils. This is all very true, but it is impossible to shield Count Beust from a great share of blame in adopting repudiation as a means of overcoming these difficulties.

In 1868, the Imperial exchequer, drained by the expenses of the war with Prussia and by the sacrifice to Hungary, by which 70 per cent. of the burthen of the national debt was borne by Cisleithan Austria, was in the most vital need of money. Taxation was very heavy, and an increase would most likely have resulted in no further result in cash. The empire was virtually insolvent, and had Count Beust at this time had the courage to come frankly forward, formally acknowledge the humiliation, ask for time for a state so rich in resources to recover her rent-paying powers, and offered a compromise such as any private creditor would have done, the principle that insolvency alone can excuse the non-payment of a public debt would have been formally recognized, and Austria, with her former high reputation for good faith, would have been trusted, and still able to negotiate her bonds. But, instead of this, the coupons of the public debt were taxed without taxing any other property. The result was that all Austrian stock was promptly struck from the quotations of the London Stock Exchange, and certificates issued entitling the bond-holders to any compensation which might hereafter be secured. Count Beust's later proposition, of conversion into currency bonds without any sinking fund, was scorned, and regarded as mere confiscation.

We cannot call Count Beust a broad-minded, calmly-calculating statesman. Great cleverness and tact are his, both by nature and habit. The skill with which he maintained the delicate connecting-links between France and Austria, without binding himself to any positive engagement, cannot be too highly praised. His talents for conciliation and his knowledge of human nature are indeed remarkable. His personal ambition is boundless, but he lacks genius, originality, and decision of character. He is not the man to decide the fate of an empire. Whenever he has taken the initiative, the hopes that were raised never have been fulfilled, as in the case of the Schleswig-Holstein negotiations, when he played directly into the hands of Bismarck. Count Beust's career as a statesman of Saxony gives evidence of his strictly conservative if not absolutist views; and previous to his advent in Vienna he had rarely missed an opportunity of manifesting an inborn aversion to the party of progress. After the battle of Königgrätz—a victory for Hungary no less than for Prussia—when Austria, disarmed, helpless, and, to use the words of the Prussian Minister at Florence, "stabbed to the heart," fell to his inheritance, by a sudden and unlooked-for conversion to "liberalism" he conciliated Hungary, and, by giving one head of the Austrian eagle to the Germans, and the other to the Magyars, the remaining crown nations were kept well in hand. But the reaction resulting from these measures cannot be said to augur well for the house of Hapsburg-Lorraine.

---

[*] Friedrich Ferdinand Graf von Beust. Sein Leben und vornehmlich staatsmännisches Wirken. Von Dr. Friedrich W. Ebeling, herzogl.-sächs. Archivrath." Zwei Bände. Leipzig. 1871.

"The Austro-Hungarian Empire and the Policy of Count Beust. A Political Sketch of Men and Events from 1866 to 1870. By an Englishman." London. 1870.

"*Unius linguæ, uniusque moris, regnum imbecillum et fragile est,*" was the favorite maxim of St. Stephen, the first king of Hungary. If the converse of this were true, what elements of strength and consistency would there not be in this polyglot realm! It is estimated on good authority[*] that there are as many as one hundred and twenty different groups of nationalities under the rule of the Kaiser, while the number of dialects spoken is not less than two thousand. These various races, moreover, are scattered about in such hopeless confusion, that it is out of the question to make an ethnological map of the country which can furnish more than a very rough approximation to the truth. In Hungary, for instance, only 36 per cent. of the population is Magyar; and an afternoon's stroll from Pesth enables one to visit villages inhabited exclusively by Slovacks, Suabians, or Serbs. No wonder Austria ever has been so pregnant an example of the principle: "*Divide et impera.*" On closer examination, however, it is found that fifteen of the thirty-five millions of Austrians are of the same race. Although twenty years ago a Czech, for instance, would have considered himself no more nearly related to a Serb or a Bulgarian than he would to an Esquimaux, yet, thanks in a great measure to the activity of ambitious governments in utilizing the speculations of historians and philologists, their homogeneity is at length acknowledged.

The position of the Slavic race in Austro-Hungary, with its centre of gravity, like that of the Germans, outside of the empire, is a remarkable feature in the ethnology of Europe. Its members, continually kept apart by the active and ambitious Magyar nation, like a wedge in the very midst of them, with foreign laws, customs, and an alien language forced upon them; demoralized by centuries of misrule and oppression; dissension and discord sown among them by designing politicians; estranged by national traditions, and having their local jealousies at times fanned into a flame that they might the more readily be brought to strangle each other—they are not in a condition to realize their own power and importance. As yet they have no common literary language; still, all the Slavic dialects are enough alike to be intelligible, when spoken, to a person familiar with any one of them. The Czech, for instance, has only to learn the Cyrillic alphabet to be able to read Russian; and as early as 1693, Peter the Great, at a banquet in Prague, expressed his delight at the facility with which he conversed with the natives through the medium of their respective dialects. The impulse given of late to Slavic literature by such men as Schafarik, Palacky, Hanka, and Gaj gives rise to bright hopes for the future.

At present the Austro-Hungarian Slavi neutralize one another by radical differences in religion, love, or hatred towards Russia, and by their local traditions and habits. There is no immediate prospect of their laying these aside; but should they do so—and Count Beust is responsible for much that induces them to do so—the convulsion will shake the empire to its very foundation. The Slavi are to the Magyars what the latter have hitherto been to Austria. Pan-Germanism, as set forth by the Ultra-Centralists, has given rise to Panslavism in a most violent and selfish form; indeed, a cry was once heard: "Better the Russian knout than the Austrian sceptre." But Belgrade, rather than St. Petersburg or Vienna, is now the bright spot to which their eyes are turned. The countries lying between the Black Sea and the Adriatic are full of the monuments and traditions of the ancient Servian Empire. The Serbs, whose national spirit is ardent and intense as that of any people in Europe, are resolved to re-establish this empire in all its original power and glory. Spirit like this is contagious; and a dread of the possible result may have passed through the mind of Franz-Joseph when, as is reported, he spoke of himself as the "Last Austrian."

THE MAGAZINES FOR MARCH.

FOR various reasons there has occurred in the minds of many persons something of a reaction against the praise that is poured out upon our American scenery. For one thing, we have had the school of poets and prose writers who followed or accompanied Thoreau in setting up what a critic has derisively styled the woodchuck dispensation; as if nature—and nature in Pre-Raphaelite nakedness—were by itself sufficing in verse and prose; as if "artists' materials" were works of art. And long before the day of the woodchuck and the cranberry, we had a school of writers who made American scenery somewhat tiresome to crapulous people by a patriotic insistence on the bigness of our Mammoth Cave in Kentucky, the brighter than European reds and yellows of our autumn foliage, the breadth and height and greenness of Niagara. The painters, too, as well as poets like Mr. A. B. Street, and those like Mr. W. H. Channing and the transcendentalists, have done their full share towards partly wearying mankind for a moment with the natural landscape. How many yellow and red Connecticut Valleys, and Saco Rivers, and Upper Au Sables, and North Conways in Late Autumn, have not the studios turned out—all, we dare say, to be pronounced fine pictures if the spectator knows anything about true landscape art, but which, by reason of their multitude, and their general sameness as regards truth to nature, by-and-by leave him a little tired of the landscape of the United States. Nor is he likely to renew his fondness for it as presented by literary or pictorial artists when he sees the work of that school of art which takes the foreign picture market much as Mr. Joaquin Miller made spoil of the London reading public—namely, by giving it quantities of gorgeous sierras, and Yo Semites, and Niagaras like transformation scenes in a theatre. But let the inclination towards a reactionary feeling only be confronted by some work not thoroughly conventional, or defective in truthfulness, or greatly hackneyed, and it is seen to disappear at once. The article, for instance, called "The Chesapeake Peninsula" in the March *Scribner's,* we think most of our readers will read with pleasure. It is by Mr. G. A. Townsend, a native of the attractive and peculiar region which he describes with a poetical feeling and enjoyment of its peculiarity and beauty. The summer travellers who, after the artists, mainly constitute the class who can compare and describe our varieties of scenery, are shut out by the summer heats and by the exigencies of fashion from the study of the slow rivers, the deep forests, the primitive farmers, the forgotten ancient towns of the Eastern Shore and Delaware; so while everybody who reads the newspapers knows all about Utah, the Yellowstone, the White Mountains and Montreal, no one knows anything of the Chesapeake and Brandywine. We should think Mr. Townsend's description of his "land of serenity and dignity," with its vacation atmosphere of fresh and faded historical memories, of stillness and seclusion, of summer seas, of reasonable prices, and of sufficient dulness, might be of service in calling visitors to a new field of interest and unfatiguing pleasure.

The third of Mr. Charles Dudley Warner's "Back Log Studies" appears in this number of *Scribner's,* and renews and increases the evidence given in his previous performances that we have in him a humorist of real merit. His first work, "My Summer in a Garden," appears to have been begun without much consideration and to have had but little value in its owner's eyes while it was going on. It was first addressed to the indiscriminate audience made up of the subscribers to a local journal of which Mr. Warner is editor, and perhaps the audience made the work a little less good than the writer wished it to be. At all events, we think these papers in *Scribner's* show that he made it a little less good than he might, for in them we have him more elevated and serious and penetrating in thought, yet not less agreeable in his humor. Pleasant reading as "My Summer in a Garden" was, it had now and again the ease of dishabille rather than of grace; and if there was often prettiness enough in the thought, there was not so often weight or energy in it. The "Back Log Studies" would seem to show that Mr. Warner's humorous powers are hereafter likely to be used less after the fashion of the "dry" man or the general joker, of whom every New England township has one or two, and more after the methods of the masters of humor—with a serious purpose, namely, and reinforced by whatever strength character, experience, and attainments can give the writer. For how much this reinforcement will count in the case of Mr. Warner we have scanty means of judging. Neither sense nor acuteness is wanting amid the fun and wit of these "Studies," and though it will not be said that our author "deals many death-blows," he treats of the topics which he has in hand with much more than the magazine writer's usual degree of acceptability.

Other articles in this magazine of which we may say a word are Mrs. M. E. W. Sherwood's "Statistics of Statira"; Mr. D. O'C. Townley's biographical sketch of Mr. William Page and Mr. Albert Bierstadt; and Mr. T. W. Knox's article entitled "That Grand Jury." Mr. Knox was a member of the famous grand jury of the Court of General Sessions which presented indictments against Tweed, Connolly, Hall, Fields, Ingersoll, Nathaniel Sands, and others of the Tammany gang and their accomplices. Mr. Knox's talent, common to him and many other writers in this age of journalism, of being constantly amid all sorts of interesting events and then writing about them in such a way as to tell nobody anything that everybody did not already know, is more in place on this occasion than it has been on most others, for as a grand-juryman he was bound to tell none of the secrets of the jury-room, and he may be said to have told none here. He comes rather too near it, however, we should think. It must be to his "journalistic tact," we imagine, that we owe the invention of magazine articles by a grand-juryman written and printed while yet the indictments presented are pending and in their first stages. We suppose it was never thought of before. Mrs. Sherwood's article is on the old subject. Statira was a servant-girl in the days "when service sweat for duty, not for meed," and she was perfection. She could cook most admirably; nobody equalled her clear starching; she staid forty years in her place, and would have staid longer had she lived; she constantly rebuked the other servants when they sought places at the family table; for wakeful infants her arms were Lethe. She had, in fact, but one great fault—"she never liked strange folks in the kitchen," and do what they would, the young ladies of the household never could persuade her to permit them to assist in making the bread or to learn about starching their things; if ever they made artful efforts to get a little dish-washing or other practical experience of housework, Statira would drive them back to the parlor. This, we should have thought, would have constituted an insuperable objection to her. But it did not, we find, and, as we have said, Statira retained her place for forty years, and then died, deeply regretted by the whole family.

---

[*] Kolb: "Handbuch der vergleichenden Statistik."

We must add, for the information of the sixty thousand and odd girls whom Mrs. Sherwood advises to follow the example of Statira, that Statira began her course by getting herself disappointed in love. She had a lover and was jilted, and it cannot be doubted that this was of great consequence in shaping her after-course. We do not mean to say that Mrs. Sherwood joins us in throwing out this hint. She mentions the fact, however; and, indeed, she is no true American female head of a family if she will not admit that "*anything* is preferable to our present system." Did not Mrs. Stowe, treating of this same question, make a story in which the good American girl goes out to service, and dusts so neatly and waits on the table so efficiently that the son of the house, wealthy, handsome, genteel as possible, weds her before the end of her fourth quarter? We do not know that our hint is more likely to cause "disappointments" than Mrs. Stowe's history; though, as a matter of fact, we have heard of no young girl beguiled by the example of Mrs. Stowe's Mary. Seriously, we think Mrs. Sherwood does very little to advance the discussion. We suspect there are just now few ways of employing one's strength less likely to have visible results than advising American girls to go out to service, and assuring them that if they do we think they will be ever so much happier. They think that they know better; and the question is not so deep and intricate that they probably have failed to get it before them fully and pretty fairly. Happiness has many ingredients, and experience shows that the American-born, American-educated daughter of the American legal voter thinks that a rather precarious life of menial labor, very apt to be too severe for her strength, is not, on the whole, so conducive to happiness as working for the tailors and milliners, or being an assistant in an asylum among lunatics, or being a matron in a hospital or a penitentiary, or binding shoes till some young man asks her to marry him. It is not considered reputable to be a servant, because to be a servant is to be more obviously at the bidding of a superior than if one is engaged in the most exacting drudgery in some business that looks like the "work" of men free to choose. It may not be sensible in the girls to look at the matter in this way; but if we are to have the spirit that "would shake hands with a king upon his throne and think it kindness to his majesty," we are to expect its operation in the kitchen as well as elsewhere. It would seem to be that American girls are too proud to go out to service, and as yet it happens in this country that people with reasonable desires can, as a general thing, have their own way. The wisdom which is forced upon men and women who have to accept what they can in a competitive struggle for life in lands where people live closer and there is little to be had, is not a sort of wisdom for which there has been so much call among us as there by-and-by will be. And, in discussing this question, it is not to be forgotten how very many bad mistresses there are, how shifting are our homes compared with that in which Statira stayed forty years, how trying we allow our wretched children to be, how strong and good-tempered a servant must be to fill well her hard place, how much we have got out of the habit of caring for our servants, and, finally, how honest, faithful, and industrious very many of the servants are. How many of them do more stealing, lying, abusing of children, slighting of work, giving of impudence, betraying of secrets, and other wickedness that we charge upon them, than is done by some of the unrighteous among their accusers?

Mr. Townley's sketch of Mr. Page is marked rather by good intention than by successful characterization of the distinguished artist. But we suppose it would be hard to write many lines together concerning him which would not contain something that his admirers would be glad to read, and to this remark Mr. Townley's article is not an exception. Of particular interest is what the public is here told of a portrait of Shakespeare which Mr. Page is meditating—at which, indeed, he has for some years been intermittently doing something, and upon which he has, during this last year, if Mr. Townley is exactly accurate, been working constantly and hard. This portrait—to call that a portrait which, if Mr. Page will pardon us for saying so, is, in the eye of the law as known to our courts, no portrait, but a picture, to which a man may, if so minded, give the name of Shakespeare—this portrait bids fair to give great pleasure to all professors of the Shakespearian religion. To such, or to many such, it is known that, some years ago, a mask was found in Germany, in some obscure collection, which, after critical examination, has been accepted by many as a mask of Shakespeare, taken at Stratford just after his death. We cannot pretend to give a synopsis of the evidence for and against its authenticity; the authorities of the British Museum declared against its genuineness, we know, or, at any rate, against its purchase; and we know that Mr. Page, on the other hand, has declared in favor of its being veritably the face of Shakespeare. In a course of reasoning which any one can follow, but which it would require a jury of artists and lawyers to appreciate at its precise value, Mr. Page maintains that both the Stratford bust and the Chandos portrait bear the strongest testimony to the genuineness of the German mask. Any sculptor, he asserts, will say that the obvious faults of the bust are exactly the faults which the use of the mask would force upon an honest carver intent on "following copy" but unskilled in his profession. And so of the Chandos portrait; it is the face and head of the original of the mask, but the face and head in hands with certain professional habitudes—habitudes which the eye of an artist can easily see to have been influential in such and such ways. Believing, therefore, that we have in the mask the face of Shakespeare, Mr. Page has procured various photographs of it, and has modelled a head, of which, says some one, it may justly be enquired, "if this is not Shakespeare, who is it, that's all?" To be sure, this is a question which, with an alteration of the inflection, may be asked of any head whatever. Still, the face certainly bears a very striking outward resemblance to the bust and to the Chandos portrait. And this being so, we may confidently expect, even if Professor Owen and the British Museum authorities were right in their scepticism, that Mr. Page will make a picture for which lovers of the poet will applaud the artist. Mr. Page's reverence for Shakespeare and his loving study and intimate knowledge of the poems are all that Shakespearians the most ardent could desire.

In *Lippincott's,* Mr. Whymper is as excellent as ever; but it is in his own especial manner that he is excellent, and in all good faith we warn very nervous readers to avoid the perusal of his escapes from sudden death. Readable, too, and more than commonly so, is Mr. William Black's "Strange Story of a Phaeton," with its three or four cleverly drawn personages. "Love, still love," is Mr. Black's business, as heretofore; but so far as we have observed, there is in this story rather less of refined feminine misery than usually has occupied him, and a rather more undiluted expression of his habit of observation and of his faculty of inventing bright dialogue. "At Home with the Patagonians" is an unpretending and sportsmanlike account of a strange life among South American Indians by Mr. George Chaworth Musters, a young Englishman, whom the ancient British instinct for killing four-footed things possesses not quite in the degree in which Mr. Whymper is possessed by the newer British impulse to climb up to the tops of high mountains at the risk of his own spine and all his other bones, and the bones of the persons tied to him, but still in such a degree that Mr. Musters spends months slaughtering guanacos and eating them among half-naked savages. Like Mr. Whymper's papers, Mr. Musters's are to be continued. Indeed, both are English books.

Other articles in the March *Lippincott's,* which is a good number, are a third instalment of a cleverish anonymous story called "Aytoun"; a second paper on the Philadelphia Art Academy, its treasures and its long history; an argument against trial by jury; a melancholy and somewhat sentimental picture of the struggles of impoverished Virginians engaged in farming; and an account of the celebrated visit to the Crimea made by Catherine Second and Potemkin in 1787. The writer's grandfather was one of the Empress's suite on that occasion, and while all of his story is interesting and entertaining, considering that he was an official personage in an age and country in which a free pen might have brought him to the knout or sent him to Siberia, the part most interesting describes the meeting of Catherine and Joseph Second in a poor man's hut on the banks of the Dnieper, and exhibits Potemkin washing dishes for the improvised meal of their majestics of Russia and Germany while the rest of the courtiers kill the chickens, hunt out eggs, and assist in the cookery. There is also an amusing figure of an old Cossack veteran, a survivor of "dread Pultowa's day," who seems to have had in its integrity the survivor's and veteran's genius for history. He had been no more than a private soldier in Peter's army, to which, indeed, he had deserted from the Swedish only on the morning of the battle, and at the time of Catherine's interview with him the old gentleman was ninety-eight years of age and considerably the worse for liquor; but "he knew exactly and could always tell where stood the Czar at the different points of the battle; where he sat, where he galloped, and where and when he issued his orders to the Russian generals. 'Here he watched the Swedes; here he galloped up to the guns; here he drove the enemy out of the field.'" Some thoughts of his latter end, or his failure to get a sufficiently steady supply of brandy, made old Mr. Borovivoffski's contributions to history less minute than they otherwise might have been, and "he could not always point out the exact positions of the different regiments of both belligerent armies."

The *Catholic World* has for its most interesting paper a translation of Monseigneur Dupanloup's letter to M. Gambetta after the ex-dictator's delivery of a speech in which he attacked the clergy as teachers, and proposed that education should be compulsory, should be paid for by the state, and should be controlled by laymen—doctrines which the bishop pronounces tyrannical and opposed to the principles of liberty which M. Gambetta and his followers proclaim. M. Gambetta's "liberty," however, has always meant the liberty of the majority to consent that M. Gambetta and his minority shall rule the whole people for the people's good; and that this is precisely what the term meant to his mind he gave a sufficiently luminous and conspicuous demonstration in 1870. It is a theory of government not so very different, perhaps, from that which Monseigneur Dupanloup holds, though M. Gambetta baptizes it with another name than the bishop would give it. The letter is a very good specimen of sharp controversial attack—perhaps, like most such things, a better specimen of successful controversial attack than of thorough-going dealing with the subject in controversy. To find disputants boldly joining issue on the real question and disdaining petty advantages, is still one of the rare things in this world. Thus, Gambetta having said that the Romish Church is an enemy to the "education" of the people, Bishop Dupanloup thus makes reply to him: "As to the church, she is founded on two things—a book, the Gospel, and a divine command, *Ite et docete,* go and teach. This sentence, which has become commonplace, 'Ignorance is the source of all evils,' was uttered by a Pope, and he added besides, 'particularly among the working-classes.' These were the words of Benedict XIV., uttered more than a century before you were born."

Another article that the general reader may wish to see is an indignant article in which attention is called to the fact that *Harper's Weekly* was not an actively loyal Republican journal between December, 1860, and the end of May, 1861, but, on the contrary, was very civil to the late Confederacy, and spoke far more respectfully of Jefferson Davis and the rebel constitution than of Mr. Lincoln, whom it caricatured, and of the Northern prospects of success, which it thought bad. The proprietors of the paper attacked will not much like to look over the record which the magazine makes for them; they may, however, for one thing, put in a plea—which too many publishers and editors think a sound one—that a newspaper is bound to reflect, or does its whole duty when it reflects, what it deems to be the public opinion of its constituency, and that it may therefore change suddenly from one opinion to another and contradictory opinion. Further, they could point to many eminent men, of a responsibility greater than theirs, who in the winter of 1860 and 1861 gave, and gave honestly, a very uncertain sound as to the right policy to be pursued in regard to secession. We are apt to forget those winter months. The *Weekly* said in its way, be the same coarse or the reverse, what each in his way many a politician, statesman, and editor was at that time saying. The continuity of a newspaper's life is another problem which this article suggests, and how far it is fair or profitable to charge inconsistency upon a paper which ten or twelve years ago was in one set of hands and to-day is in quite another. As to the matter which has provoked the *Catholic World's* natural irritation—the caricatures which Mr. Nast and some other artists have been allowed to direct against the Pope, Archbishop Manning, and the nominal Roman Catholics who are so largely responsible for the disgrace of this city—we suppose, leaving the question of good taste apart, that the pictures respond to a popular belief and feeling which is very widespread; and the *Catholic World* may doubtless better fight against it in some other way than by even the ablest and most conclusive arraignment of anybody's motives, past or present.

Aubrey de Vere has some verses in this month's *Catholic World* which readers who like that gentleman's verses in general, but have not been able to like most of those which he has latterly put in print, will be pleased to see. Perhaps they translate an Erse original, perhaps they paraphrase a legendary story, or they may be Mr. De Vere's wholly and solely; we do not know. Oisin the Bard, whose mother was "a princess turned by magic to a milk-white doe," sits in his old age thinking of his youthful prowess, of his songs, and of the dead companions, now all gone, and will not listen when Saint Patrick preaches to him the new religion. His thoughts are all with the pagan past and the old days. The Saint calls him to the true faith, and Oisin recalls the memory of Fionn the King and the ancient battles:

> "A shield I bore so charged and stored
>   With rage and yearnings for the fight,
> When foes drew near it shook and roared
>   Like breakers in the night.
>
> "Then only when the iron feast
>   Of war its hungry heart had stilled,
> It murmured like a whispering priest
>   Or frothing pail new filled."

The verses have much of the fire and pathos and music that might be expected in Oisin the Bard; and some metaphors, too, are bold enough and unhappy enough to leave no doubt of their being Irish, and are Oisin's, we trust.

We almost always read first the critical notices in the *Atlantic,* and next look at the poetry, before going to the solider articles in the body of the magazine, and we do not know that we should recommend the reader to depart from this course in the case of the March number. The fresh and pleasant criticism engages attention as usual and starts the reader fairly, and the verses need not detain any one for any great length of time from any article that he meditates studying. The poets are Longfellow, Holmes, Whittier, Miss Perry, Mrs. Thaxter, and Mr. W. W. Harney, and all are pleasing, though we cannot say that Mr. Harney is as good as the others. Among the prose articles are a story by Mr. Bret Harte, a long chapter out of Jefferson's life by Mr. Parton, an essay by Mr. George M. Towle on our consular service, more "Diversions of the Echo Club," more of "The Poet at the Breakfast Table," more of Mr. De Mille's story, more of Hawthorne's romance, and an essay on spiritism or Spiritualism, by Mr. Henry James. Doctor Johnson commended somebody for hating "a *cui bono* man," but if he had had a large enough experience of the mediums and the modern Spiritualists, and had read their piles of dubious evidence leading to unvaluable conclusions, he would have been ready to allow that the *cui bono* man, also, has a place in heaven's scheme. Mr. James passes decided and radical though mildly phrased condemnation upon Mr. Robert Dale Owen's recent book and the doctrines contained in it, and then gives an exposition of what it is which alone truly merits to be called spiritual. The reader will find it well to contemplate Mr. James's ideas, and will find in them much to be cherished, but we attempt no presentation of them here. We let it suffice to say that doubtless there are not many among the "eleven millions" of Spiritualists asserted to inhabit the United States who would derive much intellectual pleasure or spiritual illumination from the essay.

"Our Consular Service" is an essay which really is an infliction that ought not to be endured without a word of protest; and we are much in doubt if the same thing is not to be said about "The Echo Club." The airy dialogue, the lifelikeness of the characters, the easy beer, the verses—all together are wonderful; they are like the Yankee skipper's dull sailing schooner, which had so much wood aboard that she was "eenamost too much for him."

The most amusing article in the *Atlantic*—Mr. Harte's story having, so to speak, more family likeness than individual personal appearance—is Dr. Palmer's sketch of the life of the average Hindoo girl of the Brahmin caste. We take it to be instructive, too, if any one likes to take the trouble to recollect it. As here, for instance, in a passage from a work called "How to Tickle the Bear," the same being a book of directions by which wives in India are understood to govern their conjugal conduct: "Her husband may be crooked, old, infirm, offensive in his manner, choleric, dissipated, a sot, a gambler, a debauchee, reckless of his domestic affairs, restless as a demon, destitute of honor, deaf and blind; his crimes and his infirmities may crush him; yet shall his wife regard him as her God, serve him in all things, detect no defect in him, nor cause him any disquiet." We are informed that, in consequence of these and similar teachings of "How to Tickle the Bear," Hindoo divorces are seldom occasioned by any lack of complaisance on the part of the husband or wife, but usually by the fury of the mother-in-law.

In *Harper's* we find the usual variety of articles, all within the usual range as regards interest which this magazine allows itself in its stories and illustrated articles, and, besides, some essay-writing more than usually interesting in the Editor's Easy Chair. Mr. Curtis's topics this month are the death of Fisk, and our habit of allowing the death of men who have been public enemies so to influence our speech concerning them as to make us in a sense their accessories; the artistic ability of Wachtel, the German singer; the poetic merit of Mr. Longfellow's "Divine Tragedy," which Mr. Curtis considers the best poem yet produced in America; and, finally, a letter containing some kind but not undeserved though unqualified praise of the magazine and of the "Easy Chair" essays. Like much of the "Easy Chair's" own criticism, this criticising letter is better than most criticism in this respect at least—that, to the pleasure which good writers cause their readers, to the sense of enjoyment to which all good writers minister, and to the gratitude which the enjoyment inspires, it gives fuller expression than it gives to that craving for the ideally good which it is the best privilege and highest duty of writers to create, or to quicken and strengthen.

Of the articles in the body of the magazine we have found the one entitled "Negro Life in Jamaica" as readable as any. It preserves a few examples of the proverbial wisdom of the negroes in Jamaica, where, says the author, all the inhabitants are a better sort of Tuppers, as indeed one may say generally of most peoples among whom the half wisdom of proverbs has for a background the darkness of illiteracy instead of the brightness of an enlightment which displays them in their true character.

"Man talk too much him pay him fadder debt," is the negro's way of saying that by too free a use of the tongue people find that they have imposed upon themselves needless burdens and obligations. "Sarbice ober, church door lock" is Jamaican for the truth that the Monday influence of religion is apt to be less than its influence on Sunday. "Greedy choke puppy," and "A pound of fretment won't pay an ounce of debtment," are sayings directed against avarice and vain regret, or avarice and unfruitful repentance.

The illustrated papers are six in number, one of them being a part of Mr. Anthony Trollope's new story, or rather old story with French scenery; and there is a couple of love stories, "Gottfried's Success" and "Star and Candle;" they might lead one to reflections on the love story which looks to the natural relation of man and woman, and the love story with which natural and healthy sentiment has nothing to do, and which is indicative of diseased conditions.

Mr. Jeremiah S. Black and the author of the article about President Tyler and his troubles do the most readable writing in the March *Galaxy*, and together with Mr. De Forest and the author of "Fifteen Years a Shakeress," make the magazine worth reading. General Custer's "Life on the Plains" also is better this month than it has been before, and will help to establish what we believe to be the fact that, bad as the frontiersmen may be in their treatment of the Indians, neither they nor the army are so much to blame for our incessant fighting on the Plains as the Indian Ring with its Congressional managers and subordinate agents. Compared with these men simple thieves like ours in this city are comparatively respectable, for the Indian Ring preys at once upon the government and the ignorant wretches of Indians, and at the same time incites the Indian to atrocities which it gives him the means of committing. There is little doubt that Congressmen and Indian agents could be named who are to-day rich in money that they got first by cheating Indians out of lands and stores, and then selling them weapons and ammunition with which to revenge upon innocent settlers the wrongs received from the ring.

Mr. Black's article is in effect an arraignment of the New York legal Code of Procedure as the worst code known to civilization; a defence of David Dudley Field & Company for their action in the Erie suits; a violent and apparently damaging assault upon Mr. Ramsey, with whom Fisk and Gould fought for the possession of the Albany and Susquehanna Railroad; an excoriation of Judge Darwin Smith for evolving law from his own breast; and a charge against Mr. C. F. Adams, jr., of being so good a hater of Fisk and Gould as to have lost sight of the merits of the case in which they and Ramsey were involved. Mr. Adams is able to take care of himself in affairs of this sort, and a yardarm-and-yardarm engagement between him and Mr. Black might blow the latter out of the water; meantime, we can assure the reader that he will find Mr. Black's article a great deal more lively than most writings of fiction, and that, if we do not say that he has a pretty clear case in his favor as against Mr. Ramsey and most of the other gentlemen who are passed in review, it is only because we do not know what Mr. Adams may have to say in reply.

The Tyler article is full of anecdote, Webster, Clay, Cushing, John Quincy Adams, Mr. Schenck, and others figuring in the writer's recollections, and there being also some opportune wise saws about the re-elections of presidents which should interest all the postmasters in the country—"a purblind race of miserable men," however, whom only elections enlighten.

The Land of the Veda: Being Personal Reminiscences of India—its People, Castes, Thugs, and Fakirs; its Religions, Mythology, Principal Monuments, Palaces, and Mausoleums; together with the incidents of the great Sepoy Rebellion, and its results to Christianity and civilization. With a map of India, and 42 illustrations, also statistical tables of Christian missions, and a glossary of Indian terms used in this work and in missionary correspondence. By Rev. William Butler, D.D. (New York: Carlton & Lanahan. 1872.)—It might seem, at first, as if the whole available space in a volume of five hundred and fifty pages would be necessary for anything like a satisfactory treatment of the various topics which this title-page suggests. And it would not have been surprising if, in the attempt to make a really valuable presentation of any one of these topics, the book should have given evidence of careful and studious research and of laborious condensation. When one discovers that, on the contrary, the author's style is slovenly and diffuse, his arrangement of material disorderly, and his treatment of it superficial, there begins to rise within the critical and carnal heart a feeling of resentment. A religious earnestness which is no doubt sincere, a piety which is constant and demonstrative in its expression, can hardly compensate the average reader for the lack of method, of thoroughness, and of elegance by which the book is disfigured. Especially when the author is found going out of his way to have his little dig at the poor Pope, one feels that this is not the kind of thing that should be looked for in "The Land of the Veda." And it is only when we discover that a clergyman bearing the author's name is just now an officer of an American Anti-Popery Society that we find, in the possible identity of the two, an explanation of such intense and inappropriate Protestantism.

Dr. Butler arrived in India as a missionary of the Methodist Episcopal Church just before the Sepoy mutiny of 1857, and almost before he had commenced his labors (the scene of which was to be in the Kingdom of Oude and the province of Rohilcund), he was obliged to flee for his life into a little mountain village of the Himalayas. Here he remained with his family cut off from the outside world, and given up for dead by friends and kindred, until, after the capture of Lucknow and the pacification of that region, he was able to emerge with safety and recommence his missionary work. It is not surprising that he should have resumed that work with an energy and zeal to which his enforced idleness and his great perils had given increased intensity. And certainly he seems to have met with noteworthy success; so that the missions of the Methodist Episcopal Church in India, organized and superintended in a large measure by himself, present an array of statistics which he tabulates in his first appendix with pardonable satisfaction, and which he contrasts with the statistics of Roman Catholic missions in a way calculated to give very great displeasure to the Jesuits in disguise whose machinations he exposes on page 539. Naturally, Dr. Butler dwells with special emphasis and at disproportionate length on his own personal experiences and on the progress of his own professional labors. And, consequently, the title of the book, which might lead one to expect to find in it a thesaurus of information concerning "The Land of the Veda," is misleading, unless the subordinate title, which makes it to be a volume of personal reminiscence, is taken in connection with it. But, even then, the trouble is that it is neither a book of orderly and carefully collected information, such as Williams's "Middle Kingdom," for example, gives us with regard to China, nor a book of more or less superficial and entertaining travel, such as Mr. Bayard Taylor, for example, used to write, but a confused combination of the two, lacking both the value of the one and the vivacity of the other. We have noted, however, an occasional passage in which the author is unconsciously enlivening; as when arriving at the Himalayan village before mentioned, he entered his hired house, and records as follows (page 245): "We laid our weary little ones to rest in our new and strange home, not knowing how long or how short we should be able to occupy it." Naturally, in the hurry of sudden flight the fugitives could not provide themselves with everything; and probably such a thing as a tape-measure was not to be found among their available baggage.

Another passage not destitute of the same kind of interest deserves to be quoted entire. The author had the privilege of visiting the captive Emperor of Delhi while he was waiting in his prison for his trial and condemnation. He adds (page 424):

> "A day or two previous, my friend, Rev. J. S. Woodside, missionary of the American Presbyterian Church, was here. He went to see the Emperor, and took the opportunity of conversing with him about Christianity. The old man assented to the general excellence of the Gospel, but stoutly declared that it was abrogated by the Koran—as Moses and the law were abolished by Christ and the Gospel—so, he argued, Mohammed and the Koran had superseded Christ and every previous revelation. Brother Woodside calmly but firmly told him that, so far from this being the case, Mohammed was an impostor and the Koran a lie; and that unless he repented and believed in Christ, and Christ alone, without doubt he must perish in his sins. He then proceeded to enforce upon his bigoted hearer the only Gospel sermon which he had ever heard. And Brother Woodside was the very man to utter it. Was not his church entitled to that privilege by the sacrifice of the precious lives of four of their missionaries at Futtyghur, as mentioned on page 151?"

Of course we must make large allowance for the vindictiveness which is inevitable even to men of devout and heroic Christian spirit when they have been through scenes like those of the Sepoy mutiny. And it is no disparagement to the excellence of the brother who "calmly but firmly" administered to the captive Emperor (undoubtedly a miserable sinner) the discourse which is here commended, if we call attention to the singular law of compensation under which he earned the right to preach it. Of the good work which Christian missionaries are accomplishing in India there is abundant evidence. But the volume before us suggests that an occasional admonition, both with regard to the good grammar and with regard to the good taste of the earnest and useful men who write the records of that work, is not unnecessary.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—*	*Prices.*
Baynes (H. S.), Horæ Lucanæ	(J. B. Lippincott & Co.)	
Buddington (Mrs. Z. B.), Can the Old Love?	(J. R. Osgood & Co.)	
Baring-Gould (Rev. S.), Legends of the Patriarchs and Prophets	(Holt & Williams)	$2 00
" " "	(Macmillan & Co.)	2 00
Collins (W.), Poor Miss Finch	(Harper & Bros.)	1 50
Dickens (C.), Barnaby Rudge; Mystery of Edwin Drood	(D. Appleton & Co.)	
Dumas (A., fils), La Princesse Georges	(F. W. Christern)	
De Vere (Prof. M. S.), Leaves from the Book of Nature	(G. P. Putnam & Sons)	1 50

Educational Year-Book, 1872	(A. S. Barnes & Co.)	
Froude (J. A.), Short Studies on Great Subjects, 2d series, pop. ed.	(C. Scribner & Co.)	
Guernsey (Lucy E.), Lady Betty's Governess	(T. Whittaker)	
"H. H.," Bits of Travel	(J. R. Osgood & Co)	$1 50
Holland (Sir H), Recollections of Past Life	(D. Appleton & Co.)	
Holmes (Rev. A.), Demosthenes, with English Notes	(John Allyn)

Fine Arts.

FIFTH ANNUAL EXHIBITION OF THE WATER-COLOR SOCIETY.

SECOND NOTICE.

THERE are but few figure-subjects in the present exhibition, and of these few only one is particularly worthy of notice. This is Mr. Jas. D. Linton's "Reproof," No. 269, which, though we cannot help charging it with affectation in the general treatment, gives proof of considerable skill in the management of materials and, what is of far greater importance, of power to tell a simple story directly and to translate human expression with naturalness. A lady in the costume of the fourteenth century is reproving her little daughter for having attempted to eat a green apple. The child puts a rebellious finger in her mouth, but will soon be reconciled, and fall to play again with her big doll and her Noah's ark. This everyday incident has sufficed Mr. Linton for a very pretty picture, the only fault we have to find with it being that the hazy veil he has thrown over the whole drawing, and which makes the figure of the child in the immediate foreground almost as indistinct as the garden-wall that shuts in the background, hardly deserves to be looked upon as anything but affectation. For, surely, the artist who could paint the lady's gown, and the pearls about her neck, or her vain head-dress, with its soft-falling veil, to say nothing of her face, knows well enough, without our telling him, that the different planes of his picture are not in true relation to each other. The result of the indulgence of his whim is, that a really strong piece of work is made to look as if it were weak. This is perhaps a better state of things than the contrary, to which we are so often treated; but, on the whole, it is best that things should be what they seem.

Mrs. Elizabeth Murray's "Dalmatian Peasant," No. 210, is drawn with considerable spirit, and colored with force, but neither the spirit nor the force has much wear in it. This is tricky, theatrical work, and the lady has power to do better. We see in her drawings, and in those of her countrymen, Mr. D. Fowler, Mr. C. S. Millard, Mr. G. A. Gilbert, a mannerism, the result of a teaching which we earnestly hope will not come to be followed here in America. There is great danger that this way of working may make too much impression upon our young artists, for, at first glance, it seems to have just the dash and boldness that they lack; but the truth is that this dash and boldness are not real, and what apparent force they have is gained by the sacrifice of true, fixed, and resting qualities. The school in which these artists have studied is the one which teaches that in painting or drawing any object there is "a way to do it"; it is the school of recipes, of labor-saving methods; and as, in true art, there is no such thing as recipe or saving of labor, we do not like to contemplate the introduction among us of teaching to the contrary. The English themselves have had a tough fight to get rid of this very doctrine and practice, and have at last got well rid of it. We hope to see our water-color school built up on other foundations—the only foundation that will never fail, the independent, individual study of nature; each man and woman, as far as may be, looking at nature through the eyes that God has given him or her.

Of the artists that we have just named, Mr. D. Fowler seems to us by far the most original and the nearest to nature. His "Dead Duck," No. 301, the "Group of Birds," No. 400, and the "Blue Jay," No. 392, are clever drawings, and the various flower subjects in the East Room, Nos. 380, 386, 387, 402, are drawn with as much resemblance to nature as a man can give who insists on looking at nature by rule. We believe that Mr. Fowler's drawings in this exhibition outnumber those of any other artist, and any one who will look at them all, one after the other, will see that the artist has a clearly-defined method and sticks to it closely. The trouble is that his method is purely artificial, and the result is as unsatisfactory as might be predicted; we soon tire of work that betrays a complete surrender of the artist's individuality. The work both of Mr. Gilbert and of Mr. Millard is open to the same objection.

Two artists in the present exibition among the landscape painters (whose works, as might have been expected in any collection of American pictures, make up the great majority) deserve our tribute of warm admiration, and will repay the closest study—Mr. J. W. Hill and Mr. W. T. Richards. Mr. Hill has two landscapes—"On the Nyack Turnpike, N. Y.," No. 209, and "View from Gallows Hill, Conn.," No. 302. They are both fine drawings, but the latter is the more perfect composition, and is on the whole, we think, the best drawing in the exhibition. Indeed, compared with it there is no other drawing in the exhibition to which the term "masterly" can be applied. In this there is mastery of color, mastery of form, mastery of composition; and the result is full of the delight that such mastery brings to the eye and mind of him who can enter into sympathy with it. And the enduring charm of such work is, that the study of it first raises the mind to comprehend it, and afterward feeds the mind it has educated; for a true reflection of nature never ceases to give pleasure. Mr. Hill's work is the most perfect illustration that we can give of what we mean by individual study. It resembles no other work, and for the very simple reason that the artist, through the latter years of a long life, has devoted himself to the study of nature with a persistent energy which nothing but genuine love for her and love of his art could sustain. Whoever will study this drawing, No. 302—it is the better hung of the two, and can be perfectly seen—will find that we have not overrated it. The beauty of the lines, the glowing color—a glow secured without o'erstepping the modesty of nature, the knowledge shown in the management of the forms of the ground and in the perspective, these make this small bit of paper a window through which we have glimpses of that light that never was on sea or shore, the consecration and the poet's dream.

Mr. W. T. Richards has six drawings in the present exhibition, and there is danger that their sameness of tone may make a careless visitor think them all alike. But, in truth, beyond the fact that they are all made upon a certain sad-colored paper, and that they are all drawings of coast scenery, there is no likeness between them. Every one is a separate study, with its own effects and its own incidents, and, to tell the truth, it is the first time that an American artist has treated the sea-shore with such fidelity and such poetry. In these drawings Mr. Richards—as Mr. Hill in his—reaps the long harvest of his faithful toil. Work like this would be impossible to any man who had not served a laborious and earnest apprenticeship to nature, and those who, like ourselves, have watched Mr. Richards from the beginning of his career, know well that he has served this apprenticeship. We have never seen a picture or a drawing from this artist's hand that did not say in quiet tones, "This is my best." There has been danger, we have thought at times, that in the striving for precision and in the patient elaboration of detail, the spirit of the earth and sky might elude the artist's endeavor to fix it on his canvas; and we have often thought, in looking at some of his earlier pictures, that this danger had not been wholly avoided. But even when this was the case, there were the evidences of an earnest striving for truth, and of a willingness to be patient, that made it impossible to look at the result of his labor without respectful interest. And now we have his latest work, in which we see all the observation, so sharpened by practice, and all the skill gained by the industry of years brought to the service of a poetic insight that few of our artists have shown. The four drawings in the North Room are the best in our judgment, and of these four it is difficult to say which shows the finest insight into nature, or the most delicate skill in revealing what his companionship with her has taught him. In the three drawings numbered 206, 213, and 320, the skies are given with such beauty as we think every one who has ever been moved by the beauty of clouds will recognize; but the beauty of the water is given with no less completeness. It is not to be intolerant to say that whoever finds such work as this or that of Mr. Hill uninteresting, or weak, or monotonous, betrays that he cannot have lived with nature, but must have learned to try the artist by an artificial standard—by comparison of his methods, the pure results of an attempt to translate his individual experience, with those taught in the schools of recipe and convention.

We have left ourselves small space in which to speak of other drawings in the exhibition that deserve to be noticed. Mr. Samuel Colman is little less artificial and mannered than he has always been, and he seems more than ever confirmed in his theory that sunshine, rightly seen, is the color of brick-dust. Spain, the Rocky Mountains, France, and the Tappan Zee, all have the same atmosphere, since Mr. Colman wills it so. Mr. James D. Smillie, too, with the same sort of technical skill that an old, experienced drawing-teacher might show, has fallen into a mannerism which will be fatal to all healthy growth if not resolutely shaken off. Mr. Smillie probably knows as well as we do that the rocks he professes to give, as in Nos. 300 and 307, are not like the rocks in nature, except in their general form. These are rocks as we were taught to draw them in our salad days by Hubert and Calame, in those *études à deux crayons* that promised us such an easy conquest of nature.

There are several specimens in the exhibition of the work of certain Englishmen whose names are famous—S. Prout, P. De Wint, and David Roberts—but we will not discourse of them, only look and pass on. It is worth noting, however, how little our art has been influenced by Englishmen; it is a fact, we think, that deserves to be regretted

The Nation.

NEW YORK, THURSDAY, MARCH 7, 1872.

The Week.

THE Senate investigation into the French arms affair has been ordered, though, by a scandalous piece of trickery, the committee was so elected as to exclude Mr. Schurz or any one sharing his views. The investigation might, we need hardly say, have been assented to without any debate whatever, as it was in the House. Nothing has been gained for the Administration by Messrs. Conkling and Morton's fierce resistance. If there is nothing to be found out, of course nobody will suffer from it but Mephistopheles Schurz and Simpleton Sumner. Whether there is anything to find out or not we do not know, but there is no denying that there is "probable cause" for enquiry, and that the Senate is the proper body to make it. To its charges against Mr. Schurz (still without a particle of proof), the Administration organ this week adds that he is "a man without a shred of conscience in his composition." We hope it will explain to us, before long, how it happens that Schurz is at large. With his character as the *Times* describes it, he must have committed many penitentiary offences in various States.

One result of the length of time the Senate has devoted to discussing whether there should be an investigation into the arms affair or not is that the coffee and tea trade are, and have been for several weeks, completely paralyzed. The House has passed a bill repealing the duty on these articles, but the Senate neglects to act on it. The consequence is that the trade in them has been brought to a complete standstill, nobody knowing what to pay or what to ask for them, and the loss caused is of course very great. We have not had of late a more striking illustration both of the power of effecting sudden changes in the value of property which the tariff puts into the hands of the legislature, and of the recklessness with which this power is used.

We may be permitted to observe that *Harper's Weekly*, which defends the President in a way which ought to be a model to the New York *Times*, confines itself too much either to a general assertion of the goodness of his intentions or to denials of his personal complicity with corruption, and too frequently, for instance, refutes such charges as that about his investment in the Seneca Stone Company. Now we sincerely believe that there are not one hundred men in the country on whom the charges of personal dishonesty, or personal connivance at dishonesty, or "gift-taking," or jobbing investments, have made much if any impression. In fighting these charges, his defenders are fighting shadows. The questions which candid men, who have no prejudices against him and no personal ends to serve either by opposing or supporting him, would like to have answered, are these—and if *Harper's Weekly* will answer them frankly and fairly, it will either do him or the public a great service: Why did he appoint such a man as Sickles minister to Spain? Why did he select new judges to the Supreme Court with special reference to their opinions on a question already *sub judice*, or, in other words, pack the court to procure a judgment on a question of property favorable to his own views of political expediency? Why has he kept and does he still keep a man like Casey in the New Orleans Custom-house, in spite of gross and notorious misconduct, and this man his brother-in-law? Why does he keep a man like Kramer minister to Denmark, in spite of his recent display of incompetency and misconduct, and this man also his brother-in-law? Why did he appoint to the New York and Philadelphia collectorship, when meditating a great measure of civil-service reform, two persons who were notoriously opposed to civil-service reform, and one of whom was, at the time of his appointment, actually engaged in denouncing it in his paper? Why did he appoint a man like George H. Butler consul-general in Egypt? Supposing him to have been deceived in Butler's character, how is it that a year after Butler's abominations have been exposed he is still retained in office? Supposing the President to have innocently given Leet the letter of introduction to Mr. Grinnell, which we believe he did, how is it that on discovery how Leet had abused it he did not insist on his removal? How is it that, one year after Leet's misconduct had been exposed by a Congressional committee, he still remained in office, and that it took a second investigation and exposure to make his removal even talked of? We might multiply these questions, if necessary, but satisfactory answers to these would break the back of the opposition. It is these things, and not the miserable stories about his investments, and his cigars and horses, which affect the public mind, and they are not met by abuse of Schurz or representations that Charles Sumner is playing the part of a wretched dupe in Schurz's cunning hands.

It is said, and said with a great deal of force, that even if the President's shortcomings in the matter of selecting his subordinates and advisers be admitted, it is more than atoned for by the success of the Administration in the higher fields of statesmanship, such as its foreign and financial policy. We have no desire to belittle what it has accomplished in these fields, but we must remind its champions that Administrative reform, the suppression of corruption and jobbing among office-holders, is the great question of the day, and the one which most nearly affects the highest interests of the nation. We can live and prosper in enmity with England and with the payment of the debt postponed for twenty years, but unless we can reduce the number of thieves and peculators in office, and restore the purity of the courts and respect for the law, something very unpleasant will happen us. People feel this, and for reasons we need not enumerate, just now more than ever before.

General Porter has been examined at Washington before the Senate Investigating Committee on the New York Custom-house abuses as to Leet's connection with the President and himself, but his testimony, as far as it goes, is, as it was last year, favorable to General Grant. He testifies, as he testified before, that the President was unwilling that Leet should go into the Custom-house, and that he, by the President's direction, informed Leet of this fact. He also produced letters of Mr. Grinnell and Mr. Embree acquitting him (General Porter) in the strongest terms of all share in Custom-house contracts or business of any kind, and he explained satisfactorily enough the nature of "the mess," about which such a dark cloud was thrown by some of the New York evidence. He also produced a letter he himself wrote to Murphy when the latter was appointed collector, warning him not to pay any attention to persons seeking offices in the Custom-house and representing themselves as favored or protected by the President or by himself. The *Tribune* says General Porter's slow way of answering and manner generally produced an unpleasant impression on the audience, while the *Times* declares that during the whole of it "the faces of the newspaper slanderers of the President wore a very blank expression."

The news from New Hampshire is of the usual conflicting kind, but we shall refrain from prophecies or calculations. Whichever side wins, the majority is sure to be small; its effect on the Presidential nomination will probably be very marked, particularly if Connecticut should follow in the same direction, though its value as an indication of the probable result of the Presidential election itself may fairly be doubted. All State victories now will tell in favor of Grant; all defeats will tell against him, though not necessarily against the party under somebody else.

Taking the quotation of Mr. Forney's remarks in the Washington *Chronicle* in 1868, about the one-term principle and General Grant, from the *Tribune*, we were led into the error into which the *Tribune* fell itself of attributing to him, through a misplacement of quotation marks, a sentence which was that of the *Tribune* correspondent, viz., that "General Grant not only desired to remain President for two terms, but it was only on the assurance of his friends that he should be re-elected that he accepted the office at all." There was no such formal assurance given, it appears, but Mr. Forney's object in reproducing the story of General Grant's objecting to give up his position in the army unless he could have two terms, is doubtless to produce the impression that, unless he is now renominated, he will not be fairly dealt with. But then, what becomes of Mr. Forney's assertion in 1868 that General Grant "was in favor of a one-term amendment to the Constitution, that the party which supported General Grant supported it, and that, above all else, public morality required it"?

There is probably nothing in the history of the South Carolina carpet-baggers more impudent and amusing than the recent hearty endorsement of the Administration, and particularly of its financial policy, in their State Convention. That the rogues should have selected this particular feature for their approval shows that they at least know what is right, though they pursue what is wrong. There is one sorry wag amongst them, too—the President of the Senate we believe he is—who has sent in his hearty adherence to the female-suffrage movement. One of the curious things about the movement is the attractions it has for politicians of doubtful virtue. Whenever you come across a gentleman of the radical school, of somewhat damaged reputation, you may be sure he has got rid of all doubts as to the rightfulness and expediency of giving woman the franchise, and is looking round for a convention or other gathering at which he may announce his conversion. All this class has the same love of the byways of politics that tramps have for lanes and for farm-houses where the men are all away from home. It is touching, too, though a little sad, to see the joyous way in which the women welcome the old tatterdemalions to their platform, put a stitch in their rags, lend them a piece of soap, and listen to their "moral" yarns. Another comical endorsement of the Administration has come from Governor Holden, late of North Carolina, his official connection with that State having been severed by impeachment, and not undeserved impeachment either. He recommends General Grant to the suffrages of a free people. We are much obliged to him. We wonder what Mr. Holden's opinion is as to his own fitness for the governorship of a Territory. But the most amusing thing of all is the delivery in the Senate of a eulogy on the New York Custom-house by Mr. Harlan. We have given already in the *Nation* a sketch of Mr. Harlan's own career, which we are afraid would, even among custom-house inspectors, be considered disreputable.

Mr. Niles G. Parker, State Treasurer for South Carolina, has been much troubled by a statement in the minority report of the Congressional Committee that the sum of $1,208,577 67 had been paid out by him for which he held no vouchers. In reply to this, he cites the reports of two committees of the South Carolina Legislature, which on two different occasions examined his books and accounts, and the manner of doing business in his office, and reported them all to be in perfect order. The origin of this report, he says, was that, when one of the committees made its investigation, the above sum had been paid out in interest on the public debt, and in remittances to Kempton, the State agent in New York, and the vouchers had not come in in time to be submitted on that occasion, and the committee was consequently obliged to mark the absence of the vouchers in their tabular statement; but on a subsequent occasion they were submitted, and were pronounced in every way satisfactory. This is all very well as far as it goes, but we must remind Mr. Parker and remind the public that a report of a committee of the South Carolina Legislature on Parker's accounts has and is entitled to about the same weight as the report of a committee of the New York Common Council of last year on the accounts of Richard B. Connolly or William M. Tweed. No other person or committee has ever been satisfied either with Parker's accounts or his way of doing business, and, indeed, there could hardly be a more striking illustration of the demoralization of the government in South Carolina than the serious production, as auditors, of a company of the thieving rascals who compose the Legislature. The majority of the Congressional Committee report that they applied to Parker for an account of the condition of the State finances, but could get no reply from him.

The last revelation of corruption comes from Kansas, and it is very savory. The story begins in 1866, when Mr. S. C. Pomeroy, one of the present senators who figured among the incorruptibles at the Impeachment trial, was endeavoring to secure his election to the Senate, and one Mr. Sydney Clarke was endeavoring to secure his election to the House. So they hired a Lawrence editor, named Reynolds, to support them, or, as they euphemistically called it, "to advance Republicanism in Kansas and to secure a Republican victory." The price they paid the good man was one thousand dollars in cash, and their joint note for two thousand more. Pomeroy paid two hundred and fifty dollars more on account, but when the note fell due the balance was not forthcoming, and the enraged editor took them into court, where they "cutely" and successfully pleaded that the transaction was against public policy. He took them up to the Court of Appeals, but here, weary of war, as the French say, they determined to "settle" with him, and did "settle" with him by getting him a position as Register of the Land Office. This was very well for 1866. In 1871, the "corruptionists" went to work upon a large scale. This time Clarke was a candidate for the Senate, and he had a rival named Caldwell. Caldwell began his canvass by hiring eighty rooms in a hotel at the State capital. He hired another suite of rooms in another building, in which he opened a free lunch and bar, and this latter establishment was popularly known as a "soup house." These little arrangements made, he proceeded to buy up the legislators as if they were mules. To many he gave sums of money; to others promises of offices; to one he promised a post-office then held by a soldier's widow; upon the Kansas Pacific Railroad he attempted to levy thirty thousand dollars as blackmail, or, euphemistically, in consideration of his giving the road his support in the Senate. Of this he got ten thousand, but the company repudiated its promise to pay the rest. He also tried to bribe Clarke to withdraw in his favor, but Clarke refused, and, to do him justice, it must be said that he was himself bribing away like clockwork. This is disgusting, is it not? But perhaps it is a newspaper story. Not at all. It is the unanimous report of a joint committee of both Houses of the Kansas Legislature; and yet Kansas is the most Republican of States.

The Messrs. Naylor, the great iron house, who made a conspicuous figure in testifying against the Custom-house before the Investigating Committee, and especially against the seizures of one of which they were the objects, had proceedings against them suspended some time ago to enable them to procure evidence from England exonerating them from charges of defrauding the Government preferred by Colonel Howe. The evidence has arrived, but the District Attorney declares he is not satisfied with it, though he declines to say why, and has commenced a suit against them for $200,000. We do not pretend to have any opinion on the merits of the case, but we know that lawyers of the highest standing regard the proceedings as purely vexatious. One thing the public will expect, and that is that the suit will be pushed on promptly, and not allowed to hang over the heads of the defendants till the Philadelphia Convention meets. This observation is, we think, justified by the extraordinary letter written the other day by the Attorney-General to the District Attorney here, and which the latter had the fatuity to publish, instructing him to prosecute the persons who testified before the committee that they had given bribes to Custom-house officers, both gentlemen forgetting several things, and particularly that witnesses before the committee cannot criminate themselves by their testimony.

The Erie men have, after hard work, achieved something in the nature of a triumph in the New York Legislature, as they have succeeded in persuading the Committee of the Assembly to report against the Attorney-General's bill, which not only repealed the Classification Act, but provided for a new and speedy election of directors. The Committee is willing to repeal the Classification Act, which would afford an immediate relief to the stockholders, but not to do more. This is looked on, and not unnaturally, by the stockholders as next to nothing, inasmuch as they maintain that the present managers are grossly corrupt and are engaged in daily plunder. One very curious feature of the fight has been the unblushing avowal of the petitions, got up by the Ring along the line, that the owners of the road ought not to have it restored to them, because they are foreigners. It gives one a curious glimpse of the condition of the moral perceptions in country districts evangelized by stock-jobbers.

The answer of our Government to Earl Granville's remonstrance has gone out by the last steamer. There are two reports current as to its contents; one is that it declines to modify the Case, but intimates that there is not so much expected as is asked for by way of damages on the American side; the other is that it is a pure and simple refusal to modify. Without having any positive information, we incline to believe that the door has been left open to reply by some species of suggestion, and the impression gains ground that a way out of the difficulty will yet be found—one report says, by means of an agreement on the part of Great Britain to submit everything, under a stipulation that the damages shall in no case exceed a certain fixed amount. Another suggestion is that England should protest against the indirect damages claim, declare beforehand that she will submit to no award upon it, and then go on. This would throw the burden of withdrawing on the United States. The strength of the English position depends somewhat on whether the cotton-bonds claims were submitted to the Commission at Washington under instructions from home, or on the responsibility of the agent. Mr. Gladstone has stated publicly that the Government did not authorize their submission; but other people allege that this is not accurate, or, as the New York *Times* would say, that "Gladstone is a liar." It must be admitted that it is a very pretty quarrel as it stands.

The Gladstone Ministry has had a narrow escape on the Collier affair, having got off from a vote of censure by only twenty-seven majority. Sir Roundell Palmer bore the brunt of the debate, and bore it with great ability, but the work was very hard, and he came near failing. The charge was that Parliament last session authorized the Government to reinforce the Judicial Committee of the Privy Council, which hears appeals from the Admiralty, ecclesiastical, and colonial courts, by a paid member, who, the act provided, to avoid jobbery, should be a judge of one of the lower courts. The Government wishing to secure Sir Robert Collier, who was not a judge, made him a judge for a few days, and then transferred him to the Privy Council, which the Opposition held was a culpable evasion of the act, and the opposition in the matter has been reinforced by the judges, headed by the Lord Chief-Justice of the Queen's Bench. The controversy has been one of great bitterness, which has been increased by the fact that Mr. Gladstone has always made "conscientiousness" his strong point, and it was therefore delightful to his enemies to assail him on a charge of double-dealing. It has undoubtedly weakened him, and being followed by the Alabama muddle makes the position of the ministry very precarious.

In France the prospect grows daily gloomier. It is now no longer denied that what we have anticipated for some time—the attempt of each faction to enlist the army in its service—has begun. Legitimists, Orleanists, Reds, and Imperialists are all active and hopeful, all regard the actual régime as transitory and intolerable, all despair of mending it by an appeal to the country, and would all like to put an end to it by a *coup d'état*, which they wish to get the army to perform. The result is that they are all tampering with the officers, and with the most prejudicial effects on the discipline of the troops, but none of them, it is said, has as yet succeeded in securing any general. If it were not that the army is commanded by a man of singular purity of character and single-mindedness, Marshal MacMahon, the mischief done already would probably be greater than it is. The Orleans Princes are, in the meantime, conducting themselves with great discretion. The Duc d'Aumale receives men of all parties at his house, and the Prince de Joinville goes back to his old profession as an admiral in the navy, a position which he filled twenty-four years ago with the highest credit. The bill providing a government in case of a *coup d'état*, has passed the Assembly by a large majority. It makes it incumbent on the Councils-General to send two delegates each to whatever town of France the regularly constituted authorities may have fled to from the capital, and these delegates are to form the lawful legislature.

The fight between Church and State over the school question has been opened vigorously in Prussia. There the Government has hitherto, to the great disgust of the liberals, adhered steadfastly to the policy of leaving the schools under clerical control, the majority of the clergy being, of course, Protestant. But the Ultramontanists, having declared war against the Empire, and begun to teach against it in the schools, a bill has been brought into the Landtag, authorizing the Government to supersede the present clerical superintendents of schools by lay ones whenever it thinks proper. The Catholics are furious, and the bishops have signed a unanimous protest against it, while the Protestant clergy of the old orthodox school, represented by Herr Mühler, make common cause with them. How the fight will end it is as yet impossible to say.

The Italian question of the hour is the reorganization of the army, but though there is a general agreement that the Prussian system must be more or less closely copied, the Government has apparently not decided to take a firm initiative in the matter. It is, however, the last step towards the unification of the kingdom, the so-called national guard, as we lately showed, being a misnomer, and having no healthy relation to the people it is supposed to protect. However recruited, the soldier is at all events not to be left in ignorance, and there can hardly fail to be a general unanimity in providing for his instruction while in the service. The religious question remains unchanged, amid fresh rumors of the Pope's speedy abandonment of Rome. The new bishops, acting under constraint, still decline to ask for their *exequatur*, but can only be the losers in the controversy. A rather remarkable debate has taken place, under the eyes and with the seeming consent of the Pope, between six Roman priests and as many Protestants, as to whether St. Peter was ever in Rome. The Catholics admitted that the twenty-five years which tradition assigned to the first pontificate were too many, and that for no more than ten could the Apostle have been in Rome; for the rest, they simply denied that their opponents succeeded in proving him never to have been there. The disputants had their stenographers on hand, and spoke to a limited audience invited by ticket.

Some curious information has come to light about the antecedents of Shere Allee, the man who killed Lord Mayo. He is a mountaineer from the Himalayas, and was a soldier—and an excellent one—in the British cavalry; sober, faithful, obedient, and orderly; but, being engaged in a "blood feud" with members of his own tribe, he used to get a furlough about every half year for the purpose of killing one of his relatives on the other side of the frontier; having performed this duty, he always returned promptly to his regiment. As ill-luck would have it, however, he met one of his relatives on British soil, in the neighborhood of Peshawur, and killed him, too; but on British soil the act was a crime, so he was sentenced to death, and afterwards to transportation for life. The punishment was incomprehensible to him, and cut short what he considered a blameless career. So he avenged himself on the Governor-General, who represented the Government which had injured him.

THE PROPER TIME TO AGITATE FOR REFORM.

IN view of the discussion now raging, and which has been raging for some time past, over the various "investigations" which have been proposed, the question—which, though not new, is very interesting—presents itself: What is the proper time and place to agitate for the removal of abuses and the improvement of the administrative machinery of the Government? It has arisen frequently already in a slightly different form, in relation to the duty of voters with regard to what they believe to be abuses of their power on the part of caucuses and nominating conventions. Some persons have held, and an increasing number actually hold, that the time for an elector to speak out his mind on this point is after the nominations have been made, and while the candidates are already in the field, and the public attention fixed on them. But the political managers have always maintained that to do so then was to imperil the election, and, through this, to injure the party; and that it was, therefore, the duty of those who thought the success of the party essential to the best interests of the country to keep silent till the election was over, and to vote the regular ticket; but, the minute its success was assured, to make such remonstrances as the case seemed to call for, and in this way prevent the recurrence of the thing complained of. To this, on the other hand, the reformers have replied, that if they waited till the election was over, their remonstrances would fall on leaden ears; that the managers, who live from day to day, and have the deepest confidence in the forgetfulness of the public and the changefulness of the political sky, would be little troubled by threats which, at worst, could not be put into execution for a year or two; and that the people, who can ill afford the time they have to give to political affairs during the canvass, and are little disposed to listen to general preaching on the subject of political purity which has no application to pending events, and are totally opposed to crying over spilt milk, would pay but small heed to denunciations which, however admirable in the abstract, could produce no immediate practical effect. Indeed, so well recognized is the futility of post-election preaching on the propriety of "nominating none but good men for office," that there would be no difficulty in getting all the corrupt politicians in the country to engage in it heartily if it were made worth their while; and that all men who have seriously considered the various plans for keeping bad men out of office are very generally agreed that "scratching," or, in extreme cases, "bolting," is the only one of any real efficacy.

Now the question comes up—and it must be admitted that it is a very serious question—what is a Republican to do who is not satisfied with the Administration: who either has lost his confidence in the President, or who believes that, though personally pure himself, he is surrounded by and is influenced by men of whom the same thing cannot be said, and that, if he is re-elected, their influence will be strengthened rather than diminished? That there is a large body of Republicans of this kind who are firmly rooted in their dissatisfaction, and who believe that it rests on sufficient evidence, there is no denying. What are they to do?

All are agreed that they ought not to go over to the Democrats. Nobody in the Republican ranks looks for anything good in politics from Democratic hands, or doubts that a Democratic Administration would introduce fearful confusion by reopening questions which should never be reopened, and trying experiments which should never be tried. Therefore, all concur that reform, if to be sought at all, should, if possible, be sought "inside the party lines," as the phrase goes. All the discontented people in the nation are indeed cordially invited by the party papers and orators to come into the party, as the only place in which great problems can be solved or great grievances redressed. So far, therefore, the path is clear: it is the duty of a reforming Republican to seek his reform by agitation within the party.

The next question is, by what methods are reforms to be sought within the party? To this the fathers of the church give absolutely no answer. We do not know a single party chief or newspaper to whom we can refer an anxious layman for light on this most important subject. We can tell him, however, what he must not do. He must not band himself together with others of his way of thinking, and draw up platforms differing from the regular party platforms, and nominate candidates other than the regular party nominees, because this is what the Missouri Liberals have done or propose to do, and we are assured by all the party organs that this is a base and foolish thing to do, because, apart altogether from its hostility to General Grant, it threatens, by creating a split in the party ranks, to bring the Democrats into power, than which there could be no greater calamity. Nor must he write or speak in a critical or condemnatory manner of the Administration, for two reasons. One, and of course the principal one, is that his criticisms, if unfavorable, are sure not to be well founded. The things with which he is dissatisfied—say the management of the New York or New Orleans Custom-house, for instance—are not things with which a reasonable man ought to be dissatisfied. A great many other men as good as he are not dissatisfied with them; besides which, the President, if he gets time, will make the changes called for; that he has not made them already does not tell against this view, because he found the system which he administers existing as it is now when he came into office. The other is that the Administration represents the party. The party put it in power, supports it, and is responsible for it before the country. You cannot, therefore, attack the Administration without attacking and helping to divide and weaken the party, and if you divide and weaken the party you endanger the delivery of the country to the Democrats. You remember what happened in Missouri: the bolt there sent the author of the Brodhead letter to the Senate. Do you wish to see this repeated on a great scale in the national politics?

The President is the most important officer of the Government; the choice of the President is the most important political duty the people have to perform. As long as Presidents are eligible for re-election, no proper estimate of the fitness of the actual incumbent for re-election can be formed without a careful consideration of the manner in which he has already performed the duties of the office, and the proper time to form this estimate is, of course, the last year of his term. To form it any sooner would be unjust to him; to form it any later would be useless, except for historical purposes. Nevertheless, if you attempt to form it in the last year by either investigation or discussion which seems likely to lead to an unfavorable conclusion, you are accused of foul play. If you attempt to lay before the public the shortcomings of his administration, you are accused of seeking to prevent his renomination, as if this were a sufficient reason why you should not be listened to, whereas this object of yours furnishes almost your sole excuse for saying anything at all. You are told that to try to demonstrate the President's unfitness for the position is to attack the Administration; to attack the Administration is to attack the party; to attack the party is to prepare the way for its defeat; to defeat it is to throw the country into the hands of the Democrats, and so on in a vicious circle. How, then, under the circumstances, are reforms to be effected within the party lines? If we may not, in the fourth year of his term, discuss the qualifications of a President for re-election, when should they be discussed? If they may not be discussed at all, and the mere fact that a man does not believe that a President should be re-elected is sufficient to deprive him of all claim to a hearing when he attempts to give a reason for his belief, is not this virtually converting the term of four years into eight years?

It is said that the debate which has been going on in the Senate and in the press over the Custom-house investigation and the French arms investigation is really the work of the Philadelphia Convention, and that the malcontents should wait till that body meets, lay their plaints before it, and abide by its decision. But the fact is that the Philadelphia Convention, as everybody knows, will, like all conventions, be guided in its action by opinions already formed by its constituents. Delegates are already being chosen in every direction, and, by the use of the usual machinery, pledged to vote for General Grant's nomination—that is, pledged to support him no matter what may be said at the convention. To argue with them would be as useless as to argue with the master of thirty legions. In fact, the main business of the politicians who support the Administration is now, and has been for several months, so to arrange matters that the question of renominating the President shall not, at the convention, be an open question. Those, therefore, who doubt the expediency of renominating him can only reach the convention by creating, if they can before it meets, such an opinion adverse to him as shall render him in its eyes not available.

Whether they can succeed in doing this, or whether it would be well if they could succeed, are matters on which we now express no opinion. We merely wish to point out the unreasonableness of the outcry which is raised against all discussion of the claims of possible candidates, and particularly the claims of the President, in advance of the meeting of the convention. Attempts to show that he is not a good man for the place, or that some one else would be, are not the base and contemptible work that some people would have us believe. "President-making" is by no means out of place during the next three months. On the contrary, it is about the most important business in which an American politician can engage. Saying that a man who arraigns the Administration for misconduct or incompetency ought not to be listened to, because he seeks to prevent General Grant's renomination, is very like saying that you ought not to listen to a man's arguments because he aims at persuasion, or to listen to testimony because its object is proof. "Why, you're trying to corner me," said the gentleman who found his antagonist getting the better of him in a discussion; and so also some of our office-holders, when you accuse them of malfeasance, declare that, as your aim is to get them out of office, nobody ought to mind anything you say.

THE CRISIS IN THE CATHOLIC CHURCH.

THE rumor that the Pope is preparing to quit Rome is probably true, but whether he will quit it or not will doubtless depend on the state of his health. All attempts to arrange a *modus vivendi* between himself and the Italian monarchy have thus far failed, and may be expected to fail, because even if he were not notoriously obstinate he could not, without a loss of dignity too great to be borne, descend from the position he has always occupied towards what he calls the "Subalpine Government," Victor Emanuel being still, in his estimation, King of Piedmont simply. The material changes which are taking place, too, in Rome are so extensive as to make the city intolerable to its late rulers. Old houses are being swept away, new streets opened, new squares made, great excavations in the old ruins commenced, and, indeed, the old capital begins to wear the air of a bustling, active, growing modern city. Every step in this process of renovation is either an insult or a reproach directed against the Papacy. If all these changes be indeed reform, the sacerdotal administration of bygone days must have been abominable; if they are not reforms, they are too painful to be countenanced, or even witnessed, without protest by the Pope, particularly as it is not the city only which is undergoing transformation, but the whole system of administration—the law, the police, the finances, the taxation, the schools. When we say that Father Hyacinthe is at this moment in Rome writing letters denunciatory of the doctrine of infallibility, we say all that is needed to show the extent of the moral and political, as well as of the material, revolution through which the city is passing.

The Pope has made it a point of honor to shut himself up in the Vatican and represent himself as restrained of his liberty; but the Italian Government has respected his whim; and, while allowing nobody to enter the precincts of that palace without his permission, of course places no obstacles whatever to his egress. But then this voluntary confinement, now that it has lasted so long that everybody has got used to it, runs the risk of becoming ridiculous if protracted; and it must be attended with more or less inconvenience in the transaction of business. It is, therefore, hardly to be wondered at that the Pope talks of packing up and retiring to Trent, a quiet old town of the Tyrolese Alps, in which the old faith still burns with the old glow, and in which he would at least be the principal personage of the place; and this resolution is doubtless strengthened by the gradual extinction of all hopes of interference in his behalf on the part of the Catholic powers. Indeed, it cannot now be said that there are any Catholic powers, in the sense in which the Pope understands that term. Austria has plainly gone over to the enemy; Spain is in the hands either of a republican faction which hates the church or of a monarchical faction led by Victor Emanuel's son; while the expectations which were doubtless excited by M. Thiers's accession to the Presidency of the French Republic have been destroyed by the spectacle of the internal difficulties of France.

The greatest difficulties of the Papacy, however, are, and promise to be, religious rather than political, and, so far from dying out, seem to increase, and bid fair at present to lead to an extensive if not formidable revolt against Papal authority. The movement which Döllinger heads in Germany, and which, after Father Hyacinthe's failure, seemed likely to die out in France, has been revived in that country by an open declaration of war against the Papacy and its adherents on the part of the Abbé Michaud, a man of considerable attainments and influence, who has been officiating at the Madeleine ever since the execution of the late curé by the Commune. He declares, but without proof, that Archbishop Darboy instructed him before his death that outward obedience to official authority was all that was required of a faithful soldier of the church, and that it was not necessary that any priest should in his heart accept the dogma of infallibility. This view the present archbishop declines to accept, and the abbé has accordingly seceded, not from the Catholic Church, but from the Papal ranks; and he proposes to preach and administer the sacraments as heretofore, and has hired a room for that purpose, and is receiving, it is said, a considerable number of adhesions, both from priests and laymen. Similar audacity is displayed by the German leaders, and with more or less success. In Belgium, too, the Papacy has experienced a serious defeat, arising out of what is known as the Langrand scandal. M. Langrand, who is a speculator on a great scale, conceived the idea of getting up a financial company to use Belgian capital, which is cheap, in buying up and working Hungarian lands, which are also cheap, but might be made to yield large profits. In order to raise the capital, he and his associates actually secured the aid of the Pope, to whom it was represented that one of the objects of the company was to "Christianize capital"—that is, concentrate it in the hands of pious families devoted to the Church. His Holiness was charmed with this idea, and, when M. Langrand combined a loan for the Papal Treasury with his Hungarian company, the Pope gave him a letter of commendation which set all the bishops and priests in Belgium working for his benefit, and the peasantry poured their savings into his coffers with extraordinary rapidity. The Pope was more delighted than ever, and made him a Count, and his head was completely turned. His operations became larger and larger, but the crash, of course, came at last. The company failed; the assets proved worthless, and a carrier-pigeon brought out of Paris, during the siege, the result of a judicial examination of Langrand's papers, which he had left there, and which showed him to be a swindler of the first order. The excitement in Belgium was so great after this that the appointment of a M. Decker, who had been concerned with Langrand, to be governor of a province, led, lately, to riotous demonstrations, and almost to a revolution. The general result has been a great increase of anti-clerical feeling among the middle-classes, and a corresponding increase of exertion on the part of the clergy to retain their hold on the peasantry, and this is only possible through either the prevention of popular education or the retention of popular education in their own hands.

In this matter of popular education the church and the state are in fact on the point of joining battle, and have joined battle all over Europe. In Ireland, in Austria, in Prussia, in France, and in Italy, both sides are preparing for and engaged in a struggle which must have a serious influence on the future of the Papacy, because, if worsted in it, it is driven out of its last stronghold. It has lost the middle-classes and the town artisans in every country; if it loses the peasantry, it will have lost everything.

The Papal authorities are so well aware of this that they are not so seriously troubled by anything else. The Old Catholic movement, interesting as it is in some aspects, has not so great dangers for the Pope, for the simple reason that it is not likely to make any headway among the main body of the Pope's followers. Such a movement must find its recruits mainly among the middle or educated classes; and it is no longer possible to build up a new church or renovate an old one with their aid, for they are profoundly sceptical both in France, Germany, and Italy. To the peasants as they now are, and to the women, Michaud and Hyacinthe and Döllinger are and will remain simply insubordinate and renegade priests. Those who expect to see the Old Catholic movement take the shape of a new Reformation forget how completely the times and the men have changed since Luther revolted. Thousands will go with it in scouting the doctrine that the poor old Pope is not liable to error, and there is little doubt that the main body will go further, but not along ecclesiastical ways. They are not prepared to get up any enthusiasm for the early councils, or to take Dr. Döllinger's account, or the Abbé Michaud's, of the exact point at which the church became Ultramontane. In fact, they will probably be found readier for the easy course of doing without a church than for anything else. One of the curious signs of the times, and one which good Catholics must have pondered deeply, occurred in Paris the other day. A bishop was consecrated in the church of St. Sulpice, and the Minister of Public Worship was present officially to represent the state in the person of M. Jules Simon, an avowed materialist, to whom the whole ceremony was, of course, a farce. The laity were there in great force too, but they occupied themselves with hooting and jeering at the solemnities, and, indeed, displayed so little reverence for them that the new bishop came near being mobbed. The departure of the Pope from Rome at such a crisis as this one can hardly help considering not less full of significance for the church than the sack of the city by Alaric was for the old empire.

"ORGANS."

THE New York *Times* asks us, with a good deal of heat, to prove the charge that it is a "hired organ" of the Administration, or else acknowledge that we uttered a slander when we made it. Our answer is perfectly simple: we have never made it. When the *Times* puts the term "hired organ" in quotation marks, it is evidently under the impression that the term is ours. This impression is, however, a delusion. We have never applied it to the *Times*, and, what is more, have never thought it applicable. If anybody concerned will have the goodness to point out any passage in which it occurs in our columns in reference to the *Times*, we shall not only declare that it got in there through inadvertence, but make an apology. We have no proof of anything of the kind. We have never heard of any. We shall not, therefore, accept the invitation to call at the office of the *Times* to satisfy ourselves of the purity of its motives, because we do not suspect it.

The origin of this unfortunate hallucination on the part of the *Times* is doubtless to be found in the fact that we last week called the attention of the President to a pretty little collection of abusive epithets which we made in its columns from articles attacking Senator Schurz, and we hinted that he would do well to put a stop to this style of defence. We made this appeal to him, however, not in the belief that the *Times* was "hired" by him, but that it was his "organ," anxious to serve him, and not inattentive to his feelings, wishes, and opinions as to the best mode of serving him. We do not understand the term "organ" to be necessarily an offensive one—certainly not morally offensive. That we think it is, or ought to be, a term of professional reproach, we do not deny. But then, a great many respectable newspapers, conducted by respectable men, are and have always been "organs"—that is, papers devoted to the defence of the opinions, policy, or reputation or interest of particular persons or bodies, and in the habit of receiving from such persons or bodies information, suggestions, or instigation towards the composition of editorial articles. We do not ourselves think this a desirable position for a newspaper to hold. We think it involves inevitably a certain amount of falsity in its relation to its readers; we think the extent to which this relation has been imposed on a great many newspapers by what is called "personal journalism" is one of the curses of the press. But then, a great many excellent men think differently, and it would ill become us to call them knaves on that account. We shall simply do our best, by fair means, towards making their view of the matter odious, and inducing the next generation of editors at least to repudiate it.

Moreover, there are good and bad ways of discharging the functions of an organ, and we hold that the *Times's* way is a very bad one. Indeed, not to mince matters, we think its mode of advocating General Grant's claims to re-election has been a disgrace to journalism, and, further, we believe this to be the general opinion of intelligent and respectable men. For although it is permissible in any paper to defend a public man with any reasonable amount of warmth against what it believes to be unjust attacks on him, it is not permissible to writers who respect themselves, and who wish to be respected, to blackguard his enemies for him. That is the work of a bravo, and a journalist ought not to do it. We may perhaps forgive a man, out of consideration of the weakness of human nature, for running after a person in the street who has injured him, and in his passion and resentment calling him foul names, and throwing out foul insinuations against him; but we have no such indulgence for a bystander, and, above all, for a professional teacher, who runs along with him and in cold blood engages in the same dirty bout of billingsgate. If it be proper or excusable, therefore, in anybody on General Grant's behalf to call Senator Schurz an "unscrupulous adventurer," "an office-jobber," "a dog," "an unprincipled man," "an arrant humbug," and to suggest "that his leg be tied to his chair when gentlemen are speaking," it ought to be General Grant himself who does it. It ought not to be possible for him to get any leading metropolitan paper to engage in such work.

The reason why we appealed to General Grant to put a stop to it was that it was not simply disreputable and ridiculous, but injurious to him in so far as it produced any effect at all on anybody. We may safely ask the most experienced political veteran on the point whether any candidate was ever seriously injured by being called names, or was ever helped by having his opponents called names. And we have no hesitation in appealing to the judgment of the whole country whether anything can be more injudicious than to meet charges of corruption or demands for investigation by abusive language towards the persons who make them. Do not Hall, Tweed, Connolly, and all that company know this to their cost? Does not everybody's common sense tell him that the best answer, if not the only answer, to charges of this kind, and the surest way of overwhelming the accuser, is to push on the investigation, and prove if you can that he is a light-headed slanderer? There is a moment when, perhaps, a little vituperation is allowable, and that is when the investigation is closed, and it has been proved that there was nothing to be found out. Has that moment come in Senator Schurz's case? Was there really no cause for the Custom-house investigation? Has it revealed nothing and led to nothing? Must the man who proposed it have been really an unscrupulous slanderer? And do we yet *know* that the investigation into the French arms scandal is the suggestion of pure malice?

And now one word as to Senator Schurz personally. The *Times* has for two months assailed him with the grossest abuse and insult. It has called him, day by day, an "unscrupulous demagogue," "a heartless demagogue," "an unscrupulous adventurer," "an office-jobber," "a political charlatan," "a dog," has declared him "wholly un-American in spirit," and "a born destructionist," "an arrant humbug," and a "dishonest, malicious, and unprincipled man." It describes him, in short, very much as one would describe a "confidence operator," or as it described Bill Tweed and Slippery Dick itself last summer. This sort of talk is, of course, taken by itself, tolerably silly; but it might be made damaging if supported by proofs. Has the *Times* produced any proof in support of it? Not a particle. Has it any proof to produce? We think we are warranted in saying that it has not, since it produced its "exposure" of Schurz a month ago. This "exposure" was made during the debate on the Custom-house investigation, and was threatened so long in advance that it looked as if it were hoped that the mere threat would shake Schurz's nerves. It came at last, however, and we read it, and reread it, after having rubbed our eyes, with great care, and we can honestly say that we do not remember to have often read anything in political literature more ludicrous. It purported to be a sketch of Mr. Schurz's career, but the *facts* it produced were those not only of an honorable but of a brilliant career, and it would have been painful, if it had not been comical, to witness the way in which the writer tried to make it appear discreditable by sticking in epithets and innuendoes and inferences of his own all over the recital. By taking a pencil and striking these out, there remained a record which any man in the country might be proud of, and which any man might be glad to see his son strive for. The performance of the *Times* was indeed so absurd that serious reply to it was unnecessary; we contented ourselves with banter. Mr. Schurz answered it in his place in the Senate, showing the absolute falsehood of some of the charges made by the *Times*, and the misrepresentation contained in some of the others. This answer *Harper's Weekly*, which is certainly as good a friend of the President's as the *Times*, pronounced a complete vindication so far as vindication was called for, but of not one of its corrections did the *Times* take any notice. Such service not only discredits those who render it, but discredits General Grant himself as long as he sits silent under it.

For ourselves, we may be permitted to say that we sincerely admire Mr. Schurz's public career. We believe him to be an honest man; we know he is an able, and eloquent, and useful one. We consider him to be an honor to the country in which he was born, and a still greater honor to the country which he has adopted. We believe that the devotion to great principles which first showed itself under less fortunate circumstances in the Old World, and has stood the test of twenty years of loyal service in the New one, will not fail him now on the more conspicuous stage to which he has been raised; and we are sure that we can say that what is best in the intelligence of the country, if it does not always approve of his judgment, and does not share his distrust of the President personally, at least goes with him heartily in his assaults on a régime in which the Leets, Murphys, and Forneys are honored and rewarded, and which the Camerons, and Mortons, and Conklings direct and control.

THE FRENCH STAGE.

PARIS, February 16, 1872.

It must be said, to the credit of French society, that it has never been so sad as it is now. Among my own acquaintance, which is very large, I have not heard of a single ball given this winter. Here and there, some few very young girls have a *sauterie*; there are a few balls given in the American colony, which has become as brilliant as it ever was; but, in French society, dinners are the only entertainment permitted in the present mood of Paris. I hear that even in colleges and in schools the tone of the boys has become much more serious. We have been spared this year the usual promenade of the *bœuf gras* on the boulevards, with his ridiculous cortége of druids, of knights, of gods and of goddesses; very few masks were seen on the *mardi-gras*, and the masked balls of the Opera have been entirely given up to the lowest rabble. With all their elasticity, the Frenchmen feel their defeat much more keenly than the Austrians did theirs after Sadowa. It must be said, also, that the uncertainty of the future is added to the sufferings of the past; all minds are preoccupied with the dangers of our so-called Republic without republicans, with the Internationale, which still is groping in the dark, with the Bonapartist conspiracies, with the financial difficulties of the situation.

The theatres have profited by the sullenness of society; for it is still permitted to spend an evening at the play, and the theatre affords a distraction which takes the mind out of its own troubles for a few hours. I am not of those who find fault with the French nation for its love of the theatre. There is, after all, something very unselfish in the interest our minds can take in a drama, in an opera, or in a vaudeville. Society gives no rest to our evil passions, though it forces us to assume virtues which often we do not have. The theatre actually changes us from actors to witnesses, and if what we see is not absolutely bad, one can always derive some profit from it. To condemn the theatre seems to me no wiser than to condemn the reading of novels. Anything that obliges a man or a woman to think of something different from themselves tends to make them better. Under the Empire, unfortunately, the theatre had become as corrupt as the rest, and I do not remember a single successful comedy or drama where adultery was not the necessary ingredient of interest. Even now, we feel this bad influence. "Christiane" is the best piece lately produced at the Théâtre Français; it is by M. Gondinet, who is the most moral of our dramatists. He made his reputation by very clever and witty vaudevilles—"Gavot," "Minard & Cie.," "Les Grandes Demoiselles," etc.; but his ambition was always to be tried at the Français. "Christiane" is a success; it is admirably played, full of good sentiments, and it has decidedly virtuous intentions; but its whole interest lies in the struggle of Christiane's legal father with her real natural father. Christiane is pure, her mother was not; and the innocent girl makes us still think of adultery. Her situation is very painful between her nominal father and the man who knows that *he* is her father. The law has the best of it; and the *illegal* father is obliged to leave France in some diplomatic capacity. But of this painful and almost immoral *donnée* M. Gondinet has made a really virtuous drama.

I am sorry to say that there is not even a longing for morality to be found in the two last pieces of M. Alexandre Dumas *fils*. This singular writer has adopted the habit of publishing all his pieces with a long and pretentious preface. He speaks like the moralist of the age, the new Solomon; what we want, he thinks, is the exact description of our vices; he believes that our immorality comes from our bad laws, especially from the law which forbids divorce. There is a strange admixture of good and evil in his disposition, in utter want of knowledge of the world. He was born a bastard, and there is a certain hatred of society perceptible in all his words, which comes evidently from the fact that in his childhood he felt a little like an outcast. First an outcast by necessity, he has now made himself an outcast by pride. He likes to represent the *grands de la terre*, as Bossuet called them—princes, noblemen, noble ladies—as utterly vile, mean, despicable as a human creature can be represented. In his last piece, "La Princesse Georges," the Princess and the Prince are equally vile in different ways; they are moral monsters, only of a different species. He is a villain, and she is a coward; he is a traitor, and she loves him, though he is a traitor. I do not speak of the "Visite de Noces," which is only a piece in one act. The subject is so painful that it is better not to analyze it. But I am obliged to confess that these two pieces are played night after night; to be sure, the audience is very cold, almost frigid; people are drawn to the Gymnase, where Alexandre Dumas' pieces are played, by curiosity more than by pleasure. And Paris is such a large city that a feeling of curiosity, mixed with interest for the talent of the author, can fill it for many a night before the success can be attributed to any real sympathy with the sentiments of the drama. It is time, however, that some critic should ridicule the moralistic pretensions of M. Dumas. He wrote, not long ago, a letter to M. Thiers in pamphlet form, in which he spoke of the regeneration of France: we must be saved by the truth, by justice, by faith in ideas, and so on. I need not enter into the analysis of this pamphlet, where fine words covered few thoughts; but it is certainly curious that, after such a sermon, Dumas should return quietly to his old habits, and he is certainly to be admired if he thinks that "Princesse Georges" is a *regenerating* work.

The political piece, "Rabagas," has however put even "Princesse Georges" in the shade. Sardou, the author of it, began life in the Rue St. Jacques, in the Quartier Latin, as a poor *maître d'études*; he lived almost in abject misery and married his washerwoman; but he emerged by degrees from his obscurity by a number of gay, bold, and clever pieces. He has a great ability for theatrical intrigue (take as an example "Les Pattes de Mouche"); he mingles the comic and the dramatic in good proportions, and can paint with a coarse brush the absurdities of the day (for example, "La Famille Benoîton"). He is now rich; he has bought a château at Marly, which he has filled with fine books and works of art. His wife died a few years ago; the Empire made Sardou a knight, then an officer of the Legion of Honor, which did not hinder him from entering among the first the palace of the Tuileries, abandoned by the Empress. He is a man without any fixed ideas; all he cares for is success; he wrote "Séraphine" against the clericals at the end of the Empire, and everybody understood that the name of Séraphine covered that of the Empress Eugénie, who was a well-known partisan of the Papacy.

The fashion now in Paris is against the men of the 4th September; consequently, Sardou has promptly made a new piece against them, under the name of "Rabagas." This personage is a type composed half of Emile Ollivier and half of Gambetta: he is the lawyer, the politician *par excellence*, who flatters the passions of the multitude, but only wants to get into power and to find himself in the gilded drawing-rooms of royalty—in what the English call the cold shade of aristocracy. The scene is in Monaco; and the present Duke of Valentinois, the Prince of Monaco, is actually brought on the stage in a truly Aristophanic manner. I hear that the Duke wrote a letter to Sardou, which is much to his credit, in which he simply objects to his being called familiarly Florestan on the stage. Otherwise he finds no fault with "Rabagas." The demagogues of Monaco are plotting in a coffee-house called the Flying Toad, and are making up the programme of a revolution. A young American lady, who is in the good graces of the Duke, and sees the court in a state of great consternation, contrives to see Rabagas and brings him over to the Duke by an invitation to a ball. Rabagas is quite ready to be converted, as he speaks to his fellow-conspirators of "those immortal principles of '89 for which you are all ready to give *my* life, and I to give *your* life." Rabagas goes to court in tights, and by the influence of the American tempter is named minister. The insurrection, however, breaks out, and Rabagas gives the order to shoot and imprison his old associates. Then comes a change in the fortunes of Rabagas: the Duke does not want him any more, the populace hiss him, and he is kicked out of power. He leaves the stage with these contemptuous words: "Adieu: I go to the only country where men of my stamp are understood—to France!" You may imagine the mixed feelings of a French audience before such an exhibition; the Bonapartists have taken the theatre of the Vaudeville for their headquarters, and they cheer for ten minutes such phrases as this: "Quand une société est pourrie, l'avocat s'y met." One of the socialist associates of Rabagas, when he is drawing up his programme, tells him: "But you forget the social question." "Bah!" says he, "don't let's be silly; there are no social questions, there are only social positions." There is a comical account of the insurrection of Monaco, where one government is formed in a red room, another in a green room, another in a yellow room; and the green, red, and yellow governments successively proscribe each other. This transparent allusion to the scenes in the Hôtel de Ville on the 4th September, the 31st October, and the 18th March, was cheered with fury. So far, those who hiss are in the minority, and the sergents-de-ville, whose comrades were killed under the Commune, and whose wives were fleeing for their lives at that period, show an energy in the repression of hisses which is not very surprising.

The piece draws a crowd every night. I saw it on the first representation, and though I could not help being much amused by its cynical wit, I left the theatre sadder than I entered it; for I perceived in the play an absolute want of moral sense, an absence of that spirit which can distinguish what is noble and what is ignoble in the spirit of reform. Every liberal in it appears as a charlatan; the representative of royalty, the Duke, is himself a poor dissolute old man, who keeps a mistress in his own palace, and makes her the companion of his daughter, who receives secretly in her apartment one of the officers of the guards. There is not one character to represent virtue and morality. At the same time, the feelings of the audience are either favorable to Rabagas, contemptible as he may be, or else they show a rabid conservatism which reminded me of the days of the 2d December. The rich middle-class of Paris is longing for a saviour—for a man of iron, who will sweep the streets with gunpowder and shot, silence all the Rabagas for years to come, and send not only the Communists but the Republicans to Cayenne. This is now the dominant feeling; the horrors of the Commune explain it partly, but Paris is also very angry at being decapitalized, outlawed, put in suspicion by France. It has no patience with the Jules Simons, the Gambettas, the Jules Ferrys, the Favres, the lawyers, who have allowed it to commit so many follies since the 4th September; it is ashamed of itself and of the men it has recognized as leaders. It is waiting, as for a Messiah, for a man of action.

Correspondence.

REPORT OF THE FORTIETH PARALLEL GEOLOGICAL SURVEY.

TO THE EDITOR OF THE NATION:

SIR: Owing to the condition of the Union Pacific Railroad, the *Nation* of February 1 has but just reached me. In that number you comment on the Congressional discussion concerning the report of the Fortieth Parallel Survey. In your remarks you underrate, in my opinion, the "popularity" of the work. You say that "the nature of such a work precludes it from being of immediate use or interest to any but a *very limited* class of persons, and its proper destination is at once the public libraries of the country and the archives of foreign governments and scientific bodies."

Like all comparative phrases, the words "very limited" cannot be rigidly defined. There appears, however, to be a popular misunderstanding at the East as to the number of people eager for such information as the book in question contains. On the Pacific coast, mining is the main industry, and the number of persons engaged in this pursuit, although perhaps "very limited" in comparison with the total population of the United States, is very large when compared with the population of this not unimportant part of the country.

Now, a very large proportion of the mining community is anxious for information of the kind referred to. Long before the publication of the report, the War Department had received applications for copies largely in excess of the number to be printed—nearly double the number, if my memory does not fail me. After its publication these increased largely in amount. I (if I may be allowed to present personal experience) being then on the editorial staff of a mining journal of some considerable circulation, received a large number of enquiries from individuals desirous of obtaining the work, so large a number, indeed, that our paper advocated a Congressional publication to meet the demand. This certainly would indicate that the report has also other "proper destination" than that given by you.

We feel out here that our national legislature has not paid due attention to an industry which has built up States, and produced upwards of a thousand million dollars, in a little more than twenty years. We feel aggrieved, for instance, that to make way for printed matter of no public interest, the reports of the Commissioner of Mining Statistics should be unreasonably delayed year after year, and that the Commissioner should receive an appropriation entirely inadequate to the demands of his department. And when we see a disposition on the part of Congress to diminish the small favors grudgingly allowed, we grumble about it, and write to the papers.

A. D. H., Jr.

RENO, NEV., Feb. 23.

[Our remarks had reference to the publication as a whole, and were more strictly appropriate, say to the volume on Botany, than to that on Mining. Of course we attribute the widest value to the work of the Expedition.—ED. NATION.]

THE MORMON PROBLEM.

TO THE EDITOR OF THE NATION:

SIR: While writing for another purpose, let me express the hope that the *Nation*, among its other good works in calling attention to injustice and sham and corruption, may have something more to say in reference to the state of things in Utah.

On my way to this coast from the East, just about the time the U. S. officials were inaugurating their present policy, I made a little visit among the Mormons at Salt Lake, and, like every other visitor not entirely blinded with prejudice, could but have many of my previous notions reversed and my sympathies in no small degree stirred up. It seemed to me then, from what I heard and saw—an impression which has been deepened by all which has since occurred—that the Federal officers were animated by a bitter spirit of persecution against them, combined, perhaps, with the vulgar desire of making a sensation, utterly inconsistent with justice and the dignity of a great nation, and that the course being taken was wholly unwarranted by anything in the existing state and tendency of Mormon affairs.

Utah within the past few years has been developing with wonderful rapidity in all the elements of a fully civilized and enlightened community, with the single exception of its system of polygamy. The women are allowed as much freedom to go and come as they are in New York; are given, too, the ballot; paid generally the same wages as men; and occupy in not a few cases as independent a position. The two sexes are schooled together in all the branches of a liberal education, with books and by teachers that are selected for merit, and, in some cases at least, independent of any considerations of Mormonism. Any sect of the religious world is perfectly free to go in and establish churches and Sunday-schools there of its own. The Mormons themselves invite public discussion, giving up to it their own tabernacle, and are far more catholic in their fellowship practically than nine-tenths of the Christian church. The arts and sciences are cultivated and encouraged among them to an extent equalled only by a very few of the older States, Orson Pratt, while I was there, delivering a course of lectures on astronomy, which went more thoroughly into the subject than speakers generally would venture to in our Eastern cities, attended night after night by crowded houses; and not a few of the problems which other communities have taken up only in theory, that of connecting religion and amusement for instance, have been solved by them practically, and with the completest success. In short, all those agencies of education, religion, and free discussion usually proclaimed to be so mighty and infallible against error, have free play among them, with an open door for more to go in; and, if Gentile Christianity and civilization cannot meet what remains of their polygamy and superstition in a fair fight, and without resort to persecution, and vanquish them, it certainly looks as if the Mormons had something on their side we need to get—not destroy.

There are influences that, a year ago, were doing the work, doing it silently, surely, nobly. Polygamy was bound, sooner or later, to be sloughed off in an easy and natural way by simply the toning up of the moral health. Federal interference is about as much in place as the knife of a surgeon would be to a patient getting well of fever. The generous, liberty-loving heart of the country needs only to know what is doing there on the part of its officials to be filled with indignation, and stop at once a persecution worthy only of the dark ages.

I write this entirely as an outsider, and from a love not of Mormonism, but of fair play. Shall I say, too, that the Christian church, with all its holy horror of polygamy, is bound to share some of the blame for it with the Mormons? It is not an abnormal and seedless growth, but a legitimate fruit, so far as doctrine is concerned, of that literalness of Scripture interpretation which all the religious world has done so much to encourage. The same principles which the rest of us have carried out in our ways they have carried out in theirs, leading perhaps to grosser results, but not connected the less with the parent stock.

Will it do, also, to hint that possibly Mormonism may have its divine mission to work out as well as all other religious bodies, not, indeed, through its polygamy and superstition, but through its inner faith? There can be no question that it does really have this faith, a belief in directness of relationship with Deity and divine things that is in marked and grateful contrast with the materialism and indifferentism that we find so much of through the Great West—a faith more like that of the old Puritans than is felt by any other Christian sect. All history shows, New England history certainly, that these old root faiths, with their visions and revelations and realness of the spirit world, though terribly gnarled and ugly themselves, are wonderful things into which to graft new truth. At any rate, it will do no harm to look on the hopeful side, and to remember that the world's good before now has come out of its Nazareths. K.

OLYMPIA, W. T., Feb. 1, 1872.

TO TAKE A DARE.

TO THE EDITOR OF THE NATION:

SIR: I noticed in your review of Mr. Eggleston's "Hoosier Schoolmaster" a statement that in New England you had never heard the expression, "I don't take no such a dare." Some thirty-five or forty years ago, when I was a school-boy in a country district in the southern part of New Hampshire, we used to play a game in which we used the expression, "Give us a dare," and "I'll take a dare," etc. And from the game we borrowed and used an expression very similar to the one quoted by you, and with the same meaning. The subject is not of the highest importance, but it is a principle with you, I believe, "to give even the devil his due." New England should have, in this matter, all that properly belongs to her.

Truly yours, D. PUTNAM.

YPSILANTI, MICH., Feb. 19, 1872.

[This is a case of a word's being kept current longer on this side of the water than in England. Before our fathers came across, they, in common with Shakespeare, Chapman, Johnson, and their contemporaries, had the expression in use; but if it was used in New England only twenty-five years ago, it survived longer here than it did in its home. It may, to be sure, still be locally and colloquially current in England. In literature it is obsolete in both countries.—ED. NATION.]

Notes.

A. DENHAM & CO. will publish, March 15, the first collected edition of the "Minor Poems of Homer," including the Battle of the Frogs and Mice, hymns, and epigrams, in the translations of Parnell, Chapman, Shelley, Congreve, etc., with an introduction and a life of Homer.——The *Bookbuyer* for Feb. 15 announces the following firm changes: Charles Scribner & Co. becomes Scribner, Armstrong & Co., and Scribner, Welford & Co. becomes Scribner, Welford & Armstrong, the late Mr. Scribner being succeeded by his son, Mr. J. Blair Scribner. Scribner, Armstrong & Co. announce an edition of George Macdonald's poems, beginning with "Within and Without," his longest effort. Arabia will form the subject of the third volume of Mr. Bayard Taylor's Library of Travel and Adventure.——An English version of the "Æneid," by C. P. Cranch, will be published in the fall by Messrs. J. R. Osgood & Co., in a uniform style with Bryant's "Homer" and Longfellow's "Dante."——Collectors of Americana will be glad to hear that Ellis & Green, London, have just acquired copies of the letter of Columbus announcing the discovery of America (No. 4 of Harrisse), first edition, in a perfect state, and a copy of the still rarer letter of Americus Vespuccius on the same subject, supposed to be the second edition (No. 23, Harrisse), of which only one other is known; and a copy of No. 30, Harrisse, the only other known copy of which is in the Mercantile Library at Hamburg.——A translation of "Joseph Noirel's Revenge," by Victor Cherbuliez, is to be begun at once in the *Week*.

—Mr. Alexander Agassiz sends us two specimens of the first application of carbon printing to "general illustrations of natural history." One is a figure, natural size, of *Echinocidaris punctulata*, printed by Mr. Bierstadt according to the Albert process; the other, a slightly reduced section of *Laganum decagonalis*, printed by the American Photo-relief Printing Company, of Philadelphia, by the Woodbury process. The former has the decided advantage of dispensing with mounting altogether, and in a bound volume this consideration is an important one; in other respects, it would be difficult to choose. Mr. Agassiz calls attention to the good promise that these processes hold out of substituting, in scientific memoirs, the absolute accuracy of photography for lithography with no sacrifice of mechanical convenience and with great gain in point of fulness of illustration and detail. It is not only for scientific memoirs, let us remark, that this future may be expected, and we trust that the public will soon require, wherever it is reasonable that they should, the fidelity of the sun-picture in place of the fancy of the draughtsman. For this purpose it is not necessary to wait till the new processes reach their highest artistic development.

—We had been hoping that good sense and broad views would prevail in Congress, and secure the passage of the appropriation to indemnify the College of William and Mary, which, during the campaign on the Peninsula, was held and afterwards burnt without cause by Federal troops. A year and a half ago we sketched the checkered career of this venerable institution of learning, so filled with reverses, and yet so marked by a vitality that neither fire nor war could overcome. The opposition to an obvious act of justice on the part of the Government is headed (*ex officio*, we trust) by General Garfield, and, so far as we have observed, rests on two objections: first, that a costly precedent would be established; and second, that the college was a nursery of disloyalty. As regards precedents, we have only to say that if any similar case is presented, the same restitution should promptly be made. It is a fact that the college was suspended on account of the rebellion; that ninety per cent. of its students entered the Confederate service; and that the Confederates used the building as a barrack and a hospital till Williamsburg was evacuated. Its destruction, however, was not a necessary act of hostilities, and the question remains whether the college has not a moral claim for damages, and, what is the gist of the whole matter, whether the State would be better off to-day without the college—in fact, without all its colleges. If it would be, the appropriation asked for should be denied; if it would not, no better pretext could be had for fostering liberal education in Virginia without making invidious distinctions, and without incurring a general obligation to endow every other Southern college.

—It is the general principle which is chiefly commendable in the act of Congress setting aside the Yellowstone region as a national park. It will help confirm the national possession of the Yo Semite, and may in time lead us to rescue Niagara from its present degrading surroundings. That the park will not very soon be accessible to the public needs no demonstration. The expedition under Captain Barlow, sent out by General Sheridan last summer, judged it probable that a railroad could be built up the Wind River Valley to the Upper Yellowstone, and so northward to the Northern Pacific Railroad, which would then be connected with the Union Pacific. Meantime, it may be well to improve the opportunity of learning a little more of the geography of the Northwest, and to that end two maps, just published by the Department of the Interior, will be found serviceable. One embraces the whole reservation; the other, on a larger scale, takes in only the Yellowstone Lake and vicinity for a distance of about five miles from its borders--as far, on the south, as the head-waters of the Snake River. Soundings are given over the greater part of the lake, which is nowhere more than fifty fathoms deep. The chief features of this remarkable basin have already been appropriately named by Prof. F. V. Hayden and his associates, or by earlier explorers, but there is still room, we observe, for a "national" nomenclature if that is insisted on rather than a natural one. Congress, we may say here, would do well to suppress the names of "Wyoming" and "Washington,' which threaten to become fixed whenever these Territories are admitted as States. Both names are irrevocably associated with older parts of the country, and of right should be cherished for them. They are, moreover, the only instances in which our Territories have failed to receive beautiful and distinctive appellations.

—It has often been said of the New England farmers as a class that a large majority of them had long been unprosperous till luckily the war came, and enabled them to pay off debts and mortgages in a depreciated currency, and even for a time to make a fair annual interest on their invested money and labor. Before that time, it is alleged, only the garden farms which had easy access to a market, and the milk farms near to the cities, were in a condition of reasonable prosperity, while as for most of the agricultural population, in spite of the dignity of the honest farmer as insisted upon by the essayists, and the superiority of rural life to the whirl of urban existence, the farmers' boys were all emigrating to the towns and to the West, and the farmers' daughters, superfluous, were accumulating in the stagnant country villages. A recent address before a Massachusetts agricultural society, delivered by Mr. George E. Waring, Jr., seems to countenance this popular impression, and endeavors to show how the interests of the New England farmer may be so promoted as that he may be able not only "to pay his bills at the end of the year and start again at the point at which he started twelve months before, but how, as the world moves, he may move with it, how he may be in all respects as much better off at the end of each year as the merchant or professional man is." Many a farmer is to-day eager to know how this may be done, Mr. Waring thinks, and is anxious that his children at least may be got out of "the good old way" in whose ruts he himself has so long been travelling. To begin with, the Massachusetts farmer, says Mr. Waring, "must work with all his mind and all his strength, and he must work for the love of money and as only the love of money can make him work." He must no longer listen to the orators at the county fairs, who remind him that "it is upon the brawny shoulders of the sturdy yeomanry that the great fabric of our civilization rests." Mr. Waring, who "lives behind the scenes, and knows the farmer class as he knows his own brother," asserts that such oratory is "threadbare palaver, and thinks that whenever a farmer is stingy, close-fisted, narrow-minded, and pig-headed, jealous and suspicious of all improvement," he is not at all "a gentleman by right of his profession," but, on the contrary, deserves contempt, and can only secure himself from it by ceasing to do his work in a mean way and doing it respectably and thoroughly; and as this he can only do by hard work and the expenditure of money, he must, as above stated, work with all his mind and all his strength and as one who loves money and intends to have it.

—It is work done in pursuit of personal wealth, Mr. Waring asserts, to which alone we can look for that further improvement in the condition of New England farming which will make it "as attractive to the better class of young farmers as New England cotton-spinning is to young manufacturers." The hackneyed command, "Keep the boys on the farm," must somehow be obeyed. How, it is the subject of Mr. Waring's address to show. In the first place, then, the elderly agriculturist must point the younger to instances in which energetic men, by intelligently working their farms, are securing not only the means of luxurious living, but an income equal to the annual four, or five, or six thousand dollars of the professional man. Or, better still, send the boy away for a year or two to the best farmer in the region, telling him that when he comes home with his mind made up in sober earnest to be a good farmer, he shall want no help that the parental bank-stock and the parental encouragement can supply. And to this end it would be well, Mr. Waring says, if there were less of parental jealousy of the son's movements, less of parental restraint, and more of companionship and good-fellowship. And while the elderly farmers are doing thus much to keep their sons in the ranks, something must be done to make the ranks worthy of the new recruits. To talk of "plain living and hard work" is nonsense, because what the new generation wants is to live comfortably and to add to comfort as much of refinement and luxury as may be had. Each farmer, looking carefully to his own peculiar circumstances, must manage his farm with a determination to get as much out of it as the best knowledge he can command joined to his best energy will enable him to get, and he must begin by admitting that "there *is* a better way of farming than any he has yet tried," and that, if he is to have his son as his helper and successor, it behooves him to bestir himself and find this better way. Mr. Waring's counsel seems to come nearest to being practical when he remarks that in nearly every town there is one man whose eyes are open to the value of improved methods, and of the application to farming of science and liberality; that in every county there are many such men, and in every State a multitude of them, and that these should join to encourage each other and instruct their neighbors in "high farming." He is older and tougher, he says, than once he was, and now grows fat on opposition and contempt, but he cannot help feeling that "the utter and entire failure of every agricultural operation" in which he is interested "would carry joy to the hearts" of all his neighbors—who yet are not such bad neighbors either, as old-fashioned neighbors go when a man attempts "new-fangled farming" amongst them, and who, though they last year decried and hated the methods which this year they have adopted, are not less firm this year in decrying and hating the methods which they will next year adopt. The agricultural conservative, too, has all the conservative's wide notion of what constitutes a permissible weapon of controversy, and sensitive "high farmers" in some localities where they may set up their rest, are not likely to be very enviable men. However, the future bids fair to be better for them than the past has been, and such schools as that at Amherst and the new Bussey Institute at West Roxbury cannot fail to prove great allies of the men with the phosphates as against those who farm with hard cider instead, and get their milk from half-frozen and half-starved cows.

—At a time when American criticism, even of the better sort, was too apt to consist of platitudes expressed in a very academic sort of English, Mr. Jones Very, a tutor in Harvard College, published a few papers which, at any time in our history, would have been pronounced good criticism, as showing thought, knowledge, and taste. Looking recently at his essay on Shakespeare, a little while after looking at Mr. George Macdonald's "Phantastes," a work justly to be admired and justly to be condemned, we came upon an interesting example of an independent use by Mr. Very and Mr. Macdonald of the same striking image, or of two images nearly the same. This, perhaps, is hardly worth noting, especially in the case of a writer so abounding and superabounding in fanciful imagery as Mr. Macdonald, whose mind is, as it were, saturated and made flabby by its own uncrystallized poetry; but we are glad of an occasion to call attention again to Mr. Very as a man (and poet) too much forgotten. The image of which we speak is, in Mr. Macdonald's book, that the hero is attended by a black shadow, or "double," uncaused by the sun, representing an affectation of his ideal—that is to say, an attempt to appear not what he is, but at appearing to be what he aspires to become. This double once withstands the hero in visible shape, as a larger self, and must be conquered before a certain right but humble act can be done. As affectation, it is represented as disguising people's faces, and making them look ugly to each other. Thus Mr. Macdonald, following a train of thought which results in what we suppose must be regarded as sufficiently enervating and "unhealthy" reading. Mr. Very, in speaking of Wordsworth and Milton as compared or contrasted with Shakespeare, says that in the two former "we see the struggle of the child to become the perfect man. . . . They are striving for that silence in their own bosoms that shall make the voice that created all things heard. It is the self which opposes this that they see within them and feel without them; and it is this alone, under whatsoever forms it may be, that they describe. Like the fallen angel, they cannot escape the consciousness of themselves, and the brightness of poesy, instead of blazing directly down upon their heads, causes them, from the obliqueness of its rays, to be ever accompanied by their own shadow." It is, however, always well to remind ourselves that Mr. Very's "this alone," which poets such as Milton and Wordsworth could describe, is not the small matter that one might take it to be if one listened only to the mystics and the idolaters of the objective. Milton's rebellious will, Dante's intensity of spirit, Wordsworth's inaccessible egotism—these also are parts of the universe, and are at the bottom of no small amount of poetry of varieties not elsewhere to be found in right perfection.

—The Franco-Prussian war made absolutely no contribution to the science of naval warfare, and the efforts of Prussia to establish the principle of immunity for unarmed vessels engaged in legitimate traffic were also fruitless. Nevertheless, it may be said that the foundations were laid for substantial improvement of international law. One of the most important phases of this process may now be studied in a pamphlet relating to the North-German ships in Asiatic waters ("Die norddeutschen Kriegsschiffe in Ostasien"), presumably written by an officer of one of the two corvettes, the *Hertha* and *Medusa*, there stationed at the outbreak of the war—the latter at Yokohama, the former at Che-foo, in company with a French squadron. We need not speak of the uncertainty which long prevailed on the part both of the German and the French commanders as to the actual declaration of hostilities, and, when this was confirmed beyond doubt, as to the proper attitude of the belligerents' ships on that distant coast. Official tidings which now could be sent in an hour were then so long in coming that the *Hertha*, by invitation of the captain of the French ship *Dupleix*, joined in the salutes of Napoleon's day (August 15). The same commander proposed, in case the war rumors proved true, to arrange with the representatives of their respective countries for the neutralization of the Chinese and Japanese waters, subject to Government approval. This, considering the French naval preponderance, and the fact that France had in Saigon a station for equipment, repairs, and rendezvous, such as Germany did not possess in the East, was highly honorable to the source from which it emanated. The idea was favorably received by the representatives in question, and on the 22d of August an urgent request for neutralization was despatched to their Governments. By the time it reached France the men of the 4th of September were in power, and Jules Favre declared that so long as Prussia used every resource by land to crush his unhappy country, he could not consent to relinquish any advantages by sea. Meantime, too, the Governor of Saigon had manifested his intention to disregard the diplomatic understanding, and the result was that both the German vessels were shut up in Yokohama during the remainder of the war, and that German merchant vessels were compelled to lie up for the same period. Prussia's official assent reached Yokohama, via Singapore, November 22, 1870; the French refusal arrived two months later, January 22, 1871. The doctrine, however, that the security of the European colonies in Eastern Asia demanded abeyance of those differences which, at home, could only be settled by violence, was so manifestly just that it might well be taken up, now that the world is at peace, and made the subject of international treaty.

—Our readers will probably remember the pretty little poem in the first book of the "Golden Treasury," beginning:

“While that the sun with his beams hot
  Scorched the fruits in vale and mountain,
Philon the shepherd, late forgot,
  Sitting beside a crystal fountain,
    In shadow of a green oak tree,
    Upon his pipe this song played he:
Adieu love, adieu love, untrue love,
Untrue love, untrue love, adieu love;
Your mind is light, soon lost for new love.”

The song is anonymous, and is referred by Mr. Palgrave to the early years of Elizabeth. In “La Fleur des chansons amoreuses,” however, which appeared at Rouen, it is supposed in the year 1600, and which was reprinted at Brussels in 1866, on page 202 we find a song which is either the original or the translation of the one mentioned above. To show their similarity, one need only compare this first stanza with what we have quoted above:

“Tandis que le soleil ardent
  Grilloit les herbes en la plaine,
Le berger Philon cependant,
  Assis auprès d'une fontaine,
A l'ombre de trois chênes vers,
Sur son flageol sonnoit ces vers:
Bergère légère, bergère légère, bergère.”

Equally close in their resemblance are the other verses, which we copy, since the reprint is rare, as well as those, the fourth and fifth, that do not apppear in the English version:

“Lorsque j'estois auprès de vous,
  J'estois vostre cœur et votre âme,
Vous souspiriez à tous les coups,
  Vous brusliez d'une chaude flame;
Trois jours durèrent nos amours,
Et se finèrent en trois jours.
Bergère légère, etc.

“Vous veistes un nouveau berger,
  Dont soudain vous fuste esprise,
Soudain vous voulustes changer,
  Soudain il eust ma place prise,
Et soudain il en vint un tiers
Que vous aimastes volontiers.
Bergère légère, etc.

“Je croy que vous faites discours
  D'avoir une âme si féconde
A faire des nouveaux amours,
  Que vous en peuplezez le monde;
Mais vous discourez bien en vain
Puisqu'ils périssent si soudain.
Bergère légère, etc.

“Tels amours faibles et rétifs
  Ne viennent jamais en croissance,
Car comme petits avortifs,
  Ils meurent en prenant naissance,
Et telle plante ne produit
Jamais ny la fleur ny le fruit.
Bergère légère, etc.

“Si m'avez vous fait grand plaisir
  De me quitter à si bonne heure,
Avant que j'eusse le loisir
  De vous aymer d'une amour seure,
Car mon amour s'est terminé
Deux jours avant que d'estre né.
Bergère légère, bergère légère, bergère.”

In the same volume one finds the originals of some of the shorter and looser poems of Suckling, of Dryden's plays, etc., which, on the whole, are the least valuable parts of our literature.

EARLE'S PHILOLOGY OF THE ENGLISH TONGUE.*

THE object of this work is to furnish a popular account of the English language, its rise and formation, its spelling and pronunciation, the kinds of words (verbs, nouns, pronouns, adverbs, etc.) which make up its substance, and the general characters of its syntax and prosody. All these subjects are treated in a loose, desultory manner. The author gives such observations as have an interest for his own mind or seem likely to interest his readers, with little thought of method or completeness. He writes with an evident affection for his theme; and his book, whatever its weaknesses and faults, cannot be reproached as a dull one. In his style we sometimes find a pomp of rhetoric which goes to the very limit of good taste; as when he says (p. 209), “In this gradation of symbolism we see what provision is made for the lighter touches of expression, the vague tints, the vanishing points. Towards a deep and distant background the full-fraught picture of copious language carries our eye, while the foreground is almost palpable in its reality.” Sometimes, however, he sinks into a bald and almost slovenly way of writing. Thus, on p. 11, “In the seventh century Anglo-Saxon was cultivated by means of Christianity, and *over five centuries were produced those writings which have partly survived.* In the eleventh and twelfth centuries the spread of Christianity northwards had the effect *of getting the Norsk Sagas to be committed to writing.*” And again (p. 29), “So *the reign of Alfred is apt to get paralleled with those rude tribes* among whom our missionaries introduce a translated literature at the same time with the arts of reading and writing.”

Oftener still, we meet with singularities or quaintnesses of expression such as *sound-shunting* (p. 3) for Grimm's *Lautverschiebung* (or progression of mutes); *Latin documentary period* (p. 46) for the period when Latin was used in public documents; *vocalic crowding* (p. 118) for the change of *i* into *y* consonant, as in *opinion;* “to *trend* on the subject of accent” (p. 137) for *to trench; w* “prefixed *assimilatively*” (p. 145), in *woak, woats,* for *oak, oats;* a word employed *nounally* (p. 182); *flat adverb* (p. 361) for one which has no added ending to distinguish it from the adjective; *flat syntax* (p. 461) for that which is determined solely by the order of the words; “great acquisitions in the compass and in *the go* of language” (p. 496); “and with this *modulatory progress* there is certainly a *collocatory progress* afoot” (p. 536), where the first progress is an increased demand for good reading, and the second an increased freedom in the arrangement of English sentences.

If these oddities of expression were the worst features of the book, we should have little to complain of. Unfortunately, the book itself, as a whole, must be called weak. It shows throughout a want of logical precision, a lack of clear, sharp thinking, and a consequent lack of sound judgment. Owing to this defect, the author—though his scholarship, at least in Anglo-Saxon, seems to be respectable—has fallen into many superficialities and even errors. Of these we give here some of the most striking which we have noted in a cursory perusal of the work.

We are told (p. 8) that “of all the Gothic family of languages, it is the Scandinavian group alone that has made any approach to a *form* for the passive.” Would our author make a Gothic family with the Gothic itself left out of it? Or is he not aware that the old Indo-European middle-passive form is preserved in the Gothic, with signs indeed of decay, but still in constant use?—thus Goth. *bairada* (is borne), corresponding to Gr. φέρεται Sansk. *bharatai.*

When he says (p. 13) that “the Sanskrit grammar is the product of a long sustained and cloistered culture; the Gothic grammar was the property of shepherds, who were little in advance of the life of nomads,” he is evidently confounding two very different things—one, the grammatical system as inherent in the language itself, and recognized unconsciously by the great body of those who speak it; the other, that system as drawn out by studious research, and embodied more or less adequately in scientific form, in a series of rules or propositions.

He speaks (p. 15) as though it were questionable whether the English is more nearly related to the Norse dialects or to the Low German; and recites an incident (probably apocryphal) which “tends to show that in A.D. 912 Englisc was very like Danish.” It is said that the Northman Rolf or Rollo, when he did homage to Karl the Simple for his new fief of Normandy, refused to kiss the emperor's foot unless he lifted it to his mouth; and that his language, heard in this refusal, was taken by Frankish bystanders for Englisc. As if such a mistake, in those who understood neither Norse nor Englisc, was proof of any near likeness between them. And as if facts (?) like these could have any weight against our own knowledge; for what Englisc was in 912 we know from its monuments, and of what the Norse must have been at that time we at least know enough to be certain that it was very different from Englisc.

Among English words of ancient British (*i.e.*, Welsh) origin, Mr. E. has no hesitation in placing the old verb *ear* (to plough). He asserts (p. 19) that “soon after the Saxon settlement, the verb ERIAN must have been adopted from the British vernacular.” His only question is whether the word belonged to the primitive language of the British Celts, or was only the Latin *aro* borrowed by them from their Roman conquerors. It does not occur to him that the common word may have come alike to Latins, Germans, Celts, from their common ancestors. But be this as it may, it is absurd to suppose that a word which belonged to all the old Teutonic idioms (Goth. *erjan,* Old High Germ. *aran, erran,* Old Frisic *era,* Old Norse *erja*) was adopted by the Saxons from the British vernacular.

He regards *be* (p. 40) as “a mere vague prefix in the modern *because, besides*”; though the sense of *by,* local in one, instrumental in the other, is perfectly evident. “The preposition BE,” he says (p. 38), “at the time when we first become acquainted with it, means *about, around.*” What this time is, we are left to conjecture: that the prep. *be* in Anglo-Saxon ever meant *around,* he does not and (we think) could not show. The English compound *besiege* does not mean to *sit around* (as explained on p. 82), but to *sit* BY, *at, over against,* with hostile purpose: compare the Latin *obsidio,* Greek ἐφέδρα, both of which signify a *besieging.*

If we compare pp. 46 and 53, we find that the writer of the “Ormulum”—who “has not the Anglian mark of *s* for *sh;* who writes *shall* and not *sall*”

---

* “The Philology of the English Tongue. By John Earle, M.A., Rector of Swanswick, formerly Fellow and Tutor of Oriel College, and sometime Professor of Anglo-Saxon in the University of Oxford.” Oxford: At the Clarendon Press. 1871. Small 8vo, pp. viii., 599.

—cannot be placed in Norfolk or Lincolnshire, but may have written in Peterborough, that is, within twenty miles of Norfolk and Lincolnshire. The reader may doubt whether distinctions so sharp as this are warranted by what is known of English dialects six hundred and fifty years ago, especially when he finds (p. 59) that "Havlok the Dane," which uses *sh*, is referred to an Anglian locality, along with "Genesis and Exodus," which shows the Anglian *s*.

On page 81 we have a list of couplets, such as "*nature* and *kind*," "*mirth* and *jollity*," in which a French word is paired with a Saxon. But "*aid* and *abet*," "*chiere* and *face*," are inserted by mistake, as each consists of two French words; and these throw doubt on the explanation given for the rest by Mr. Earle and many others, that they were devised to meet the comprehension of all classes, when French was mingling with Saxon to form the new English.

It is difficult to understand why *to boot* should be taken (p. 84) from French *bouter* (to push), rather than from Anglo-Saxon *tô bôte* (for amends). For *bouter* makes in English *to butt;* and the explanation of *to boot*, as meaning to "push a bargain," is hardly a natural one. On the other hand, both form and sense are perfectly explained by the Anglo-Saxon derivation: the A. S. *ó* usually makes Eng. *oo;* and that which is given *to boot* is given "for amends," to compensate for any disadvantage to the party that receives it.

We hardly know what to say of the remark (p. 112) that "*h* is almost classed with the *vowels*, as in the familiar rule which tells us to say *an* before a word beginning with a vowel or a silent *h*." That a mere silence should be classed, or *almost* classed, with the vowels (so named as being eminently *vocal*), seems strange enough; but still stranger that any one should fail to see that the two things classed together here are a vowel with *silent h* written before it and a vowel with *nothing* written before it. The rule, in fact, classes *h* with the *consonants;* for it implies that when it *is* an *h* (a sound, not a silence), it has the same effect as a consonant on the article preceding it. The fact that the old *h*, final or before consonants, where the English writes *gh* (as in *though*, *night*), ceased to be heard in pronunciation, is ascribed (p. 88) to French influence. But this sound maintained itself long after the Norman Conquest, down to the middle of the fourteenth (according to Mr. Ellis, till late in the sixteenth) century; while in the Old Norse, beyond the reach of any French influence, it was extinct in the thirteenth century, and probably for ages earlier: thus, O. N. *thô* (though), *nâtt* (night). We may, therefore, reasonably doubt whether the French has had that influence on English pronunciation which our author supposes. Indeed, the English has shown in some respects a peculiar toughness in the preservation of ancient Teutonic sounds: in two very remarkable cases—the semivowel *w* and the spirant *th*—it has retained sounds which in all its sister-idioms have been corrupted or lost. In regard to the *w*, however, Mr. E. has a singular theory; he believes (p. 115) that the English sound of it came from the Welsh—came through the West Saxons on the Welsh border, and from them was communicated to the East Saxons and the Angles. "As an initial," he says, "it would hardly have existed had our language been educated in the Eastern counties" (which, by the way, seems inconsistent with the assertion, on p. 60, that "the Saxon literary language was not really native to Wessex, that it was not originally Saxon at all, but Anglian," *i.e.*, belonging to Eastern counties). There is an emphasis here on the word *initial;* for he holds that a *w*-sound is naturally generated between almost any two vowels when pronounced in quick succession, an example of which he finds in A. S. *ofersæwisc* (over-sea-ish, transmarine), not observing (what we see from Gothic *saiv-s*) that *sæw* in this compound is the earlier form for A. S. *sæ* (sea).

What utter misconception of the relations between Welsh and English is implied in this theory of a borrowed *w*, we have not the space to expose. Nor can we go into the reasons for believing that this sound was the common property of the old Teutonic idioms. We can only refer to the opinions of eminent investigators, who could feel no patriotic interest in the antiquity of the English sound; as the Dane Wimmer, in his "Altnordische Grammatik," who recognizes it in the Old Norse; and the German Heyne, in his "Grammatik der altgermanischen Dialecte," who recognizes it in the Gothic, in the Old High German, and (less confidently) in the Old Saxon of Northern Germany. Curiously enough, Mr. Earle, who regards it as the product of a Celtic influence, speaks of it (p. 145) as the "special birthright of English." A similar claim is put forward (p. 119) in the case of another semivowel: "We must consider this Y consonant as being in some special sense the property of the English language." He acknowledges that the same sound, in words of the same origin, appears in the German and in other tongues. But the English has rescued it from a confusion with G, which prevailed in Anglo-Saxon writing, as *geong* (young); and has given it place in many words where it had no native right, as in *ewe*, in the name of the vowel U, in the boarding-school pronunciation of *kyind*, in the *yarm, yarbs* (for *arm, herbs*), of the Dorset dialect, etc. These are the supports of the English claim. It may be said, in passing, that Anglo-Saxon orthography, so much complained of as irregular and variable, has found a champion in Mr. E.: "For a manuscript literature, that of the last hundred years of the Saxon period is singularly orthographical." In illustration we may state that the Anglo-Saxon word for *young* appears in Grein's "Sprachschatz" with five different spellings, *geong, geng, ging, giung, iung;* though we cannot say that all of them belong to the century here named.

It is well known that *could* was in Anglo-Saxon *cûdhe*, in early English *couthe, cowde;* and it is generally supposed that when *l* had become silent in *should* and *would*, it was introduced by false analogy into *could*. To those who pronounced *woud, shoud, coud*, and wrote *would, should*, it might well seem natural to write *could* also. But our author supposes (p. 145) that while the *l* was pronounced in *would, should*, it was introduced as a silent letter into *could;* as if from the analogy of *went* and *sent* we should introduce a silent *n* into *get*, and write it *gent*. But he supposes further that the silence of this *l* in *could* had such force as to bring about at length the silence of *l* in *would* and *should;* much as if the analogy of *indict* should make us say *convite* (for *convict*), or the analogy of *salve* should make us say *vaav* (for *valve*). This preference of an arbitrary and improbable hypothesis for a simple and natural one gives striking proof of the author's inaptitude for philological reasoning.

Further evidence of the same fact may be found in the strange attempt (p. 480) to show that the English verbal in *-ing* is only a corrupted form of the Anglo-Saxon infinitive in *-an*, made by a direct euphonic change of *-an* to *-ing*. For such a change the only examples he offers (aside from proper names) are the modern vulgarisms *capting, garding*, and the like, for *captain, garden*. But the history of the A. S. infinitive is perfectly traceable; we know what became of it; we see A. S. *help-an* pass into Semi-Saxon *help-en* (so always in the "Ormulum"); and this into early English *help-en* or *help-e* (so in Chaucer); and this into *help-e* as sole form; and this finally into the modern *help*. So, too, the verbal in *-ing* can be traced with perfect certainty from Anglo-Saxon times to our own. It has never ceased to be used in the same form, though it has received an extension of its syntax. It can now have an object in the accusative, which it could not do in Anglo-Saxon. It has, in fact, taken on the construction of an infinitive, and may without impropriety be called by that name; but that it comes by actual descent from the old infinitive in *-an* there is no good reason for believing.

Speaking of the auxiliary *do*, our author calls it (pp. 490, 492) "a symbol-verb of a peculiarly insular character," an auxiliary "which peculiarly belongs to English." He seems not to be aware that expressions such as *er that kommen* (he did come) are frequent in colloquial German. Yet the first impulse to this use came, he thinks, from the French: "At its start it was a French-borrowed plume." It was from the construction of *faire* with the infinitive, to express a causal sense, that the English learned to use *do* in the same way: *he does him come* (causes him to come), like the French *il le fait venir*. In time, however, the English dropped the causal sense, so that *he does come* became nearly equivalent to *he comes*. It is in this way that he explains the genesis of the auxiliary *do*. But, in fact, the causal use of *do* with an infinitive is much older than he supposes. It is found in the Gothic (*ga-taujan*), in the old High German (*tuon*), and in the Anglo-Saxon, from which it passed into the Semi-Saxon and the early English. There is no reason whatever to regard it as the imitation of a French idiom. As for the non-causal use, which he considers not as French, but as an English alteration of the French idiom, this also is met with, though rarely, in the Anglo-Saxon; see Professor March's "Anglo-Saxon Grammar," § 406. This is one instance out of a considerable number which show an exaggerated estimate of the French influence on the formation and character of our language.

But we must not fail to notice a point of grammar which is dwelt on at great length, so as to be a leading feature of the work—the division of all words into *presentive* and *symbolic*. The division is not new, being substantially the same as the well-known division into *essential* and *formal* words, or into *conceptional* and *relational* words—into words which express objects, actions, qualities, and words which mark the relations of these to the speaker and to each other. The second class in all these cases consists mainly of pronouns, pronominal adverbs, prepositions, and conjunctions. What is new here is the novel and (as we must think) unhappily chosen term, *symbolic*, to denote this class. All words are symbolic; *tree, thought, dear, shine*, are as truly *symbols* of the conceptions they express as are *this* and *that* of the relations to the speaker which they denote. But our author's idea seems to be that a word is peculiarly symbolic when it can stand for many different things; so that *this* and *that*, being applicable to all things, must be in the highest degree symbolic. If so, *greater* and *smaller* ought to be symbolic (not presentive), for any object may be called *greater* when compared with a smaller, or *smaller* when compared with a greater. Perhaps, indeed, Mr. E. would call these symbolic, though (on p. 207) he speaks of *more* as presentive, in "the *more* [*i.e.*, greater] part"; for his hazy, unlogical conception of what he means by symbolic has involved him in numerous inconsistencies. In taking up the pronouns (p. 387) he says: "We now cross the greatest chasm in language—the chasm which separates the presentives from the symbolics." But this chasm appears somewhat differently when he tells us (p. 388) of expressions which "have passed, or at least are passing, into the region of the symbolic"; and (p. 389) of pronouns "which combine with their symbolism a certain qualified sort of presentive power," *subpresentive* he proposes to call it; and (p. 210) of words whose "signification lies on the confines of presentation and symbolism"; and especially (p. 417), "the presentive adverbs pass off by such fine and imperceptible shadings into a symbolic state, that the division must needs be exposed to uncertainty." That the position of this "greatest chasm" is really quite uncertain may be seen by looking at the two little paragraphs (pp. 210, 211) in which the symbolic words are distinguished by italics. Here, *happened* appears as presentive, but *went on* (continued to take place) as symbolic; *once* (one time) is marked as symbolic, but *ten* and *times* each as presentive; *home* figures as symbolic in *sent home*, but presentive in *at home*; *become* (in "individuals become types") stands as presentive, though *γίνεσϑαι*, *fieri*, *devenir*, *werden*, are called (p. 489) "symbol-verbs of great mark each in its own language"; and it is said (p. 490) that "the word [become] has been thoroughly symbolized, and so qualified to take the place of our lost verb *weordhan*."

Mr. Earle insists strongly on the philological importance of this distinction between *presentive* and *symbolic*. The symbolic he declares (p. 211) to be the modern element—"the element which alone will give a basis for a philological distinction between ancient and modern languages." Yet on p. 214 he says: "The admiration which is accorded on all hands to the Greek language is due to the exquisite perfection of its symbolic element." The Greek, then, as it has the characteristically modern element, must be modern; even the early Greek of Homer, which abounds in particles, must be a modern language. Indeed our author (p. 218) does not shrink from this conclusion, but declares boldly that the Greek may be called truly modern. Now, we do not object to a classification in which some of the ancient languages should be associated with some or all of the modern; but it ought not to be made under wrong names. When a man professes to draw a line which shall separate ancient from modern languages, and draws it so that the language of Homer and the language of Walt Whitman are found on the same side, it may be a very good line, but it hardly corresponds to the professions of the drawer.

The reader now will not be surprised at the severity with which Mr. E. speaks (p. 215) of all attempts to penetrate the mysteries of Greek "symbolism," to find the sense of

> "Those airy nothings which scholars have been chasing all these centuries ever since the revival of letters, every now and then fancying that they had seized them, till they were roused from their sweet delusion by the laughter of their fellow-idlers. The exact distinction between *μή* and *οὐ*, the precise meaning of *ἄν* and *ἄρα* and *δή* must forsooth be defined and settled; and it is very possible that we have not yet seen the last of these futile lucubrations."

We hope for better things. The scholars, blind as they are in their vain conceit of learning, cannot shut out this new light of symbolism. They must see that what is really wanted for the Greek particles is to recognize them as "symbolic" and—"modern."

Much as we have trespassed on the patience of the reader, we must add yet one brief passage (p. 486), not to be matched for the delightful unconsciousness, the more than Arcadian simplicity, which breathes in it. The small capitals are our own:

> "Not very unlike this is the expression in the Offertory Rubric: 'While these sentences are in reading.' In modern English we should make it passive, and say: 'While these sentences ARE BEING READ.'"

Theological and Philosophical Library: A Series of Text-Books, Original and Translated, for Colleges and Theological Seminaries. Edited by Henry B. Smith, D.D., and Philip Schaff, D.D., Professors in the Union Theological Seminary, New York. Vol I. of the Philosophical Division: A History of Philosophy, from Thales to the Present Time. By Friedrich Ueberweg, late Professor of Philosophy in the University of Königsberg. Translated from the fourth German edition, by George S. Morris, A.M., Professor of Modern Languages in the University of Michigan. With additions by Noah Porter, D.D., LL.D., President of Yale College. With a preface by the Editors of the Philosophical and Theological Library. Vol. I.: History of the Ancient and Mediæval Philosophy. (New York: Charles Scribner & Co. 1872.)—Hitherto, no general history of philosophy has existed in the English language which deserves to be called thoroughly good. Schwegler's little handbook, which has twice been translated, is unintelligible to beginners and of little use to advanced students. Lewes's history is only an account of the relation of different systems to the Positivist conceptions, interspersed with biographical notices of their authors. Tennemann's manual is out of date as a book of reference, and gives a learner no clear notion of the doctrines taught in the different schools.

Under such circumstances, it is not surprising that even people who have paid some attention to philosophy have been ill acquainted with its history, that false conceptions have prevailed of the general causes of the advances of philosophical thought, and that the importance of understanding this branch of human history has been almost overlooked. There are several familiar books written to show the manner in which civilization in general has progressed, while Whewell's writings have beautifully illustrated the development of the natural sciences. But the very popularity of a *biographical* history of philosophy shows, to our mind, that but crude notions of the movement of speculative intelligence have been current. An event in the life of a writer may doubtless color his own mind, and so by his influence slightly deflect the current of the thought of his age and of succeeding ages. But the effect is almost infinitesimal. A great leader in philosophy must no doubt be a man of power; but he must also teach things that men are disposed to listen to. No man can turn back the general current of thought by any mental superiority or agreeable style of writing. On the other hand, if there be a doctrine to which a large part of the world is inclined, it will surely get developed, if not by this man, then by another. Descartes's life, for example, may easily have helped to make him set forth the metaphysics he did; but whether the world would accept this or that doctrine which he advanced depended principally on what that doctrine was, and comparatively little on the fact that it was Descartes who had originated it. If he had not lived at all, there is evidence to show that substantially the same doctrines would have been published. Thus biography does not much illustrate the course of philosophical speculation, but on the contrary the contemplation of the subject from that point of view draws the attention away from the main historic causes.

Moved by these reasons, perhaps, Drs. Smith and Schaff have made the first two volumes of their new Theological and Philosophical Library a translation of Ueberweg's "History of Philosophy." Nothing could have been more judicious. There was nothing so much needed in the philosophical department of their undertaking at least, and we are distinctly of opinion that no other book which exists in any language or which could have been written would supply that want half so well as the particular treatise they have selected. It is a calm and moderate production, not written in the interest of any system of philosophy or theory of history. It is carefully accurate and executed with great evenness throughout. It sketches the doctrines of the different schools and masters with admirable power of delineation and perspicuity, and under each head it refers the reader for further information to a large and select list of books and memoirs. In short, it will do immense good simply as a model of scholarship for all who write upon philosophy; and it will make all young students see what an indispensable aid to the formation of philosophical conceptions which may be really up to our age is a study of the origins and growth of existing conceptions.

Professor Moore's version is distinguished from most translations from philosophical German in being not an unintelligible jumble of strange words, but correct, perspicuous, smooth, and pleasant to read. Ueberweg, it is true, is a very plain and simple writer compared with the German philosophers of the past, but that has not prevented the recent English translation of his logic from being decidedly obscure.

The History of Ancient Art, translated from the German of John Winckelmann, by G. Henry Lodge, M.D. Vol. III. (Boston: J. R. Osgood & Co. 1872.)—The name of Johann Joachim Winckelmann is well known among the names of writers upon art and archæology, while yet his influence over more recent writers upon these subjects has not been very great. The "Geschichte der Kunst des Alterthums" was first published in Dresden in 1764, and this first edition is not rare; nor is that of 1776; nor are the three or four editions of the French translation; nor is the Italian version; one or the other of these is in every library of books on art. Messrs. Osgood & Co. are about to try whether an English translation of the whole work, published in four dignified volumes, will be successful. There has been no complete English version. We believe Dr. Lodge published, in 1849, in Boston, a translation of a part, under the title, "Ancient Art among the Greeks," and of this we have seen an English reprint. Afterwards, it seems, an earlier portion of the work was translated, and issued, says a circular from Messrs.

Osgood & Co., in 1856. And these two issues will form Vol. II. and Vol. I. respectively of the newly completed English translation of the work. The publishers send us Vol. III., and announce that new editions of Vols. I. and II. will be brought out, and that Vol. IV. will appear during the current year. The volume before us, the third, contains Books VI., VII., and VIII., which treat, respectively, of drapery, with dress, armor, and jewelry generally, as used by the Greeks and Romans; the materials used in art, together with some speculation about the processes of painting employed by the ancients; and the rise and decline of artistic style and taste under the Greek and the Roman dominion.

An archæological work published in 1764 has to be entirely rewritten for modern use, and this from the fact that what we now mean by archæology is of later date than 1764. Winckelmann deserves credit, indeed, as one of the first to perceive the possibility of such a science; but the science itself has far outgrown him, and the opinions and statements contained in his book have to be re-examined in the light of modern criticism. That this has been done to a certain extent at least is proved by the prodigious accumulation of notes by many different editors. One-fourth of the volume before us consists of these notes—or rather much more than a fourth, as the type is smaller than that of the text. And, as might be expected, the notes often contradict flatly the text to which they refer, and often qualify it; they are fully as important as the text, and more trustworthy, and it is a serious fault in the volume before us that it is so difficult to use them. There is no sign on the page you are reading what chapter you are in, so that if the reader finds (10) and looks for the corresponding note, he must first turn back and hunt through the pages for the heading of the chapter; then he must find what "Book" he is in, which is most quickly done by the table of contents; then, upon turning forward to the notes, there is still no helping margin or running title; the first (10) he comes to is the wrong one (the table of contents will not help in this case), and he has to search for book and chapter and to count backward and forward unceasingly. The delay and annoyance caused by this little fault, so easy to correct and so inexcusable, as it seems to us, are a very serious hindrance to using the book at all. There is a note to nearly every page of text, and, as we have said, the reader dares not overlook one of them, for fear it might contain a flat contradiction of what the text has asserted.

The Coin Book, comprising a History of Coinage; A Synopsis of the Mint Laws of the United States, etc., etc. With engravings of the principal coins. (Philadelphia: J. B. Lippincott & Co. 1872.)—We can recommend the "Coin Book," to those among our readers interested in the study of numismatics, as a useful and carefully edited compilation. The first part of the volume gives an account of the history of the coinage of Great Britain, by Mr. Robert Mushet, of the Royal Mint of London, taken from the "Encyclopædia Britannica." This article is carefully written, and Mr. Mushet has evidently read with care authors such as Messrs. Ruding, Hawkins, and Snelling, whose works on the coinage of Great Britain are looked upon as standard authorities. It is, however, rather difficult to agree with Mr. Mushet in the very bold statement that the social and political status of a nation can be judged by the beauty or art of the existing coinage. The coinage all over Europe at the present time, though accurate in weight and fineness, cannot be held up to view as proof of "artistic design and beauty." Should a comparison be drawn between the crown piece of Great Britain, the five-franc piece of France, or the German thaler, with either a tetradrachm of Mithradates VI., King of Pontus, or one of those lovely medallions given as prizes at the Syracusan games, the award of impartial criticism would be more flattering to the ancient artist than to modern mint-masters. Nor can we agree with Mr. Mushet in the statement that the coinage appears to be gradually approaching the highest degree of excellence, as in our opinion the five-pound piece struck for George III. by Pistrucci is a finer work of art than the coin of the same value executed by the elder Wyon.

Our forefathers, the early Britons, took as a model for their coinage the stater of Philip of Macedon; and a view of the numerous changes which this beautiful coin underwent forms a curious chapter in the great book of history. The quadriga, at first attempted, disappears entirely; a vague outline, drawn with the same artistic finish that would be found on the slate of some infant school-boy, represents a horse, while the wheels of the chariot can be no longer accounted for. The Saxon and Norman coinages, though more pretentious, do not exhibit any high advancement in art, the portraiture being utterly unrecognizable. The difficulty of minting must have been hard to overcome, as will be seen by the following passage extracted from the "Coin Book": "The metal brought to the mints for coinage was, after being tried, reduced to sterling or standard by alloy when too fine, and refined if too low in quality; but by what means the latter operation was performed we remain in ignorance. The metal so melted was cast into small bars, and these were flattened by a hammer; and out of these fillets or plates square pieces were cut of nearly equal weight, and then rounded at the forge. These were stamped simply by fixing a die in a block of wood, while another was used as a punch, and repeatedly struck with a hammer till it received the required impression." From this description it will be seen that our ancestors were not to be congratulated on their mechanical contrivances, though we must own that very few among the many coins which have come down to our time bear evidences of double striking. The Romans, even at so early an age as that preceding the reign of Augustus, were more fortunate in their apparatus. The British Museum lately acquired, through M. Feuardent, an original die and punch, found in the south of France, in such perfect preservation as to enable the officers to identify at once the coin with those of the same family in the cabinets of the Coin Room. The first gold coins in the English series (which Mr. Mushet does not describe, and which are very little known even in England) were issued in the forty-first year of the reign of Henry III., A.D. 1257. The record is to be found in an old manuscript chronicle of the city of London, and reads thus: "Hoc anno creavit rex moneta aurea denarpond-duos sterlingos de auro purissimo et voluit ut illo auro curreret in pond-viginti." Snelling adds: "Here seems by some means to be a mistake of the word *pond* for denar in the value." These coins were not, however, popular. Carte informs us that they were recalled by royal mandate, November 4 of the same year. The two best specimens of these valuable relics exist in the English series of coins in the British Museum, the large sum of £41 10s. being paid for one of them to the executors of the late Mr. Tyssen. From the above date to the year 1343, no gold coins were struck. Edward III., however, caused gold to be issued as coinage, and from that reign to the present time the series presents a rich and varied aspect.

The "Coin Book" also informs us that the coining-press or mill was of French origin, the invention being generally ascribed to Antoine Brucher, who, in 1553, first tried it in the palace of Henry II. of France for the stamping of counters. It continued in use till 1585, but being considered too expensive, the old system of hammering returned into fashion. Briot, another French artist, in the year 1623, unable to induce his own country to return to the coining-press, emigrated to England, and his series of shillings and sixpences can be pointed to as some of the finest work ever sent out from the English mint. They can be recognized by the B under the truncation of the bust of Charles I. The coining-press was, however, abandoned during the revolutionary troubles; but Blondeau, also a Frenchman, induced Charles II. to allow him to set up a press with some of his own inventions. The press is now used, greatly improved, though this cannot be said of the art.

Further on we have a chapter headed "Synopsis of the Acts of Congress regulating the Mint." Here will be found much valuable information relating to the officers of the mint; assay and coinage of bullion; annual trial of coinage; and other laws and regulations referring to our own mint, carefully tabulated so as to be easy and useful for reference. A "Numismatic Dictionary," containing "names of all coins known from the earliest period up to the present day," is tolerably accurate. For merchants and business men is affixed a useful table—"The Daily Price of Gold from 1862 to 1870." The engravings of the leading gold and silver coins of the United States, France, Great Britain, Mexico, Prussia, Russia, and Spain, engraved for the "Merchants' and Bankers' Almanac for 1871," are the worst feature of the book, being badly and incorrectly drawn, and in no way adding to the value of the work.

Poor Miss Finch. A Novel. By Wilkie Collins. (New York: Harper & Brothers. 1872.)—Poor Miss Finch, the heroine of this story, is blind. Oscar, the hero, is an amiable young man, who has already been tried for murder but acquitted, and is particularly remarkable for a dark-blue complexion, the result of his taking nitrate of silver to cure his epileptic fits, which fits are the consequences of an attempted assassination. These two young persons become engaged, and everything promises a happy match until the arrival of Oscar's twin-brother, who resembles him in every particular—height, voice, shape, bearing—except that, having eschewed nitrate of silver, his face is as ruddy as that of most Englishmen. He, too, falls in love with Miss Finch, and introduces a surgeon who succeeds in restoring the blind girl's sight. Oscar, however, had concealed his misfortune from Miss Finch, who, in spite of her blindness, has rather morbid opinions on the subject of color, and, having wound himself up in various falsehoods, dreads the mortification of a disclosure, and when she mistakes Nugent—the brother—for him, a mistake which rejoices the heart of the enamored twin, flees from the country, leaving the clear-complexioned villain to play the part of the girl's betrothed. This is the ground-work of the novel. A curious and intricate mesh of intrigue follows; but the result is that the girl cries herself blind again. Oscar returns, detects his brother's dishonorable conduct, is found by her to be the one whom she had really loved, and, of course, they are married. That the story is interesting in a certain way cannot be denied. There is a judicious combination of tragedy of a certain sort and comedy of a certain sort. And then, too, the way that the villain has of entering the room just as the innocent hero has left; the way in which scraps of paper thrown aside as carelessly as we throw away old envelopes, turn up again a hundred pages later, and nearly break off a marriage and drive two lovers to despair; the mysterious influence that the most ordinary and everyday acts exercise upon the plot of the story, all combine in giving us the impression of a sort of civilized romanticism, of a fairyland under the control of the police of the present day, that at certain moments makes such stories far from unreadable. But again, when we look at the story more coolly, we find around so petty a building such a lofty scaffolding, so many derricks, cranes, and pulleys, and, when the tale is finished, so little done in comparison with the immense preparations that have been made, that one is rather curious about the quality of mind that can produce such wonderfully intricate skeletons of stories without the power of more completely hiding the dry bones with the better-known and more attractive covering that we see in the life about us. For what is the aim of this story? That the blind should marry the dark-blue? There is then an excellent opening for some novelist, distracted for a plot, to write about the love of the color-blind for the jaundiced. Is it that twin-brothers should not pretend to be one another—that two minutes after we have left a room we should put our heads in the door to see if our deadliest foe is maligning us in our absence? But how petty, how exceedingly unreal seem just those stories that are so evidently most anxious to preserve the air of realism. Whatever may be said against the vanity of existence, it is not all a combination of missing trains, listening behind doors, and mysterious meetings. That is all that Mr. Collins sees in it, and therein lies his weakness. On the whole, the story may perhaps be recommended to persons about to take a long railway journey, or who, when at sea, are just well enough to sit up and read without growing dizzy.

The Princess and the Goblin. By George Macdonald. (Philadelphia: J. B. Lippincott & Co. 1872.)—In this child's story, Mr. Macdonald has simply followed his ingenious fancy, he has forborne all introduction of misplaced preaching, and the result is a charming little tale, pretty but not "goody-goody," and fantastical enough to please any but the most boisterous boys, although we imagine it will rather be the favorite of little girls, therein resembling the fate of his more ambitious works with grown people. It is the story of a little girl, a princess, who lives in a castle on a mountain, and is exposed to great dangers from the kobolds who dwell in the subterranean depths. The story itself we will not abridge; it is very slight, and almost the whole of the charm lies in the telling of it. The invention it shows is so innocent and poetical, the fancy is so ingenious without being artificial, that we would set it above even some of the most highly praised children's books of the day. In comparison with it, in regard to facility of fancy, even "Alice's Adventures" are cold and mechanical, though we dislike to say a word against a book which has that little girl in it. One would never laugh over "The Princess and the Goblin," but we think it might well become the favorite book of a rather serious child. Even if children should not care for it, their parents might find less entertaining books for an evening's reading. To our mind, it is in this story that Mr. Macdonald is at his best.

LEGENDS OF THE PATRIARCHS
AND PROPHETS
Current at the East, collected by Baring-Gould.
Crown 8vo, $2.

"We venture to predict that few books will be more delightful to a great part of our readers. . . . He has collected from the Talmud and other Rabbinical books, apocryphal Scripture, and still other ancient sources, a vast store of the most curious—to put it plainly—'yarns' about the fall of the angels, the creation of the pre-Adamites, Adam and Eve, the Fall, the Giants, the Deluge, the remains of the ark, ond the Old Testament personages, especially Abraham, Joseph, Moses, and Solomon."—New York Evening Mail.

"It will be his (the reader's) own loss if he foregoes the pleasure and the profit of reading this entertaining volume."—Saturday Review.

HOLT & WILLIAMS, 25 Bond Street, N. Y.

PRESIDENT PORTER'S NEW WORK.

THE SCIENCES OF NATURE *vs.* THE SCIENCE OF MAN.
BY NOAH PORTER, D.D., LL.D.,
President of Yale College.
One volume 16mo, $1.

"President Porter attacks modern infidel science at the point of its mortal weakness."—*Christian Intelligencer.*

DODD & MEAD,
762 Broadway, N. Y.

IN imperial 8vo, double columns, price $8, handsomely printed in a new, clear, old-faced type,

A DICTIONARY OF ENGLISH ETYMOLOGY.
BY HENSLEIGH WEDGWOOD.

Second Edition, thoroughly revised and corrected by the Author, and extended to the Classical Roots of the Language (with the assistance of the Rev. J. C. Atkinson, Author of the Glossary of the Cleveland Dialect).

With an Introduction on the Formation of Language.

In preparing this Edition the Author has had the benefit of the learned and very judicious annotations of Mr. George P. Marsh in the American Edition of the First Volume of the Dictionary, which have in many cases led to the adoption of his views. Attention has also been given to the criticisms in the Etymological Dictionary of G. Müller (Köthen 1865-7), and to the scattered suggestions on the derivations of words which occur in various periodicals. Wherever the etymology of the First Edition has been materially altered, the word is marked with an asterisk. In deference to the judgment of respected friends, the etymology of words of classic derivation, which in general were omitted in the First Edition, has been concisely inserted in the present work.

Copies will be sent to any address, on receipt of the price ($8), by

MACMILLAN & CO., Publishers,
38 Bleecker Street, New York.

ONE REASON MORE why Hurd & Houghton's (Riverside Press) unabridged, enlarged, and corrected edition of SMITH'S DICTIONARY OF THE BIBLE, edited by Hackett and Abbot, 4 vols. 8vo, 3667 pp., 576 illustrations, cloth, $26, is better than the English edition of the same, and thus the best Bible Dictionary in the English language, is that the labors of American scholars have been recognized, not only by the use of articles from them, but by a very full reference in the Bibliographical portions to books and articles accessible to American students. In fact, no pains have been spared to make the American the best.

TWO German Ladies, residing in the City of Hanover, Germany, are prepared to receive a few young ladies as private boarders who wish a pleasant home while finishing their education in the excellent schools of that city. For particulars, apply to "I. D.," P. O. Box 2136, Philadelphia.

FAMILIES OR YOUNG PERSONS Wishing to Study Abroad, and obtain the Purest German or Hanoverian Accent, can find the comforts of a home in an officer's family in Hanover.

Distinguished resident Professors of Languages and Music. Terms, $38 per Month, Gold.

References given and required. Address,
Mrs. C. Giesecke, Königstrasse, 13, Hanover, Prussia.

SALESMAN or BOOK-KEEPER.—A young and trustworthy man, who has had experience, desires employment in either of the above positions. Can furnish good references.

Address, G., P.O. Box 6732, New York City.

OFFICE OF THE

ATLANTIC MUTUAL INSURANCE CO.

NEW YORK, January 26, 1872.

The Trustees, in conformity to the Charter of the Company, submit the following Statement of its affairs on the 31st December, 1871:

Premiums received on Marine Risks from 1st January, 1871, to 31st December, 1871,	$5,412,777 51
Premiums on Policies not marked off 1st January, 1871,	2,033,675 18
Total amount of Marine Premiums,	$7,446,452 69
No Policies have been issued upon Life Risks, nor upon Fire Risks disconnected with Marine Risks.	
Premiums marked off from 1st January, 1871, to 31st December, 1871,	$5,375,793 24
Losses paid during the same period,	$2,735,980 63
Returns of Premiums and expenses,	$973,211 84
The Company has the following Assets, viz.	
United States and State of New York Stock, City, Bank, and other Stocks,	8,143,240 00
Loans, secured by Stocks and otherwise,	3,379,050 00
Real Estate and Bonds and Mortgages,	217,500 00
Interest, and sundry Notes and Claims due the Company, estimated at	386,739 41
Premium Notes and Bills receivable,	2,405.937 95
Cash in Bank,	274,345 01
Total Amount of Assets,	$14,806,812 37

Six per cent. interest on the outstanding certificates of profits will be paid to the holders thereof, or their legal representatives, on and after Tuesday the Sixth of February next.

The outstanding certificates of the issue of 1868 will be redeemed and paid to the holders thereof, or their legal representatives, on and after Tuesday, the Sixth of February next, from which date all interest thereon will cease. The certificates to be produced at the time of payment, and cancelled.

Upon certificates which were issued (in red scrip) for gold premiums, such payment of interest and redemption will be in gold.

A dividend of Forty per cent. is declared on the net earned premiums of the Company, for the year ending 31st December, 1871, for which certificates will be issued on and after Tuesday, the Second of April next.

By order of the Board,
J. H. CHAPMAN, Secretary.

ENGLISH WROUGHT-IRON FENCE.

We are prepared to receive orders for Wrought-Iron Fence of the best English make, especially suited to Country Seats, for the enclosing of lawns, for dividing lines of properties, and for use in Parks and all Ornamental Grounds. Delivery could be made at New York, Philadelphia, Boston, or Baltimore. This fence, while ornamental, is much the most economical that can be used, being practically indestructible. It is an absolute protection against cattle. It can be set up without difficulty, and once in place, is perfectly firm and secure.

Specimen panels of different styles may be seen at our office, or drawings of them can be forwarded to any address.

Entrance and Hand-gates and pillars for the same we are prepared also to order.

YARNALL & TRIMBLE,
147 South Front Street, Philadelphia.

T. B. BROOKS, C. E.,

IRON EXPERT,

In charge of Michigan Geological Survey of the Marquette Iron Region, gives exclusive attention to Explorations and Surveys of Iron Ore Lands and Mines. Address, until May 1: Care School of Mines, Cor. Forty-ninth Street and Fourth Avenue, New York.

MACMILLAN & CO.'S PUBLICATIONS.

BARING-GOULD'S NEW BOOK.

LEGENDS OF OLD TESTAMENT CHARACTERS, from the Talmud and other Sources. By the Rev. S. Baring-Gould, M.A., author of "Curious Myths of the Middle Ages." Crown 8vo, $2.

"We venture to predict that few books will be more delightful to the majority of our readers than Rev. S. Baring-Gould's 'Legends of Old Testament Characters.' . . . The author has collected from the Talmud, other Rabbinical books, apocryphal Scripture, and still other ancient sources, a vast store of the most curious—to put it plainly—'yarns' about the fall of the angels, the creation, the pre-Adamites, Adam and Eve, the Fall, the giants, the Deluge, the remains of the Ark, and the Old Testament personages, especially Abraham, Joseph, Moses, and Solomon."—N. Y. Evening Mail.

"The book is one to be taken up at any odd moment, and to be laid down with difficulty, or to be carefully studied on account of its wealth of out-of-the-way and most attractive information."—Philadelphia Press.

"It is important to the student and interesting to the general reader."—Philadelphia Age.

SPECIMENS OF ENGLISH LITERATURE. From "The Ploughman's Crede" to the "Shephearde's Calendar," A.D. 1394—A.D. 1579. With Introduction, Notes, and Glossarial Index. By the Rev. Walter W. Skeat, M.A., late Fellow of Christ's College, Cambridge. 1 thick 12mo vol., $3.

"The object of this volume is to supply the student and general reader with trustworthy and useful extracts from writings of the fifteenth and part of the sixteenth centuries."—Editor's Introduction.

THE PHILOLOGY OF THE ENGLISH TONGUE. By John Earle, M.A., sometime Professor of Anglo-Saxon at Oxford. 12mo, $2.

"This is a treatise recondite yet popular, showing how the English language has been formed, *what* it is and *why*. It is a pleasure to read such a book, full of illustrative quotations—from American as well as other authors—and pleasantly putting everything in the clearest light."—Philadelphia Press.

THE HISTORY OF THE NORMAN CONQUEST OF ENGLAND: its Causes and Results. By Edward A. Freeman, M.A., D.C.L., Oxon. With Maps and Plans.

Vols. I., II., and III., price $18; Vol. IV. (just published), $8.

"A perfect miracle of research. The book is a noble book, and the greatest incident of our history is in the hands of an historian who can tell it as it ought to be told."—Saturday Review.

BY THE SAME AUTHOR.

HISTORICAL ESSAYS. By Edward A. Freeman, M.A., D.C.L., Oxon. 8vo, $4.

"The subjects are treated with decided ability and sound learning, and with great independence of judgment. . . . The work affords an agreeable series of recreations to the historical student."—N. Y. Tribune.

"The essays in the present volume are singularly full of information. The book abounds in true historical reflections of the greatest value and solidity."—London Pall Mall Gazette.

THE HISTORY OF NAPOLEON I. By P. Lanfrey. Vol. I. 8vo, $3 50.

"It is unquestionably and immeasurably the best biography of Napoleon that has yet been produced."—Saturday Review.

LIVY. Book I. Edited, with Historical Introduction and Notes, by J. R. Seeley, M.A., Professor of Modern History in the University of Cambridge. 8vo, $2 50.

SOPHOCLES: the Plays and Fragments. Edited, with English Notes and Introduction, by Lewis Campbell, LL.D., Professor of Greek in the University of St. Andrews. 2 vols. Vol. I., containing "Œdipus Coloneus," "Œdipus Tyrannus," and "Antigone." 8vo. $6.

OUTLINES OF TEXTUAL CRITICISM applied to the New Testament. By C. E. Hammond, M.A., Fellow and Tutor of Exeter College, Oxford. Extra fcp. 8vo, $1 50.

LIFE OF BISHOP BEDELL. By his Son. Now first Edited by John E. B. Mayor, M.A., Fellow of St. John's College, Cambridge. Forming the Third Part in Mr. Mayor's "Cambridge in the 17th Century." Fcp. 8vo, $1 75.

NOTE-BOOK ON PRACTICAL SOLID OR DESCRIPTIVE GEOMETRY, containing Problems, with Help for Solutions. By J. H. Edgar, M.A., and G. S. Prichard. 12mo, cloth, $1 25.

MACMILLAN & CO.,
38 Bleecker Street, New York.

JUST PUBLISHED.

8vo, cloth extra, pp. 595, price $4.

A CHURCH HISTORY OF THE FIRST SEVEN CENTURIES,

To the close of the Sixth General Council. By the late Rev. Milo Mahan, D.D.

Tracts for the Church and the Age. No. I.

ABOUT THE BISHOPS'

DECLARATION ON BAPTISM;

With something about Prayer-Book revision and Church Progress. A Letter to a Layman.

By C. S. HENRY, D.D.,

12mo, paper, 15 cts.

Post Free on receipt of price.

POTT, YOUNG & CO.,
Cooper Union, New York.

NOW READY:

ON THE NATURE OF THINGS

(De Rerum Natura).

From the Latin of Lucretius.

BY CHARLES FREDERICK JOHNSON.

With Introduction and Notes.

1 vol. crown 8vo, handsomely printed. Price, in cloth, $2 50; half-calf, extra, $4.

For sale by all booksellers, or sent free, on receipt of the price by the publishers,

DE WITT C. LENT & CO.,
451 Broome Street, New York.

A. DENHAM & CO.

Have in Press, and will publish March 15,

THE MINOR POEMS OF HOMER:

THE BATTLE OF THE FROGS AND MICE,
HYMNS AND EPIGRAMS,

Translated by Parnell, Chapman, Shelley, Congreve, and Hole. With Introductions by Henry Nelson Coleridge, and a Translation of the Life of Homer, attributed to Herodotus.

In one vol. 12mo, cloth, 200 pp., handsomely printed on toned paper, price $1 50.

A. DENHAM & CO.,
Publishers and Importers,
Near Broadway. 17 MURRAY ST., NEW YORK.

☞ Priced Catalogues of our English and Foreign Books sent free of charge to any address.

RUSKIN'S NEW VOLUMES.

JOHN WILEY & CO.,
No. 15 ASTOR PLACE,
Have nearly ready:

SESAME AND LILIES. With Additions. New edition. Being Vol. I. of Ruskin's Works. 8vo, cloth, $1 50.

MUNERA PULVERIS. Letters on Political Economy. Being Vol. II. of Ruskin's Works. 8vo, cloth, $1 50.

Do., 12mo, cloth, $1.

FORS CLAVIGERA. Letters to Workmen. Part II. 12mo, cloth, $1.

SUPPLEMENT TO DANA'S MINERALOGY. Bringing the work down to the present time. By Profs. J. D. Dana and Geo. J. Brush. 8vo, 75 cents.

THE BREATH OF LIFE. By Geo. Catlin. New edition. Limp cloth, 75 cents.

The Nation.

NEW YORK, THURSDAY, MARCH 14, 1872.

The Week.

THE most extraordinary incident of the week has been the *coup d'état* at the Erie building, by which the government of Jay Gould has been overturned, most of the old directors turned out, and a new board installed, with General Dix as President. General Sickles, who, it has been rumored for some time past, returned from Spain in the employ of the Erie stockholders in England, planned the blow by winning over a sufficient number of the old directors weary of their position, and doubtful of Jay Gould's ability to hold his own against the various combinations now forming against him. These called a special meeting of the board under the by-laws, on the neglect or refusal of the President to do so, at which many of them resigned, and others were elected in their stead; Jay Gould was deposed, and possession taken of such portions of the building as Gould did not retain by manual violence. A large body of police was in attendance to keep the peace, and the rival parties made various unsuccessful attempts to have each other arrested, and, failing this, amused themselves by chasing and being chased around the building, and serving or being served with papers. One of the first acts of the new board was to dismiss Field and Shearman from the position of counsel to the road, and install Mr. S. L. M. Barlow in their places, but Mr. Shearman remained faithful to Gould to the last, locking doors and holding the handles of doors, and rallying the henchmen of the fallen chief, with a pertinacity that showed his heart was with the old régime. Gould held out till Tuesday, and then surrendered, on being allowed to go through the forms of resignation. He still remains a director, however, and the reform will not be complete till he is lodged in the penitentiary, and getting his first taste of honest and useful industry. What effect the news will have on the legislation at Albany, where the Ring have been working hard and with some show of success, remains to be seen.

The prosecution effected at the trial of Mayor Hall on Friday a *coup de théâtre* of extraordinary brilliancy and efficiency, by suddenly producing as a witness, from an inner room, Andrew J. Garvey, the plasterer, one of the principal "Ring thieves," who had acted as "executive officer" to Tweed, and had made up a large proportion of the fraudulent claims which Hall and his board audited. Garvey fled to Europe after the first exposure, but was brought back by his wife, and delivered penitent into the hands of the Attorney-General, who brought him up as a witness, to the astonishment of the Mayor and his counsel. At this writing, Garvey is telling the wonderful story of "how the great frauds were planned and carried out, and how the money was divided." We ought to mention, however, by way of caution to the friends of woman's suffrage, that Mrs. Garvey's action is due not to anxiety about the condition of Andrew's soul, but to a desire that he should, by turning State's evidence, save his fortune from legal pursuit. But she is, nevertheless, an able and energetic woman, much superior to her husband, and deserves a public luncheon or something of that kind.

The Collector of this port, General Arthur, has issued the new order reforming the general-order business. He designates a number of bonded warehouses in which goods are in future to be stored "under the general order." As the names of Leet & Stocking do not appear among those of the owners of these warehouses, we presume this famous firm has now vanished into history, and with them a great "plum" has disappeared, we trust, for ever from New York politics; but it is right to add that there is still widespread distrust on this point. Let us sum up, for the benefit of posterity, the history of Leet's Custom-house career. He got from the President a simple letter of introduction to Mr. Grinnell, who was, he had found out, to be the new Collector, and by announcing this fact to Mr. Grinnell before that gentleman was himself aware of it, he produced on Mr. Grinnell's mind the impression that he was in the President's confidence and enjoyed his special protection, and he asked from him a share of the general-order business, and this in spite of the fact that he had been formally warned by the President that he did not wish him, or anybody else who had been connected with him, to take any office in the Custom-house. He concealed from the President the fact that he had disregarded his wishes; retained his position in the army, and continued to do duty in the War Department in Washington, after having farmed out his share of the general-order business, and drew his share of the spoil covertly, and through a third person, meanwhile occasionally threatening Mr. Grinnell that if he did not give him more of the business—that is, a monopoly of it—he would have him removed, thus making himself guilty of a second false and fraudulent misrepresentation. After a year of this, Mr. Grinnell transferred to him and a new partner, Stocking, the whole of the general-order business, and the warehouses previously kept for this purpose were closed, and a petition against the change from the merchants of the city disregarded. Collector Grinnell was then dismissed, Thomas Murphy appointed in his place, and Leet, taking off the mask, moved on to New York and took open charge of the business, and commenced the system of exactions which has finally been brought to a close by the "Schurz-Fenton Trick."

Now here is the strange part of the story, to which we again direct the attention of *Harper's Weekly*, premising that the Seneca Stone Company story we utterly disregard. When the President became aware that Leet had abused his confidence, disregarded his wishes, made false representations as to his influence over him, and concealed his doings from him—facts which were revealed by the repeated complaints of prominent merchants, and by Leet's appearance in public as owner of "the plum," and, finally, by a Congressional investigation—he took no notice of them whatever. So far as we know, he gave no sign of displeasure, paid no attention to the complaints against him, and let him go on for nearly two years preying on the commerce of the port, till a second Congressional investigation, obtained with great difficulty, and the savage assaults of the press on the eve of an election, made the change we have just witnessed imperatively necessary. It has been the custom of the defenders of the Administration hitherto, whenever charges of this kind are brought up, instead of answering them, to tell you that they endear the President more than ever to the American people; that "his renomination is a sure thing," etc.; and that Horace Greeley is the friend of Hank Smith. Now, is this satisfactory? Let us have a candid answer, without allusions to cigars, or fast horses, or investments, or summer vacations, Hank Smith or Horace Greeley.

Three members of the Civil-Service Commission are also employees of the Government in other departments; that is, in addition to their regular, onerous, and greatly underpaid duties, they have assumed other duties, also onerous and also sure to be underpaid, which have to be performed by working overtime, and which it would be a disgrace to the nation to allow them to perform without extra pay. Nevertheless, when a resolution came up in the Senate the other day authorizing the President to give them such extra pay for such extra services, Mr. John Sherman thought it was a capital joke, and said that this was "the best commentary on civil-service reform they had had yet"; whereat, we are told, there was "laughter." Mr. Carpenter "thought it was a striking illustration of the reform as it was being carried out"; and then came Mr. Logan, who gave notice that he would move for the repeal of the law under which the Civil-Service Commission was created, and declared that "he was as much in favor of civil-service reform as anybody, but not in this way." "This particular measure" seems to be still in as great disfavor as ever; but we are also just as far as ever from knowing what particular measure would find favor with gentlemen of the Logan kind. There is nothing more curious in the present political crisis than the apparent determination of the "Administration Senators" not to let the President's plan of reform go into practice. Their notion appears to be that the civil service ought to be reformed without labor or expense, and by some process in the nature of a miracle—by "the laying on of hands" by the heads of departments, or something of that kind. The payment of money to anybody on account of it wears, in their eyes, a look of simony or blasphemy. The compensation has at last been voted.

A noticeable recent occurrence in the political world is the *Tribune's* partial change of front in the matter of the New Hampshire election. Administration Republicans in that State were not, we judge, getting much comfort from its editorial articles in the earlier days of the contest, but as soon as the Democrats began circulating free-trade documents among the voters, the *Tribune* at once gave what we may call fair notice to all men that protection must be let alone, or the *Tribune's* friendship dispensed with; so Democrats, Administration men, and Reform Republicans will have to note and ponder the fact that protection is the *Tribune's* main question, and may govern themselves accordingly.

New Hampshire has been carried by the Republicans, by a majority estimated, as we write, at from 1,500 to 2,000 votes, assuring the Governor, the Legislature, and a United States Senator to the party, and seeming to prove that its defeat last year was due to its own dissensions more than to the increased strength of its opponents, and very little, if any, to considerations of national importance. The canvass on the Republican side was extraordinarily active, much being at stake in local politics, and much being believed to be at stake in national politics. The result will diminish the influence of the Reform Republican leaders within the party, and will, perhaps, more than proportionally increase their consideration in the eyes of the Democracy.

The "exposure" made of Schurz by the *Times* has called out a reply from Mr. Jussen, Mr. Schurz's brother-in-law, who is now at Bonn, in Germany, in a letter to the *Chicago Tribune*, in which he says that Schurz distinctly refused to support his application for the office of collector of internal revenue in Chicago; that the appointment was procured for him by certain Chicago gentlemen, who then wished to share in his salary; that he had, while in office, to dismiss Dr. Lamper, "a cousin of the President, and gauger of the district, for appropriating highwines." Lamper dared him to do it, but he did it, and Mr. Delano approved his action; but Lamper was soon after appointed receiver of public moneys in the land office in Washington Territory. Shortly after this, he was approached by Mr. Orville Grant, the President's brother, who proposed to him to allow a certain distillery to double its capacity without paying any more tax, which Mr. Jussen indignantly declined to do, and reported the proposal to the Commissioner of Internal Revenue, the Assistant-Assessor, and Senator Schurz, upon hearing which Grant came and apologized, and said he only did it "to test his integrity." As Mr. Jussen gives names and dates, and refers to documents, it seems as if these charges would have to be investigated.

Mr. Samuel Bowles, a practised political observer, writes home from Washington to his paper, the Springfield *Republican*, a long and interesting letter about the immediate future of politics which will displease Federal officeholders, but which is, nevertheless, worth their close attention. Mr. Bowles is an avowed opponent of the nomination of General Grant, and it may be as well to recollect that fact in examining his statements and predictions; but it must be recollected, too, that he is a shrewd man, as good a politician as the managers of conventions, as powerful in virtue of his editorship as half-a-dozen wire-pullers of the first magnitude, and possessed of excellent means of getting information. This is in substance what he says:

> "Everything and anything is possible to the political history of the next ninety days. If the Mortons, the Forneys, the Chairmen of State Committees, and the other masters of the mere machinery of the Republican party, decide on renominating General Grant, they may or may not find themselves vigorously opposed in the Philadelphia Convention; but it is a thing certain that when their nomination is made, they will be confronted by such an opposition, arising from their own ranks, and represented by names so Republican in services and history, so powerful in character, and so powerful in their representation of public opinion, as will carry away from General Grant all the flower of the Republican party."

Neither the Republican nor the Democratic party, whatever the politicians may think of the people's intentions and wishes, could rally one-half of its followers against a movement of the honest men of the country intent upon reform, and headed by such candidates as Trumbull and Greeley, or Sumner and Trumbull, or Trumbull and Sumner. Some such ticket will be framed at Cincinnati, in the convention which is to be held there in May, and which will be, it is probable, "one of the largest assemblages of the purest and most independent Republicans of all the States that ever has been known." Such a ticket would have the support of a vast number of Democrats, for "the present tendency of opinion among the wisest of the Democratic leaders North and South is, in the event of Grant's nomination, to the abandonment of the Presidential campaign to the Reform Republicans." In respect of this whole matter of the next nomination, "the country is ahead of Congress, the press is in advance of the people, and the people in advance of the politicians, as a rule." Mr. Bowles says that he finds Congressmen anxiously non-committal, but that if the Republican members were to-morrow compelled to sign one of two papers, "declaring their belief that the interests of the country and the party require the renomination of General Grant, or the reverse, such renomination would be no longer possible." As we say, Mr. Bowles is long since committed to opposing General Grant's renomination, though he worked hard to secure his election, and worked hard, too, in defending his official acts and omissions, and it may be necessary to make some abatement of the expectations which his letter is calculated to excite. A very great deal depends upon the firmness of the Cincinnati men and their friends. Meantime, Republicans of their way of thinking are, with very rare exceptions, allowing the officeholders to manipulate the primary meetings and pick the delegates for Philadelphia, while, for the moment, the Reform cause goes by default.

What has recently happened in Missouri seems to indicate that the corruptionists, far from being discouraged by the events in New York and elsewhere, are growing bolder than ever. In Cass County, in that State, about $100,000 county bonds—which had been printed some years ago for issue in aid of the Missouri Pacific Railroad, but which, for reasons unnecessary to enumerate here, were never issued, and ought to have been destroyed—lay for some time unnoticed in the county treasurer's safe. The news of their existence getting abroad, a "ring" was at once formed of two of the judges of the county court and three or four prominent lawyers and merchants. The approval of the county court was necessary to give the bonds even an appearance of validity, so the two judges waited until the court had been adjourned one day, and their honest colleague had gone home, when they "reopened court," called up the bonds for "approval," got a knavish or simple deputy clerk to affix his signature and the seal of the court to them, and then the "prominent lawyers" and merchants started for St. Louis and other places to put them on the market. They were promptly pursued by the police, and the scheme frustrated, and one of the merchants committed suicide. When the judges of a court of record combine with members of the bar and respected if not respectable merchants to engage in fraudulent issue of county bonds, it must be admitted that this particular mode of making money is growing in favor; but it must be admitted, too, that what is called "the framework of society" is in a shaky condition in any place in which such things occur.

The Chicago *Tribune* very properly calls attention to the cruel treatment Messrs. Caldwell and Pomeroy are experiencing at the hands of the Kansas Legislature. We told in our last the story of their performances when getting themselves elected. When these charges reached Washington, Senator Caldwell "hurled them back" with scorn and indignation, but declined to do anything with them except "hurl" them, until he was furnished with a certified copy of the testimony on which they were founded. This he will receive as soon as he has exhausted every means of suppressing it.

The Legislature of South Carolina is engaged in passing a bill giving validity to all issues of bonds heretofore made, which is in itself an admission that some of the bonds are illegal, which the State government is trying to deny. The bill, however, goes further than this, and exonerates the rascals who issued the bonds from all blame, which reveals the real character of the transaction. The measure will hardly do much for the State credit, inasmuch as it can only bind the State till the next Legislature meets, and as the character of the present body is too low for its sanction or confirmation to give any bond or bill or note any increase of market value. The men who "engineer" legislation in that State now ought to be, in a large number of cases, laboring in the penitentiary, and their poor colored dupes ought to be handling honest spades or pickaxes. Emigration from the State continues on a great scale, and a few years of the present state of things will probably leave nobody for the carpet-baggers to prey upon.

One of the greatest curiosities of New York jurisprudence has been for some time the rule which permitted a prisoner to challenge a juror for having formed or expressed an opinion in reference to the circumstances out of which the trial arose, or in reference to the guilt or innocence of the prisoner. The result has been that the process of impanelling a jury has long consisted in the careful sifting of the list by the prisoner, so as to select the most ignorant and stupid persons on it. Indeed, it may be said, without meaning to impugn the justice of any verdict in particular, that nearly all juries in criminal trials have, for many years back, been composed of persons who were, by their own confession, entirely unfit to form an opinion of any value on any matter whatever; for a man who in New York either does not read the newspapers, or, reading them, forms no conclusion whatever as to the character of the most startling events of the day, is, *ex vi termini*, either an ass or an idiot. This interesting farce is now to be ended, we hope, by a bill which has passed the Assembly, and awaits the action of the Senate, which declares that if the juror can swear that any opinion and impression he may have formed will not prevent his rendering an impartial verdict according to the evidence, the formation of the opinion or impression shall not be a good ground of challenge. This is a very important contribution to reform in the administration of justice.

The Tichborne case has closed in England after a trial lasting over one hundred days, and after an address from the defendants' counsel, the Attorney-General, extending over more than twenty, the longest we believe on record, but not longer than the enormous mass of testimony called for. This testimony consisted not simply of the evidence given in court by a cloud of witnesses, but of depositions taken in South America and Australia by commission. The Attorney-General lost reputation by his cross-examination of the claimant, which was somewhat feeble and ineffective, but he more than regained it by his running commentary, which was a masterpiece of that mingled recital and argument known as an address to a jury. At its close the jury, for the second time, declared themselves convinced, and the claimant withdrew his suit, and shortly after was arrested for perjury on a bench-warrant, and now lies in jail awaiting his trial, at which it will doubtless go hard with him, as he has been the means of saddling a minor's estate with an encumbrance little short of half a million of dollars, and swore he had seduced a lady now living while engaged to her as Sir Roger Tichborne, whom he was personating. His failure does not, however, prevent his being perhaps the most remarkable impostor on record. Though, according to the theory of the defence, nothing but an illiterate butcher-boy from the East End of London, who had lived several years in Australia as a blackguard and thieving adventurer, he succeeded in persuading Lady Tichborne that he was her own son, several cavalry officers that he was an old comrade, some servants that he was their old master, several country gentlemen that he was the companion of their youth. Moreover, he got numbers of people to lend him money on the strength of his claims, and the price of his bonds were quoted in the street as his chances rose or fell. He had the impudence, too, to present himself in open court for cross-examination as a person living in a circle which he had never entered, and of the habits and manners of which he could only have known by hearsay. Some of his knowledge has not been satisfactorily accounted for—such as his telling an old friend of Sir Roger's what kind of pipe he (Sir Roger) had smoked on a particular evening, after a particular event, the pipe being peculiar, and the occasion twenty years ago. He was finally broken down by his ignorance of a multitude of things he ought to have known if a true man, and by the ludicrous mistakes he necessarily made in guessing. But he, nevertheless, performed a great feat, and must for ever rank among the foremost rascals of an age prolific in cheats and impostors.

The news of Mazzini's death, which has come at last, is none the less sad for having been long expected. He was the greatest, bravest, most heroic and persistent of the long roll of Italian worthies who took up in 1815, when the rest of Europe sunk, weary of strife, into ignoble repose, what was best in the ideas of the French Revolution, and, above all, the great doctrine that every people has the right to dispose of itself, and fought and died for it, without ever flinching or ever despairing or ever repining, till 1859 brought their triumph. Indeed, it may be truly said that to them, more than to any other agency, is due that great, silent change in European politics which has made Austria a constitutional monarchy and has taken Victor Emanuel to Rome. This long and fruitful Italian struggle, too, was remarkable, not simply for the production of martyrs and confessors and conspirators, but of brilliant men of action, of soldiers and statesmen who wanted nothing but a country and an organized government at their back to make them illustrious. Any country which in fifty years of sorrow and degradation and oppression has produced Mazzini, and Manin, and Garibaldi, and Cavour, and D'Azeglio, and Rattazzi, and the gallant and gifted Govone, just dead in his prime, and who led his division off the field of Custozza unbroken, after bearing the whole brunt of a bloody and disastrous day, may well call herself the mother of a great race. Mazzini was a dreamer, as a man must be who is for ever intent on schemes beyond his power, and morbid, as men always are who are fighting against laws for which they have no respect, and bitter, as nearly all men become who have long hoped against hope and have often thought themselves struggling against fate itself. But it was a striking illustration of the radical soundness of his mental and moral constitution that, when the day of triumph came, it brought in him no frenzy or ecstasy. His last public utterances were as clear and healthy definitions of the bases of civil society, and of the true conditions of order and rational progress, as if he had all his life sat debating in the parliament of a free country, instead of plotting in back bedrooms. Italy owes him a monument as one of those great "precursors," as they have been called, who rendered her the inestimable service of worshipping her as a nation when the rest of the world despised her as a "geographical expression," and only visited her as an old curiosity-shop.

LAND AND POLITICS.

We are likely before long to have some exact information on a question which not only plays an important part in English political discussion, but in the controversy between democracy and oligarchy all over the world, namely, how many landholders there are in England. The popular belief, founded on the last census returns, is that there are only 30,000, and there is hardly a speech, denunciatory of the English political system, delivered in either hemisphere, in which this calculation is not used as an illustration of its badness, and as a support to some scheme for the more equal division of landed property. It appears, however, that nobody is returned in the census as an owner of land who does not return himself as a "landowner," which, it is alleged, a large number of persons who are really possessed of land in fee simple, but do not live off it, or who follow some calling beside that of agriculturists, do not do.

Parliament has now ordered a return of all persons in the kingdom owning an acre or more, which will be the first enumeration of the kind made since the Domesday Book of William the Conqueror, and it will be very interesting, owing to the stout denial of the accuracy of the census report put in by prominent members of the landed aristocracy. Lord Salisbury has, for instance, made an examination of the landed proprietary in Hertfordshire, which revealed the fact that there were in that county 8,333 owners of land, whereas the census only gave it 245. At this rate, the whole kingdom ought to contain nearly one million, and Lord Derby maintains that it does contain over 300,000. The matter is of more importance to the great English proprietors than to anybody else. There has of late been a great deal of ominous talk about the injustice and inexpediency of treating property in land as capable of acquisition by individuals with the same absoluteness and inviolability as the products of human industry, and the appropriation of such rise in the value of land as has been caused by the growth of the community in wealth and population, forms one of the leading suggestions in the programme of a large and increasing body of English radicals; that it will eventually become a plank in their platform we can hardly doubt. Landed proprietors, too, are gradually becoming objects of popular dislike and suspicion, because the power and influence of the English aristocracy have mainly rested on property in land, because the owners of it have for ages formed a veritable caste, and until very lately were held to constitute the real "country." Indeed, the whole of the legal and political system of Great Britain may be said to have been the creation of the landowners, and to have been maintained by them, with all its virtues and all its defects, down to our own day. The leading characteristics of the landowners' mind have been a frequent topic of discussion of late, and they are, it must be admitted, intensely aggravating to the progressive school of politicians. Their caution, their narrowness, their dislike of new customs and new ideas, their want of sympathy with persons apart from property, their satisfaction with the present and reverence for the past, are all obstacles to change, and their obstructiveness is made all the more exasperating by the reflection that they whom everybody paid for the privilege of sleeping under a roof formed only an infinitesimal portion of the population. If it can now be shown that they form with their families a respectable portion of the population—say 5,000,000—although it may not make them more acceptable to reformers, it will certainly make them seem more dangerous to meddle with.

But then there is no doubt that the whole question is being treated in England on a view of the relation of land to politics which the experience of other countries does not altogether justify. The one result which may be counted on with certainty from a wide diffusion of landed property, is that the cause of property generally, as opposed to communistic schemes hatched in cities, will be greatly strengthened. Owners of land, in fact, are always opposed to "going shares" with anybody, and have the sense of ownership very highly developed. There is no country in the world, for instance, in which there is so much hostility to property as in France, and yet there is perhaps no country in which property is exposed to less danger at the hands of the majority, owing to the division of the soil amongst the peasantry. A Paris or Lyons socialist is more of a noxious animal in a village of his own country than he would be in an English manor-house. So that it is undoubtedly true that the more you cut up the soil, the more guarantees do you create that the present social organization will undergo no serious change.

On the other hand, the wide diffusion of landed property, apart from education and the habit of self-government, apparently promises nothing whatever for political liberty. The worst governments in France rest on the peasantry, and will continue to rest on them as long as the peasantry are neither taught in schools nor in meetings to manage their own affairs. The one political good they seek is security, but they are utterly indifferent as to the means by which they attain it—so that the conservative interest is cultivated at the expense of everything else. Belgium has also a peasant proprietary and an excellent government; but the goodness of the government is largely due to the fact that the peasantry have nothing to do with it except obey it. The suffrage is restricted to the *bourgeoisie*, which really governs the country, as the same class governed France under Louis Philippe. If the suffrage were made universal, as it was in France in 1848, the Government would at first pass completely into the hands of the clergy, and the revolt of the town population against the clergy would create such a feeling of insecurity and horror of disorder that the reins of authority would at last be freely surrendered to anybody who promised to rule with the strong hand, to make going to church safe, and to make every man sure of reaping what he had sown.

It has to be borne in mind, too, that the love of the land and the honor of agriculture which has come down to us from the Middle Ages, and is, perhaps, the best of mediæval traditions, is declining so rapidly in modern times that it is highly unsafe to attempt to build a political system on the presumption of its continuance. It has been weakened in our day, and is likely to be weakened still further, by a variety of influences. The increased facility of locomotion, by enormously increasing the number of landowners and the opportunities for becoming a landowner, has done much to deprive the character of a landowner of its respectability. The Irish or German peasant, whose brother owns a quarter-section in fee out in Illinois, and cares for nobody, must have his reverence for squires and landlords diminished by the knowledge of this fact, and still more by the ease with which he has learnt that he can go and do the same thing himself. Moreover, the assimilation which has taken place in the jurisprudence of nearly every civilized country of the rules regulating the acquisition and transmission of real estate to those regulating the acquisition and transmission of personal property, has made the transfer of land easy, and therefore frequent, and under their influence farming has come everywhere to be looked on more as a business and less as a status, and the farm as an investment rather than "as a stake in the country"—or, in other words, to deprive landholding of its sentimental associations. Farmers, in other words, are losing their conservative character, and growing changeable and restless, and begin to come and go, like traders, and think more of present profits and less of steadiness of position and certainty of future. Add to all this the dislike of the solitariness of farm life caused by cheap literature, and the consequent diffusion of urban tastes through the rural population, and the facility with which easy access to the city enables them to be gratified, and we have enough reason for believing that landowning will cease in a generation or two to produce anywhere a distinct type of character possessing a special value for political purposes.

The truth is that the character of the political and social organization in every country will probably hereafter be determined, not by the extent to which landed property is diffused among the people, but by the extent to which property of all kinds is diffused, and by the extent to which people are educated. The American farmer is not a fit basis for a despotism, as the French farmer is, because, although he loves security and respects property as the French framer does, he is well-informed enough to contribute to the opinion of the country, and has the habit of politics. But he has no characteristic of special political value or importance which an American artisan, having money in the savings-bank, or shares in a factory or railroad, does not possess in as great a degree. This almost amounts to saying that it is not as profitable, from a political point of view, to agitate for the diffusion of farms among the people as to agitate for the diffusion of five-dollar bills, and the arts of reading, writing, and habits of order, forethought, self-respect, and of managing affairs in common with others. Perhaps nothing is better calculated to make a man a good politician than to be a member of a co-operative association.

MASKED REFORMERS.

THE examination of the proprietor and editor of the *Times* before the committee sent down by the Legislature to investigate the charges made by that journal against Mr. Miller, the State Superintendent of Insurance, furnishes one more striking illustration of the defective condition of the law of libel, and of the necessity, in the interest of political reform as well as of other things hardly less important, of such changes in procedure as will make possible the trial of libel suits promptly after the appearance of the alleged libel. We have spoken of this more than once already. The events of every day add to the force of all that we or others have ever said in its favor. Of the merits of the controversy between Mr. Miller and the *Times* we do not profess to know anything certain; but enough appeared in the evidence before the committee to make it plain that if he is innocent he is greatly to be pitied, and that if he is guilty the public and the insurance companies are greatly to be pitied.

The *Times* has during the last six months or more been steadily charging him, week by week, with various infamous offences, such as appropriating public money to his own use, levying blackmail on insurance companies and taking bribes from them, and has indeed imputed to him almost every variety of breach of trust. It has even gone further than this, and sought to show that his private character was, before he took the office, that of an untrustworthy and irresponsible person, and it has done all this with great vehemence and bitterness. Its attacks, in short, have been of a kind that no public official can possibly suffer to pass unnoticed, and such as no private individual possessing any self-respect or regard for the respect of others could live under, even if they had not been fortified by the formal declaration of the *Times* that it knew what it was talking about, and that "it would make good all it said against him." He was accordingly driven into asking an investigation at the hands of the Legislature, and the Legislature—these being days of reform—was driven into making it, and it sent down a committee for that purpose. The principal articles bearing on his case were produced at the investigation and read over to the conductors of the *Times*, and they were asked whether they had any personal knowledge of the truth or falsehood of the charges made in these articles. They admitted they had not. They were asked to give the names of some person or persons who had, and they refused to do so. They refused also to say who wrote the articles, although the editor expressed the opinion that these persons "ought to come forward" and make good their assertions. It appeared, in short, that the charges rested on the naked assertion of somebody in whom the editor of the *Times* had confidence, and whom he therefore permitted to say anonymously in the columns of the paper whatever he pleased reflecting on Mr. Miller's character, without exacting from him any guarantee whatever of his good faith, and without even reserving the right to reveal his name or to bring him forward as a witness. The editor, however, expressed his readiness to produce the desired proof before a court of law in a libel suit.

Now the only difference between a trial before a committee of the Legislature and one before a jury is that the committee has no power to inflict a pecuniary penalty on the *Times*, in case it fails to make good its charges. Evidence is, however, produced before it under precisely the same conditions as before a jury, and its report would produce just the same effect on the public mind in convicting or acquitting Miller as the verdict of a jury. The position of the *Times* towards Miller is therefore substantially—we do not say consciously—this: "We have brought terrible charges against your character, and we will prove them; but we will not prove them before any tribunal, however competent to establish your guilt or innocence, unless our failure to do so should be attended with pecuniary loss to ourselves. About the consequences of this refusal to you or the public, we care nothing. If you are not satisfied, bring your action. The men whom we have allowed to assail you ought to come forward now as witnesses, but they would rather not, and we shall not try to force them." Now, why does Miller not bring his libel suit? We do not know, of course, what influences operate on his mind, but we do know what influences operate on the great mass of those whose character is assailed by newspapers. When a charge of a serious nature is made against a man in a public journal, an exposure of its falsehood, to be effective, must not only be made by proper procedure before a tribunal whose findings people will treat with respect, but must be made *at once*, while the public attention is fixed on the matter. If it cannot be made at once, everything fades out of the popular recollection except a vague impression that he was once accused of this or that offence and did not meet it, and that there was probably something in it, and everybody knows that it is almost impossible to eradicate an impression of this kind. People will not read answers to charges the exact nature of which they have forgotten; they are too busy, too fond of new things, and find life too short. A libel suit amounts to nothing more than an answer of this kind. As the law stands, it cannot, in this district at least, at the earliest be tried for two years after the libel has appeared. To a public officer accused of malfeasance, a favorable verdict coming at this interval is of absolutely no use as a vindication; to a private individual, it is of next to no use, for, as we have said, in two years his wrongs have well-nigh passed out of the public mind. And then, though last not least, there is the pecuniary difficulty. No one can now safely engage in a lawsuit with a great newspaper who cannot afford to sink at least a thousand dollars in it, which to a great newspaper is nothing, but to most individuals is a good deal; and indeed to most men the pecuniary risk added to the delay makes the legal remedy for slander worse than none. Practically, therefore, newspapers enjoy complete impunity in their attacks on private character. But decent respect for private character and for common justice requires that if the person they assail can provide any speedy, conspicuous, and trustworthy mode of testing the truth of the charges against him, the editor should at once meet him there with all the necessary proofs. To wait for a libel suit, as the law now stands, is equivalent to taking refuge behind a technicality.

Moreover, it is as injurious to the influence of the press as to the character of individuals. Nobody will assert that a newspaper should never assail a man's character. To lay down any such rule would deprive the press of three-fourths of its usefulness, and give a large body of knaves all but complete impunity. Nor should an editor be required to know personally the facts of every charge he makes. If every editor had to satisfy himself of the truth of everything he published, newspapers would cease to appear. Nor is he bound to give the name of everybody who criticises the opinions or public career of public men. It makes no difference to anybody who writes the comments which appear in a newspaper on facts of general notoriety. The question in this case is not from whom do these comments come, but, are they sound? But when an editor determines, for reasons of public policy, to denounce any man as a thief, or embezzler, or forger, or peculator, we believe the generally accepted and only sound rule is that he should be ready to produce the evidence of the truth of what he says, whenever called on by the accused person, before any tribunal whatever, libel suit or no libel suit. He is bound to show the documents on which he has based his assertions, or produce the person to whose word he trusted when he made them. Anybody who asks an editor to allow him to make charges of this kind in his paper, but refuses to come forward in support of them, if called upon, is unworthy of belief, and deserves no more pity, shelter, or connivance than any lurking assassin or sneak thief. Skulking patriots, who are anxious to make "exposures" of private character, but unwilling to shoulder the responsibility of them, are a very large class. Every editor is familiar with them, but we believe it is the general practice of editors to refuse them a hearing.

We think the *Times* will see, on reflection, the dangers, and difficulties, and unfairness of its departure from this sound and wholesome rule. In the first place, it would, if generally adopted, place the reputation, peace, and credit of every man in the community at the mercy of any professional or commercial rival, or social enemy, who managed to persuade an editor, not that what he said was true, but that he himself was generally trustworthy—as if no generally trustworthy people misstated facts, or drew unwarrantable inferences, or saw others with the eyes of envy, hatred, or malice. In the second place, if it were generally understood that respectable editors assailed character without having proofs in their possession, or being willing to produce them when called upon by persons aggrieved, it would deprive all newspaper attacks of any weight, or, in other words, completely frustrate the object for which such attacks as these of the *Times* are made. Indeed, things have nearly reached that pass already. The phrase "newspaper charge" is now all but a synonym for a downright falsehood, of which no sensible man would take any notice, and on which no decent man ought to be condemned, simply because the process of bringing newspapers to book is tedious, cumbrous, and expensive. Let it but be well understood that under no circumstances can an editor be induced, in less than two years, or without the risk of a heavy fine, to reveal his reason for telling forty thousand people, six times a week, that he considers you a thief, and the term "thief" would rapidly cease to be a term of reproach, while stealing would go on as steadily as ever.

We know nothing, we repeat, of the truth or falsehood of the charges against Miller. He may be, for aught we can tell, the greatest rascal "of this or any other age," but he may also be the most innocent and injured man in this State. Thus far, little proof of any kind has been produced against him. The principal fact the investigation has revealed is that the persons who wrote the articles against him in the *Times* are, on their own showing, timid persons, on whose anonymous evidence it would be unsafe to convict a hungry dog of having robbed a larder.

ENGLAND.

London, Feb. 23, 1872.

A FEW days ago I found myself forming part of an animated mass, so densely packed that I feared for the safety of my ribs, and—to put it mildly—at an elevated temperature. Keeping my head above the human waves, I was swept, without much assistance, from my feet through a fearfully narrow channel into an overflowing meeting. The Chelsea Vestry Hall was the scene of my sufferings, and, whilst I clung to my neighbors in order to relieve a very rickety bench of part of my weight, I had time to contemplate the long list of parochial benefactors on the wall, and to remark that Sir Robert Walpole had given £50 for the good of the poor in the year 1730. The roar which went up from the crowd, and which gave me time for these historical investigations, was not ill-tempered, and was, in fact, simply due to the vehemence with which everybody was exhorting everybody else to hold his tongue. As the idea gradually dawned upon us—as it will in such cases—that the shortest way of producing silence was to be silent one's self, a young gentleman advanced to the edge of the platform, and began to address us in due parliamentary eloquence. Sir Charles Dilke, the gentleman in question, does not conform to the ordinary type of mob orators. His style is a little heavy, and it was characteristic that this extreme representative of British republicanism, far from appealing in a Continental fashion to the rights of man and the everlasting principles of justice, stuck to the British Constitution, and solemnly read us the opinions of various legal pundits to prove that the king can do no wrong, and that there is always a responsible minister to bear the blame. The crowd appeared to be a good deal impressed by these arguments, and were obviously gratified by the implied compliment to their sound constitutional knowledge. Sir Charles explained that he intended to stand by the statements which he had made in the now celebrated Newcastle speech, with one exception. He admitted that he had been mistaken in asserting that the Queen had not redeemed her pledge of paying income tax, which, it must be added, was by far the most serious accusation which he had put forward. He has given notice of a motion in the House of Commons which will doubtless lead to a vigorous encounter, and I refrain from going further into that matter. Meanwhile, Sir Charles's constituents, or that part of them which was present in the Chelsea Vestry Hall, undoubtedly received him with marked enthusiasm. They applauded to the echo any *quasi* republican sentiment, and, when the speaker strongly condemned the present Government for their mode of conducting the Washington negotiation, they yelled at Mr. Gladstone as vigorously as they would have applauded him three years ago, and muttered significantly to each other that such misfortunes were the natural result of entrusting business to people with titles. I wish I could think that the cause of the evil were as susceptible of easy removal!

In spite of these sentiments, I don't think that Sir Charles's republicanism is of a very dangerous character. It is still of the true British type, and involves very frequent reference to *Magna Charta,* and the glories of Hampden and Sidney. Most of my Chelsea friends, I have no doubt, will be turning out next Tuesday to witness the procession through the streets in honor of the Prince of Wales's recovery, and though they will be dimly sensible that there is a good deal of sham sentiment in the whole proceeding, they will be willing to give a cheer or two to the Royal Family. On that day we are all bound to be more or less hypocritical. Nobody can hint a doubt as to the direct interposition of Providence for the cure of the typhus fever or as to the greatness of the benefit so conferred upon the country. A good many people, I believe, hold in all sincerity that national acts of organized hypocrisy are exceedingly edifying, and I don't suppose that such a belief is confined to the British Islands.

Meanwhile, Parliament has lost no time in bringing forward some of the irritating topics that have accumulated during the vacation. The case of the appointment of Sir R. Collier came first, and on that case it had been supposed that a vote of censure could hardly be avoided, especially in the House of Lords. The divisions showed the substantial justice of this opinion. It is true that in the House of Lords the Government had a majority of one, and, in the House of Commons, a majority of twenty-seven; but then it was perfectly well understood that their antagonists did not wish to beat them. It is held, though I confess that I can't quite see the wisdom of the opinion, that we are bound to keep the Government in office in order that they may see us through the American scrape into which they originally brought us. Lincoln's maxim about not swapping horses in the midst of the ford is considered to determine the proper line of policy. Whether the doctrine—sound enough in many cases—is applicable to this, I shall not enquire; but it is certain that many of the Opposition abstained from voting simply upon that ground. In the House of Lords, of course, the Opposition can have a majority whenever they please; and in the House of Commons, the old government could formerly count upon a majority of a hundred. That that majority should have been reduced, in spite of the protection extended by the great authority of Sir Roundell Palmer, to little more than a quarter, was a sufficiently significant reproof. A government which is thus maintained in office because it is inconvenient to turn them out at the present crisis, has naturally no bed of roses. Last night, a spirited encounter took place which illustrates the method in which they may be put to the torture. Ever since the Hyde Park riots in 1866 which led to the Reform Bill, there has been a feeble attempt to legislate for the future management of the parks. A bill which is now before the House is considered by Mr. Vernon Harcourt—known to you as *Historicus*—to be an infringement of the liberties of the subject. It confides, or so he thinks, intolerable powers to Mr. Ayrton and his myrmidons. Mr. Harcourt has become, I need hardly say, an extreme Radical, and is very jealous of the slightest interference with the popular right of meeting; but Mr. Harcourt has also, which is just now more to the purpose, a singular talent for irritating his opponent. He has a genius for contemptuous sneering in which few men are his equals, and he poured a few drops of acid last night upon some of the most irritable of mankind. Mr. Ayrton tried hard to be as disagreeable as Mr. Harcourt, and certainly succeeded in being thoroughly offensive, though in a less artistic manner. Mr. Gladstone, however, offered a concession to Mr. Harcourt's proposal which stirred the wrath of the Conservatives, to whom the memory of the Hyde Park riots is specially bitter. Forthwith a general row took place. Mr. Hardy, Mr. Disraeli's vigorous second in command, vehemently declared that the conduct of Government was neither honest nor satisfactory. Mr. Gladstone pleasantly replied that Mr. Hardy was the man in all the House most capable of importing "the acid and venomous spirit of party" into the plainest practical matter. Mr. Disraeli retorted by calling the ministers cowards, and accusing Mr. Gladstone of utter meanness during the original dispute, and of preserving a sulky silence in Parliament, whilst addressing tumultuous mobs from his own balcony. Mr. Gladstone, trembling with passion, retorted that the one intelligible sentence in Mr. Disraeli's speech had not "a single shred, syllable, or shadow of truth in it." In short, the parliamentary synonyms for liar, coward, fool, tyrant, and knave flew about the House quite freely, and ministers appeared without their official dress. The climax was reached when Mr. Harcourt, with ironical blandness, apologized for having provoked such celestial wrath, and begged the great leaders once more to kiss and be friends. Things are growing pleasant. However, the Park Bill is being carried in spite of these little amenities, and as it won't make the smallest practical difference, it is perhaps as well that it should be got out of the way.

There is one other very melancholy subject on which a word or two must be said. Poor Lord Mayo's assassination has been deeply lamented by men of all parties. When he was sent out, three years and a half ago, by Mr. Disraeli's government, the appointment was supposed to be a party job, and was bitterly attacked. Now, as is only natural, we hear nothing but praises of his administration. I have, however, good reason for saying that these praises are not the insincere compliments which we sometimes feel compelled to pay to the recently dead. Before Lord Mayo's death, I have heard from men who had the best possible means of judging, very warm praises both of his personal character and of his skill as an administrator. Everybody who served under him felt for him both affection and confidence. The loss is therefore a heavy one in itself, but it is impossible not to feel that it may be ominous of more dangers to come. The assassination of the Chief-Justice a few months ago spread a very uncomfortable feeling through Indian society, for, after all, the small white population must always feel that it is more or less living upon a volcano, and that nobody can tell what mysterious causes, working far below the surface and beyond all our means of information, may lead to a sudden eruption. The murderer of the Chief-Justice was a Mohammedan fanatic; and though great efforts were made to prove that the crime was merely due to private vengeance, there was an uncomfortable suspicion that it might be part of a wider conspiracy. Lord Mayo's murderer was a convict, who had been sentenced to transportation for carrying out the custom of his tribe, and prosecuting a blood feud upon English territory. It is scarcely likely that his action should have been due to conspiracy, as no one could have calculated on the visit of Lord Mayo to the island; it is natural enough that the wild clansman from the hills should cherish an indiscriminating sense of vengeance against men who had sentenced him to imprisonment in a distant island, and murder would be simply his natural mode of protest. Still, it is impossible to say what may be the effect of such an action upon the imagination of the vast populations with whom we are so imperfectly acquainted, and who are so easily impressed by anything which tends to diminish our prestige. Mr. Seward, I am told, remarked, in his late visit to India, that in any new revolt assassination would be the natural weapon of the natives; and Mr. Seward should be an authority upon assassins. But, at any rate, it is no wonder that the crime seems to many people ominous of further mischief; and if any of your readers wish to know more of the grounds for such a feeling, I would strongly recommend them to read a book of singular interest recently published by Mr. Hunter—author of the "Rural Annals of Bengal"—under the title, "Our Indian Mussulmans: are they bound in conscience to rebel against the Queen?" There they will find set forth, in a short space and in a very forcible style, an account of the remarkable Mohammedan revival of late years, which is singularly interesting both in its political and its religious bearings.

ERNEST RENAN'S NEW BOOK.*

PARIS, February 27.

ANYTHING which comes from the pen of Renan deserves the attention of the public, not only on account of the grand and noble style of all his writings, but also because of the earnestness and purity of the writer. I choose the word purity on purpose, as it represents rare qualities in a country which has suffered so much from demoralization. I have known Renan for years, and I am witness that his private life is that of a true philosopher. He has married a niece of Ary Scheffer, and lives in a modest apartment on the third floor, where there is hardly room enough for his books. His time is spent at the Institute, in his *cabinet de travail*, and in a small circle of intellectual friends. Even his bitterest enemies can bring no other reproach against him than his intimacy with Prince Napoleon and his semi-reconciliation with the Empire. I speak now of political reproaches, and, if we come to religion, we should find many people who regard him as the last incarnation of Satan. "Prince Napoleon," said once Renan to me, "is a child of genius: he interests me as a child. But I know that he can never become an adult, and that he will fall suddenly from childhood into senility." His adhesion to the Empire was brought about less by ambition than by his contempt for the politicians of the French liberal school and especially for M. Thiers. He was named Professor of Hebrew by the Emperor, but suspended by M. Duruy after a lecture in which he spoke of Christ as of a man. Politically, Mr. Renan may be said to be in a state of philosophical indifference; he has never been on the staff of any organized party—he knows the important men of all parties. This gives a special value to his opinions; but it must be said, at the same time, that it leaves them in a sort of nebulous state. It is not in politics as it is in purely ideal matters; the individual and dramatic element is often stronger than the intellectual. Renan looks upon France with more affection, but with as much calmness as he would upon the ruins of any great empire. His guide is history, and he sees in all events the necessary development of historical laws. "The day on which France beheaded her king, she committed suicide." He shows us France as the work of the Capetian dynasty. To him the revolutionists of '89 are "ignorant and silly men," who thought that they could reconstruct France. As soon as the Empire fell, France was obliged to go back to the Capetians. The ordinances of 1830 were, says Renan, a crime of the monarchy; but as soon as the king had abdicated, the nation ought to have accepted the infant Comte de Chambord as the legitimate heir of the crown. Though eighteen years of a happy reign seemed to justify the choice of another sovereign, the French Revolution of 1830 had not, like that of 1688 in England, the justification of a final success. The Revolution of 1848 was, in Renan's opinion, a great national misfortune; it forced universal suffrage on a country where there was no system of universal education.

It is not strange that Renan should speak with indulgence of Napoleon III. "If," says he, "he had contented himself with stifling every political idea or liberty, with developing material interests, with taking his stand on a moderate clericalism without convictions, his reign and that of his dynasty would have been assured for a long time." The country was becoming more and more vulgar, materialist. No opposition could have shaken a government founded upon the plébiscites. Renan says distinctly that a government which aims at duration in France will have nothing to do but to imitate the programme of Napoleon III., minus war. It was the love of war which lost him. He was a dreamer of glory. France has become thoroughly pacific, too pacific, thinks Renan, since she has lost her Germanic, military, feudal aristocracy. Mammon has become the only god of her democracy. "The nobility once fallen, there is nothing but an undistinguished mediocrity, without originality or boldness, a *roture* which understands neither the privileges of the mind nor the privileges of the sword. Such a nation can reach the height of material prosperity." She has no further part to play in the world, no more action abroad. Renan, who regrets what made old France—the Capetian royalty, the military aristocracy—does not hope that France will find a new ideal in republican institutions. He does not believe that she will be able to copy America. "America," says he, "finds a substitute for her want of education, of distinction, for that vacuum which is always produced by the absence of a court, of an upper society, of old institutions, in the fire of her own growth, of her patriotism, of the perhaps exaggerated confidence which she has in her own strength, in her persuasion that she is working the great work of humanity, in the efficacy of her Protestant convictions, in her boldness and her spirit of enterprise, in the total absence of socialism, in the facility with which the distinction of rich and poor is accepted, especially in the privilege she has of developing herself in the free air, in the infinite of space, without neighbors." I have cited this judgment on America to show that Renan is instinctively an aristocrat; he has no genuine love of a republic, even of the best of republics. But he is probably right when he says that France would never be but a second-rate America, a mediocre one, more resembling Mexico or South America than the United States.

The present materialism of France is neither monarchical nor republican; it is indifferent; society wants to be defended, not to defend itself, and is not even capable of a great effort to find a defender. Renan thinks that a state of things in which those who have all the wealth will not wield the sword, is rotten. The French *bourgeoisie* is as arrogant as the old military nobility, but it has lost the virtues and the courage of that nobility. In every society, there is a process of natural selection which brings some men or some families forward and places the government in their hands. This governmental selection is, as it were, the formation of the brain in the body politic. Now, in France, there is no mode of selection left but direct and universal suffrage. This method gives to France directors "without intelligence, without knowledge, without prestige, and without authority." Renan thinks that the most mediocre man is better than the collective *résultante* of thirty-six millions of men, each counting for a unit. There is, in his opinion, but one real superiority, that of race, of birth, for moral and intellectual supremacy springs only from the supremacy of a certain germ placed under advantageous circumstances. He is therefore a believer in families, in dynasties, in chosen lines of men; and he thinks that a democracy cannot prosper any better than a monarchy, if the process of natural political selection is counteracted by the laws. In Germany, the nobleman, the tradesman, the professor, the peasant, the workingman, are types; they do not care for the rights of man. "Equality," says Renan, "is the greatest cause of political and military weakness." The Germans owe their triumph to their hierarchical spirit, to the precision and even to the narrowness of their views, to their chastity. Renan believes that it is one of the forces of Germany that women should play a small part in the social and political movement. "In France," says he, in a note, "they count for an enormous part in this movement; in Prussia, for an infinitely smaller part."

---

* "La Réforme Morale et Intellectuelle."

But how is France to recover and to regain what she has lost? The answer to this question shows exactly the calibre of Renan's mind. He shows France placed, as it were, like Hercules, between virtue and vice, and discussing an alliance with one or the other. She can espouse virtue, choose the way of penitence, become more austere, more stern, more disciplined, more obedient, more military than Prussia; re-establish the old monarchy, rebuild an aristocracy; silently, sullenly prepare for revenge; be blind to the affairs of the whole world; never utter a word of complaint; reform, reform; educate every child, make a soldier of every man, renounce the follies and babbling of democracy; construct a narrow ideal, make the words king, country, the only holy words. This is the hard road, the difficult way of salvation. But there is another, and here I must cite Renan:

> "The character of a nation cannot be changed. It is enough, says one imaginary interlocutor to the other, that the plan of reform which you have just traced should have been that of Prussia for me to affirm that it will not be that of France. Reforms which suppose that France will renounce her democratic prejudices are chimerical reforms. France, believe me, will remain a country of amiable people, mild, honest, gay, superficial, full of good heart, of a feeble political intelligence; and she will preserve her mediocre administration, her obstinate committees, her *routiniers* bodies, persuaded that they are the first in the world; she will go farther and farther in this way of materialism, of vulgar republicanism, towards which all the modern world, except Prussia and Russia, seems to advance. Does this mean that she will never have her revenge? It is precisely thus that she will have it. Her vengeance will lie in the fact that she will have outstripped the world on the road which leads to the end of all nobility, of all virtue. While the German and Slavic populations preserve the illusions of young races, we shall remain inferior to them; but these races will become old in their turn; they will enter into the way of all flesh. . . . The most cruel vengeance which France could take of the proud nobility which has been the instrument of her defeat, would be to live in the democratic state, and to demonstrate the possibility of the Republic in Europe. It would not be long before we could tell our conquerors, like the dead of Isaiah: 'Et tu vulneratus es sicut et nos: nostri similis effectus es.'"

And, a little further on, he adds:

> "France, at any rate, is more sure of her revenge if she trusts her defects than if she relies on qualities which she never has had. Our enemies may rest quiet if the Frenchman, in order to regain his place, must become a Pomeranian and a Ditmarscher. What has conquered France is a remainder of moral force, of rudeness, of heaviness, of abnegation which happens to have still resisted, in a corner of the globe, the deleterious influence of egotistical assertion. Let French democracy succeed in establishing a status, in living, and this old leaven will soon disappear under the action of the most energetic solvent of all virtue which the world has known thus far."

I am unable in such a short space to give you even an *aperçu* of the various reforms which M. Renan advocates in politics, in public education, in administration. This would require another article. I have only tried to draw the general lines of M. Renan's political ideas. To do him justice, in an article which he published before the war, on Constitutional Monarchy in France, and which is reprinted in this volume, he already foresaw that there would be a struggle between the feudal, military, German ideal and the democratic, Cæsarist ideal. The last term of the socialistic and democratic ideas seemed to him to be such a state of weakness and decomposition as called, as it were, for conquest. To a feudal mind, a contract appears all the more holy that is more ancient; but contemporary positivism will not allow one generation to bind another. A contract seems only good when it is very recent. With such conceptions, the integrity of a country is always in danger. It is quite clear that M. Renan has not much hope in restoring in the French mind a faith in tradition, a love of historical right and continuity. "Fata viam invenient!" He looks upon the misfortunes of his country much as the philosopher of Lucretius, though, to do him justice, there is sadness in his criticism and sympathy in his severity.

NOTES FROM BERLIN.

BERLIN, Feb. 19, 1872.

BISMARCK has baffled the Jesuits, confounded the clerical party, and, it is hoped, has broken for ever the hold by which ecclesiastical power was seeking to fasten itself upon the state. In a former letter I quoted his pregnant declaration that the government should be constitutional and not confessional. The confessional feature has long been recognized in the schools. Inheriting from the Reformation the notion that the state must in some way provide for the religious training of its subjects, Prussia has nevertheless sought to do this in the spirit of toleration towards all beliefs—assisting different communions in the support of religious worship, and providing for the religious instruction of the children in the public schools according to the several communions or confessions in which they were born, whether Protestant, Catholic, or Jewish. To this extent the schools have been *confessional;* not that their primary object was to inculcate any faith in particular, but a subordinate place was given to religious instruction, with the toleration of different faiths. Naturally enough, the superintendence of this branch of education in the schools was left to the several religious bodies whose catechumens were among the pupils; and it came to pass that in rural districts Protestant clergymen, Catholic priests, and Jewish Rabbis were *ex-officio* the inspectors of the schools, and the supervisors of religious instruction for the children of their own confessions, if not the actual teachers in this department. This system had in the main worked with little friction; the great confessions had a parity of privileges, and nobody was disobliged except the small fraction of non-believers, and these were not disposed to make trouble.

The recent agitation was caused by the Ultramontane party in the Catholic Church. Taking advantage of an article in the new constitution which favors ecclesiastical freedom, this party would separate the church from the control of the state, but, at the same time, would seek to control the state in the interest of their church. Having always enjoyed liberty of religious worship and teaching, they now insisted upon a *right* of instruction in the schools, without revision or direction from the state, intending to use the school as a lever for bringing to bear against the new Empire of Germany the power of the infallible imperium at Rome. Schoolmasters who declined to teach the new dogma of Papal infallibility were excommunicated! Everywhere in Prussia the Roman Catholics were organizing themselves as a political party; canvassing for the elections upon ecclesiastical grounds alone; and insisting that legislation should in everything have respect to the church, as a power at least co-ordinate with the state. But Prince Bismarck was equal to the occasion: "This," said he, "shall not be made a confessional government; nor parliament the scene of confessional strifes"; and so he introduced and carried a declaratory act, which asserts the supremacy of the state and cuts off the church from interference.

The act embodies in a few words these two fundamental principles; first, that the supervision of all educational institutions, public and private, belongs to the state alone, and all local ordinances to the contrary are abolished; second, that the appointment of local and district school inspectors, and the designation of their respective fields of supervision, is vested solely and absolutely in the state, and all regulations to the contrary are repealed.

To the American reader these declarations will appear very obvious, almost commonplace, but in Prussia they mark a great step forwards, and prepare the way for the complete and final separation of church and state. By the first section the anomalous and conflicting school-laws and usages in different sections are set aside, and the school administration throughout Prussia is reduced to one uniform principle. By the second, the inspection of the schools is taken from the clergy as an official prerogative or an honorary function; and it is decreed that the supervision of religious as well as secular teaching shall pertain only to the direct appointees of the state. Then follows a third declaration, as a present peace-offering, by which the state continues to use the clergy as inspectors, but only at its discretion, and subject to its control. This concession must soon give way to the pressure of the foregoing principles; practically, the church is ousted from the control of popular education. The high orthodox are endeavoring to reconcile themselves to this result as a fatal blow to the machinations of the Jesuits, though some of this party would rather concede to the Catholics a partial control over public education than relinquish their own share of this power. On the other hand, some of the devout Evangelicals apprehend that this measure will displace the true faith from the schools, and open the way for the machinations of Romanism and the inroads of materialism. They have not yet learned to trust the principle of church independence and religious freedom. Such works, however, as Dr. J. L. Tellkampf's "Selbstverwaltung und Reform der Gemeinde- und Kreisordnungen in Preussen" will direct attention to the working of self-government in England and the United States.

Of course the Liberals are jubilant over the advanced position of the Government. The debate in parliament was protracted, violent, and intensely personal against Prince Bismarck. It was a foretaste of what men might look for should sectarian animosities be permitted to mingle with political strifes. But Bismarck's sagacity has ruled church contentions out of Parliament. You remember Schiller's poem of the Handschuh, upon the Countess who threw her glove into the arena before the lions to test the devotion of her knight. *Kladderadatsch* pictures the forum with a glove upon the floor inscribed "Katholiken"; two young lions are ready to tear each other in pieces for the glove, when from behind the barrier appears the great lion head of Bismarck, with the motto:

"Und der Leu mit Gebrüll
Richtet sich auf, da wird's still!"

The same journal thus satirizes the English and American war of words over the *Alabama* question:

"So kommen vielleicht wir noch zum Ziel
Ohn' Krieg und ohne Grolle;
Denn unser Losungswort heisst: *Viel
Geschrei und wenig Wolle.*"

Most of the journals here are disposed to treat the new *Alabama* demonstration as for mere political effect in both countries; but I defer an opinion until I shall have received that of the *Nation*. AUSWANDERER.

Correspondence.

ELISEE RECLUS.

To the Editor of the Nation:

Sir: In the number for Feb. 22, page 121, you publish a notice of Elisée Reclus containing several errors injurious to the character of one for whom you seem to have sympathy. Reclus was never in "the company of assassins and *pétroleurs*" who gave Paris a second edition of the too celebrated St. Bartholomew of old, for the reason that he was a prisoner at Versailles several weeks before that period. Reclus had nothing to do with the Commune, except that, being a private soldier in a company of National Guards, he marched with his battalion when ordered. He was taken at Châtillon with nearly the whole of his battalion the very first day that the forces of the Federalists confronted the army of the Thiers government. This was the third of April, the same day that Flourens was killed and General Duval was shot by military order.

The only "fatal error" of Reclus was that during his long confinement at Versailles, Belle-Isle, and St. Germain, he maintained an attitude of self-respect, never yielding or changing his opinion as to the culpable incapacity of the different governments that have dragged France into the shameful and degraded condition which began with the *coup d'état* of December, 1851. The political opinions of Reclus were always extremely liberal and democratic, and the night before the revolution of the 18th March, 1871, which gave birth to the Commune, he told me he had no more hope whatever in any of the old political parties, and that the only chance left was to return to an organization like that of the commonwealth of Massachusetts or one of the cantons of Switzerland. It was a misfortune for Elisée Reclus that a younger brother, Elie Reclus, was appointed near the close of the Commune delegate to the Ex-Bibliothèque Nationale—which, by the way, he preserved intact, not a book, not a pamphlet or manuscript, nor even a coin or medal, was wanting when the library was taken possession of by M. Thiers's government.

Military justice declined to pardon Reclus because he was too proud; such was the excuse repeatedly given. The Central Commission or Council of the Geographical Society of Paris, of which he was a member, have just obtained a commutation of his sentence of deportation to New Caledonia to one of banishment, and he is now in Italy. The French Academy did nothing for him, but the efforts of the Commission, and especially of Messrs. Charton and Chasseloup-Laubat, also members of the National Assembly, have at last set him at liberty, an exile for life, after eight months of imprisonment, for having marched once only with his battalion of Federal National Guards against M. Thiers's army. It is not pleasant to contrast this severe punishment with the lenient treatment of Bazaine, who is still a marshal, with his staff at his orders and his pay, Lebœuf also and De Failly, and hundreds of other high military and civil dignitaries, who, with their "*cœurs légers*," have precipitated France into the abyss.

Elisée Reclus has never been "in Mexico." After the *coup d'état* of Louis Napoleon he left France voluntarily, and travelled in the United States from New York to New Orleans, from there crossed to Carthagena, exploring New Grenada and more especially the Sierra of Santa Marta in the Andes.—Very respectfully yours,

Jules Marcou.

Cambridge, Massachusetts, March 3, 1872.

FRIEDRICH KAPP AND CARL SCHURZ.

To the Editor of the Nation:

Sir: The New York *Herald* of January 13 publishes what purports to be a report of an "interview" with me at which I expressed various opinions derogatory to my friend, Carl Schurz. I have written to that journal informing it that the report is a fabrication from beginning to end. In case it does not publish or notice my letter, permit me to say through your columns that I have never been interviewed by a *Herald* correspondent on this or any other subject; that had I been visited by one, his call would have been exceedingly short; and that my estimate of Mr. Schurz is directly the opposite of that which the author of the communication has had the impudence to ascribe to me.—Faithfully yours, Friedrich Kapp.

Berlin, February 4, 1872.

[We have not seen the letter in the *Herald*, or any notice of it. —Ed. Nation.]

FLOWER PAINTING.

To the Editor of the Nation:

Sir: In your excellent article on the Water-color Exhibition in your issue of February 22, a point is touched upon which I think ought to be more fully treated, and, with your permission, I will offer a word by way of amplification. The passage I refer to is the following: "We do not ourselves care much to see fruits and flowers treated as subjects for drawings or pictures to be framed and hung upon walls. The proper field for such work is the illuminating of books or the decorating of panels in furniture."

I sympathize with this feeling in the main, but there are important saving clauses. As subjects of art of any high character, flowers are hardly to be ranked at all, yet it is difficult to say with what beautiful, and in some sense even high art, a painter of fine ability may not treat them. A large proportion of the works of the great English colorist, the late William Hunt, were of nothing but flowers and fruit; and I presume no discerning man who was so fortunate as to possess one of them would wish it down from his wall. Much less would he wish to see such art employed in the mere illuminating of books or the decoration of furniture. Their more subtle qualities demand close attention and study before they can be felt, and would be lost as decoration. Indeed, they would not serve a decorative purpose at all. Work so exquisitely realistic is neither to be thumbed on the page of a book nor exposed to the injuries to which their use upon furniture would render them liable; but it should be carefully protected and hung against the wall, where it can be favorably seen, or laid away in the portfolio.

As discipline for young artists and students, nothing can be more valuable than the faithful drawing and painting of flowers. Ordinary flower-painting is too base for comment; but such as Mr. J. W. Hill has given us we cannot be too thankful for. And if our artists—landscape and other—would go through such a course of it as he has gone through, there would result a vast change for the better in the quality of all their works. The mere surface prettiness of flowers is not what should be aimed at. It is the vital energy of the growing lines which should be looked for, and which cannot be enough admired, while the effort to follow their marvels of color, however unsuccessful, cannot fail to be of the greatest service to any man who has the least color faculty.

At present, our artistic efforts, in all directions, are retarded greatly by want of humility in estimating our powers, and, consequently, we do not duly estimate what is involved in thorough artistic training. We are striving after qualities in art concerning which we but dimly apprehend the nature, and which, however well we might understand them, we could yet never reach except by very different means of approach. Mr. Ruskin's advice to the students at Oxford, namely, that they should strive after "skill in portraiture" as the groundwork of every other attainable excellence, is full of wisdom for us. Such single striving may not lead to the attainment of any very exalted art for a while, but it will secure to us, in the meantime, something vastly better than the results of our present misdirected efforts. And, among other things, what can we more usefully or more healthfully portray than the wild flowers of our fields, with all the histories of their growth and the circumstances of their fortune? Consider the benefit to science as well as to art that would accrue to each city by the possession of a gallery or museum filled with such skilful and reliable drawings of all our native plants.

No arts have ever flourished which were not in sympathy with the leading thoughts and feelings of the age in which they existed; and we cannot expect it to be different with us. Our better leading mental activity is doubtless in the direction of scientific investigation, and our arts must get into sympathy with this and help it. And the help which art can give to science is precisely that which she most needs, while through such help, faithfully rendered, the arts themselves will be raised, in ways which we cannot now fully discern or estimate, to such strength and nobleness as has not been seen hitherto.—Truly yours,

C. H. Moore.

Jamaica Plain, Mass., March 6.

"THE MORMON FAITH."

To the Editor of the Nation:

Sir: Your correspondent "K." closes his truly charitable and interesting communication on "The Mormon Problem" in this week's *Nation* (March 7) with the remark that "it will do no harm to look on the hopeful side" of the subject, and that there is a "hopeful side" seems certain by the Mormon "Faith," which, as set forth in the *Frontier Guardian* (edited by Orson Hyde), I copy from Lieut. Gunnison's "History of the Mormons, or Latter-Day Saints," published in 1852.—Truly yours,

Geo. B. Reed.

Boston, March 9, 1872.

"We believe in God the Eternal Father, and his Son, Jesus Christ, and in the Holy Ghost.

"We believe that men will be punished for their own sins, and not for Adam's trangressions.

"We believe that through the atonement of Christ all mankind may be saved by obedience to the laws and ordinances of the Gospel.

"We believe that these ordinances are: 1st, Faith in the Lord Jesus Christ; 2d, Repentance; 3d, Baptism by immersion for the remission of sins; 4th, Laying on of hands for the gift of the Holy Spirit; 5th, the Lord's Supper.

"We believe that men must be called of God by inspiration and by laying on of hands from those who are duly commissioned to preach the Gospel, and administer in the ordinances thereof.

"We believe in the same organization that existed in the primitive church, viz.: apostles, prophets, pastors, teachers, evangelists, etc.

"We believe in the powers and gifts of the everlasting Gospel, viz.: the gift of faith, discerning of spirits, prophecy, revelation, visions, healing, tongues, and the interpretation of tongues, wisdom, charity, brotherly love, etc.

"We believe the Word of God recorded in the Bible; we also believe the Word of God recorded in the Book of Mormon, and in all other good books.

"We believe all that God has revealed, all that he does now reveal, and we believe that he will reveal many more great and important things pertaining to the kingdom of God and Messiah's second coming.

"We believe in the literal gathering of Israel, and in the restoration of the ten tribes, that Zion will be established upon the Western continent, that Christ will reign personally upon the earth a thousand years, and that the earth will be renewed and receive its paradisiacal glory.

"We believe in the literal resurrection of the body, and that the rest of the dead live not again until the thousand years are expired.

"We claim the privilege of worshipping Almighty God according to the dictates of our conscience, unmolested, and allow all men the same privilege, let them worship how or where they may.

"We believe in being subject to kings, queens, presidents, rulers, and magistrates; in obeying, honoring, and sustaining the law.

"We believe in being honest, true, chaste, temperate, benevolent, virtuous, and upright, and in doing good to all men; indeed, we may say that we follow the admonition of Paul. We 'believe all things,' we 'hope all things,' we have endured very many things, and hope to be able to 'endure all things.'

"Everything lovely, virtuous, praiseworthy, and of good report we seek after, looking forward 'to the recompense of reward.' But an idle or lazy person cannot be a Christian, neither have salvation. He is a drone, and destined to be stung to death, and tumbled out of the hive."

Notes.

The following are the principal announcements of new publications for March. D. Appleton & Co.: Prof. C. D. Yonge's "Three Centuries of English Literature"; Sir John Lubbock's "Pre-historic Times"; Dr. H. Schellen's "Spectrum Analysis"; Huxley's "Manual of the Anatomy of Vertebrated Animals"—all reprints. Harper & Bros.: the third volume of Brougham's Autobiography; "Music and Morals," by Rev. H. R. Haweis, with illustrations and diagrams; "Ancient America," by John D. Baldwin; and the "Annual Record of Science and Industry for 1871," by Spencer F. Baird and others. G. P. Putnam & Sons: "Beauty and the Beast," by Bayard Taylor. A. D. F. Randolph & Co.: "Princeton College during the Eighteenth Century." Macmillan & Co.: Martin's "Statesman's and Merchant's Year Book for 1872." Scribner, Armstrong & Co.: "The Memoirs of Robert Chambers, with Autobiographical Reminiscences of William Chambers"; and the third volume of Curtius's "History of Greece." Porter & Coates, Phila.: "The Underground Railroad," an authentic history, by William Still. Lee & Shepard, Boston: "An American Girl in Europe," by Adeline Trufton, illustrated by Miss L. B. Humphrey. Roberts Bros.: Miss Rossetti's "Shadow of Dante"; Helps's "Thoughts on Government"; "The Thief in the Night," by Harriett Prescott Spofford; "Saunterings," by Charles Dudley Warner; "Crossing the Atlantic," by Augustus Hoppin; "Fables and Legends of Many Countries rendered into Rhyme," by John G. Saxe. J. R. Osgood & Co. publish soon: Eastlake's "Hints on Household Taste"; a new volume of sketches by Bret Harte; "Rise and Fall of the Slave Power in America," by Henry Wilson; "Life of Abraham Lincoln," by Ward H. Lamon; "Wood and Wayside Scenery of New England," by Wilson Flagg, with illustrations; "The Masque of the Gods," by Bayard Taylor; "Out-of-door Rhymes," by Eliza Sproat Turner; the second volume of Bryant's "Homer's Odyssey."

—Mr. B. J. Lossing's *American Historical Record*, begun this year, has reached its third number (Philadelphia: Chase & Town). It is rather more scrappy than it can afford to be if it aims to be first-rate in quality, and the only feature of it which distinguishes it from other historical periodicals is the woodcuts which Mr. Lossing so freely employs in the illustration of his works. The first page, for example, bears a view of the "New Theatre" in New York, being the Park Theatre of 1797, from the original engraving by E. Tisdale, who is stated, in a foot-note on the next page, to have been the artist of the Gerrymander broadside of 1812, which has been ascribed, apparently with more reason, to Gilbert Stuart.

—The discussion of the right of the word *to jew* to a place in our dictionaries has been continued, the Messrs. Merriam, on the part of Webster, defending themselves against some strictures of the Springfield *Republican*. The reasons advanced, however, seem to us better for the disuse of the word in conversation and in literature than for its exclusion from the dictionary. Or, if it is to be excluded because it is almost wholly colloquial, then the dictionary should be remodelled on that principle; or, again, along with *to jew* many other false and injurious metaphors, and many other historical locutions, should be omitted. A highly respectable class of the community might object to the opprobrious sense of the verb *to deacon*, as applied, for example, to packing a box of berries so that they shall

"Grow *smaller* downwards through the box."

A more limited class would have a personal interest in abolishing *to tylerize* and *to gerrymander* and *to lynch*, which, whether historically justifiable or not, are firmly fixed in our American vocabulary, though they every day tend to become more and more impersonal. In fact, there would be no end of tinkering the dictionary if everybody was permitted to make words mean what he thought they ought to mean, or insert words that ought to be recognized, or, as a purist, to cut out words that usage ought not to have sanctioned. We get a glimpse of the confusion that would prevail, from the *World's* attack on the editors of the later Webster for omitting Webster's definitions which gave color to the States-rights, confederation, compact doctrine of the nature of the United States Government. There is another significant omission which we will point out for the benefit of our woman's-rights advocates, in the definition of the word *preposterous*, for which we refer the curious to the earlier editions of Webster.

—Time enough has not yet elapsed since the manumission of the slaves and the close of the war to determine the law of movement for the negro population of the United States. Still it is interesting to consult the statistics, and to use them so far as we may to check our theories. The first table shows (in whole numbers for the most part) the percentage of gain in the entire negro population of the slave States for the decade from 1850 to 1860:

	1860.	1850.	Gain per cent.		1860.	1850.	Gain per cent.
Texas......	182.921	58.558	213	Tennessee..	283.019	245,881	15
Arkansas...	111,259	47,708	133	N.Carolina.	361,522	316 012	15
Florida.....	62,677	40.242	56	Kentucky..	236.167	220,992	7
Mississippi.	437,404	310,808	41	Delaware...	21,627	20.363	6
Louisiana..	350,373	262,271	34	S. Carolina.	412.320	393.944	5
Missouri....	118.503	90,040	31	Virginia....	548,907	526.862	4
Alabama....	437,770	345,109	27	Maryland..	171,131	165,091	4
Georgia....	465,698	384,613	21	D.Columbia	14,316	13,746	4

The following table shows the change in the entire negro population of the former slave States for the decade from 1860 to 1870:

	1870.	1860.	Gain per cent.		1870.	1860.	Gain per cent.
D.Columbia	43,404	14,316	207	Delaware...	22.794	21,627	5
Florida.....	91,689	62,677	46	Louisiana..	364,210	350,373	4
Texas......	253,475	182.921	38	Maryland...	175,391	171,131	2½
Georgia.....	545,142	465.698	17	Mississippi.	444,201	437,404	1½
Tennessee.	322,331	283,019	14	S Carolina.	415,814	412,320	¾
Alabama....	475,510	437,770	9	Missouri...	118,071	118,503	⅓ loss.
Arkansas...	122,169	111,259	9	Kentucky..	222,210	236,167	2 "
N.Carolina.	391,650	361,522	8	Virginia...	530,821	548,907	3⅓ "

Our third and last table shows the percentage of gain in the negro population of some of the Northern States for the last decade:

	1870.	1860.	Gain per cent.		1870.	1860.	Gain per cent.
Iowa........	5,762	1,069	436	Mass.	13,947	9,602	45
Illinois.....	28,702	7,628	270	New Jersey.	30.658	25.318	21
Indiana....	24,560	11,428	115	Penn........	65,294	56,949	15
Michigan...	11.849	6,799	74	New York..	52,081	49,005	6
Ohio.... ..	63,213	36,673	73				

—It is a current speculation that the negroes will flock to districts of the South where negroes are already in the majority, and where the climate is hardest on the field laborer, and that those districts will pass under negro control. South Carolina, Florida, Mississippi, and Louisiana are named as States which will probably become distinctively negro States. Does the census of 1870 show such a tendency of the population? The gain in Florida was 46 per cent.—greater than that of any other slave State; but in the previous decade it was 56 per cent. The movement of the negro population to Florida and Texas during the first of the two decades we are considering was continued during the second. Both these States were outside the seat of active war, with a sparse population, and afforded a refuge for the negro both as a slave and freeman. It is unfortunate for the speculation referred to that the percentage of gain in Louisiana for the last decade was only 4 per cent., for Mississippi 1½ per cent., and for South Carolina ¾ per cent. To realize the significance or the insignificance of these figures we must recollect that the gain of the entire negro population of the United States for the same period was 12 per cent. It is true that in South Carolina, Mississippi, and Louisiana the negro population suffered greater losses and encountered greater obstacles to natural increase from the violence which prevailed during and which has prevailed since the war, than in most other States. But if there had been any tendency of the negro population toward those States since the war, we should have had different figures from the above. Another current theory in keeping with the preceding is that the negro population of the Northern States, and of the northernmost of the old slave States, will drift rapidly southward. So far from this being the case as yet, the percentage of gain in the negro population of some of the more accessible of the Northern States is very much greater than the average for the entire population of the United States for the same period. Of course the violence of the war, and of the times since the war, accounts for this movement toward the States which afford a refuge.

—It is impossible to say just what the percentage of natural increase in the negro population should be for such a period as that of the last ten years we are considering. It would probably be something less than that of Pennsylvania—15 per cent. During the peaceful decade from 1850 to 1860, it was 19 per cent. New York has not sustained the percentage of natural increase, the negro population there having suffered a relative loss. Why? Negro emigrants are drawn mostly to the cities and villages in search of menial occupation for immediate pay. The same is true of the lower class of Irish. Hence they are competitors, and the Irish laborer is the sworn enemy of the negro, as we all know. In view of this competitive relation, it is not surprising that, where the territory is already preoccupied to its full capacity by an Irish population, as New York is, the negro, so far from being able to press himself in, should gradually be pressed out. The next census may show that what is taking place in New York will have commenced in such States as Massachusetts and Pennsylvania, in which the Irish element is greatly in excess of the negro. The reader will perceive that the percentage of gain in the negro population of the District of Columbia is far above that of any other portion of the old slave territory. Why? Because of the accessibility of the District to the colored population of the surrounding slave States when the war set it floating, and the large opening there for domestic and personal service in which the negro can give satisfaction.

—In the last three States of our second table there has been an absolute loss in the negro population. In the next eight above these there has been a relative loss, as the ratio of increase is below that of the entire colored population of the United States for the same period. In the remaining four Southern States and in the District of Columbia, the percentage of gain is above the average, as it is also in the first six of the Northern States in our third table. In a general way, we may regard the movement of the negro population as having taken a Northern as well as a Southern direction. From what has occurred within the brief period since the war commenced, what are we to infer for the future? This period has been an anomalous one, and it affords no safe basis for prevision. The negro, like any one else, is influenced in his migrations by a variety of conditions, and as these conditions change we shall see him varying or reversing his course. The sympathy with which the negro is received has much to do with determining where he shall go and where he shall remain. Climate is a consideration of theoretical value, and in a long period may count for much, but for short periods it may well be left out of the account. Negroes would no doubt rather live in Kentucky than in Ohio or Indiana, but the antagonism of their neighbors in the former State has driven them by thousands into the midst of a more sympathizing people where the climate is less genial. Mere political considerations are secondary with the negro; he will go by the easiest route, and stay precisely where he thinks he can have the "best time," where he is protected, where he can find employment, where he can live with the least hardship. The future may change the conditions, and whenever the negroes can do as well in the South industrially, and find there a genial social atmosphere, there will no doubt be a tendency of the negro population in that direction under social, political, and climatic influences, but not till then.

—It would be curious to enquire why the negro population of Tennessee has had about its natural increase, neither gaining nor losing during the last decade, while this is not the case with any other Southern State? Also, why Georgia should have gained and Alabama lost? Again, whether the loss of Louisiana and Mississippi is due to outright destruction of the negro; or, if not, what direction the exodus of colored people from these States has taken, whether westward to Texas or northward up the Mississippi, or both? And what proportion of the negro emigrants to the North has settled in cities and villages, and what in the country? Also, what contrast in the industrial habits of negro emigrants to the extreme North and those to the extreme South? We leave all that. The subject of the movement of any population is a very complicated one, and unless we are familiar with all the details of fact which influence it, we may very easily err in our interpretation of it. We have intended our statement to be suggestive rather than dogmatic.

—At the recent auction sales at Christie, Manson, and Woods's, London, a Turner drawing, "Grenoble," sold for 1,400 guineas. It was a large water-color of his best period, and peculiarly fortunate in subject and treatment. Earlier and smaller drawings sold for 800 and 600 guineas. The principal work was one for which Turner probably received not more than 200 guineas, the others respectively not more than 50 and 80. In March, an important collection of Turner drawings will be sold, with several oil pictures. In April, an important collection of old masters will be sold in Vienna, some of the pictures being of the highest class.

—The late Henry Fothergill Chorley, for thirty-five years the musical critic of the *Athenæum*, was a member of the Society of Friends when first he attracted the attention of the editor of that paper. He was born in 1808, near Liverpool, and his love of music asserted itself without external aid till such time as he could profit by instruction. He learned to play the pianoforte by going to the house of an acquaintance among the "world's people." His first efforts to support himself were literary rather than musical, his first published book being "Memorials of Mrs. Hemans," though he had previously, in 1827, edited with his brother one of the annuals then in vogue, called the "Winter's Wreath." As the critic of *Athenæum*, which he at once became on going up to London, and remained so till his health broke down in 1868, he was distinguished for his independence and for the certainty of his judgments in regard to new music and new artists. He furnished the words for a great number of compositions of a high order, and wrote works on "Music and Manners in France and Germany," "Modern German Music," "Thirty Years of Musical Recollections," "Handel Studies," etc.; and at the time of his sudden death had nearly finished a life of Rossini, and was preparing his own memoirs, which, from his friendships with literary men alone, should have been of more than average interest. He died of heart disease, Feb. 16.

—Captain Burton, in a rambling letter to the *Athenæum* of Feb. 24, suggests the need of a General Translation Fund, and promises to draw out a scheme of it on another occasion. This need he had recently felt himself when, having undertaken as a labor of love to translate the diaries of a brother African traveller (Dr. Francisco Almeida de Lacerda, the first European ever known to have penetrated the country of King Cazembe, "where Dr. Livingstone lately lived, it is said, under detention"), he sought to get his version published by the Hakluyt Society, "with the assurance, under personal guarantee, that the Society should not lose by the transaction." He was met, however, by the simple objection that the Portuguese explorer wrote in 1792, and that the Society had bound itself not to publish any work dating after 1700. The "publishing public," as Captain Burton calls them, of course would reject his manuscript if offered them, on the ground that "translations don't pay." Further on in his letter it appears that he has made a number of translations from Brazilian literature—the "Uruguay" of José Basilio, the "Iracema" of J. de Alencar, and the "Manoel de Moraes" of J. M. Pereira da Silva; and he adds from his notebooks a long list of Brazilian works that deserve translation. This is but a portion of the field which a General Translation Fund would cover, but it is a corner hitherto untouched by English scholarship, while the French and Germans have explored it to advantage.

—There is one passage in Captain Burton's letter that leads to curious reflections. He tells of a dinner, many years ago, of the Royal Literary Fund, at which the Duc d'Aumale made a speech, and also, later in the evening, Mr. Thackeray, who, in replying to the toast of "Belles-Lettres," remarked of French literature—"I had almost said, the wisest literature in Europe."

> "The question at once suggested itself, 'Why "the wisest"?' and the answer came as readily, 'Because the most cosmopolitan—cosmopolitan because the most given to translating!' During the early part of the present century, French, I need hardly assert, was still, *par excellence*, the social and political language of Europe, which is now threatened with a new diplomatic Tower of Babel. Frenchmen thus dispensed themselves with the trouble of learning strange tongues, whilst their literary wants were ministered to by a body of able translators—how able, let the versions of Burns and Dickens prove. Thus their literature had the enormous advantage of being capable of comparing native with foreign ideas and views of the world. It was a traveller who sees many men and their cities, instead of studying the circle, large or small, of his immediate neighborhood. It was the novelist who seeks fresh impressions from life beyond his study, instead of 'eliminating his camel from the depths of his self-consciousness.'"

The result of Frenchmen having "thus dispensed themselves with the trouble of learning strange tongues" is hardly such as to encourage the founding of a General Translation Fund. Fifty years of this sort of thing have made France the China of Western Europe—neither more nor less; and their "being capable of comparing native with foreign ideas and views of the world" has ended in complete ignorance of the character, progress, and prowess of their nearest and most formidable neighbor, and in the penalty for such ignorance—wanton and contemptuous aggression and ignominious overthrow. The one thing to which France is impervious is "foreign ideas and views of the world," especially views of French conduct and ideas of French nature. The inference would seem to be of the strongest kind that a habit of translating is opposed to the highest intelligence, and that the best policy is to promote in their stead linguistic culture, both for mental discipline and the acquirement of positive knowledge. The end and influence of translations should be twofold—to make foreign science accessible in the vernacular, and to stimulate resort to the original sources, which, in any live literature, can be only very partially and inadequately reproduced in another tongue. Their utility may well be doubted for a people who, as we saw in the case of a French author lately reviewed in these columns, are not above the childishness of accusing foreigners of concealing their designs behind their difficult language.

HAWTHORNE'S FRENCH AND ITALIAN JOURNALS.*

MR. HAWTHORNE is having a posthumous productivity almost as active as that of his lifetime. Six volumes have been compounded from his private journals, an unfinished romance is doing duty as a "serial," and a number of his letters, with other personal memorials, have been given to the world. These liberal excisions from the privacy of so reserved and shade-seeking a genius suggest forcibly the general question of the proper limits of curiosity as to that passive personality of an artist of which the elements are scattered in portfolios and table-drawers. It is becoming very plain, however, that whatever the proper limits may be, the actual limits will be fixed only by a total exhaustion of matter. There is much that is very worthy and signally serviceable to art itself in this curiosity, as well as much that is idle and grossly defiant of the artist's presumptive desire to limit and define the ground of his appeal to fame. The question is really brought to an open dispute between this instinct of self-conservatism and the general fondness for squeezing an orange dry. Artists, of course, as time goes on, will be likely to take the alarm, empty their table-drawers, and level the approaches to their privacy. The critics, psychologists, and gossip-mongers may then glean amid the stubble.

Our remarks are not provoked by any visible detriment conferred on Mr. Hawthorne's fame by these recent publications. He has very fairly withstood the ordeal; which, indeed, is as little as possible an ordeal in his case, owing to the superficial character of the documents. His journals throw but little light on his personal feelings, and even less on his genius *per se*. Their general effect is difficult to express. They deepen our sense of that genius, while they singularly diminish our impression of his general intellectual power. There can be no better proof of his genius than that these common daily scribblings should unite so irresistible a charm with so little distinctive force. They represent him, judged with any real critical rigor, as superficial, uninformed, incurious, inappreciative; but from beginning to end they cast no faintest shadow upon the purity of his peculiar gift. Our own sole complaint has been not that they should have been published, but that there are not a dozen volumes more. The truth is that Mr. Hawthorne belonged to the race of magicians, and that his genius took its nutriment as insensibly—to our vision—as the flowers take the dew. He was the last man to have attempted to explain himself, and these pages offer no adequate explanation of him. They show us one of the gentlest, lightest, and most leisurely of observers, strolling at his ease among foreign sights in blessed intellectual irresponsibility, and weaving his chance impressions into a tissue as smooth as fireside gossip. Mr. Hawthorne had what belongs to genius—a style individual and delightful; he seems to have written as well for himself as he did for others—to have written from the impulse to keep up a sort of literary tradition in a career singularly devoid of the air of professional authorship; but, as regards substance, his narrative flows along in a current as fitfully diffuse and shallow as a regular correspondence with a distant friend—a friend familiar but not intimate—sensitive but not exacting. With all allowance for suppressions, his entries are never confidential; the author seems to have been reserved even with himself. They are a record of things slight and usual. Some of the facts noted are incredibly minute; they imply a peculiar *leisure* of attention. How little his journal was the receptacle of Mr. Hawthorne's deeper feelings is indicated by the fact that during a long and dangerous illness of his daughter in Rome, which he speaks of later as "a trouble that pierced into his very vitals," he never touched his pen.

These volumes of Italian notes, charming as they are, are on the whole less rich and substantial than those on England. The theme, in this case, is evidently less congenial. "As I walked by the hedges yesterday," he writes at Siena, "I could have fancied that the olive trunks were those of apple-trees, and that I were in one or other of the two lands that I love better than Italy." There are in these volumes few sentences so deeply sympathetic as that in which he declares that "of all the lovely closes that I ever beheld, that of Peterborough Cathedral is to me the most delightful; so quiet is it, so solemnly and nobly cheerful, so verdant, so sweetly shadowed, and so presided over by the stately minster and surrounded by the ancient and comely habitations of Christian men." The book is full, nevertheless, of the same spirit of serene, detached contemplation; equally full of refined and gently suggestive description. Excessively detached Mr. Hawthorne remains, from the first, from Continental life, touching it throughout mistrustfully, shrinkingly, and at the rare points at which he had, for the time, unlearnt his nationality. The few pages describing his arrival in France betray the irreconcilable foreignness of his instincts with a frank simplicity which provokes a smile. "Nothing really thrives here," he says of Paris; "man and vegetables have but an artificial life, like flowers stuck in a little mould, but never taking root." The great city had said but little to him; he was deaf to the Parisian harmonies. Just so it is under protest, as it were, that he looks at things in Italy. The strangeness, the remoteness, the Italianism of manners and objects, seem to oppress and confound him. He walks about bending a puzzled, ineffective gaze at things, full of a mild, genial desire to apprehend and penetrate, but with the light wings of his fancy just touching the surface of the massive consistency of fact about him, and with an air of good-humored confession that he is too simply an idle Yankee *flâneur* to conclude on such matters. The main impression produced by his observations is that of his simplicity. They spring not only from an unsophisticated, but from an excessively natural mind. Never, surely, was a man of literary genius less a man of letters. He looks at things as little as possible in that composite historic light which forms the atmosphere of many imaginations. There is something extremely pleasing in this simplicity, within which the character of the man rounds itself so completely and so firmly. His judgments abound in common sense; touched as they often are by fancy, they are never distorted by it. His errors and illusions never impugn his fundamental wisdom; even when (as is almost the case in his appreciation of works of art) they provoke a respectful smile, they contain some saving particle of sagacity. Fantastic romancer as he was, he here refutes conclusively the common charge that he was either a melancholy or a morbid genius. He had a native relish for the picturesque greys and browns of life; but these pages betray a childlike evenness and clearness of intellectual temper. Melancholy lies deeper than the line on which his fancy moved. Toward the end of his life, we believe, his cheerfulness gave way; but was not this in some degree owing to a final sense of the inability of his fancy to grope with fact?—fact having then grown rather portentous and overshadowing.

It was in midwinter of 1858 that Mr. Hawthorne journeyed from England to Italy. He went by sea from Marseilles to Civita Vecchia, and arrived at Rome weary, homeless, dejected, and benumbed. "Ah! that was a dismal time!" he says with a shudder, alluding to it among the happier circumstances of his second visit. His imagination, dampened and stiffened by that Roman cold of which he declares himself unable to express the malignity, seems to have been slow to perceive its opportunities. He spent his first fortnight shivering over his fire, venturing out by snatches, and longing for an abode in the tepid, stagnant, constant climate—as one may call it—of St. Peter's. There seems from the first to have been nothing inflammable in his perception of things; there was a comfortable want of *eagerness* in his mind. Little by little, however, we see him thaw and relent, and in his desultory strolls project a ray of his gentle fancy, like a gleam of autumnal American sunshine, over the churches, statues, and ruins. From the first he is admirably honest. He never pretends to be interested unless he has been really touched; and he never attempts to work himself into a worshipful glow because it is expected of a man of fancy. He has the tone of expecting very little of himself in this line, and when by chance he is pleased and excited, he records it with modest surprise. He confesses to indifference, to ignorance and weariness, with a sturdy candor which has far more dignity, to our sense, than the merely mechanical heat of less sincere spirits. Mr. Hawthorne would assent to nothing that he could not understand; his understanding on the general æsthetic line was not comprehensive; and the attitude in which he figures to the mind's eye throughout the book is that of turning away from some dusky altar-piece with a good-humored shrug, which is not in the least a condemnation of the work, but simply an admission of personal incompetency. The pictures and statues of Italy were a heavy burden upon his conscience; though indeed, in a manner, his conscience bore them lightly—it being only at the end of three months of his Roman residence that he paid his respects to the "Transfiguration," and a month later that he repaired to the Sistine Chapel. He was not, we take it, without taste; but his taste was not robust. He is "willing to accept Raphael's violin-player as a good picture"; but he prefers "Mr. Brown," the American landscapist, to Claude. He comes to the singular conclusion that "the most delicate, if not the highest, charm of a picture is evanescent, and that we continue to admire pictures prescriptively and by tradition, after the qualities that first won them their fame have vanished." The "most delicate charm" to Mr. Hawthorne was apparently simply the primal freshness and brightness of paint and varnish, and—not to put too fine a point upon it—the new gilding of the frame. "Mr. Thompson," too, shares his admiration with Mr. Brown: "I do not think there is a better painter . . . living—among Americans at least; not one so earnest, faithful, and religious in his worship of art. I had rather look at his pictures than at any, except the very old masters; and taking into consideration only the comparative pleasure to be derived, I would not except more than one or two of those." From the statues, as a general thing, he derives little profit. Every now and then he utters a word which seems to explain his indifference by the Cis-Atlantic remoteness of his point of view. He remains unreconciled to the nudity of the marbles. "I do not altogether see the necessity of our sculpturing another nakedness. Man is no longer a naked animal; his clothes are as natural to him as his skin, and we have no more right to undress him than to flay him." This is the sentiment of a man to whom sculpture was a sealed book; though, indeed, in a momentary "burst of confidence," as Mr. Dickens says, he pronounces the Pompey of the Spada Palace "worth the whole sculpture gallery of the Vatican"; and when he gets to Florence, gallantly loses his heart to the Venus de' Medici and pays generous tribute to Michael Angelo's Medicean sepulchres. He has indeed, throughout, that mark of the man of genius that he may at any moment surprise you by some extremely happy "hit," as when he detects at a glance, apparently, the want of force in Andrea del Sarto, or declares in the Florentine cathedral that "any little Norman church in England would impress me as much and more. There is something, I do not know what, but it is in the region of the heart, rather than in the intellect, that Italian architecture, of whatever age or style, never seems to reach." It is in his occasional sketches of the persons—often notabilities—whom he meets that his perception seems finest and firmest. We lack space to quote, in especial, a notice of Miss Bremer and of a little tea-party of her giving, in a modest Roman chamber overhanging the Tarpeian Rock, in which in a few kindly touches the Swedish romancer is herself suffused with the atmosphere of romance, and relegated to quaint and shadowy sisterhood with the inmates of the "House of the Seven Gables."

---

* "Passages from the French and Italian Note-Books of Nathaniel Hawthorne." Boston: J. R. Osgood & Co. 1872.

Mr. Hawthorne left Rome late in the spring, and travelled slowly up to Florence in the blessed fashion of the days when, seen through the open front of a crawling *vettura*, with her clamorous beggars, her black-walled mountain-towns, the unfolding romance of her landscape, Italy was seen as she really needs and deserves to be seen. Mr. Hawthorne's minute and vivid record of this journey is the most delightful portion of these volumes, and, indeed, makes well-nigh as charming a story as that of the enchanted progress of the two friends in the Marble Faun from Monte Beni to Perugia. He spent the summer in Florence—first in town, where he records many talks with Mr. Powers, the sculptor, whom he invests, as he is apt to do the persons who impress him, with a sort of mellow vividness of portraiture which deepens what is gracious in his observations, and gains absolution for what is shrewd; and afterwards at a castellated suburban villa—the original of the dwelling of his Donatello. This last fact, by the way, is a little of a disenchantment, as we had fancied that gentle hero living signorial-wise in some deeper Tuscan rurality. Mr. Hawthorne took Florence quietly and soberly—as became the summer weather; and bids it farewell in the gravity of this sweet-sounding passage, which we quote as one of many:

> "This evening I have been on the tower-top star-gazing and looking at the comet which waves along the sky like an immense feather of flame. Over Florence there was an illuminated atmosphere, caused by the lights of the city gleaming upward into the mists which sleep and dream above that portion of the valley as well of the rest of it. I saw dimly, or fancied I saw, the Hill of Fiesole, on the other side of Florence, and remembered how ghostly lights were seen passing thence to the Duomo on the night when Lorenzo the Magnificent died. From time to time the sweet bells of Florence rang out, and I was loath to come down into the lower world, knowing that I shall never again look heavenward from an old tower-top, in such a soft calm evening as this."

Mr. Hawthorne returned to Rome in the autumn, spending some time in Siena on his way. His pictures of the strange, dark little mountain-cities of Radicofani and Bolsena, on his downward journey, are masterpieces of literary etching. It is impossible to render better that impression as of a mild nightmare which such places make upon the American traveller. "Rome certainly draws itself into my heart," he writes on his return, "as I think even London, or even Concord itself, or even old sleepy Salem never did and never will." The result of this increased familiarity was the mature conception of the romance of his "Marble Faun." He journalizes again, but at rarer intervals, though his entries retain to the last a certain appealing charm which we find it hard to define. It lies partly perhaps in what we hinted at above—in the fascination of seeing so potent a sovereign in his own fair kingdom of fantasy so busily writing himself simple, during such a succession of months, as to the dense realities of the world. Mr. Hawthorne's, however, was a rich simplicity. These pages give a strong impression of moral integrity and elevation. And, more than in other ways, they are interesting from their strong national flavor. Exposed late in life to European influences, Mr. Hawthorne was but superficially affected by them—far less so than would be the case with a mind of the same temper growing up among us to-day. We seem to see him strolling through churches and galleries as the last pure American—attesting by his shy responses to dark canvas and cold marble his loyalty to a simpler and less encumbered civilization. This image deepens that tender personal regard which it is the constant effect of these volumes to produce.

Fine Arts.

THE METROPOLITAN MUSEUM.

I.

THE two Belgian collections bought for the Museum have arrived, and are now stored in a neat gallery and some cabinet rooms at No. 681 Fifth Avenue. It is so important that the average public mind should not find such collections repellant, that we consider fate to have been notably kind in directing to us a group of old masters having the three advantages of being in prime condition, indisputable in pedigree, and wonderfully attractive and accessible in subject-motive. There is no need to approach these specimens of Hals and Van der Helst with misgivings, as a kind of meritorious sacrifice and study; they will be found altogether colloquial, and able to explain themselves, when the slight repulsion of too much fresh varnish and gold leaf is got over.

The cynosure is the great Rubens; there are two of his works, giving a powerful sense of his vigor and effervescence. The "Return from Egypt" surprises us, in the figure of the Infant Saviour, with its not unsuccessful attempt at a hardly Rubens-like tenderness—the patience and fatigue of the holy child being treated in a quite languishing sentiment; with him is the abounding Ceres-like Madonna, perfectly able to repeat the journey if necessary; also the St. Joseph and the Eternal in the clouds above—the divine and the morganatic father being about equal in point of dignity and elevation. The group is of life-size, with the finest possible flesh-tints, in perfect preservation, and altogether a treasure of a Rubens, painted without assistants, just before the famous "Descent from the Cross." It was the fortunate work of the master, the only one saved from the conflagration of the church of the Jesuits at Antwerp, and a prize for that or any other city. The alteration in the panel on which it is painted from an arch to a rectangle, and the joints of the wood, do not interfere with the enjoyment of this generous painting, which contains enough of the live blood of art to nourish a whole school. The other example is still earlier, a study made long before Rubens was vulgarized by patronage and discipleship, though it was afterwards often repeated by his scholars; it represents lions and a deer, and shows animal study unprecedented for the time, though of composition it has none; examination of its details, as of the young lion's head viewed in front, will be well rewarded, as it is all over magnificently brushed.

Of his successors, Vandyck and Jordaens are spiritedly answered for, the three treasures by Jordaens especially covering nearly all his ground. One is a small sketch for a sacred subject, a bouquet of colors, in whose case we catch the master thinking with his pencil; another, a "Triumph of Bacchus," is clear as wine in its color, loose and webby in drawing; the third, a "Holy Family," is Jordaens at his very best, supremely sure of his touch, his tint, and his light—it is a group of sufficiently vulgar models, to whom the artist does not make the slightest attempt at giving ideality or ecclesiastical feeling. The little Jesus stares at the little Baptist with a child's pleased awkwardness in making acquaintance. The other heads, including those of the truly admirable old people, are the first Antwerp citizens come to hand, set in a steep, concentrated studio light, which accents the divine Infant's torso like a silver statue, and throughout painted with prodigious legerdemain. From these three *morceaux* we can adequately appreciate the strong, mundane, practical, modern talent of Jordaens, beside whom Rubens seems a god Pan and Vandyck a fastidious chevalier. Two Vandycks are present, a portrait and a church-subject. The "Miss De Christyn," painted in 1630, when that heiress was in her early teens, shows her looking out of the picture with the brightest oracular eyes, while she holds a fan suspended in one of her taper hands, with the air of Portia watching the decision of the caskets. The other Vandyck is an exceptionally small easel-picture, to be taken at first sight for an Assumption of the Virgin, but proving to be "St. Martha interceding during the Plague at Tarascon"; the gracious and ample form of Martha is surrounded by a wreath of little cherubs, one of whom explains the import of the subject by displaying a skull, at which revelation another of them very frankly holds his celestial nose.

Another contemporary was Gaspard de Crayer, of whom we have the finest imaginable example, given to the Empress Josephine by the city of Ghent, and long her companion in her retirement at Malmaison. It is an Alexander rebuked by Diogenes, with a number of attendants, and Bucephalus, all natural size. Nothing can be more captivating than this courtly Renaissance treatment of the cynical legend. The Diogenes is venerable, keen, earnest, and a gentleman—his fine bearded head would decorate a palace pulpit; the Alexander exhibiting race and nobility without a particle of affectation, falls to staring with much sincerity as he receives the rebuff—like nothing so much as a young lord at Oxford, exclaiming, "Here's a go!" when his trainer gets in one on the bread-basket. The picture altogether is so rich that there is not a head in it of which a painter might not make a profitable study, from the men-at-arms, full of curiosity, herculean but not at all loutish, to the bright youth who holds the horse, the page who anticipates all the *gaminerie* of Dickens's "Bailey Junior," and the faces that lose themselves in the shadows. Among these excellences, as a retrograde trait, is to be noticed the horse of pure convention, with rocking-chair action and human eyes, distinctive of the time and school.

Again do we see the tradition of Rubens in its lustihood in the "Jason" of his pupil, Abraham Van Diepenbeeck. The hero, of full life-size, is evidently a portrait of some wealthy Flemish knight—not impossibly a Jew in armor, for the features are of a refined Hebrew type, and the hair auburn. The painter's Jason is entirely of his own period, clothed down to the feet in modern mail, and combating with aristocratic contempt a sort of china-ware dragon. Upon a large tree overhead glows the fleece of gold. The fine landscape background is by another hand, Jan Wildeu's. We have here a composition of a type completely lost (if we except some very disagreeable battle-pieces)—landscape and large figures meeting to build up the motive, as in Titian's "Peter Martyr," Poussin's works, etc. When our modern art shall yield us landscapist and figure painters perfectly matched in merit, and mutually appreciating instead of distrusting each other, we may perhaps get further developments of this excellent notion—scenery borrowing definition from groups of figures, and groups continued by the accompaniment of successive distances in scenery.

The collection boasts of nothing by the hand of Rembrandt, but it has his signet; a couple of very choice portraits are stamped with his influence to the point of deception. The Dutch Admiral's portrait, by Aart de Gelder, which was once sold as a Rembrandt for nearly six thousand dollars, would never have come into existence without that master's tuition. It represents a crusty old face, in an unctuous saturation of light, and perhaps reveals to the student the pronunciation and all the necessary characteristics of a veritable Rembrandt. Again, there is, from the almost lost painter, Adriaan de Vries, a portrait of a young Holland gentleman in which the artist may be admitted to have surpassed his great contemporary in the sense of intellectual refinement, while, technically and *primâ facie*, the picture asserts itself a Rembrandt. Only three other works of this artist, signed and dated, are known to exist—in Gotha, Weimar, and Rotterdam, the explanation being that his admirable portraits were almost all caught up by dealers, and sold as specimens of Rembrandt's imaginary "first style," with counterfeited signatures—the best possible criticism of the pictures: the present specimen, with signature and "Hagæ Comitis," proves that the artist was from the Hague. In either of these two quite dissimilar portraits we have the deep-sought sensitiveness of shadow which indicated for Van Rhyn and his rivals the refinement, the aristocracy, the tone, the culture, the poetry that they had; it is at least as evident in them as it is in Leonardo, who wears the special fame of chiaroscuro, and it constituted in them as unmistakable a signature of mental elegance as does the fine line of Raphael or the modelling of Phidias.

Another portrait-painter is present who shows himself more practical and in fuller daylight, while he lays his grasp on our sense of admiration with an all-powerful hand. Intelligent, penetrating, unvarnished reproduction can no farther go than with this inexorable Van der Helst, from whom a sitter need hope to have no reserves. He photographs for us a person of importance from Haarlem or Amsterdam. On the man's body—a black velvet barrel—rests a barrel-head of flat white collar, and on that again rolls the round burgomagistral face, with all the life and sparkle to-day before our eyes it ever had in its own seventeenth century. The moist mouth is thatched with a level black moustache, the chops wear a two days' growth of beard, the jet-black hair is a perfectly unimaginative fringe, while a singular dart of fineness and intelligence shoots from out the small dark eyes, giving point to their look of almost swinish epicureanism. Here is a painter who had the power to shine into his sitter's mind like a conscience. From this single specimen we can understand the immense contemporary value set upon the portraits of Van der Helst, whose education and history are obscure, and whose works never escape into public sales. Of his brush we know of but one other example in the country, the "Violinist" at the Philadelphia Academy, an example indicating capacity for still higher things in the way of fancy and improvisation.

But the highest praise for skill in delineation will be reserved by many a spectator for the bold sketch of the "Hille Bobbe," of Haarlem, by Franz Hals, a *chef-d'œuvre* which perhaps marks the utmost height to which expertness in portraiture can go. The picture is a *Gavarni* of the pre-journalistic period, evidently thrown off at a sitting, and retains for us a Dutch witch's beery laugh over some joke cracked two centuries ago. Art-history tells us that Hals illustrated two verses of a ballad on "Hille Bobbe" which circulated in Flanders, one in a sketch now at Aix-la-Chapelle, representing the convivial lady with her hands on a flagon, the other in our present acquisition. This shows her as she bursts out laughing, smacking the back of one hand with the palm of the other, and almost breaking her hard, round cheeks with the stress of the laugh which puckers them. It is a work, artistically, of giant muscle, a gymnastic of long-trained character-painting. We are particularly glad that the enjoyment of this masterpiece need not be altogether confined to those to whom the original is accessible, but that its true flavor may be got from the etching by Jacquemart, who has been most felicitous in copying it for the illustrated Catalogue of the Museum. That Franz Hals was something more than a painter of heads his color-sketch for the "Meeting of the Gardes-Bourgeoises to celebrate the Peace of Munster" will convince any artist; it is a composition of great force, with the purest and richest colors.

These are works that nail the mind to the earth, with their intense sense of real life, their shrewdness, and their reading of character; there is besides another group of paintings, not less bright to look at, such is their fortunate state of preservation, but a century older, and able to carry us past the vivid presentments of these trading and prospering Hollanders away into the noble ascetic heart of the Low Countries. Here, for instance, we are in the chaste studio-atmosphere of Van Eyck; it is an "Adoration of the

Magi" by his pupil Van der Meire. All is purity, peace, renunciation. The babe is very human and pitiful—the just-born progeny of this world's poor; the Madonna has no thought to be sentimental or particularly spiritual, but rather to be neat, and keep the little kicking feet of the baby in place with her hands—hands, feet, and all painted like the miniature work of missals. The central Magian is a pale mediæval monk in contemplation, and very noble; but another is a travelled man, with a commercial look among the rich gifts; and the third a painfully imagined negro, almost without the limits of the painter's consciousness, and drawn with timidity like a menagerie animal. Again, altogether in the sentiment of Hans Memling, there is a head of Christ, meagre, intellectual, and charged with devotional tenderness from the painter's heart; it is by Dierick Bouts, who was born in 1391. The three pictures by Van der Weyden show a similar directness and sincerity. The largest, the "Descent from the Cross," is the canvas wanting to the series of the Passion in the Brussels Museum. What a measureless distance from the Magdalen in this group to a Magdalen by Rubens! It is as far back of him as the transcendental Magdalen of Tennyson, whose eyes are homes of silent prayer, and whose intellect is fixed on the problem of cerebral suspension in the tomb, is ahead of him. Here the poor saint is noway seductive, she is lean and brittle-looking like the other women, only her hair is done up with *recherche*, and she wears fine black velvet, with cuffs and borders of jewel-studded gold. The other two, an Ecce Homo and a Madonna, are monastic, careworn, and of low vitality, the faces bathed in tears, and revealing on the painter's part that personal comprehension of habitual sorrow which is so striking in all mediæval religious works. A little later, in the specimens from Martin van Heemskerck, we have art still religious, in a filial and devotional sense, but beginning to glance at the gaiety and picturesqueness of nature. The likeness of his father, a serious, much-tried laboring man, with circumflex mouth, is pious and careful, and, in fact of portraiture, has the palpable accuracy of a die. For his larger example, "Christ and the Pharisee," our first greeting, on approaching it as a fifteenth-century work, is a start of surprise at its vivid, throbbing color, as of a jewel freshly disinterred; then, further, while archaically didactic, it has not the introversion of the monastery; the world has crept in, the painter feels less strongly the rebuke to the Pharisee than the painted sunlight and dashing variegation found in a city crowd, and we feel a twitch or two of the influence that will lead to Rubens and the Revival.

Several of the specimens we have picked out for notice are subjects of the etchings for the catalogue of the Museum. M. Jacquemart, who executes these illustrations in Paris, is certainly one of the most expert copyists of the time, and in ten *eaux-fortes* now ready has contrived to give the strongest conceivable suggestion of the touch of the master, from the painful plodding of the portrait by Heemskerck to the rollicking way in which Hals has painted his laughing beldam.

THE VALLEY ROUTE TO THE PACIFIC.

THE SNOW PROBLEM.

The four principal routes that have been surveyed to the Pacific have the following mean elevation above the sea level: 1. The extreme Southern or Texas Pacific route, skirting the border of Mexico, has an average altitude of 2,300 feet. 2. The 35th parallel route, 3,600 feet. 3. The Middle route, extending 1,771 miles, from Omaha to Sacramento, 5,000 feet. 4. The Northern route, from Lake Superior and St. Paul to Puget Sound, 1,900 feet.

The middle route (now occupied by the Union and Central Pacific Road) scales four principal summits, having the following elevations: 6,169 feet, 7,042 feet, 7,463 feet, and 8,235 feet. The Northern route has on its main line but two summits, the highest of which has an altitude not much exceeding 5,000 feet. Nine hundred continuous miles on the Middle route have a greater average elevation than the highest summit on the Northern, and 450 continuous miles on the former line are 1,000 feet above the highest point on the latter.

The remarkably low altitude of the Northern line fully entitles it to the designation it has received of the Valley Route to the Pacific. From Lake Superior, for a distance of eight hundred miles, on this line, the country is a vast plain, partly timbered, but mainly prairie, gradually rising from one thousand one hundred feet elevation above the sea near Lake Superior to two thousand seven hundred feet near the Rocky Mountains. This plain has a varied surface, and in its depressions flow the navigable waters of the Mississippi, the Red, the Upper Missouri, and the Yellowstone, and their many tributaries.

Crossing at right angles the valleys of the Mississippi and the Red River of the North, the Northern route traverses the rolling prairies of Dakota to the broad and fertile valleys of the Missouri and Yellowstone. The latter it follows nearly the entire length of Montana to the foot of the mountains. Ascending the eastern slope by an almost imperceptible grade, and surmounting the divide by a pass so remarkable that it almost constitutes a gateway through the mountains, the Northern line enters the valley of a branch of the Columbia, and follows that noble river to tide-water on the Pacific. The leading advantages resulting to the Northern Pacific Railroad from the low altitude of the valley route along which it is building are: 1. A mild climate and a sheltered position. 2. Exemption from deep and drifting snows, and hence, with ordinary precautions, entire freedom from winter obstructions. 3. A productive and verdure-covered country flanking the road, resulting in rapid settlement, a large tributary population, and a profitable local traffic. 4. An abundance of good water. 5. A saving of many millions in cost of construction, with a proportionate reduction of interest burden. 6. A succession of natural and easy grades, which will greatly reduce the cost of operating the road, and enable the same motive power to accomplish far greater results, both in speed and traffic, than are possible on an elevated or mountain route.

The experience of the past winter, the severest since our Territories were settled, and not likely to be repeated for many years, has thoroughly justified the claim that the Northern Pacific Road, when completed, will not be at any time obstructed by snow. Authentic reports—official, unofficial, and incidental, from surveyors, engineers, United States military and signal officers, and settlers, representing all important sections of the route—agree that during the past hard winter there has not been a time when, with the precautions usually taken on roads in Northern States, Northern Pacific trains could not have made regular trips.

Chief-Engineer Roberts, of the Northern Pacific Road, who has no superior in his profession in this country, and has carefully studied the Western snow-problem during the past three years, in a recent report, based on very full data, sums up his conclusions in this sentence:

"With ordinary means of protection at exposed points, the Northern Pacific Railroad, when completed by the Yellowstone route, can unquestionably be kept open for regular traffic its entire length across the continent, even during winters as severe as the present, should they occur."

He further says, alluding to a mass of testimony from Montana:

"These very favorable reports, during a winter of unprecedented severity, cover the most elevated and mountainous portion of our line, where obstructions from snow would occur if anywhere on the route; and, when it is remembered that the obstructions on the Union Pacific have been virtually confined to a section of 180 miles, every part of which is at least 1,000 feet higher than the highest summit on the Northern route, and most of which is 2,500 to 3,000 feet higher than the mountain section of equal length on the Northern Pacific line, it becomes perfectly safe to predict for the latter as complete exemption from winter blockade as is enjoyed by railroads in New York and New England."

Intelligent judges believe that the Union Pacific Company, taught by experience, will be able hereafter to prevent any serious blockade on their line. Whether this shall prove true or not, it can be considered settled that the Northern Pacific Road, following as it will the channel-way of the great rivers of the continent, traversing the mild-winter belt, and running at an elevation 2,500 to 3,500 feet lower than its neighbor, will, from the day of its completion, furnish a reliable means of transit between the Atlantic and the Pacific. It is particularly and vastly important that this fact be known and emphasized now that we have among us an important embassy from Japan, whose report on the efficiency of our trans-continental thoroughfares will do much to hasten or retard the increase of our direct trade with the Orient.

The past year's business on the Union and Central line, with its promise of rapid increase, establishes beyond doubt the success of the first trans-continental road, but it renders equally certain the profitableness of the Northern Pacific, which has radical advantages, with an ample field and future of its own. The two lines are so far apart as not to interfere with each other. As is the case with the present Pacific Road, the bulk of the earnings of each will doubtless come from local traffic; while the Asiatic and through carrying trade of both will be increased to an enormous volume by their joint efforts to turn the current of the world's commerce across the American continent, and by their joint demonstration that the trans-continental route is equal to all commercial needs.—*Independent.*

"One of the few books which render piety attractive."—
Henry Ward Beecher.

JUST PUBLISHED,

12mo, cloth, price $2.

UNA AND HER PAUPERS.

MEMORIALS OF AGNES ELIZABETH JONES.

By her Sister. With an Introduction by Florence Nightingale. First American from the second London edition. With an Introductory Preface by the Rev. Henry Ward Beecher, and a Supplementary Chapter on Hospital Training and Nursing in the United States, by the author of "Woman's Work in the Civil War."

"I call her Una, for when her whole life and image rise before me, so far from thinking the story of Una and her lion a myth, I say, here is Una in real flesh and blood—Una and her paupers, far more untamable than lions."—Florence Nightingale.

"There are few memoirs better calculated to produce a profound impression upon all who are susceptible to the exhibition of remarkable Christian excellence. It is one of the few books which renders piety attractive."—Henry Ward Beecher.

"As a record of heroic, self-sacrificing life, we most warmly recommend this book, confident that to not a few hearts it will carry a message, and that to some it will bring a gladdening sense of a clear course on which they may walk in the fruitful service of God and man."—Nonconformist.

"It is really the duty of every one who can possibly do it to study the exceedingly beautiful character here presented to us. What she did was marvellous, but what she was is the deeper interest and truer lesson of her life. A true Sister of Mercy, she devoted herself from her girlhood wholly to the service of Christ in his poor, and few women have done as much in a long life as she in five-and-thirty years."—Literary Churchman.

YET ANOTHER REASON why Hurd & Houghton's (Riverside Press) unabridged, enlarged, and corrected edition of SMITH'S DICTIONARY OF THE BIBLE, edited by Hackett and Abbot, 4 vols. 8vo, 3,667 pp., 576 illustrations, cloth, $26, is better than the English edition of the same, and thus the best Bible Dictionary in the English language, is that the Scriptural references have all been verified anew, and a great number of errors corrected. Then an index of the passages of Scripture illustrated, extending through fourteen four-column pages, is an entirely new feature in the American edition.

Now Ready, No. 39, *March,* 1872.

THE AMERICAN BIBLIOPOLIST:

A Literary Register and Repository of Notes and Queries.

The new Number contains, with other Articles, the following: New York City in 1800.—American and British School-books.—Tales and Jests of Mr. Hugh Peters. Part I.—Boswell.—Was Dr. Johnson a Snuff-taker?—James Rivington.—George Barrow's Works.—Richardson and Clarissa.—Cervantes and his Translators.—A Relic of the Revolution.—Capt. Peter Ewing.—Book Notices.—Notes and Queries.—Literary Gossip, etc.

The BIBLIOPOLIST is issued on the first of every month. Subscription, $1 per year. Cheap edition, 50 cents. Send stamp for specimen number.

The Nation.

NEW YORK, THURSDAY, MARCH 21, 1872.

The Week.

WE are sorry to have to record another appointment by the President which is not exactly in the direction of civil-service reform. We believe it is now the fashion to accuse everybody who makes a remark of this kind of being a "partisan." Well, we are partisans, but we hope partisans of good government and official honesty, and we therefore confess, without shame, that we think the appointment of a Lowell carpet-bagger named Parker, a brother-in-law of Mr. Benjamin F. Butler, who is also the uncle of George H. Butler, the well-known Consul-General in Egypt, to the surveyorship of the port of New Orleans in the place of General Longstreet, a great scandal and a sad commentary on the value of the new rules. General Longstreet, who is an honest man whom his worst enemies respect, has resigned through disgust at the performances of Casey the collector and his faction, and now the President puts in his place a low adventurer in order to oblige B. F. Butler, and he does this while retaining his own brother-in-law as collector—he who, besides many other exploits, lately employed the Federal revenue cutter for twelve days in carrying a batch of State senators up and down the river to protect them from arrest by the sergeant-at-arms. Now, why is this done? What excuse is there for it, in view of the reform in the civil-service which, we are told, is going on? Will not some champion of the Government answer these questions, avoiding all allusions to the Seneca Stone business or Horace Greeley's relations with Hank Smith?

Mr. Conkling's resolution calling for a return of the recommendations for appointments to and removals from office offered by the senators from New York, Wisconsin, Illinois, Nebraska, and Indiana, and all representations made in the premises by these persons, and also an account of the number of appointments "credited" to them respectively, has passed the Senate. This request, which, as the *Evening Post* very properly observes, is insulting to the President, and will probably receive no answer, is simply a mode of carrying on a quarrel of a purely personal character between half-a-dozen senators, and which Mr. Conkling himself began by treating the demand for the Custom-house investigation as an outrage. That such a resolution should have been gravely offered, debated, and acted on, is a curious illustration of the loss of tone the Senate has within a few years undergone.

It was asserted a few days ago that Mr. Sumner would preside at the Cincinnati Convention, but as nobody had asked him, or had any authority to ask him to do so, he has really neither consented nor refused. He is said still to be in some uncertainty as to what his course will be with regard to the Cincinnati movement, but in all contingencies will oppose the renomination and re-election of General Grant. Mr. Dawes has written a letter denying sympathy with the Cincinnati movement, but at the same time strongly condemning the course of the friends of the Administration in the Senate and elsewhere in resisting investigation. It is probable that we are on the eve of a more general expression of opinion on the part of politicians than has yet taken place or than a few weeks ago seemed probable. Mr. Sumner suggests the propriety of General Grant's withdrawal, which would really put an end to the Cincinnati movement. When one considers that it is the determination of his friends that he and nobody else shall be the next President and that his claims to renomination shall not even be discussed, which is breaking up the party, one can hardly consider such a step as altogether impossible.

Later returns from New Hampshire than we had at our last writing make clear several points that were then doubtful. In the first place, it would seem to be certain that Judge David Davis's nomination for the Presidency may be entirely disregarded by everybody, and that Democrats, Liberal Republicans, and Administration men may each proceed to make their game as if the so-called Labor Reform party had never tried to get itself into existence. New Hampshire has workingmen if any State in the Union has, and yet out of a total vote of seventy-five thousand, more or less—one of the heaviest ever cast in the State—the Labor Reformers cast some four or five hundred. Prohibitionists made a still smaller show. But, indeed, the people are but few just at present who give themselves sufficient concern about the Prohibition party to do so much as draw a moral from the result of its operations. It simply can do nothing when the people are really agitated by political questions. The Protectionists have made some endeavor to show that the activity of the Free-traders in New Hampshire inured to the benefit of the Republicans. The *Tribune* appeals to the returns from Nashua, Manchester, Dover, Summersworth, and Claremont in support of this position. The figures show an increase of 1,279 over the vote of last year in these five manufacturing towns, the Republican share of the increase being 1,246, and the Democratic share but 33. So far as the returns now in admit of a judgment's being formed, the increase in the aggregate vote of the State will be something more than 6,000, and a proportionate increase in the towns above-named would have been not far from 800.

The *Tribune*, we think, says more than it can at all make clear when it attributes this disproportionate increase to the exceptionally manufacturing character of the population of these towns. When there is to be an increase in the aggregate vote of a State, it is fair to look for a somewhat disproportionate rate of increase in the large towns, which are always most vigorously canvassed by speakers, brass bands, processions, and other like persuaders, and in which it is always easiest for the voter to get to the polls. The *Tribune* is plainly wrong in talking about a Democratic loss of 1,000. There was an absolute Democratic gain, though a small one, and no one can say that, of the 1,279 votes not thrown last year, 1,000 were Democratic. We take the fact to be that on account of the comparative slothfulness of the Administration wheel-horses last year, and of the general half disgust with which a certain number of people were looking at a good many of the Administration's acts of omission and commission, and on account, too, of local railroad troubles since healed, a portion of the Republican Israel betook itself to its tents, and this year came out of them. How many Republicans came out to fight for protection as against a lower tariff we suppose the *Tribune* no more knows than we. But we believe not enough to have affected the result one way or another.

Of the other results of the New Hampshire contest, there appears to be less doubt in any quarter than there was when news of it first came, and there was not much then. We judge that we speak without danger of misleading when we say that the Democratic press throughout the country has, within the week, become very much readier to go the length of admitting that the Democracy must take platform and candidate from the Cincinnati Convention, and that it will have to take them without in return taking from that body other guarantees than those furnished by the platform itself, and the high character of the candidates. The independent, or partially independent, press is very free in telling the Democrats that now they must at last see that the party wants nothing so much as an undertaker, it being full time for it to confess itself dead and consent to have its remains decently interred. The portion of the Democratic press more advanced in liberalism takes this talk in good part, so far as to indicate their willingness to adopt the Cincinnati platform at least; and some of them, as well as some Republicans, avow the belief that if Cincinnati nominates Mr. Charles Francis Adams and Mr. Trumbull, nothing that could be done at Philadelphia would prevent their election. The Administration press, and such of the Republican press as is not so feverishly Administration in tone, is disposed to be a good deal less satisfied at the New Hampshire victory than it was at first, though it is still maintaining that the result in that State makes the renomination of the President and his re-election also a certainty. Still it is seen that Connecticut and especially that Cincinnati are yet to be heard from. We doubt, though, if there has been a worse time for prophets of a political and Administration turn since the days of Ahab and Jezebel; and even the renomination of President Grant, certain as it has been looking for some time past, may nevertheless be made merely impossible within the next forty days. Such Republicans as Mr. Dawes and Mr. Garfield give but an uncertain sound, considering how plainly they both can speak, and the House of Representatives generally is a long way from being up to the Morton-Conkling mark in point of loyalty and devotion.

The canvass in Connecticut seems likely to be made very lively by the appearance on the scene of the Woodhull wing of the Woman's Suffrage movement in the interest of the Democrats. The chiefs having definitively abandoned the Republican party, Woodhull herself and Mrs. Hooker are appearing on the stump. The *Woman's Journal* says the Republican success in New Hampshire was partly due to the Republicans having secured the services of Mrs. Livermore as an orator, and this, apparently, not so much because the cause was good, as because Mrs. Livermore is a woman. It now remains to be seen what sex can do for the other side in Connecticut. If one woman can carry New Hampshire for the Republicans, two women ought to be able to make mince-meat of them in Connecticut. We would warn Woodhull, however, against appearing too often. The community is getting a little tired of her, and, if we are not greatly mistaken, she, like several other prominent public characters, is on the eve of an “investigation” which may diminish her usefulness. We would advise the Republican managers in Connecticut, if they wish to make “politics” in that State thoroughly interesting, and reduce it to a real science for the benefit of the young, to bring on Woodhull's married sister and her aged parents, and give them a hall in which to tell the electors what they know and think about “pantarchy” and “pantarchists.” We observe that a “Hartford Lady” is, as the pugilists say, “getting home on” Woodhull with some terrible blows in the *Courant*. On the whole, what do you think, brethren, of this illustration of “the feminine element” in politics? Improving spectacle, is it not?

We had no idea, when writing of “masked reformers” last week, apropos of the *Times's* attack on Miller, the Insurance Superintendent, that the appropriateness of our remarks would so soon receive a striking illustration. It now appears that the person whom the *Times* allowed to make these assaults in its editorial columns, and whom it refused to produce, was a worthy gentleman known to the *Times* as “F. W. Browning,” but known to the *Spectator*—an insurance paper—as “F. W. Ballard.” In the columns of the *Spectator* he upheld Miller, but in the columns of the *Times* he blackguarded him handsomely. Indeed, he was the author of nearly all the *Times's* “exposures,” including the articles entitled “Miller's Progress,” “Miller's Pet Lambs,” “Those who did not endorse Miller,” “The Insurance Investigation,” “The Insurance Report,” “How not to do it,” and “Superintendent Miller's Extortions.” This valuable “expert” has now come forward, and in evidence before the Committee of Investigation, and in letters to Mr. Miller himself and to the editor of the *Times*, confesses he is satisfied there was no truth in his charges, and that he is sorry he ever wrote the articles containing them. In short, it looks very much as if he was “an arrant humbug,” had “not a particle of conscience in his composition,” was a “born destructionist,” and “ought to have his leg tied to a chair” when left alone in a room with valuable property. He has shamefully abused the confidence of the *Times*, and also shamefully abused the confidence of the *Spectator*, and ought clearly not to have been trusted by either.

The moral of the affair for editors is: when anybody asks leave to call somebody a thief through your columns, do not let him do so because you think he is honest, unless he agrees to prove his charges if called upon; because, even if honest, he may be misled by ignorance or passion; and, if dishonest, he may sell you out and bring you to open shame. It is right to add that the result of the investigation thus far goes to show that Browning was nearer the truth when writing to the *Times* than Ballard was when writing in the *Spectator*, but this makes little difference after all, for when the devil gets Ballard, what will become of Browning? There is another bit of instruction which respectable newspapers may draw from the affair, and that is, not to mix themselves up lightly and hastily in insurance quarrels. There is no business in the United States more embittered by competition and more ravaged by blackmailers. Crowds of adventurers like Ballard *alias* Browning live by preying on the fears of the companies and their officers in virtue of a real or pretended connection with the press. Several weekly papers and one “quarterly review” are actually supported by this species of extortion, and no respectable editor, unless he takes extraordinary precautions, can venture into the region infested by these rogues without imminent risk of being waylaid, stripped, and robbed as the *Times* has been.

Thomas Murphy has this week been examined by the Custom-house Investigating Committee at Washington, but his evidence contained nothing of much importance or interest, except his denial of the story told by Messrs. Palmer and Townley about the President's interest in “Corrigan,” and desire to have that person retained in the Custom-house. This, he says, was “made out of the whole cloth,” which raises what is called “a conflict of veracity” between him and General Palmer and Mr. Townley, both of whom swear to the conversation. He also testified that the President had, in May, 1871, told him that he thought the young man Leet ought to be discharged, the newspapers were making such an uproar about him; but Murphy refused to discharge him, in the belief that the uproar was got up by the steamboat companies, from whom the general-order business had been taken away. The remonstrance against Leet, signed by one hundred of the leading commercial houses of the city, he also disregarded, thinking it mere “paper”—that is, believing it to have been signed by the merchants in order to oblige the steamboat companies.

“The young man Leet” certainly seems as lucky and as mysterious a young man as ever got into the public service. He got one of the most valuable places in the gift of the Government, though nobody wanted him to get it, and the President wanted him not to get it. With incessant change going on about him, too, he has proved immovable as a rock. Other officers come and go, but he stays where he is—the storm of public indignation beating on him in vain; and yet everybody, from the President down, denies all interest in him and all desire to keep him in office. The steamboat companies, powerful and wealthy corporations, have tried to uproot him; A. T. Stewart & Co. have tried; one hundred leading commercial houses have tried; and, last of all, a powerful section of the press, headed by the *Tribune*, which bowled over Murphy himself, has assaulted him, and yet this obscure and friendless youth defies them all. Mr. Murphy's explanation of his real-estate partnership with Hugh Smith, Sweeny, and Tweed was very interesting. He took them in, he said, to show them that his opposition to them in the State Senate had nothing personal in it.

Jay Gould has at last resigned his position as director of the Erie Railroad, so that the road is now, at last, completely in the hands of honest men, and, owing to the repeal of the Classification Bill, it will be shortly in the hands of men elected by the *bonâ-fide* stockholders. The stock has been rising rapidly under the influence of the change, the orders for it from Europe being very heavy. There has been much speculation during the week as to the exact nature of the process by which the Gould dynasty was overthrown, many people being inclined to regard the *coup d'état* in the Opera House, and the subsequent racings and chasings, forcing open of doors, tying of door-handles, and entrances through windows, as simply a prearranged little comedy, intended to amuse the general public, the issue having been all along agreed on between Jay Gould and his assailants.

The truth, or as near an approach to the truth as it is permitted to outsiders to make, appears to be that the plan of operations was settled by a London firm named Bischoffsheim, acting in conjunction with Mr. McHenry of the Atlantic and Great Western road, and representing one section of the English stockholders, the others making what is called the Heath-Raphael interest, and represented by an English lawyer here, Mr. Swan. The Bischoffsheim people had the sagacity to employ General Sickles, who at once opened negotiations with members of the Erie Ring individually, whom he found demoralized by Fisk's death, by the Reform movement at Albany, and by distrust of Jay Gould. He soon made sufficient progress to make them distrustful of each other—a feeling probably aggravated by the peaching of Garvey in the Hall case—and they speedily came to terms, fearing that if they waited longer they might fare worse, and it is presumable that it was made easy for them to come down. Gould still held out, but hardly with the prospect of final success, and he stood a siege, as commanders of indefensible fortresses fire a few rounds to save their honor. The story that he finally surrendered at a three hours' private interview with Sickles, under threat of criminal proceedings, and in sight of terrible "proofs" in Sickles's hands, is certainly bosh. That interview was most probably passed in ordinary negotiations over the questions, "How much will you give?" and "What will you take?" Gould goes out, at worst, with a very considerable fortune, and will yet be heard of as an "operator" of no mean force. Field and Shearman remain for the present to wind up or dispose of the various complicated suits they are carrying on for the company.

Something ought now to be done to make the recurrence of such gigantic robberies impossible. The first thing is, of course, to keep the bench pure, but the second is to prohibit the conversion of bonds into stock. The basis of the Fisk-Gould operations was the power enjoyed by the directors of issuing bonds, the intent of the law being, of course, that this power should only be used for the purpose of effecting *bonâ-fide* loans of money to be used for the benefit of the road, and to make the bonds more attractive to lenders they were made convertible into stock. The Ring, however, issued bonds to themselves and their confederates, not for the purpose of raising money, but for the simple purpose of converting them into stock, and with the stock thus created, as often as suited their convenience, they overwhelmed the real stockholders.

The Utah Constitutional Convention has met and framed a Constitution which is a somewhat noticeable instrument, and perhaps some of its most remarkable features point to its probable fate, for we suspect a good number of years will pass away before our Mormon friends see it in operation, despite the Hon. Mr. Fitch and other disinterested persons. The meeting of the Convention was in obedience to a popular Mormon conviction, which a prominent Mormon recently expressed in the remark that there is "no safety for us without a State government, and no State government for us without concessions." The "concessions" are, permitting the Utah mines to be worked and giving up the practice of polygamy—a practice of which the Mormons, two years ago, publicly declared that it was enjoined upon them by heaven under pain of eternal damnation, The State Government so much desired gives them freedom from the crusade directed against them by Judge McKean, and puts them in complete possession of Utah—in possession so complete, indeed, that the next attack upon Mormon polygamy would have to be made by means of a constitutional amendment. How likely the future State would be to revoke the action of the present Territory we have little means of knowing, but the popular disposition to trust the Mormon leaders in regard to anything is of the feeblest. We at the East really know very little about the Mormon community, which constitutes a little *imperium in imperio* that is but very slightly Americanized, and which we suppose may be described as gathered from the stupidest and most ignorant classes of half-a-dozen European nations. These people are, for the most part, geographical Americans merely, and Americans in no other sense in which it is desirable that men should be American, if they are to be made into a State of the Union.

Young, Hyde, Pratt, and the other astute heads of this collection of people, now offer in the new constitution which they have made to allow the mines to be opened and agree that the new State shall levy no tax on mining; to give the right of voting to women; to allow cumulative voting; to establish freedom of religion; and to tax equally all men, whether Gentiles or Mormons. As the Eastern Gentile world does not seem to care much about the right of women to vote—and especially of Mormon women to vote in droves with cumulative ballots; as the mines have already been opened; and as freedom of religion has been pretty well established by the Pacific Railroad, the Mormon concessions will not have great effect in placating Eastern public opinion. We have no sympathy with the performances of Judge McKean, and we are very much inclined to believe that Mormon Utah is just now undergoing a small infliction of carpet-baggism of the good old Southern Reconstruction stamp, but we do not forget either that, all things considered, there is no need of haste in loosening in any way the grasp of the United States upon the Mormons. They no doubt represent, after a fashion, the principle of freedom of opinion, but they are neither so wise, nor so good, nor so numerous, nor have they been so patriotic nor so civil to the United States Government, nor are they in any way or shape so creditable to anybody who has had anything to do with them, that we need be in great haste to take their "concessions" and give them two senators and a representative in return.

Mr. Fish's answer to Lord Granville's despatch has been received in London, and we learn that it, too, is couched in courteous and friendly terms, but does not accept the English view of the matter. A reply is to be given to Minister Schenck in the course of the present week, but it is tolerably plain, from the tone of Mr. Gladstone's remarks in announcing this to the House of Commons, that we are not to look for a mutual understanding. There is not, as far as we can see, any desire in England to escape the submission of *any and all* indirect claims. The claim for increased premium of insurance, for instance, and enhanced freight, being provable and computable, we have little doubt, would be accepted as a legitimate subject for the arbitrators to pass on, and ought, undoubtedly, to be pressed by our Government. What arrests the negotiations is the claim for the expenses of the war after Gettysburg, which is neither provable nor computable, which we have reason to fear Mr. Davis stuck in on his own responsibility, and which, we repeat, no lawyer or layman of intelligence in the United States has ever ventured to defend, and which hardly anybody ever mentions privately without a smile. The only strong objection we know of to the insurance claim is the difficulty, if not impossibility, of dealing with it under the clause which directs the assessors to apportion the loss among the different cruisers for whose operations Great Britain shall have been declared responsible. How could they decide to what extent any *one* had been instrumental in raising the premium?

THE CINCINNATI CONVENTION.

A MASS Convention is to meet at Cincinnati on the first Wednesday in May, for the purpose of considering, adopting, and, if thought advisable, of nominating candidates for the Presidency and Vice-Presidency, on the platform recently put forth by the Missouri Liberal Republicans. Whatever doubts may have been at one time entertained as to the numbers and character of the Convention may be said to be nearly set at rest. It will probably be very large, and will probably be, in the best sense of the term, very respectable. One of the curious results of the personal turn given to the pending Republican canvass has been that every Republican success swells the ranks of the bolters. In other words, the regular Republican cause having been proclaimed by the managers to be the cause of General Grant, the more triumphs it meets with, the more General Grant's enemies multiply and declare themselves. The object of the Philadelphia Convention being now all but set down in black and white as his renomination, and not deliberation on the choice of his successor, the natural consequence is that not only those who are opposed to him, but those who are opposed to the practice of adopting in convention, without debate, nominations prepared beforehand, and in fact to all forms of dictation through the use of party machinery, are going to Cincinnati, and will not go to Philadelphia. His unskilful mode of using his patronage has, of course, made him a host of enemies in the ranks of the politicians proper, who will now probably proffer their aid to those who desire his defeat on higher grounds.

Within the last few days, too, it must be admitted the secession has received a powerful stimulus from the New Hampshire election, which is proving for the Administration one of those terrible victories which are far worse than any defeat. It poured speakers into the State without stint during the canvass, but it is no exaggeration to say that they proved its worst enemies, for the more they persuaded, the more they injured it. Had the Republicans carried the State with great difficulty and by a bare majority, or had the election gone into the Legislature; or had the Democrats held their own or made appreciable gains; above all, had they achieved a triumph, they would doubtless have been sufficiently encouraged to make a separate nomination for the Presidency, and repudiate utterly the passive policy; and any such attitude on their part would have exercised a correspondingly depressing influence on the Liberal Republican movement, for a Liberal Republican candidate and a Democratic one are hardly likely to be able to keep the field together. But their defeat in New Hampshire has so instructed the Democrats that—particularly if it should be followed by a defeat in Connecticut—we shall probably now witness a general adhesion to the passive policy, or, in other words, the complete break-up of the old organization. This cannot but give to the Cincinnati Convention an importance it did not previously possess. From a convention of bolters, who, within their own party, would certainly be a minority, and perhaps a small one, it becomes a convention whose nominee will not improbably be elected without difficulty. This prospect has naturally already made a profound impression on the great host of timid and uncertain people, and people who like, in all games, to be on the winning side; and the preparations for the meeting have, within a week, exhibited an earnestness and activity which were previously wanting. Should the Administration now succeed in "redeeming" Connecticut as they have "redeemed" New Hampshire, it will be most probably at the cost of their own damnation.

There is, perhaps, nothing which now does, and will continue to do, so much for General Grant as the fear entertained, even by those who doubt his capacity and profoundly distrust the men who surround him, that a movement against him would result in a return of the Democrats to power. It may be, they say, that the Administration is surrounded by corrupt men—that the Camerons, Forneys, Mortons, Conklings, Murphys, and Leets are not exactly the kind of men whom we should wish to see acting as the President's agents or counsellors, or it may be that there is a vast amount of robbery and corruption, even if the President be not responsible for it. But after all, nothing that he or anybody else within the ranks of the Republican party is at all likely to do, supposing him and his friends to be as bad as his worst enemies paint them, can equal what we might fairly and reasonably look for from a Democratic Administration, or from any Administration which the Democratic party helped to elect, and on which the Democratic leaders might therefore be expected to exercise more or less influence. Consider what the history of the party, within the last fifteen years, has been. Consider, above all, two points in its history—its hostility to the negro, and its hostility to the public credit. Might we not reasonably fear that these, though for the present covered up, would, if power were placed in the hands of the party or its chiefs, break out once more with fresh vigor? Consider, too, that, even supposing the aims of the chiefs to be good, and their disposition to accept the results of the war undeniable, their constituents include all that is most ignorant, debased, and corrupt in our population, and that, whatever their own desires might be, to this ignorant and debased element they would be allowed to pander. Are you, therefore, prepared to accept their aid at this risk?

We only know of one good answer that can be made to these objections, but it is, we think, a very good one. They are based on a theory which, though it finds constant expression in the political slang of the day, has really no place among the ideas or practices of American politics—we mean the theory that the two great parties which are always contending for power are two hostile armies or camps irreconcilably divided, and that each is to the other not an opponent to be persuaded or won over, but an enemy to be remorselessly pursued and destroyed. In reality, however, this theory is French and not American, and it constitutes the curse of French political life. In our system, political opponents are fellow-citizens of a different way of thinking from our own about the best means of promoting the common weal; and the object of our writing, and speechifying, and, indeed, of the whole machinery of our agitation, is not to secure their permanent exclusion from all influence on the government, but to change their opinions and induce them to act with us instead of against us. If we succeeded in introducing into our politics the element of irreconcilable hatred, of fixed and irremovable distrust of all men who have ever been arrayed against us on any great question, which some of our Radical friends are now preaching as a duty, we should have reduced our political contests to the level of the barren and unfruitful faction fights which have plunged France into the abyss. To us, political opponents, even Democrats, are, and long may they remain so, a body of our countrymen of whom the great mass are honest and well-meaning, but mistaken. We must so regard them or else sit down in despair, for do they not constitute well-nigh one-half of the American people? And we must regard them as open to conviction—that is, as practical politicians capable of changing their minds, either under the influence of new views of principle or new views of expediency, and of adhering to these new views in their political action. We have to remember that all new parties which have yet arisen in any country have been formed out of old ones. The Whig, Federalist, Republican, Democratic, New Whig, and Anti-Slavery Republican parties were all composed of men who had previously been divided in sentiment and belonged to opposing political organizations. The party now in possession of power is composed of old Whigs and old Democrats, in almost equal proportions. It is, therefore, in this country of all countries, absurd to assert that we must never act in politics with men who have once been opposed to us and have held doctrines which we believed to be dangerous and detestable. It is by the break-up of old parties, and the construction of new ones out of the old elements, that all the forward steps in politics are made, and, we may add, all reforms effected, and the sign that a man has abandoned his old party and joined a new one is that he adheres to the platform and votes for the candidates of the new one. The enquiry into the state of "his heart," which some of the friends of the Administration would have us institute, would be futile as well as ridiculous. If the Democrats adhere to the platform of the Cincinnati Convention, and vote for the candidates nominated on it, they will have given the only sign of conversion known in American politics, and the great object of all the Republican speeches and articles of the last twenty years will have been attained. What have we been writing and preaching for so long, if not to get a majority of the American people to agree with us about equal rights, civil-service reform, tariff reform, the public credit, and so on; and if they signify their agreement in the only possible way, what more do we want? Suppose, too, that such a man as Charles Francis Adams, or Lyman Trumbull, or Charles Sumner, or Judge Davis, or any one of half-a-dozen others of similar antecedents whom we might name, should be elected on such a platform as that of the Missouri Liberals by the votes of a combination of Republicans and Democrats, this combination would, if there were only two candidates in the field, have to contain a majority of the American people, would it not? After his election, the government of the country would be lodged where it always is, and always ought to be, would it not? The honest and patriotic men of the nation, who now save it, would still be in existence, would they not? If it be true that this result would, however, bring ruin and desolation upon us, what becomes of the theory of democratic government? Why hold conventions or organize parties at all? If the great aim of the Republican party is to keep the majority from governing, why not say so frankly?

We had intended to say something, but must defer it till next week, about the notion so much preached, and which, indeed, constitutes one of the strongest points in the position of the Administration and its friends, that needed reform must be sought in the ranks of the Republican party as now organized. We think it can be readily shown that this is a chimera; that no party ever yet carried out more than one leading idea; that, this idea embodied in legislation, you cannot take the party, like a machine, and turn it to a new job; that each new aim, even though of the same general character, requires a new combination for its attainment. There are thousands of men in the country who have been totally opposed to us on slavery and reconstruction, but who agree with us heartily on administrative reform. Reconstruction and slavery we have done with; for administrative and revenue reform we are eager; but these men will not labor with us under the lead of our Murphys, and Forneys, and Conklings, and Camerons. Shall we hug the Murphys, and Forneys, and Conklings, and Camerons to our bosom, and drive away all our old honest opponents, who ask us to let bygones be bygones, and go with them in quest of fresh woods and pastures new?

SOMETHING MORE ABOUT OUR "CASE."

WE have heretofore discussed the difficulty which has arisen between this country and Great Britain in the firm belief that the great body of the American people wish to approach the subject above all things as honest men, seeking nothing to which they do not really and sincerely believe themselves to be entitled, and withholding nothing to which their opponents are entitled. But the American public has from the outset labored under a serious disadvantage in forming a rational judgment on the matter in controversy, owing to two facts: one is, that there is no recognized means of getting at the real opinions or intentions of the Administration; and the other is, that the discussions which the subject has undergone in the Senate have been secret, so that we do not know what the leading senators have said or thought about the matter. In every other constitutional country there exists, in spite of the covertness of diplomatic processes, some mode of putting the government on the defensive, and compelling it to explain and defend, if need be, its course in the conduct of any important negotiation. Any member of the British, German, French, Italian, or Belgian parliaments can get up and compel the Foreign Minister to state then and there why he did this or left that undone in his management of foreign affairs; and this right is so assiduously used that the people of all these countries are enabled to exercise a supervision over their foreign relations which, if faulty, is not faulty for want of information. But our President and the State Department are almost as secure from all enquiries as the Venetian Council of Ten in its palmiest days. If they explain at all, they practically explain only to the Senate; and whatever the Senate learns from them, and what it thinks of their doings, is kept carefully concealed until the knowledge of it will be of no use to anybody. Indeed, what the country hears about this most important branch of the public business while important transactions are taking place in it, is mainly composed of vague rumors picked up by newspaper correspondents. This state of things is all the more unfortunate because our foreign relations form the only department of our politics in which mistakes are practically irretrievable. When the Government makes a false step in any other field of its duties, it either finds no difficulty itself in retracing it, or public opinion has no hesitation about making it do so. But in all dealings with foreigners, every people in the world has still enough of the old feudal notion of "honor" to make the confession of an error seem disgraceful and, because disgraceful, impossible—a notion which has been at the bottom of the bloodiest wars, not only of mediæval times but of our times. This notion is gradually losing all influence on the relations of individual men; but it has little less influence than ever upon international relations. The mildest-mannered man among us, who in social intercourse would feel the frank withdrawal of an unjust claim, or the frank atonement for an injury wittingly or unwittingly done to his neighbor, one of the first of his duties, feels aggrieved if his government, in its dealings with foreign powers, does not put on the manners and morals of a swashbuckler, and offer "satisfaction" to anybody who complains of its behavior. So that, after having allowed two or three or four men at Washington to place us, without our knowledge or consent, in a position of great moral and political perplexity towards foreign powers, we are in constant danger of seeing the public encouragng them, either by silence or open approval, to persist in a policy which every individual, in his own house, disapproves and deplores.

There is one other reason, and perhaps the most powerful of all, for regretting this state of things, and that is, that in all probability the part taken hereafter by the United States in moulding the confused medley of usages and opinions known as international law into a well-defined, compact, and consistent code, will be more important than that taken by any other power. It is reasonable to believe that in the year 1900 no other government, or combination of governments, will be able to set up or impose any duty or doctrine which we have not sanctioned; and in any such work as this it is certainly to be desired that the intelligence and morality of the whole country should bear a part, and that this intelligence and morality should be enlightened by the open discussion of international affairs by our ablest men. The English know at this moment what Mr. Gladstone, Sir Roundell Palmer, Lord Cairns, Earl Granville, and half a dozen others think of the construction of the Treaty of Washington; but who among us knows anything for certain of what Mr. Fish, or Mr. Sumner, or Mr. Trumbull, or Mr. Cushing, or Mr. Dana, or Mr. Evarts, or Judge Curtis, not to speak of the Senate Committee on Foreign Affairs, thinks about it? Some private individuals may know something, but the general public nothing. In all that relates to this unfortunate business, the country is literally "going it blind." We might find ourselves in war with England to-morrow without more than a dozen men among us being able to say exactly what caused it, or whether it might not have been avoided. The press is so conscious of this, that most of the newspapers avoid all discussion of the present complication, and content themselves, as does the main body of the public, with "standing by the Government"—that is, taking up an attitude of passive and rather ignorant acquiescence upon one of the most important questions with which any civilized people has ever been called upon to deal. Indeed, the New York *World* may be said to be the only paper which has made any serious attempt to inform public opinion upon it, and if its able discussions of questions of law and hermeneutics were not marred sometimes by a blatant

"Chauvinism," at other times by ferocious party spirit, it would be entitled to the thanks of the community.

We do not profess to know how the pending negotiations are going to end; our own belief still is that the Treaty will prove a failure, because we do not see how the Administration can, on the eve of a Presidential election, admit that it has committed what, if a mistake at all, is a mistake of the first magnitude; and we do not see how England can submit, even *pro formâ*, to the decision of any six men the question whether she shall pay a penalty which, if levied, would cause national bankruptcy, and her degradation to the rank of a second or third-rate power. We confess that, owing to our sincere desire to see the principle of international arbitration established on a sure and lasting foundation, we should be sorry to see any such question submitted to the tribunal either with or without England's consent; because we know that such a precedent would break arbitration down at once. No nation will ever leave the question whether it ought to exist to the decision of any "board," and no nation ought to do so. For small nations the liability to such penalties as we claim from England would put their existence in peril every time two great powers went to war, and one of them accused a small one of violating neutral obligations. Fancy Denmark or Holland exposed to the payment of German expenses in fighting the French after the battle of Sedan, or fancy even us, with our long line of coast and our feeble navy, being called on to foot the bills of any belligerent who could show that we let out a cruiser to prey on its commerce, or filibusters to serve in the armies of its enemy. Even if the claim, which we are trying to get before the Geneva Board, and for the sake of which the Treaty will probably be upset, were not absurd on its face, and were not considered absurd and indefensible by every lawyer of standing in the United States, the argument *ab inconvenienti* would make short work of it.

Taking it for granted that our first object in the prosecution of this controversy is to be right, we shall now suggest two or three questions which, unless satisfactorily answered, might furnish the public or Congress with sufficient reasons for helping the Administration to effect a dignified and orderly retreat from a position which is clearly not tenable, whether lawfully won or not. We are told in the protocol that the American Commissioners claimed indirect damages in the negotiation, but waived them in the hope that "an amicable settlement" might be made, without prejudice to their reproduction of them, in case no such settlement should be made. Now, the preamble of the Treaty, which is not to be found in our "Case," runs as follows:

> "The United States of America and her Britannic Majesty, being desirous to provide for an *amicable settlement* of all causes of difference between the two countries, have for that purpose appointed their respective plenipotentiaries. [List of the respective plenipotentiaries.] And the said plenipotentiaries, after having exchanged their full powers, which were found to be in due and proper form, have agreed to and concluded the following articles."

Now, what we would ask of the Administration, and what the public ought to know before this unfortunate negotiation goes any further, is this:

1. Wherein did the "amicable settlement" you contemplated in making the Treaty, and which you speak of *ipsissimis verbis* in the preamble, differ from the "amicable settlement" you had in your mind when you offered to waive the consequential damages? What is there in *this* "amicable settlement" to make it improper to surrender for its sake what you were perfectly ready to surrender for the sake of the other?

2. It is true that the preamble speaks of an "amicable settlement of *all*" claims, and that you maintain, it is said, that this must be held to include claims for remote and indirect injuries; but, if so, why not also the claims submitted to the Commission at Washington, and the claims submitted to the Emperor of Germany, and the "belligerent-rights" claims?

3. If you really intended to claim consequential damages for the prolongation of the war and so on, how is it that in your "confidential memorandum" of instructions to our counsel you make no mention of them?

Here is the description of the claims to be urged before the Board, as given in that document:

> 1. "*Claims belonging to the United States.*—The United States should be reimbursed for actual outlay expended in the pursuit and capture of the rebel cruisers.
>
> "They may also fairly claim, as representing the community, to be reimbursed for the outlay caused by the increased premium and enhanced freights resulting from the special risk growing out of the operations of the rebel cruisers fitted out in English ports.
>
> "2. *Claims of Individuals.*—The following is believed to be a proximately complete statement of the amount of claims thus far presented to the Department of State for injuries committed by the rebel cruisers."

Here follows a list of the depredations by fourteen cruisers, amounting in all to over $13,000,000.

4. If the country is to be bound even to the extent of war by the letter of the "Case," the "Case" ought to have been the work of our ablest lawyers and diplomatists—not of one lawyer or diplomatist, however able, but of as many as could put their heads together. Was it the work of any such body? Was it not, on the contrary, left entirely to Mr. Bancroft Davis, and did he not take advice or not, as he pleased, while engaged in its composition? Did he indeed submit it to any one till he had it in print, when it was practically too late for any jurist of standing to give it careful consideration; or was the attention of any jurist called to the closing part, in which remote national injuries are made distinct items on which to assess pecuniary damages, until too late for any revision?

5. If the matter was left wholly or all but wholly to Mr. Davis, we would then ask, without meaning to cast any imputation on him, whether his standing at the bar and his diplomatic experience have been such that the people of the United States would, even if consulted beforehand, have consented to back up, even at the sword's point, everything he said in a controversy with a foreign power, and to abide absolutely by any statement he pleased to make, before the most august tribunal ever set up, of the cause of the most serious difference, except that which led to the Revolutionary War, in which this country has ever been engaged?

THE FRENCH GOVERNMENT AND THE PRESS.

PARIS, March 1, 1872.

THERE is a strange sameness in the history of French politics, and liberalism seems to be under what the great naturalist Geoffroy St. Hilaire called an "arrêt de développement." It is unable to grow, to increase in size, or vary in form. Our Liberals are still the slaves of the Jacobin formulas of the French Revolution. Read Michelet's, Louis Blanc's, Thiers's, Lamartine's histories, you always find the same monotonous defence of force, the same prevailing idea that success justifies the means. Let me give you a striking example of the curious sterility of French legislation. In the month of May, 1819, a royalist chamber, under Louis XVIII., made an act against the press. "Whoever," says the first article, "by speeches, or words, pronounced in a public place, by writings, books, drawings, engravings, pictures, emblems, sold or distributed in public places, or by placards exposed before the public, shall have excited any citizens to commit any act designated by law as a crime or a misdemeanor, will be reputed an accomplice, and punished as such." Let us now jump over many years; the Bourbons are gone; Louis Philippe is gone; the Republic has been proclaimed. Here is the text of a decree of the 12th of August, 1848, made six months after the Revolution: "Any attack by one of the means enunciated in article one of the law of the 17th of May, 1819, against the rights and the authority of the National Assembly, against the power and the rights which the members of the executive have received by the decrees of the Assembly, against the republican institutions and the constitution, against the principle of the sovereignty of the people and of universal suffrage, shall be punishable by imprisonment for from three months to five years, and by a fine of from 300 francs to 6,000 francs." Here you see the Republic of 1848 choosing the same means of defence as the Bourbon monarchy of 1819, and putting its trust in gendarmes and tribunals rather than in its own principles. Can anything be more odious, and more ridiculous at the same time, than a republican power forbidding, under the heaviest penalties, not any armed attack, but any attack in words or in writing against "the principle of the sovereignty of the people," against "universal suffrage"—any drawing or engraving directed against the same principles? There is an almost childish ferocity in the construction of this republican law. The similitude between the divine right of the Republic and the divine right of the Monarchy is complete: their intolerance is equal; they will not be put in question or be discussed; they cannot allow any contradiction.

After the constituent Republican Assembly of 1848 had instituted a President, there was a new law passed, in order to defend his power. In this law of the 27th of July, 1849, it is said that the articles of the decree of August, 1848, are applicable also to the rights and to the authority of the President of the Republic. It is remarkable how intricate all the acts are; each of them alludes, without citing it explicitly, to an article of some preceding act; so that, in order to understand clearly a law of 1872, you have to read successively three or four preceding ones, each one referring to its predecessor. The Empire did not take the trouble to change an iota of the three preceding laws. The man who had upset the Republic turned to his own account the protection which was afforded to the President of the Republic. The tribunals continued to defend "the rights and authority which the President derived from the constitution" after the President had thrown the constitution to the wind and assumed the Imperial title. The Emperor did not alter an article in the laws of 1819 and of 1849; he simply added to the arsenal of the Monarchy and of the Republic a new decree: he assumed the right to give "avertissements" to the papers and to suppress them after two such warnings. The sentence of death was constantly hanging over every writer. Now we come to the third Republic. It is only justice to say that in Paris during the siege there was an absolute liberty of the press; and it may even be said that this liberty was unnecessarily allowed to run into license, as the state of siege gave to the Government extraordinary powers, which it might have used with advantage. When the Prussians were occupying all the heights around Paris, the military commander could have assumed almost dictatorial powers; he could have shut the clubs of Belleville, hindered the formation of the Central Committee of the National Guard, the rebellion of the 31st of October; arrested Flourens, Blanqui, and the Communists. But no rigor was shown as long as rigor was excusable and was even a duty; as soon as the capitulation had taken place, several newspapers were suppressed, under the rules of a state of siege which had become merely nominal.

Gambetta, to give everybody his due, had boldly suppressed newspapers and imprisoned journalists as soon as he had descended from his balloon. He is a born Jacobin, and as he felt that he was Danton, Carnot, and Napoleon in one person, he was obliged to treat the provincial press with the greatest contempt. When peace was signed, when the compact of Bordeaux was made between M. Thiers and the Chamber, the press began to discuss very freely all the questions connected with the future of the country. The race was open, as it were, for all comers; every party was called upon, was free to give a solution; the Republic of Thiers was only a temporary bridge over a stream of anarchy—such was the construction which was put on all sides on the *pacte* of Bordeaux. M. Thiers had solemnly taken an oath before the Chamber: "I swear it before God and men, I will deceive no party; I will favor none; you have given me the Republic in trust; I will give it to you as you gave it to me. You are divided. France is not yet in a position to choose between the various parties; she is still undecided; she does not know whether it is best that she should go back to the tradition of a thousand years, or whether she can confide herself to the troubled current which carries democracy to an unknown future." He was to be essentially an arbiter of parties, the keeper of the public peace, the negotiator with the Germans. But all those who knew him well anticipated that he would not long be contented with this *rôle*. He is President of a Republic *de facto*, and he intends to remain President of a Republic *de jure*. The two monarchical parties of the Chamber, Orleanists and Legitimists, have at times attempted to consolidate in one party, but these attempts have each time been defeated by the acts of the Count de Chambord. This prince seems to have in him the spirit of a Stuart rather than that of Henri IV. M. Thiers, taking advantage of the Antwerp manifestations, which have cast some discredit on the cause of the Legitimists, has thrown down the gauntlet to the House. To give himself an air of impartiality, he has brutally suppressed a Bonapartist paper called the *Gaulois*, which had a very wide circulation, and the day afterwards he sends to the Chamber a law on the press. The first article provides that "every attack by one of the means enunciated in article one of the law of the 17th of May, 1819, either against the rights and authority of the National Assembly, or against the government instituted by it; every publication having for its object to provoke a *renversement* [an upsetting] of this government, shall be punishable according to article one of the decree of the 12th of August, 1848." The second article says that "any paper suspended or suppressed in a district subjected to the *état de siége* shall not be printed or published in any other part of the French territory." As all the leading papers are published in Paris, and as Paris is now subjected to the *état de siége*, the Government has practically claimed the right to dispose of the existence of every important newspaper.

But even if it had not presented this second demand, which is truly draconian, the first proposition is enough to show that M. Thiers intends to spread terror among all his opponents. His government was founded on the distinct understanding that it was *no* permanent government; and the law which he now proposes treats as criminal every attempt to change it. The press is already showing its alarms. Yesterday, three writers in the *Figaro* declared that they would lay down their pens, or, at least, that they would cease to speak on politics. Fancy the editor of the *Tribune* or of the *Herald* making such an announcement some morning! There is something comical in the solemnity with which our popular *Figaro* said yesterday, "I lay down my sword till better times come, when it will be less dangerous to use it." Several papers, more serious, have been confidentially warned that they might be suppressed if they did not moderate their opposition to the provisional Republic. One of the Government papers wrote this yesterday: "The Chamber was very much mistaken at Bordeaux when it believed that it was as easy to leave a government as it is to go from one chamber to another. It thought that the Republic was but a name: it showed a great simplicity of heart in so doing. The Republic is in possession, and it will not be dispossessed without a bloody revolution." That is clear enough: if the Chamber insists upon its constituent rights, it can only use these rights in one way; it is free to move, but it must move in a given direction. The Republican party, and Thiers at its head, distinctly warn us that the word Republic will not be wiped out except with blood. If the Chamber, alarmed at the prospect of civil war, gives in, if it now allows the Government to carry on its nefarious designs against the press, we must expect to see Thiers follow up his advantage with great energy. We shall have successive propositions for the prolongation of his Presidency, for the establishment of a Republican Vice-Presidency, for the renewal of the Chamber by thirds, for the establishment of a second Chamber, etc. I should myself be easily reconciled with all these measures if the spirit of the country was moving in a republican direction at the same time with the ambition of a certain number of politicians. But I believe that this is not the case; Bonapartism, which, only a few months ago, was almost extinct, which seemed to have given up every hope, is reviving; the nation, which wanted a monarchy, and would have preferred to have it constitutional, liberal, and parliamentary, is getting disgusted with the present Assembly and the present government, and is slowly returning to imperialism. Cæsarism represents a certain combination, a chemical mixture of democracy and of authority, which suits the taste of the army, and of a people jealous not only of the old aristocracy, but of the rich middle-classes. It is not so far from the Commune to Bonapartism as it would appear to many eyes. Kindle the fire, and then extinguish it, is the method of many Bonapartists. Constitutionalism is not well understood even by the middle-classes. The workingmen of Belleville would probably be rejoiced if they saw the deputies of Versailles transported in vans to the prison of Mazas, and would not move any more than they did on the 2d of December. A revolution against parliamentarism is ripe, because parliamentarism has no more fulfilled its true function in 1871 than it did in 1851. Let us, hope, however, that it will not happen—that something or somebody will be interposed between a distracted country and a new despotism; but it is sad to think that we have to rely only on Providence. The Poles used to say, "God is too high and France is too far." We can say now, "God is too high and France is too low."

NOTES FROM ITALY—GENERAL GOVONE.

FLORENCE, Feb. 12.

ITALY has again lost one of her best men, and, though the event did not and could not take any one here by surprise, the impression caused by this death, coming as it did so rapidly after the somewhat analogous end of the deeply lamented Civinini, the learned and courageous editor of the *Nazione*, has been very deep. Although ten years older than Civinini, General Govone died while yet in the prime of life, being only forty-five. The army and the liberal party, nay, the whole country, lose in him a man whom it will be difficult to replace. His name cannot be unknown in America, as it acquired so great a distinction even abroad by his successful negotiation of the Prusso-Italian alliance in 1866, as well as by the glorious part he took as a brave young officer in the terrible day of Balaklava, when the flower of the English aristocracy was mowed down, and when the gallant Italian was seriously wounded.

Giuseppe Govone had entered military life at the early age of eleven, as a pupil of the Cadet School at Turin, an establishment which bears considerable resemblance to the military training institution at Berlin, being another of those striking points of analogy between Piedmont and Prussia which have contributed greatly, no doubt, towards the similarity existing in the part which these two countries play in the history of our times. He had the good fortune to serve as lieutenant at the age of nineteen under General—at that time Colonel—Alfonso La Marmora, by whom the young officer's high qualifications were immediately recognized, and who well knew how to turn them to the best account. A few years later on we find young Govone employed in a mission in Turkey, shut up within the walls of Silistria, and contributing, by his excellent advice, to the long and successful resistance of that fortress. The reports which he sent from the East not only struck his own superiors, but excited the interest of foreigners also. The Emperor Napoleon himself, having perused one of them, expressed a desire that King Victor Emanuel should do him the favor to communicate the rest to him as they might arrive. Govone served under La Marmora in the Crimean War, and took part in the brilliant victory of the Tchernaya, which did such great credit to the Sardinian troops. His subsequent promotion was very rapid, more so, indeed, than would have been compatible with equalitarian or democratic states. However, favoritism may have its good as well as bad sides, just as everything else in this world. Pitt would in all probability have died as a candidate for a seat in parliament had he lived in modern France; Lord Clive would very likely not have passed his competitive examination for East Indian service successfully; and Govone would hardly have risen higher than a major-brevet by seniority had he not served old-fashioned Piedmont, and been just in time to escape the new democratic principles of military advancement in modern Italy. Successively major in the campaign of 1859, colonel and commander of Gaeta in 1860, general-in-chief of the army corps sent to suppress the then formidable *brigantaggio* near Aquila, and, finally, lieutenant-general at the age of thirty-seven, he was sent to Berlin as negotiator in 1866 by General La Marmora. It can hardly have been forgotten how ably and satisfactorily he acquitted himself of this difficult task—for Italy may in fact be said to owe Venice to the adroitness displayed by him on this memorable occasion.

At the time when the Menabrea Cabinet fell, in 1869, when press, parliament, and public opinion were vieing with each other to obtain a reduction of the standing army—a most unwise demand, considering that economy had reduced it already so far as to render it literally almost unable to take the field—the general unwillingness to incur the responsibility of the portfolio was so great that General Govone alone, having recently been chosen member of parliament, could be induced to do so under conditions so unfavorable. This was, if not the sole, at any rate the chief mistake of his life, and bitterly he rued it. Scarcely had the great Franco-German war broken out, in July, 1870, when he became at once aware of the heavy responsibility which lay upon him. A dread lest Austria should take part in the struggle, and once more cross the Italian frontier, grew in his mind till it acquired the proportion of a fixed idea; it pursued him, it haunted him to such a degree that, knowing how unfit the Italian army would be to cope with an invasion, reduced as it had been by mistaken economy, he set to work to accumulate all possible means for preventing the disaster he so much feared. Not only was regiment after regiment despatched to Venetia, but the officials under his orders soon saw that the reason of the Minister must be impaired, unable as it was to resist so terrible a shock, for his orders became confused and contradictory, the same regiment being ordered several times to the same place, etc. At one sitting of the Cabinet Council, he actually threw himself at his Majesty's feet, weeping and imploring pardon. After his resignation of office, the public was at times sadly impressed by reports which got about that he made various attempts to put an end to his existence. A few days ago, the melancholy news reached us that he was no more.

As I have recorded the demise of poor Civinini in the beginning of this letter, I may as well state that, although accused of having been bribed by enormous sums, the young "renegade" had, in fact, died as poor as Fanti, Farina, and many more illustrious Italian politicians of our time. In his case, the poverty was indeed so abject that it was found necessary to redeem the orator's silver medal as parliamentary deputy from the Mont de Piété that it might be placed in his coffin! A subscription was immediately raised in behalf of the much-abused politician's widow and son, to which the king and most of the members of the House have contributed. Some days ago, the Italian journals contained a very significant letter from Count Brassier de Saint-Simon, the envoy of the German Empire at Rome, and one which evidently has a political aim in view. Civinini had, in fact, been the only man of eminence belonging to the moderate liberals in Italy who had leaned openly towards the German side during the war. He had even written some very remarkable articles in the *Nuova Antologia*, in order to show that the principles on which the modern German Empire rests are in direct contradiction with those of the mediæval "Holy Roman Empire of the German nation." According to American ideas, two hundred dollars as a contribution from the mighty German Chancellor will appear but a paltry contribution to the subscription of Civinini's widow and son, although higher than any other on the list; still the fact in itself is not unimportant or uninteresting. For who can the "on" be, mentioned in the Count's letter, if not Prince Bismarck himself? "In our country," it says, "we lament (*on regrette*) a departed friend who saw the advantages of a nearing (*rapprochement*) of the two nations which know too little of each other, and one who did what he could to promote it with as much zeal as intelligence. . . . I have been commissioned (*on m'a chargé*) to contribute to the subscription opened for the education of the son of the deceased, trusting that this small offering, coming from a friendly country, will not be refused by the committee."

The last number of the *Nuova Antologia* (10th February) brings a posthumous letter of poor Civinini which justifies Count Brassier's and his master's feelings towards the honest young statesman (he was only thirty-five) who has been so prematurely taken away from his country. It was written to his electors at the beginning of his long and fearful illness, and in it he begs to resign his seat and to explain his reasons for doing so. This letter—one of the noblest and most touching I ever perused—accounts for this resolution, first, by an utter weariness of politics and the desire of withdrawing from an activity he thinks vain and useless compared with intercourse with great thinkers and poets of former days; secondly, because he sees himself obliged, in order to remain true to himself, to separate entirely, for a second time, from the political party to which he belongs. This party, indeed, thought, and still thinks, it possible to bring about a reconciliation with Papacy. Civinini considered that the destruction of Papacy (spiritual as well as temporal) could alone give Italy perfect vitality. His party, the moderate one, persisted in leaning for support on France; Civinini thought that an alliance with new Germany was the true interest for the kingdom, its liberty and its progress. Time, I think, will prove that Civinini was right in both respects. Many distinguished Italians of the moderate party already begin to open their eyes in these matters, and the force of circumstances and interests, stronger even than passion and sympathy, daily widens the gulf between the liberators and the liberated of 1859.

Whilst I am writing these lines, new tidings reach me of a most melancholy character. General Cugia, one of the best officers of the Italian army, one of the conquerors of San Martino, twice minister of war, succumbed yesterday, at the age of fifty-three, to an attack of apoplexy, in the king's own room in the Quirinal, where his duty as an *aide-de-camp* to the Crown Prince had called him.

Correspondence.

A PREPOSTEROUS DEFINITION.

To the Editor of the Nation:

Sir: I am an "advocate of woman's rights," and also one of "the curious," and I should be pleased to know why in the last number of the *Nation* you refer me, and people like me, to Webster's definition of the word "preposterous." In my copy of his dictionary, "preposterous" is defined to mean, "Having that first which ought to be last; inverted in order; contrary to nature or reason; not adapted to the end; utterly and glaringly foolish; unreasonably absurd; perverted; wrong." How, may I ask, does this concern me? Is it as an advocate of woman's rights that it applies? I know the usual fate of people who venture to ask of the *Nation*, Why do you so?' but, as I have confessed, I am one of "the curious," and to gratify my curiosity will run the risk of a tap from the steam-hammer with which you welcome "enquiring minds" into your office. C. B

Brooklyn, March 15, 1872.

[Our correspondent must look in some earlier edition of "Webster" for the definition which we conjectured might have interest for the advocates of Woman's Rights. Apparently, with the determination that neither shall be behind the other in propitiating the Jew, the Greek, the Woman, or anybody else, the proprietors of our two great dictionaries have, from time to time, made various alterations in those works. We noticed the case of the Jews last week. Ten years ago we read in our "Webster" the following definition of "preposterous," which calls for at least one editorial article in the next *Woman's Journal*, and a resolution all to itself at the next convention (Had the lexicographer a mother or a sister?):

"Perverted; wrong; absurd; contrary to nature; not adapted to the end; as, a republican government in the hands of females is *preposterous*."—ED. NATION.]

TARIFF LEGISLATION.

TO THE EDITOR OF THE NATION:

SIR: In the last number of the *Nation* brief reference was made to the fact that the protracted debate of the Senate on the arms investigation has delayed action on the House Bill in relation to the tariff on teas and coffees, and that, as a result, the trade in these two important items of commerce is paralyzed.

While we have a tariff on imports, whether for protection (so called) or for revenue, changes more or less injurious to certain interests are to be looked for. These changes are, moreover, rendered additionally damaging by their suddenness and an utter absence of consistency in legislation on this subject. The merchant whose transactions may require months for their development is, at the outset, met by the fact that his best-laid plans may end unprofitably, through no fault of judgment on his part, but simply because a special interest has found itself powerful enough to induce Congressional interference with existing relations between buyer and seller.

Would it not, in view of this element of instability, which is, after all, the chief fault of our tariff system, be well to determine that, when changes are introduced, the new rate is to be maintained for a definite period? Although Congress could, at any time, unmake its own laws, there might, it seems, be a restraining influence in such action. To make such a restriction binding, it would, of course, be necessary to incorporate it with the organic law of the land; and to this it would be objected that there should be no obstacle to the immediate repeal of any law which has been found oppressive. It may, on the other hand, however, be doubted whether the present sense of insecurity be not a greater grievance. N. N.

Notes.

MESSRS. G. P. PUTNAM & SONS announce the manual of "Pottery and Porcelain," by John H. Treadwell, to which we lately called attention. Also, to appear this month: "Five Hundred Majority," a political romance by a new writer; "Lectures on Instinct," by Dr. P. A. Chadbourne; and "The Bandit," a novel from the Swedish.——The first volume of Rev. Justus Doolittle's "Vocabulary and Hand-book of the Chinese Language" is announced by Messrs. A. D. F. Randolph & Co.——Messrs. Hurd & Houghton will publish a "Handbook of Painters, Sculptors, Engravers, and their Works," by Mrs. C. E. Clement, author of the "Handbook of Legendary and Mythological Art," with illustrations.——Messrs. Lee & Shepard have undertaken "Half-Hour Recreations in Popular Science," a monthly series of selections from the writings of the best modern scientists. No. 1 is "Strange Discoveries respecting the Aurora," by Richard A. Proctor; No. 2, Virchow's "Cranial Affinities of Man and the Ape." Each part is sold for 25 cents, and the series for $2 50 per annum.

—Dr. Lieber, writing to the Census Bureau, says some things worth remembering about a very common error:

> "Let me hope that this barbarism will not pass over into the census. One of my earliest and best-remembered teachers used to call the tautologies into which we boys occasionally stumbled *bacon fried in lard*; but, frankly, I remember none so repulsive as the *native-born citizen*. It is now, I am sorry to say, universally used by the law, or rather by the lawyers; but the expression is new and must be eradicated. Native citizen or population is all that need be said. Voluminous, heavy language, obscuring by its own verbosity, is anything but a sign of culture, and ought to be eschewed in law even more than in any other branch. *Fracture-broken legs*, or *tribulation-grieved souls* is every bit as elegant as *native-born citizens*. Simplicity is clearness and a sign of culture, and in a language in which so many parallel words exist derived from Latin and Saxon as in English, such graceless reduplications might be extended without end. Savigny has somewhere a very impressive passage on the beautiful, because terse and clear, Latin of the foremost jurists of the civil law. Let us strive to imitate them, and discard the idea that repetition of this sort lends emphasis, as those must have thought who called George I. in the proclamation of 1714, sent abroad by Bolingbroke, 'The royal King George.' We find in the Roman jurists no accumulation of words, like stifling pillows, once so common in the English law, and far too frequent yet.
>
> "The Constitution has the term natural-born citizens, not much better than *native-born*, if it be better at all. For, what is natural-born? We think instantly of natural, unimpeded parturition, or of the fact that in many languages illegitimate children are called natural children, in which case *nature* and *natural* are contradistinguished to *law* and *lawful*; or we think involuntarily of the transposition, *a born natural*. "*Natural-born*, meaning what the Germans call *Eingeboren* (in-born, indigenous), is an old English law expression, but uncouth enough for all that. The famous Act, 13 George II., c. vii., cited as an important authority in the report of the Committee on the subject of Colonial Rights in the Congress held at New York in October, 1765, makes use of the expression natural-born, and the report itself uses the simple word *natives*. I know that some persons will object that *native* would remind us of Indians; but this is not valid. Why does it not do so in French or Spanish? If it did not remind our forefathers of the Indians in the early year 1765, why should it suggest the fading race to us in 1872?
>
> "The Act of 1740, just mentioned, invites foreigners to settle in the king's American Colonies, by declaring, after a most anti-Know-Nothing preamble, in sufficiently odd language, that foreigners, having resided seven years in the Colonies, on taking the oaths of allegiance, etc., etc., are to be his majesty's natural-born subjects of the kingdom of Great Britain, etc., etc. The preamble pronounces immigration a most desirable thing, and the report of 1765, of which I speak, contains this sentence: 'The colonists are by this act considered as natural-born subjects, and entitled to all the essential rights of such, unless it could be supposed that foreigners, naturalized by this act, are entitled to more than the natives.' Let us retain the last word and be done with the subject. In no other language that I know of, ancient or modern, has such a term as native-born or natural-born crept in.
>
> "The words just quoted in the great immigration act, that certain foreigners are 'to be his majesty's natural-born subjects of the kingdom of Great Britain, to all intent, construction, and purpose,' are allowed to be grotesque, and yet the word naturalization expresses the same, but does it less glaringly. Naturalizing means imparting the *nature, natura, character by birth*, to a man. I do not know when the word naturalization first came into use in law, but who will forget Bacon's early words: '*All states that are liberal of naturalization toward foreigners are fit for empire*' (Bacon's 'Essays.' Essay 29: On the Greatness of Kingdoms and of Estates)? Certainly no one who calls himself *civis Americanus*, as Paul collectedly said, *Civis Romanus sum*."

—Sir Thomas Phillips, Bart., of Middle Hill, Co. Worcester, and Thirlestane House, Cheltenham, who died on February 6, says the *Athenæum*, was one of the most learned men of the age, and as a collector of manuscripts he was without a rival, even in that land of bibliomaniacs, England. He bought library after library, collection after collection. When Thorpe issued a catalogue of 1,400 manuscripts, Sir Thomas ordered the whole. He bought the Meerman library of Greek manuscripts, and accumulated the best private collection of monastic chartularies. He had especially a great number of manuscripts relating to genealogy, and printed several Herald's Visitations at his private press. He left only daughters to succeed him. His oldest daughter, who inherits the estates, married J. O. Halliwell, the Shakesperian annotator. This marriage was so distasteful to her father that by his will he left his library to his youngest child, Mrs. Fenwick, with restrictions to further mark his displeasure. Rumor, indeed, at one time hinted that a desire to prevent accumulations of property beyond his control was one cause for Sir Thomas's incessant and costly purchases.

—A notable enterprise for the communication of German learning to French and English readers is the *Quarterly German Magazine*—a series of popular essays in science, history, and art, mainly selected from the "Sammlung gemeinverständlicher wissenschaftlicher Vorträge," edited by Prof. Dr. R. Virchow and Prof. Dr. Franz von Holtzendorff (New York: E. Steiger). The "Sammlung" begins this year its seventh series of cheap fortnightly issues (24 parts), from which only purely religious or purely political topics are excluded. It will include biographical essays on Schopenhauer, Kepler, the painter Wiertz (by Hermann Grimm), and papers on the circulation of the blood, the social question, petroleum, the coinage question (by L. Bamberger), graphite and its most important applications, the battle of Sedan, coral insects and their part in the economy of nature, the idea of love in ancient and modern languages (by Dr. Abel), the realm of Tantalus and Crœsus (a narrative of travel), the theory of superstition, etc., etc. Dr. von Holtzendorff closed the sixth series with a paper (No. 144) on "Conquests and the Right of Conquest," with special reference to the annexation of Alsace and Lorraine, of which he says: "Modern history tells of no conquest that appears so just in its origin, so promising in its completion, so moderate in its limitations, as that lately achieved by the German Empire." The first number of the *Quarterly German Magazine*, and the only one that we have seen, was published in November, and contains: "The Cranial Affinities of Man and the Ape," by R. Virchow; "Sight and the Visual Organ," by A. von Graefe; "The Circulation of the Waters on the Surface of the Earth," by H. W. Dove. The last of these will be thought the most popular reading, but the first merits especial attention as an unbiassed contribution to the Darwinian controversy, and will comfort those who object to including the ape in the human pedigree, seeing that comparative anatomy of the skull seems to justify the deduction that "by progressive development an ape can never become a man," whether or not "research may ever succeed in fitting into each other, through actual demonstration, all the intervening links." The English of these translations betrays a foreign hand, and is sometimes so obscure as to destroy the point of a remark or an argument; but generally it is clear enough. Parallel with the "Sammlung," a new series has been begun, which deals expressly with the topics excluded from the former. It is called *Deutsche Zeit- und Streit-Fragen,* and purposes discussing the questions of the day about church, school, labor, and the domestic and foreign politics of the new empire. A principal feature will be the reproduction, in permanent form, of the current articles in newspapers and other party organs which are worth rescuing; but we judge that there will also be special contributions from a large number of learned professors, who have promised the series their support. There will be sixteen issues yearly, in the duodecimo shape of the "Sammlung." The initial number contains a paper by Heinrich Lang, a Zürich pastor, on "The Life of Jesus and the Church of the Future." The editors of *Zeit- und Streit-Fragen* are Drs. von Holtzendorff and W. Oncken.

—We find in a recent number of *La Chronique des Arts*—a weekly flyer to the *Gazette des Beaux Arts*—the following summary of the Eighteenth Report of the English Government Department of Sciences and Fine Arts. The National Normal School of Design at South Kensington was attended in 1870 by 994 pupils—99 more than in the previous year. New Schools of Design have been established at Belfast, Derby, Dover, Keighley, Kendal, Leamington, and other places, so that the present number of such schools is 117, and the whole number of scholars is 20,290. In 1869, there were 107 schools, and 19,864 scholars. The night-schools show a still more satisfactory increase. At the close of the year 1869, there were 249 of these schools, with 9,322 scholars; in 1870, there were 352 schools, with 12,119 scholars. Finally, the Schools of Design for the Poor have reached the surprising number of 1,359, with 147,243 scholars (23,315 more than in 1869). The increase of scholars in all the schools has been 19.5 per cent., and 187,916 persons of both sexes have been employed in these schools as teachers during the single year 1870. The receipts from the fees paid by the scholars in these various Schools of Design amounted (during the last year, we presume) to £21,468. The greater number of the Schools of Design are self-supporting, but, in proportion to the progress of the pupils in any one school, or to the increase in the number of its pupils, the Government comes forward with help to enable it to get more or better models, and to engage additional teachers. The receipts of four schools, and the amount of help given by the Government to each, are quoted by the *Chronique:*

	Fees and other Receipts.	Government Aid.
Taunton	£268	£48
Worcester	299	70
Sheffield	932	290
Liverpool	486	73

—Nor has the Kensington Museum reason to complain of the year 1870. Its galleries have been enriched with several important collections. Among these we find a series of twenty pieces of goldsmith's work and jewellery of the period from the sixteenth to the eighteenth century, purchased from the Treasury of La Virgen del Pilar of Saragossa for the sum of 20,000 fr. = £800; fifty-one pieces of terra-cotta, vases, and statuettes from Canosa; one hundred and twenty-three superb specimens of the old pottery of Rouen and Nevers, part of which were exhibited at the Union Centrale in 1865, and which were purchased for the Kensington Museum by M. Aigoin for the sum of 50,000 fr. The library also has steadily increased. It contains now 33,000 books and pamphlets, and it will be to its eternal honor that it has rendered possible the compilation of the "Universal Catalogue of Books on the Fine Arts," one of the greatest works in the field of bibliography that has up to this time been undertaken. Two thousand new photographs have been added to the portfolios. Finally, the number of visitors during the past year has been 1,014,849.

—A special class of students will derive valuable aid from Abel Hovelacque's "Instructions pour l'Etude élémentaire de la Grammaire comparée de la Linguistique indo-européenne." It is something more than a mere list of works needful to consult, such as M. Bréal gave in the first volume of his translation of Max Müller's "Science of Language," inasmuch as every title is accompanied by a critical appreciation: in other words, it is a *catalogue raisonné.* In an introduction, the author gives his view of the origin of language, as well as of the origin of man, from the Darwinian standpoint. M. Henri de l'Epinois, in his "Critiques et Réfutations," overhauls M. Henri Martin and his "History of France," and has good material for criticism in that much overrated work. His exposures are more immediately designed as an antidote to M. Martin's pronounced anti-catholicism. Two volumes, forming the first part of a "History of the Reign of Louis XIV.," have been issued by C. Gaillardin, author also of a "History of the Middle Ages" and of a "History of La Trappe." They present the political, religious, and literary aspects of France under Mazarin, with whose death they close, and also, more summarily, during the preceding reign. A grave defect in French usage is probed in "Les Résultats du Partage forcé des Successions en Provence," by Claudio Jannet, a lawyer of Aix. His investigations were undertaken at the request of the Society of Social Economy, with regard to the agricultural organization and moral and economic condition of rural families in Provence, as specially affected by the law of inheritance. M. Jannet's conclusions that small farming is disorganized and the family spirit deeply and injuriously affected, is doubtless applicable to the country at large, whose stationary population is even more to be attributed to this statute of Napoleon's than to the loss of able-bodied men from the wars to which he committed his country down to this day. M. Jannet proposes that division of property in kind shall not be obligatory, and that the disposable portion be raised to one-half. "Examen de Conscience des Femmes honnêtes de France," by a woman, charges upon her sex some part of their country's disaster and degeneracy. "Les Crimes de l'Education française," a plea for the abolition of the state's monopoly of instruction, by M. Laurentie; and "Quelques Notes sur l'Instruction primaire en Prusse," by Archbishop Dupanloup, which finds most praiseworthy the prominence given (under Von Mühler) to religious instruction, and condemns non-confessional instruction (*l'instruction laïque*), are contributions to the most important discussion now going on in France. M. Viollet-le-Duc's "Mémoire sur la Défense de Paris," which is accompanied by an atlas of twelve maps, has an interest apart from the purely professional account of the works offensive and defensive involved in the siege of Paris. A long introduction consists of a dialogue on the causes of the French reverses, in which the author's countrymen, the Empire, and the Government of September are passed in review, and all condemned in a patriotic and intelligent spirit.

—According to a recent article in the *Militärische Blätter*, the Germans took no steps to employ the balloon in their operations against the French till the end of August, 1870, when the war was already so far advanced that the ultimate issue of it was not doubtful. Two corps of balloonists, numbering twenty men each, were then formed at Cologne, and provided with all the apparatus and transportation deemed necessary, and from August 31 to September 5 were practised in the neighborhood of that city, acquiring considerable proficiency in mere manipulation. They made no ascensions, however, higher than four hundred feet, and were wholly unskilled in observations, when, on September 8, one detachment, under an English aeronaut, Coxwell, who had acted as instructor of the corps, was despatched to Strassburg with a couple of balloons. The next day, at Bischweiler, three and a half miles from the beleaguered city, headquarters were established, and subsequently reinforced by the second detachment. Here more time was given for practising, in favorable weather, and ascents of nearly twelve hundred feet were made, with good prospects of future usefulness. On removing, however, to a nearer suburb, where no illuminating gas was procurable, resort was had to hydrogen, obtained from the decomposition of water. The single balloon which had been transported could not be filled by this means till September 24, and even then very imperfectly, owing to the tubing having been, in a fit of economy, made out of old balloon material instead of rubber, so that most of the gas escaped on the way. Barely one man could be raised by it less than four hundred feet, and, after one trial, it speedily collapsed. The capitulation of Strassburg followed shortly, and the mortified balloonists repaired to the army about Paris, where they accomplished nothing, and fell into utter neglect. Meantime, inside the city, with such materials as he could procure, the famous engineer, M. Dupuy de Lôme, was constructing, with Government assistance, an immense balloon on a new principle, which only last month was completed and satisfactorily tested. It has an egg-shaped body, and is built with a decided axis, designed to be kept parallel with the line of progression. The wheel which turns the driving screw is also parallel with this axis, and is worked by four or eight men, as may be convenient—the basket holding fourteen. A rudder is attached to the balloon proper, capable of altering its course eleven degrees either way from the set of wind. In his ascent of February 2, the inventor landed near Noyon, seventy miles northeast of Paris, travelling, with the aid of the screw, some five miles faster than the wind. The gas used was hydrogen.

—The material progress of Italy is working such rapid transformations in the face of the peninsula, and in the moral and political condition of the people, that it is well to take account of it whenever we may. The recent reports of the Ministers of Finance and Public Works furnish such an opportunity. First, regarding the postal service, it appears that while, in 1861, there were provinces in Central and Southern Italy containing but one post-office to every 29,299 inhabitants, in 1870 this proportion nowhere fell below one to every 11,507. The postal routes, meantime, had increased from 16,192,291 kilometres to 27,318,152—the railroad lines alone from 3,955,024 kilometres to 6,751,347. In 1862, the postal deficit amounted to about $2,000,000, but since 1869, in spite of the increase in the number of post-offices, there has been a slight revenue from this branch of the service. This is partly due to the raising of the rates of postage, which are exceptionally high in Italy, and the effect of which is seen in the comparatively slight augmentation of the number of letters transmitted during the past decade—67 millions in 1861 against 87 millions in 1870. The money-order system—telegraphic, international, and consular—has been eminently successful. The telegraph lines now extend over 15,900 kilometres, instead of 9,860 as in 1861, and the number of wires has nearly trebled. A deficit of $400,000 in 1861 was changed in 1870 into a net gain of about $200,000, the expenses remaining nearly the same, though the stations have been quadrupled. Reduced tariffs are credited with this improvement.

LEGENDS OF BIBLICAL PERSONAGES.*

MR. BARING-GOULD has been a voluminous writer, and has had very good success in making books of entertaining reading, but we believe he has never succeeded better than in these "Legends of Old Testament Characters." As is usual with our author's books, this one is on a subject that seems to threaten an effort of mere book-making; but as also is usual with him, it pretty successfully evades this charge, and while it is not a work of the profoundest sort, nor thoroughly exhaustive, it collects and agreeably conveys a great deal of rare information, and with it gives us some work of Mr. Baring-Gould's own. Of this latter there is not very much, nor can we deny that we could readily be brought to dispense with what there is, none of it striking us as valuable. For example, in giving the rabbinical account of the offering of Isaac by his father, Mr. Gould makes a contribution to the science, or art, of mystically interpreting Scripture, and in so doing seems to us to lay nobody under any great obligations to him. The legend represents Abraham as saying to Isaac, "My son, is there any blemish in thee within? For the offering must be without blemish of any sort." Isaac replies that there is not any blemish; that in his heart there is not the least resistance to the Divine will; and that he can say with gladness, "The Lord be praised who has chosen me for a whole sacrifice." Abraham answers in these words, not the least affecting of the affecting narrative into which the rabbins have expanded the Scriptural story: "O my son, with many a wish wast thou brought into this world. Since thou hast been in it, every care has been lavished upon thee. I hoped to have had thee to follow me and to make a great nation. But now I must myself offer thee. Wondrous was thy coming into this world, and wondrous will be thy going out of it. Not by sickness, not by war, but as a sacrifice. I had designed thee to be my comfort and my stay in old age; now God himself must take thy place."

It will not occur to readers who have been little accustomed to mystical interpretations and to the rather astonishing light which they frequently throw upon the literal meaning of the Scriptures that in these passages Mr. Baring-Gould finds proof of the genuine character of this version of the story. They must, he is inclined to think, have been handed down by direct tradition from Abrahamic times, because the offering of Isaac on the mountain by his father was typical of the offering of Jesus upon Calvary by his Father, and these rabbinical passages bring out the typical character of Abraham's offering so much more clearly than even the Biblical narrative itself, that the argument in favor of their being genuine Abrahamic traditions and not inventions of a later day may be said to be manifest and strong. It is all the stronger, too, says our author, because Jewish inventors, knowing as they did that Christians always "pointed triumphantly to this type," would have been very unlikely persons to invent passages bringing the typical character of the offering into still greater distinctness. They would not, for instance, have put into Abraham's mouth the words above quoted, "Wondrous was thy coming into the world, and wondrous will be thy going out of it"; nor these other words, "I had designed thee to be my comfort and stay in old age; now God himself must take thy place," for of these utterances, the latter, mystically taken, is a prophecy that God was one day to be made a sacrifice in Isaac's place, while the former is "spoken mystically of Christ." No more would Jewish interpolators have represented Isaac as saying, "The Lord be praised who has chosen me for a whole sacrifice," because in these words "the type of Christ comes out more distinctly than in Genesis, for here we see Isaac not merely offered by his father, but also giving himself as a free-will offering." Mystical interpretation is responsible for a good many odd things, as, of course, any method of interpretation must be which, so far as uninspired persons are concerned, is based upon the metaphor-making, simile-hunting capacity of the human mind, and allows that capacity free range. Anything and everything can be made to symbolize and typify anything and everything else, from the kingdom of heaven down to a grain of mustard-seed; and, of course, the exercise of the symbolizing faculty gives legitimate pleasure, and often works beautiful results. But we should think that those fondest of the mystical method might hesitate at such applications of it as confer upon an unscriptural legend a dignity and significance not possessed by the canonical narrative itself; and those who object to more of mystical interpretation than has been forced upon the reader by the Scriptural authors themselves, will, of course, think as we do, that Mr. Baring-Gould would have been more satisfactory if at this point he had held his hand, and kept himself to his unadulterated fables. As we have said, however, there is not much of our author's original work, and his book is to all intents and purposes a handy volume, full of tales of wonder, some terrible, some grotesque, nearly all in one way or another interesting, collected by Mr. Baring-Gould from various sources, and tolerably well representing the curious storehouse of rabbinical and Mohammedan legendary lore from which they are drawn, and of which the ordinary reader had no other means of knowledge than that afforded by the notes in the Koran, for instance, or by an occasional poet. A bookful of wilder wonders it would be easy for any compiler to put together, and to the size of the bookful there need hardly be a limit, but we do not know that such a compilation would answer any useful purpose better than this one. The curious investigator of rabbinical inventions, absurdities, *grossièretés*, and all, may well enough be referred to the original sources, while the general reader, who is the person whom our author has in view, will find what for him will be a sufficient sample of the work that has been done in this particular field of human activity.

We may best give an idea of the character of the "Legends" by giving the substance of a few of them, and for this purpose perhaps as interesting as any are those relating to Azrael, the Angel of Death. He first appears in this volume at the time when God is about to create man. The Creator having determined on making Adam out of earth, first sends Gabriel to procure the necessary clay, but the earth addresses the archangel in remonstrance, and makes oath in the name of God that he shall take of her neither clay nor dust nor stone, lest the creature made therefrom should do evil on the earth and shed innocent blood. Gabriel withdraws, having respect for the oath, and says to God, "Thou knowest what the earth said to me." The archangel Michael is next sent, but to him also the earth swears the same oath, and he also withdraws. Then Azrael is directed to secure from the earth clay of every sort; and when the earth swears to him as to the archangels, he answers, "I must obey the command of God," and from the ground, forty ells below the surface, he takes clay as commanded. So it was the Angel of Death from whose hands God received the material of which should be formed the first of all living. Of Adam and Azrael it is related that when Adam had attained his nine hundred and thirtieth year Azrael appeared to him in the form of a goat. Adam recoiled with horror, knowing Azrael through his disguise, and said to him, "God has given me a thousand years. Wherefore comest thou now?" "What!" said the angel, "hast thou not given seventy years of thy life to the Prophet David?" This question referred to a covenant into which Adam had long previously entered. It had happened when the Lord was showing Adam his descendants, and revealing to him the span of life allotted to each, that David had appeared as appointed to die while still an infant; whereupon Adam had begged that seventy of his own years might be allotted to the prophet. To this God agreed, but, distrusting Adam's firmness or good faith, he had caused to be made a written agreement and the patriarch's signature to be appended to it. Azrael, therefore, after his question above quoted, and after Adam had stoutly denied that he ever entered into such contract, drew the document from out his beard, and Adam could no longer refuse to go. Of our first mother, also, *apropos* of her first sight of Azrael, there is a story told which reflects but little credit on her or any of the rest of us: After Sammael, the Evil One, in the form of the serpent, had persuaded her to eat of the fruit of the forbidden tree, he went towards it, and, touching it, cried out to Eve, "See, I have touched the tree and am not dead." Upon this Eve went towards the tree, but as she approached she saw standing beneath its branches the Angel of Death waiting, with his sword in his hand, and she said in her heart, "It may be that I am indeed to die, and that then God will create for Adam another wife; he must die, too"; she therefore took of the fruit and gave it to her husband, who ate it. The great evil which our common mother thus accomplished was accompanied by a small one, for the apple blunted those of Adam's teeth with which he chewed it, whence it comes that men's back teeth are no longer sharp. Mr. Baring-Gould gives no explanation of the fact that the portion of forbidden fruit which Adam ate stuck in his throat and is visible to this day in the throats of his male descendants, while the portion eaten by the woman was swallowed with ease. Of Enoch and Azrael it is told that there was between them a great friendship, which began at the angel's request, for he admired Enoch's piety. When first Azrael came before Enoch, he said, "Thou mayest make me a request which I shall grant."

---

* "Legends of Old Testament Characters, from the Talmud and Other Sources. By the Rev. S. Baring-Gould, M.A." New York: Macmillan & Co., and Holt & Williams. 1872.

The patriarch said, "Thou mayest take my soul"; but this Azrael could not do, the appointed time not having yet come. He, however, begged the consent of God to the modified request that Enoch's soul should be, for a little space, removed from his body, and God hearing, yielded, so the angel removed from him his soul, which, at the same moment of time, the Eternal One restored to him. Years past, and Azrael and his friend lived together in amity and intimacy, and then the angel procured from God that Enoch, who had tasted death, should now be suffered to experience for a little time the torments of the damned. After still other years, Enoch made another request, which was that, having tasted death, and having known hell, he might now see paradise. This also was granted, God knowing the prophet's heart, but not till after a long dispute with Ridhwan, keeper of the gate. The prophet proves to Ridhwan, or rather tries to prove to him, when the keeper declares him a man, that though this be granted it is nevertheless no valid objection to his entering, inasmuch as he has experienced death and suffered in hell. Ridhwan refuses to be moved, but God interferes, and Enoch, still a living man, dwells with God and the departed in Paradise.

The story of Abraham and the Angel of Death, as it is told by the Mussulmans, is as follows:

> "The Angel of Death, when bidden to take the soul of the prophet, hesitated about doing so without his consent. So he took upon him the form of a very old man, and came to Abraham's door. The patriarch invited him in and gave him to eat, but he noted with surprise the great infirmity of the old man, how his limbs tottered, how dull was his sight, and how incapable he was of feeding himself, for his hands shook, and how little he could eat, for his teeth were gone. And he asked him how old he was. Then the angel answered, 'I am aged 202.' Now Abraham was then 200 years old. So he said, 'What! in two years shall I be as feeble and helpless as this? O Lord, suffer me to depart; now send the Angel of Death to me, to remove my soul.' Then the angel took him, having first watched till he was on his knees in prayer."

A rabbinical account of the death of Moses is very striking, but too long for us to quote as it stands. The closing passage of it is as follows. We must premise that the prophet had been extremely reluctant to die, but that God had shown him that in death, as in life, he might confidently commit himself to the care of his Maker. The story thus proceeds:

> "Moses returned with shame to his home, comforted his wife and children, and went alone to the mountain where he was to die. And when he had gone up the mountain, he met three men who were digging a grave; and he asked them, 'For whom do you dig this grave?' They answered, 'For a man whom God will call to be with him in Paradise.' Moses asked permission to lend a hand to dig the grave of such a holy man. When it was completed, Moses asked, 'Have you taken the measure of the deceased?' 'No; we have quite forgotten to do so. But he was of thy size; lie down in it, and God will reward thee, when we see if it be likely to suit.' Moses did so. The three men were the three angels Michael, Gabriel, and Sagsagel. The angel Michael had begun the grave, the angel Gabriel had spread the white napkin for the head, the angel Sagsagel that for the feet. Then the angel Michael stood on one side of Moses, the angel Gabriel on the other side, the angel Sagsagel at the feet, and the Majesty of God appeared above his head. And the Lord said to Moses, 'Close thine eyelids.' He obeyed. Then the Lord said, 'Press thy hand upon thy heart.' And he did so. Then God said, 'Place thy feet in order.' He did so. Then the Lord God addressed the spirit of Moses, and said, 'Holy soul, my daughter! For a hundred and twenty years hast thou inhabited this undefiled body of dust. But now thine hour is come; come forth and mount to Paradise!' But the soul answered, trembling and with pain, 'In this pure and undefiled body have I spent so many years, that I have learned to love it, and I have not the courage to desert it.' 'My daughter, come forth! I will place thee in the highest heaven beneath the Cherubim and Seraphim who bear up my eternal throne.' Yet the soul doubted and quaked. Then God bent over the face of Moses, and kissed him. And the soul leaped up in joy, and went with the kiss of God to Paradise."

A Mohammedan account contains the fine legend that when Moses, reluctant, resisted the angel who had come for his spirit, God commanded the messenger of death to take from Paradise an apple of the tree of life, smelling the perfume of which the soul should leave the body, dying, as it were, into its true life.

Solomon of course figures largely in the legends, though not so largely as one would have expected, considering his popularity as a legendary figure among Mohammedans as well as with the Hebrew writers; and of Azrael and him Mr. Baring-Gould tells no story, we believe. We make no excuse for reminding or informing the reader of the tremendous rabbinical tale which Leigh Hunt has versified, and which certainly ought not to be omitted from any collection in which both the angel and the monarch appear. It is simple and brief, though we have applied to it the term tremendous. Solomon is walking in his garden with a friend, when suddenly they see approaching them, "his eyes like lamps of doom," the dreadful Angel of Death. The king's friend is smitten with affright, and begs the king to use his magic power and transport him at once to the furthest mountains of Cathay. Solomon turns the signet-ring on his finger, and the wish is accomplished before Azrael has reached the king. Having come, the angel says, "O Solomon! what did that man here in the garden with thee? But this moment I was sent to bring him from the furthest mountains of Cathay."

Mr. Baring-Gould's style is better fitted for narrating the absurd and trivial legends with which he deals than for narrating the terrible and beautiful legends, which, if much less numerous than the others, are much more important. These he belittles and disfigures by a manner often colloquial and slovenly in tone, and sometimes vulgarized by downright colloquialisms of speech.

FERGUSSON'S RUDE STONE MONUMENTS.[*]

MR. FERGUSSON is a well-known and prolific writer on architecture generally, but more especially on Oriental architecture. He has also written on Eastern antiquities: Nineveh, Ellora, Halicarnassus, the Holy Sepulchre, the Temple at Jerusalem, etc., etc. His last work, previous to the present, entitled "Tree and Serpent Worship," in which he ventured beyond his favorite field of enquiry, did not add to his established and well-earned reputation; and it is doubtful how far the book under notice will impress itself on archæologists and antiquaries. It is ambitious and diffuse, but for all that a most remarkable collection of data on the subjects to which it relates, and (being profusely illustrated) it will prove indispensable to students of the monumental history of mankind. It treats mainly of what it is now the fashion to call "Megalithic monuments," those rude stone structures which, in the form of circles, *dolmens*, and single upright stones, are scattered so widely over Europe and parts of Africa and Asia, and whose origin and purposes have long been matters of dispute and irreconcilable speculation. Mr. Fergusson traces these remains through England, Scotland, Ireland, France, Scandinavia, the Iberian Peninsula, Italy, Northern Africa, Asia Minor, and all intervening territory into the heart of India, assigning to nearly all of them the characters of either tombs, sepulchral monuments, or mementoes of battle. Stonehenge—the inclination of the stones of which ingenious writers have declared to indicate the direction of the current of the deluge—and Avebury—in which other ingenious writers have found the profoundest symbolism of antiquity—both these Mr. Fergusson believes to be (and supports his view at length) the monuments of battles fought in their vicinity, corresponding with the great mound on the field of Waterloo, and raised after the Romans left the British Isles. As for the Druids, he scouts them and their works, and is satisfied that they never existed in regions where what are called Druidical remains most abound.

Not to do Mr. Fergusson injustice, we quote the propositions he has sought to establish in his own words:

> "*First.* That the Rude Stone Monuments with which we are concerned are generally sepulchral, or connected directly or indirectly with the rites of the dead.
>
> "*Second.* That they are not temples in any usual or appropriate sense of the term; and
>
> "*Third.* That they were generally erected by partially civilized races after they had come in contact with the Romans, and most of them may be considered as belonging to the first ten centuries of the Christian Era."

It is utterly impossible for us to follow our author through the 558 pages royal octavo in which these positions are supported. But while we agree with him that *dolmens*, great stones supported on smaller ones, and which it was once the habit to call "Druid's altars," are sepulchral in character, we do not doubt that those great enclosures, circles, etc., bounded by erect stones or walls of earth, were often used as cemeteries, precisely as our churches have been, the solemnity of the grave adding to the sanctity of religion. Mr. Fergusson objects, and we think for ample reasons, to the chopping up of prehistoric antiquity into three ages, the "stone, bronze, and iron." Chronometrically, they mean nothing, for one race or people, or part of a people, may have got rid of its stone axe and taken to copper, bronze, or iron, thousands of years before another. And what are we to say of peoples such as we find in some parts of the Andes of Peru, who use to-day alike stone, bronze, and iron implements? The designations are poor attempts to simulate scientific accuracy by the use of vague words and phrases.

America receives but little attention in Mr. Fergusson's book. It is accorded only ten pages, in which, however, he pays a high compliment to some of our archæologists. Of the first volume of the "Smithsonian Contributions to Knowledge," entitled "Ancient Monuments of the Mississippi Valley," by Messrs. Squier and Davis, he says: "In this work, the Americans possess a detailed description of their antiquities of this class such as no nation in Europe can boast of. Their survey was carefully and scientifically carried out. The text is tersely and clearly written; mere theories or speculations are avoided, and the plates are clearly and carefully engraved. If we had such a work on our own antiquities, we should long ago have known all about them." Our author objects to the classification of the great square and circular earthworks of the West as made by Messrs. Squier and Davis. He does not think them sepulchral, and cannot conceive how vast spaces of from 50 to 100 acres, designated by these gentlemen as "sacred enclosures," could be utilized for any religious purpose. He suggests that where squares occur in connection with circles, and connected with them, the former might be the places of assembly of the tribe, the exercise grounds or gymnasia, and the latter the places of residence of the chief, his wigwam being in the centre, surrounded by the huts of his subordinates and retainers. We believe him to be nearly right, except that the temple, or whatever religious structure or structures the builders of these works intended, occupied the circles, while the squares were reserved for some of the purposes he suggests. Mr. Squier has produced some very conclusive evidences of this in his memoir on the "Aboriginal Monuments of New York." Mr. Fergusson, by the way, was once disposed to doubt the existence of the great mound, in the unmistakable form of a serpent, in Adams County, Ohio, and even now, after its resurvey during the last summer by Mr. Blackmore, the founder of the Salisbury Museum, only considers that its existence is not "improbable."

---

[*] "Rude Stone Monuments in all Countries: their Age and Uses. By James Fergusson, D.C.L." London: John Murray. New York; Scribner, Welford & Armstrong.

Circles and squares defined by rough upright stones do not, as far as we know, exist in the United States; but they do exist in Peru, and there are long lines of upright stones in Central America. Some of those of Peru, on the shores of Lake Titicaca, are absolutely indistinguishable from many of those figured by our author. These circles are called *Intihuatani*—which signifies "where the sun is tied up," indicating a relationship with solar worship—and are not sepulchral, for the modes of burial among the present and earlier occupants of that region are well known. When the dead were not buried in caverns, they were deposited in structures of the *dolmen* type, sometimes rude and often elaborate. As regards the ruins of Tiahuanuco in Bolivia, Mr. Fergusson has been misled by imperfect photographs or erroneous descriptions. Most of the stones connected with that enigmatical series of remains are elaborately cut, but the principal enclosure, a rectangle of 388 by 445 feet, is defined by rude stones, irregular in size, placed about 15 feet apart. Some of these seem to have been partly shaped by art, but to an extent hardly appreciable, while most appear to be in their natural rough state. Interior to this enclosure are lines of perfectly rough stones defining rectangular spaces. This enclosure is regarded by Mr. Squier as the oldest of the Tiahuanuco remains—the ancient structure around which, at a period long subsequent to its erection, the more elaborate buildings, mounds, monoliths, etc., were raised.

Our author is of opinion that the mounds and monuments of America "do not seem to have any direct connection with those of the Old World." This expression is striking and important from a man so thoroughly acquainted with the Buddhist and other monuments of India, in which so many speculative minds and active imaginations profess to find, not merely resemblances, but absolute identities, with the monuments of Central America.

A History of Massachusetts in the Civil War. By William Schouler, late Adjutant-General of the Commonwealth. 2 vols. 8vo, pp. 670, 711. (Boston: Vol. I., 1868. Vol. II., 1871.)—The State-house view and the town-meeting view of Massachusetts in the war have each a volume given to them by Mr. Schouler, who also contemplates a third volume containing what we may call the view from the front—a history of each Massachusetts regiment in the field. If this design be carried out, as we hope it will be, it will leave all other State war records behind, full and meritorious as some of them have been. We are disposed to regard it as particularly creditable in our author that he refrained from bringing out his field history first, while the public was still easily moved by narratives of this sort, and had a painfully distinct recollection of the sequence and varying fortunes of the struggle. The logical order promised at no time so many or so interested readers, and that it prevailed with Mr. Schouler is evidence of a singleness of purpose which deserves a passing word of acknowledgment. The official memoirs, doubtless, which lie before us, could not well—or at least so well—have been written by any other person even using the same materials. Nevertheless, the magnitude of the task might have served as a valid excuse for declining the office of historian had Mr. Schouler, no longer a young man, been so disposed. That he did not decline it, but accepted it, and has given five years of hard labor to it with these handsome results, should be recognized by the State as an honorable continuation of the services which he rendered as adjutant-general during the rebellion.

As Vol. I. treats of the successive steps taken by the commonwealth of Massachusetts to furnish its contingent to the Federal army and to sustain the National Government by its credit, advice, and patriotic example, it has most interest for the general reader. Inevitably it is, for the period which it covers, to a large extent a biography of Governor Andrew, told by a devoted admirer indeed, but mostly in the Governor's own words, as recorded in the wonderfully voluminous letter-books preserved in the State archives. He is the central figure, foreseeing, inciting, and directing all, whose very first official utterance gave the key-note of Northern resistance to Southern secession and aggression. Banks had closed his term of office by advising, in face of a rapidly dissolving Union, the repeal of the Massachusetts Personal Liberty Law. Andrew succeeded him with an argument in defence of the statute, and put Massachusetts in her proper place over against South Carolina. The story of these first days before and just after Sumter is well related by Mr. Schouler, as for example the circumstantial account of the efforts to prevent Lincoln from being inaugurated, and the part which a Massachusetts man played in thwarting them. Butler's volunteering to put down an imaginary slave insurrection in Maryland, and his subsequent difference with Governor Andrew in regard to recruiting, are clearly set forth from a point of view not exactly that of Mr. Parton. Mr. Phillips' contradictory predictions, a week apart, are given side by side without comment, needing none. The doings of the party conventions from year to year are carefully, though summarily, reported; and Judge Parker, of Cambridge, denouncing to the Democracy the Altoona meeting of loyal Governors, at which Governor Andrew was prominent, is sent down to posterity as making the curious declaration (Oct., 1862) that if these treasonable plotters were seeking the removal of General McClellan, "they met too late to dare to do this, as he was the commander of a victorious army, and it was dangerous."

A highly instructive feature of this volume is the intercourse between the Massachusetts Executive and the War Department, more specifically between Gov. Andrew and Secretaries Cameron and Stanton. The start which the State, thanks to its prudent Executive, was able to take in responding to the call for troops, required it from the beginning to make constant appeals to the War Department for rulings on questions of recruiting, equipment, pay, bounty, quota, allowance, coast defence, colored troops, naval credits, etc., etc., all of which Gov. Andrew urged with his accustomed fervor and pertinacity. Oftener than not his wishes were consulted, and views adopted; not unfrequently they were disappointed, for reasons good and bad. Occasionally the cordial relations between Stanton and Andrew were endangered by the former's arbitrary and rude decisions, or refusal to consider cases. Mr. Schouler's readers, however, will hardly fail to find excuses for Mr. Stanton when they see Gov. Andrew, like the rest, bringing him to his scheme for the conduct of the war—a descent on the coast of Texas.

The war legislation of Massachusetts will be found especially worthy of study, having been proved in the main to have been wisely considered, as it was purely administered. Much of it, perhaps the best, says Mr. Schouler, was the result of suggestions coming in more or less official shape from town-meetings. To these the second volume is wholly devoted. "We have read," he says in the preface, "with care, and for a purpose, every vote and every resolve acted upon or passed at every town-meeting held during the war in Massachusetts." The result of this industry, given town by town in alphabetical order, hardly any one would undertake to read through, and yet it embodies probably the most valuable lessons this history has to give; and they must consult it who would know how the most intelligent and homogeneous community in the United States met the gravest emergency ever visited upon a free society, and in what lies the strength of an enlightened republic under this and all similar tests. While waiting for Mr. Schouler's third volume, the picture will be made tolerably complete by reading over again the "Harvard Memorial Biographies."

Kate Beaumont. By J. W. De Forest. (Boston: James R. Osgood & Co. 1872.)—It cannot be denied that Mr. De Forest has many of the necessary qualifications of a good novelist. His plots are always interesting, and the reader is carried on to the end of the book in a pleasing uncertainty between a profound conviction of a happy issue and alarm at the dangers that encompass the tortured hero and heroine. His characters are sharply and humorously drawn, and if they often lack those higher qualities that make people interesting in stories as well as in life, they have certainly the merit of distinctness. They make an impression as of people whom we have seen. They stand out well. The scenes, too, that he represents are put before us with considerable dramatic vigor. His style is never dull, and the little side-remarks—the sort of indication of the writer's reflection—are often quite amusing. But there are certain faults, of a kind in which Mr. De Forest is not a solitary offender. For instance, on page 11, we find: "Same with some women; can't believe they have passed the age of fascinating; make eyes at young dandies who don't understand it at all; would beggar themselves for a husband of twenty-two." If this is worth saying at all, is it not worth saying better? Not only does one detect here a careless style, but also the presence of a trait that is more marked in the description of Judge McAlister, on page 34, and which, to some extent, savors of coarseness, not to put too fine a point on it. For who cares for the measurement of the Judge's hips or for the touching of his knees? Nor is the account of his resemblance, in stooping, to an elephant a pleasing picture.

If this novel is absolutely reeking with bad whiskey and noisy with pistol-shots, that is because Mr. De Forest has given us the "Southrons" as so many of them were, and not as the English travellers used to represent them—a set of mild-eyed patriarchs, presiding with firm but gentle sway over hereditary acres and devoted bondsmen. We see their sensitiveness arising from their almost total lack of humor, which is so marked a Southern want, their lofty belief in themselves, and their fanatical devotion to their duelling code, all of which are the natural products in sinful man of ignorance, idleness, and slight responsibility. Even those who have had the opportunity to profit by a European education return as bigoted as those who have always lived upon the plantation. McAlister, the hero, is an exception; but he, too, though against his will, has to obey their fantastic code of honor. In all of this part of the story Mr. De Forest shows fully his merits as well as his faults. The various peculiarities of the Southerner are drawn amusingly and with only that amount of caricature which pales into insignificance before certain well-known facts in the history of that part of the country before the war; and the author deserves credit for bringing into literature that period of our history which ran so great a risk of being forgotten, for most tales about the slave States were simply veiled arguments in favor of Abolitionism, or the unearthly visions of the genuine Southern novelist. But, while we gladly acknowledge the truth and vigor of Mr. De Forest's account of Southern life, something more is required before a story can receive the highest praise. Mere accuracy of description will never make a good novel. That is but the framework in which the story is set. We take up this book to read of the loves of Kate Beaumont and young McAlister. The family feud is a perfectly legitimate means of tormenting these two young people; but the real interest of the story should lie in the agonies of their distracted hearts, and not in the curious antics of their eccentric relations. The sentimental reader demands that the account of the Southerner's whiskey-bibbing should be subordinated to the story of these loves; that the study of the human heart, the same from Maine to Texas, should not be sacrificed to the "local color." This requirement is not met in "Kate Beaumont." We are told that the hero and the heroine suffered, hoped, were disappointed, again were nearly certain of bliss—but all this is merely stated; what is actually put before us is the conduct of the other people of the story. It is not unlike a play in which the scenery is admirably painted, and all the subordinate characters are excellently represented; they know their parts perfectly, they fight with a bloodthirstiness that cannot be too highly commended; the blue and red fires blaze at the proper moment, but the hero and heroine do not come upon the stage.

While Mr. De Forest lacks this all-important qualification, the comprehension of what really makes a story, he deserves all praise for his various merits, which are of a sort by no means common. He has written a novel that is very readable, and he has given proof of being able to do more and better work. His painstaking, his careful observation and sprightliness, are qualities which will certainly achieve a more than partial success.

Fine Arts.

THE METROPOLITAN MUSEUM.

II.

IT seems curious to go to Velasquez for a painting of a butterfly, but his fruit-piece, No. 171, contains one, and a gossamer-like little flirt it is too. For those who think that still-life cannot be painted in the grand style, these fruits are a sufficient refutation. Everything is done with originality and largeness, as if to prove that the mallet-hand was voluntarily carving cherry-stones, and it is amusing to see that this poor pyramid of sweets has a mountain background. In the front lies an apple, which was a flat disc until, with a little instantaneous coruscation of golden dabs, the painter adjusted his high-light and sphered the fruit. The grapes behind it express unmistakably the hardness and coldness of not yet ripened bunches. The picture is an interesting specimen of the class of studies on which Velasquez spent his early ingenuity and research, commanding every sort of art-expression by original methods of his own, until at last, with this same economy of means, he arrived at all that was great in human portraiture. There is in the Museum another picture of the Spanish school, by the eccentric painter Goya, which deserves attention for its own as well as its author's sake. It is a little study of considerable finish, representing a Jewess of Tangier in the rigid embarrassment of her fine clothes. With her right hand she holds a rich veil to her breast, while her left bears a fan that unfurls into a circle. Circular discs and amulets depend from her body until she resembles a parchment deed or charter with its seals. The painting is sombrely luscious, and gives one a decided respect for Goya, the unmanageable pet of Charles IV.—a man who, after Cellini and Salvator, is the most remarkable personality among artists. The favorite of the king and the comrade of bull-fighters, Goya was a rule unto himself, amenable to no standard of social criticism. His etchings, the "Caprichos," satirize the follies of the court with a terrific bitterness. Another set, the "Tauromachia," in thirty-three plates, delineate the history of the bull-fight, an institution he dearly loved, from the Moors to the commencement of the nineteenth century (Goya died in 1828). In painting he was a savage Ishmaelite. He painted with sponges, with brooms, with rags. One of his scenes, a "Dos de Maio," a combat of French and Spaniards, was done with a spoon, and it is a picture of tremendous vigor. Always a hasty and incorrect designer, the vitality of his conception carries off the rudeness of the science, while the verity of his color and his instinct of composition give quality to everything he has left. His perpetual intrigues and life of license did not prevent him from being one of the most prolific of painters. He was equally happy in portraits, sacred subjects, caricatures, and genre. He painted the king and queen in large equestrian pictures; he copied after Velasquez; he sometimes covered thirty feet of wall in a day or two; he was an industrious engraver and etcher; and at last, in order to die in character, when old and almost blind he took to making lithographic drawings, in which his favorite bull-fights were poured forth with a profusion and spirit not at all impaired by the fact that they were done in the dark. It is well to possess even so slight a bit of handiwork on which to hang a souvenir of this strange creature.

Of Italian painting there is, in the figure line, an insufficient yet fascinating represention. The finest thing is the portrait by Paris Bordone of a Milanese count, a Sforza. Here is a palette that has been near enough to Titian to float off some of the potable gold of his atmosphere. Separated as we are in this country from the art of Venice, the coloration of Bordone's picture, among the Dutch exactitudes which hang around it, seems to have the sacredness of a sermon against impurity, muddiness, asphaltum, and mummy. Beautiful as an angel, and apparently painted at sunset, the boy-warrior lifts in the clearest light his oval face, surrounded with blowing silken hair that parts in the middle, and set upon a strong young body in complete armor, like a St. George. The heavenly freshness of the complexion and the large, felicitous manner make one recur to this picture as a constant delight, although it by no means leaves upon the mind that conviction of earnest fidelity in the portraiture which is impressed by some of the Flanders work. By Albani there are four decorations, of a broad, low shape, representing little naked genii engaged in various children's games, their color being as riant as their occupation, but the painting too careless to challenge any criticism. By Sassoferrato there is a Virgin, a small bust picture. It represents, of course, a late eclectic school, and is quite powerless over the sympathies of a modern spectator; yet it is a bit of perfect achievement, in perfect order; and the draperies, which introduce every kind of torsion that there is room for in the frame, are as careful in drawing and texture as is the elegantly-afflicted face. Three little easel-pictures by Tiepolo represent art still further conducted on the path of beautiful dilettantism. These softly-glowing and obdurately graceful compositions, arranged according to a rule and blushing on principle, with gauzy angels, graceful pages, curtains, and antique statues, are much the same, whether the "Crowning with Thorns" or the "Triumph of Ferdinand III." be the subject, and are the most charming of interpreters of religion and politics for the boudoirs of duchesses.

The French pictures include a Greuze and a Poussin, the latter an important one, but detained for the time being in Paris until M. Jacquemart shall have copied it in aquafortis. The specimen of Greuze, whose works have lately been attaining such wild valuation among his countrymen, is truly very fine. It is a life-size study, from the model whose face he so often repeats, of the head for the pleading girl in the "Paternal Malediction," one of his capital works at the Louvre. These full-size *Académies* are the specimens to seek for in getting up a high idea of the talent of Greuze, as they are filled with life and vigor, whereas in reducing them for his elaborate groups the artist always fell into the white-wax manner and finish which distress the critic. It is, perhaps, useless for us to try to attain the pious ecstasy with which the French gather to the feet of Greuze, as the one poet of chaste family joys and sorrows in humble life. For us, his uncropped village maids seem to show a good deal of neck, the white-haired fathers are self-conscious, and everybody has a cloying balance of feature more or less referable to the Apollo Belvedere. This profile of a young, distressed girl, however, is a fine bit, laid upon the canvas with decision and delicacy, and, in expression, suggestive of a mitigable grief which it would be a very pleasant task to soothe away. Of seventeenth-century French—a class yielding but few treasures—there is a group of beggars by one of the brothers Le Nain; a squalid family in the costume, so far as they wear any, of 1700, waylaying the rich passenger with the sullen pertinacity in which we can perceive the muttering of the Revolution.

English art is hardly recognized in the collection, but there is a fair though not remarkable Reynolds, a portrait of Sir Edward Hughes, wearing a red face and a white wig; it is painted with great sincerity and lifelikeness. Of Sir Peter Lely, in his English manner, there is the head of a court brunette, painted, like most of the later Lelys, with a supreme heartlessness and coldness of debauched talent that leaves the work almost incoherent, except in so far as it is stiffened with a kind of varnish of Vandyck. Far better, if court beauty must be painted in its full caparison, is the happily shallow and idealess Duchess of Mazarin, by Nicholas Maas, which happens to hang beside the Lely. This style of painting, imitated from the effects of pastel, has a fragile elegance very dainty and modish, quite applicable to the subject in hand. The little lady, who is nearly featureless, her nose being a pustule and her eyes somewhat like soap-bubbles, displays a general glitter of bust and arms, due to the painter's tone, which is rather pearl-powdery than pearly. Like an honest courtier, he cannot draw a line, and his sitter's wrist is badly wrenched, and her torso impossible; but he is at home with her cosmetics and with her hair, the latter, in its flossy abundance, giving him something to work on that he could really appreciate and develop with sympathy. This doll Duchess at least enjoys dress and chandeliers, while the white-bosomed Lely, as is usual with his "beauties," is a sphynx too dull to understand her own enigma.

In the anteroom where the portraits last spoken of abide is Vela's statue, a work of quite another sentiment, but which, if noticed at all, should be mentioned among the figure subjects. As one of the most striking works of plastic art yet brought to the country, it merits a better and more disengaged review than we can now give, but we will attach a few remarks to it. The marble is not the property of the Museum, being a loan from its owner, Mr. John Taylor Johnston, and it is not placed in a light which at all brings out its drawing. The side view, which happens to relieve the profile against a dark canvas, is the only view which can now be advantageously taken. The subject is "The Last Days of Napoleon." The captive is represented propped on pillows in a large chair, his head sunk upon his bare chest, from which the dressing-gown has been thrown back, his clenched fist bearing with vast expression upon a map of Europe which is on his lap. This is a replica of that "Napoléon Mourant" which was so covered with votive violets and poems when displayed in the last Paris Exposition. It is said to be a carving rather more satisfactory to the artist, or more true to his clay ideal, than the Paris impression. Either one is probably inferior to the statue of "Spring" which Vela sent at the same time to the Champ de Mars; but the romance of the subject, of course, threw any quieter work into eclipse. The "Napoleon" is a most striking image of will still conquering in spite of circumstance. The head has the immense brain development, the sculptural features, of the first Bonaparte, appropriately modified by age and illness. The film over the profound eye, the thinking swell of the nostril, the fixity of the pressed lips and of the muscle upon the chin, are immensely impressive, and form altogether a type of imperious resolve. The statue is of far too elevated an order to admit of any discoverable faults of *métier*, and the only question is whether it has not too many perfections. The Greeks, as their relics tell us, had an art, by massing details and omitting petty traits, of making a heroic marble seem far away, completely rapt into ideal air. By this they could counteract the tendency, always too strong in a spectator, to examine pieces of sculpture with the end of the nose. But Vela, in his Napoleon, insists on the closest scrutiny, and we think it incontestable that he thereby loses the highest impression for his work. The hands, finished to the pores of the skin, and creating an effect of painting rather than of sculpture, become curiosities; the blanket covering the lap is stippled over with a tool made express, so as to imitate illusively the web of the material; the chair-frame is chiselled in all its trimmings of ormolu; and the stamped leather of its back, and the embroidery of the robe, are so beautifully invented and displayed that they seduce the most sincere attention. The conception of the "Napoléon Mourant" is a grand one, grandly printed, but it is a question whether it be not dissipated among the wealth of accessories.

LEGENDS OF THE PATRIARCHS
AND PROPHETS
Current at the East, collected by Baring-Gould.
Crown 8vo, $2.

"We venture to predict that few books will be more delightful to a great part of our readers. . . . He has collected from the Talmud and other Rabbinical books, apocryphal Scripture, and still other ancient sources, a vast store of the most curious—to put it plainly—'yarns' about the fall of the angels, the creation of the pre-Adamites, Adam and Eve, the Fall, the Giants, the Deluge, the remains of the ark, ond the Old Testament personages, especially Abraham, Joseph, Moses, and Solomon."—New York Evening Mail.

"It will be his (the reader's) own loss if he foregoes the pleasure and the profit of reading this entertaining volume."—Saturday Review.

HOLT & WILLIAMS, 25 Bond Street, N. Y.

EDITIONS OF
SHAKSPEARE'S WORKS
FOR SALE.

Mrs. C. Giesecke, Königstrasse, 13, Hanover, Prussia.

"No one who has ever been to Rome, no one who hopes to get there, no intelligent traveller now there, can afford to be without this valuable work on the most noted city in the world history."—Hall's Journal of Health.

WALKS IN ROME.
BY AUGUSTUS J. C. HARE.
Crown 8vo, 710 pp., extra Etruscan cloth, price $3 50.

"This volume is simply delicious. Mr. Hare tells the story of actual Rome so as to freshen everything. The reader sees it all over again."—New York World.

"It is the most complete monograph for the traveller that has, we think, ever been published. It is a cyclopædia on the sights of Rome; it is of interest to those who are going and to those who have returned; to the one as 'guide, philosopher, and friend'—and now that it is written, no sight-seer should go to Rome without it—to the other as memento; but it is, further than this, so generally interesting that few will find it other than delightful reading."—Evening Mail.

"Invaluable in suggesting what should be seen and the best way of seeing it. Mr. Hare is evidently a man of education and refinement, with a nice sense of historical perspective and a thorough appreciation of the beautiful. The plan of his work is original in its collation of the most interesting passages from modern literature that have reference to the spots and buildings described, and it is a matter of special interest to the American reader to note how largely the writings of our own authors enter into the record."—Evening Post.

549 & 551 BROADWAY, NEW YORK,

Publish this Day:

I.

MABEL LEE.

A Novel. By the author of "Valerie Aylmer," "Morton House," etc. With Illustrations. One vol. 8vo. Price, paper covers, $1; cloth, $1 50.

"Mabel Lee," like the other works of this young and popular authoress, is a story of Southern life and character. The scene is laid in Virginia, and afterward in South Carolina, and the manners and customs of the South are well delineated. The plot, which is highly interesting, turns in a great degree on the mysterious and abnormal influences which have of late years attracted so much attention under their various forms of animal magnetism, mesmerism, or spiritualism.

II.

CHRIST IN MODERN LIFE.

Sermons preached in St. James's Chapel, York Street, St. James's Square, London. By Rev. Stopford A. Brooke, M.A. One vol. 12mo, 408 pages. Price $2.

"The main thought which underlies this volume is enthroned in the first two sermons, and is this: That the ideas which Christ made manifest on earth are capable of endless expansion, to suit the wants of man in every age; and that they do expand, developing into new forms of larger import and wider application, in a direct proportion to that progress of mankind of which they are both root and sap. If we look long and earnestly enough, we shall find in them (not read into them, as some say) the explanation and solution, not only of our religious but even our political and social problems. Nor do they contradict the ideas which direct scientific research, nor those which have been generalized from the results of that research, but are in essential analogy with both one and the other."—Extract from Preface.

III.

PREHISTORIC TIMES,

As Illustrated by Ancient Remains, and the Manners and Customs of Modern Savages. By Sir John Lubbock, Bart. One vol. 8vo, 640 pages. Illustrated. Price $5.

"A work of more than usual interest, in which he has dealt with a very difficult subject in the most scientific, but at the same time in the most alluring manner."—Times.

"As a history of the discoveries which have been made, and as a *résumé* of our present knowledge of prehistoric man, it leaves nothing to be desired. It cannot be read but with interest and pleasure."—Standard.

"The chapter on the 'Antiquity of Man' shows a marvellous range, a mastery of the antiquarian, geological, astronomical, and physical branches of the subject, and no English *résumé* so complete of the facts of the old and new Stone Ages, and of the Bronze Age, is elsewhere to be found."—Ibid.

"The book ranks among the noblest works of the interesting and important class to which it belongs."—Athenæum.

"Those who desire a compact and careful review of the whole subject, well illustrated, will find it in this volume."—Ibid.

"On the subject of prehistoric archæology, it is not only a good book of reference, but the best."—Nature.

IV.

THREE CENTURIES OF ENGLISH LITERATURE.

By Charles Drake Yonge. One vol. large 12mo, 673 pages. Price $2.

"Prof. Yonge discards Chaucer and Spenser as too antiquated for modern study, and starts with Shakespeare. He divides his subject into seven classes—'dramatists in verse and prose; poets, subdivided into two classes, so as to take lyric poetry separately from that of other kinds; historians; essayists; orators, both in the senate and in the pulpit; and novelists'—and he gives epitomes and specimens of the writings of each in chronological order."

V.

SOUTH SEA BUBBLES.

By the Earl and the Doctor. One vol. 8vo, 312 pages, cloth, price $3.

"'South Sea Bubbles' makes one long to visit Polynesia. Melville fascinated us with his enchanting 'Omoo' and 'Typee.' After a long interval came the 'Pilgrims and the Shrine,' with like enthusiasm for the beauty of the Southern isles and islanders. And now young Lord Pembroke and Dr. Kingsley ravish us once more from the chills and toils of a Northern existence to the sunny paradise of the Pacific. Their joint volume is happy alike in its designation and its conception."—London Athenæum.

Either of the above sent free, by mail, to any address in the United States on receipt of the price.

LEE & SHEPARD

PUBLISH THIS WEEK.

AN AMERICAN GIRL ABROAD.

By MISS ADELINE TRAFTON.

16mo, illustrated, $1 75.

Of this new book of travel the New York Tribune says: "Miss Trafton writes with a sort of rollicking humor which sounds as if she was never once tired in all her journeyings, never conscious of her back, that aching malcontent which gets the better of most nervous women. She looks at everything with the unabashed eyes of a young republican princess, satirizing many things not unkindly, and satirizing quite as often her own credulity. She laughs so heartily at her own blunders that you laugh with her, and never at her; and in the midst of all her half-reckless fun, you come now and then upon some little surprise of pathos, or bit of tender sentiment, which gives you the same kind of pleasure you experience when you find in an unexpected place a blue flower growing with a dew-drop in its eye."

NORTHERN LANDS;

OR,

YOUNG AMERICA IN RUSSIA AND PRUSSIA.

By OLIVER OPTIC. 16mo, illustrated, $1 50.

"A second series of 'Young America Abroad' will be warmly welcomed by the youthful readers of the country. The first series achieved a success almost unprecedented in the history of juvenile literature. The large amount of history and geography, so deftly woven into the narrative as to enhance rather than impair its interest, renders these books instructive as well as entertaining. None can be placed in the hands of boys which will simultaneously give them so much amusement and information."—New York Atlas.

NOTES ON THE HISTORY OF FORT GEORGE

During the Colonial and Revolutionary Periods.

BY B. F. DE COSTA.

Reprinted from THE AMERICAN BIBLIOPOLIST.

The fragments embodied in this sketch were for the greater part accumulated by the writer while engaged in preparing a work on Lake George. They are not given in a separate and permanent form, not as constituting anything like a complete history, but rather as interesting materials affording some fresh illustrations of the annals of one of the most beautiful and celebrated localities of our land. These gleanings have come from every source accessible to the compiler, and include nearly everything of interest that can be found in connection with the history of Fort George. Many of the documents thus embodied appear in print for the first time, being transcripts from the original MSS.

The Nation.

NEW YORK, THURSDAY, MARCH 28, 1872.

The Week.

THE principal event of the week in Congress has been the Senate's passage of the “free breakfast-table” bill, admitting tea and coffee free of duty. It will be recollected that Mr. Sherman's device had been previously practised in the House by the Protectionists there, so that now both houses have swept the duties off tea and coffee, though the duty on salt, cutlery, and so on leaves the breakfast-table about as much encumbered as before. The bills are different in some respects, and will lead to a conference. But it is certain that the duty will be removed by the 1st of July, so that dealers can go on with their dealing, but many of them have lost enormously. The probabilities seem to be that no general revision of the tariff will take place this session, the minds of the members being too much occupied with coming events. Most agree in declaring that the mind of the average Congressman is, however, a great deal easier than it has been for some weeks past, there being more certainty than there was that the Philadelphia Convention will be the real seat of power, and at all events the safest thing to adhere to. In the meantime, rumors about the Cincinnati Convention continue to be as numerous and conflicting as ever. There are some rather extravagant ones about the persons who are expected to be present. Mr. George Alfred Townsend, of the Chicago *Tribune*, has interviewed Mr. Sumner, who is, he says, “concerned about the Cincinnati Convention, and wants it to be a Republican Convention in the larger, broader sense of a common country, legible legislation, and an exemplary executive,” which sounds attractive, but is, we confess, not very clear. He declares “General Grant's administration has exceeded that of Andrew Jackson in violence of personal purpose, and attacks on other departments of the Government.”

The French arms investigation is drawing to a close, and certainly very little, if anything, has come of it, or is apparently likely to come, which makes the frantic opposition offered to it in the Senate all the more incomprehensible. The discrepancy between the amount of the receipts of the War Department and the receipts of the Treasury from the sales of arms was explained long ago. It now appears that the difference between the amount accounted for by the Treasury and the amount paid by the French Government represents the addition to the arms bought of the Government of other arms obtained by the French agents from private dealers. Some of the other charges, such as the private sale of arms which ought to have been sold by advertisement publicly, are met by what is really a confession that disregard of the letter of the law has grown into a usage in some departments of the Government. Thus it is said in this case that General Schofield, when Secretary of War, had decided verbally that it was not necessary that every lot of stores should be advertised; that when one lot of a particular kind of stores had been sold under advertisement, the requirements of the law had been satisfied. So also it is alleged to have become “an understood thing” that when you sell breech-loaders you must supply cartridges, therefore the manufacture of cartridges to accompany the rifles in the present case was a necessary consequence of the sale. The terms “damaged” or “unsuitable,” as applied to arms, has also been construed by the officers of the War Department as meaning any arms which have been outstripped by an improved pattern. Whether this interpretation, which leaves an enormous discretion to the War Department, will hold good remains to be seen. Another great point of debate, which is, after all, a purely legal point, is whether, a sale of arms having been made to a man, and it having been discovered after the closing of the contract that he is the agent of a belligerent, it is a breach of the neutrality laws to deliver the goods. The Administration men say it is not, the anti-Administration men say it is. The point is a nice one; but it is one in which, whichever way it is decided, it will be hard to make anybody out a rascal.

“You never can tell till after election,” is a warning to prophets which we fancy does not apply this year in the case of Connecticut, for it seems clear that the Democrats are not going to carry the State next Monday, either by their own exertions or by any help of Liberal Republicans. Republicans who intend joining the Reform movement, if that movement shall seem to them to take the right course, are not going to “Liberalize” by ones and twos; and as for the Liberal leaders, they would appear to have determined to do nothing by way of preventing the President's renomination at Philadelphia, apparently thinking it better to make a fight for reform from the semi-detached position of Cincinnati, than to attempt reform from the very inside of “inside politics” at Philadelphia. We suppose that beyond peradventure such an attempt would be futile. Even if for any reason the officeholders should think of dropping General Grant, it certainly would not be in the interest of any true reform that he would be dropped by the men who constitute his *entourage*—by Cameron, Forney, Murphy, Morton, Harlan, Conkling, Pomeroy, Casey, Carpenter, Scott, and the like—that portion of the party, in short, which will have to be sloughed off before reform is possible. They might learn to look on General Grant's nomination as a make-bate that would divide the party; but, even so, their new candidates would be make shifts, sops to soothe for a moment rather than permanently to satisfy, and by no means promising the real amendment in our politics which is sought by Trumbull, Sumner, Schurz, Cox, Adams, Matthews, Brown, and their friends. Whatever the reason, the Liberal Republican leaders seem to have decided on making their first sign in May next, and meantime the rank and file, of course, take no action either organized or individual. This being so, and the Administration being extremely active, while the Democratic State Committee is extremely quiet, the Democracy cannot have any great expectation of carrying the State. The Administration men count on a majority for Mr. Jewell of five hundred, which would be five times that of last year, and we do not see why they should not get it and more.

For the last few years, the good-sized Tammany colony at Greenwich, Connecticut, with its mushroom village of fine houses and palatial stables, has greatly helped the Democratic cause in Connecticut, and to its votes and its money it is probable that Republican defeat has several times been due. This year none of Tweed's money will go into the State, and, on the other hand, the postmasters and tidewaiters have probably had to bleed heavily in behalf of the Administration cause. Speakers have been more numerous and active than is usual, except in the years of Presidential elections, and as for the pecuniary contributions to success, we judge from the case of New Hampshire that they have been large. “Probably,” says an intelligent correspondent, “so much money was never lavished on a New Hampshire contest before, at least by the Republicans.” Another says “there is a widespread feeling of anxiety among good citizens at the venality of the election.” To do the Administration men justice, it is not said that all the money laid out came from Custom-house contributions and other such sources. Mr. E. H. Rollins is a strong Administration man, but he is also said to be treasurer of the Pacific Railroad Company, which is said to want to see its secretary in the Senate, where it has use for him; and this corporation is said to have supplied money for the canvass in the hope that Mr.

Rollins may be made Senator in place of Mr. Patterson, whose term expires. Mr. Rollins has long and often been a Republican canvasser of New Hampshire, knows the poll of each party in every hamlet and ward of the State, and is a politician of a well-known kind—a kind better known than respected. He probably has not the first requisite for the place he seeks, and of eminent disqualifications he has several. Other money, however, than his and his railroad company's appears to have been plenty in the canvass, and in "redeeming" Connecticut also, levies upon Federal officials have, according to all accounts, been found quite necessary. All things considered, then, another "endorsement of the Administration" may, we think, be confidently expected next Monday. That, at all events, one might reasonably take to be the issue as made up, for the Democrats are on a platform which differs from that of their regular Republican brethren only in its lacking the plank in which the latter assert of the present Administration that it seems to them wise, great, and good—which of course, *ex vi termini*, it must seem to the Federal office-holding mind.

To what an extent in our politics the will of the allied Postmaster, United States Marshal, Collector, Assessor, and Inspector, may be and is substituted for the will of the people, a majority of the voting public hardly knows, much as has been said about it. Take, for instance, the recent history of the Republican party of Kentucky, a section of which has broken into open revolt at Covington. Several things appear to have united to dissatisfy the Covington Republicans, but as we have not any very clear version of both sides of the stories which are told, we merely say that they do not look particularly criminal, but are of that malodorous kind which Mr. Jesse Grant has for some years succeeded in getting told about him, and which all indicate a certain lowness of tone, to say the least of it, with which even insensitive American citizens are not much pleased. Whatever the remote and immediate causes, the Covington delegation to the State Convention were not in favor of the President's renomination, and they found themselves compelled to withdraw from that body, which, it seems, had no sooner come together than it showed itself determined to "endorse the Administration." The discontented delegates have just been holding at Covington a public meeting of protest, in which there was much racy talk, and, among other speakers, General Burbridge described the composition of the Louisville Convention and made an exhibit that will perhaps excite as much surprise in the reader as does the unanimity with which we read that State delegations to Philadelphia are "instructed to vote for Grant." The Louisville Convention was called to order by a gentleman who had been a Federal officeholder for sixteen years. The Committee on Organization contained a revenue officer; another revenue officer; third, a revenue officer; fourth, a revenue officer. The Secretaries were postmasters, custom-house officials, and gentlemen who owned newspapers.

The Committee on Resolutions had on it a gentleman on the staff of a Louisville newspaper, who held office under Mr. Johnson, and probably hopes he may never be so tempted again; second, a collector of internal revenue; third, a late consul to Foochow, whom also it would probably be dangerous to tempt with the offer of a new office; fourth, a gentleman who is not reported as being in office; fifth, a revenue officer; sixth, an assistant assessor of internal revenue. The Committee on Permanent Organization contained a gentleman not described as having any office, but as not being a good Republican; second, a postmaster; third, a postmaster; fourth, an assistant assessor; the chairman was a pronounced Administration man. Altogether, there were present in the Convention, General Burbridge says, 75 office-holders known to him, of whom the most prominent were collectors, assessors, and pension agents, and with these were their subordinates and assistants. There were also present forty Johnson men, and General Burbridge and his constituents think that the Louisville delegation to Philadelphia is no fair representation of the wish and will of the Kentucky Republicans.

One Administration paper, the *Indianapolis Journal*, has undertaken to reply to the questions we asked the other day about certain points in General Grant's course, and the reply is that the question is one of taste, and that the *Nation's* standard is not that of General Grant, and that his "Administration is not to be tried or condemned by the people on a question of propriety and good taste." What interests the people, it says, is seeing the tariff reduced, the taxes decreasing, the debt paid off, the premium on gold declining, and it laments that such papers as the *Nation* should be driven to such pitiful straits for arguments.

We fell into a slight error last week in the article on "Our Case," in speaking of the memorandum of "confidential instructions" as having been given to the counsel. It was given to the Commissioners, but we are informed they acted independently of it when proposing "the amicable settlement." We do not know that any progress has been made in the negotiations since our last issue. Earl Granville's reply to Mr. Fish's answer is said to be on its way to this country, but we know of no reason for believing that anything will come of it, except a rumor that he proposes that both parties should go before the Board, under a declaration from England that even if consequential damages are awarded she will not pay them. This would be arbitration with a vengeance. In the meantime, interest in the whole subject is, in this country, we think, daily declining, and until the Presidential election is over is not likely to be revived. Among the latest contributions to the literature of the controversy has been a letter from Mr. Cyrus W. Field and one from Mr. Dorman B. Eaton, the lawyer of this city who was so shamefully struck down two years ago, and whose recovery everybody will be delighted to hear of.

There has been a lively debate in the French Assembly over the International, it being proposed to legislate against it, during which M. Tolain, who is one of the International chiefs, made a really able speech in its defence. Louis Blanc made the strongest point against all hostile legislation, viz., that it would help to spread the organization. Efforts still continue to be made to bring about something like a co-operative effort on the part of European governments to put it down, and the Spanish Minister of State has issued a circular, calling attention to the fact that the Cortes has declared it outside the constitution and liable to the penal code, and the Government has determined to introduce a bill dissolving the Association; and he proposes that all governments should enter into a common agreement for universal and simultaneous action, and he urges that nations which have no extradition treaty with Spain should enter into a special agreement as to whatever relates to the International. There could hardly be a more unfortunate move, if it be desired to put the International down. The best chance of its extinction lies in the indifference of workingmen, and the very best way to rouse their enthusiasm for it is to begin to persecute the members. A Holy Alliance of the governments would be apt to arouse this enthusiasm in an extraordinary degree.

The most exciting of recent events in French politics, however, has been the trial and acquittal of M. Janvier de la Motte, the ex-Prefect of Seine-Inférieure, on a charge of malversation of funds and malfeasance in office. He was one of the jolly, pleasure-loving prefects of the Empire, careless about his accounts, as were all the officials of the Empire, for there was no one to overhaul them; on excellent terms with the Council-General, who were his official auditors, but let him do what he pleased; given to fêtes both public and private, and various other prodigalities, moral and immoral; and very fond of resorting to what the French financiers call *virements*, or transfers of money, in the discretion of the officials handling it, from the object for which it was appropriated by the legislative body, to such other object, new or old, as the officer might see fit. Under this system the appropriations of the legislature were simply farcical, as nobody knew whether they would be allowed to stand or not. It was, in fact, the *virements* which left the army in the wretched condition in which the German invasion found it, as the money voted for military purposes was regularly diverted in part to objects which would not bear public discussion. The *virements*, too, went down through all grades of the official hierarchy. The Emperor resorted to these on a great scale, the prefects and sous-prefects on a smaller one, and so on. M. Janvier de la Motte was one of the greatest *vireurs* of them all. It was curious to see, too, how closely the tricks of these Imperial financiers resembled those of our own Ring, for one of M. Janvier de la Motte's favorite modes of raising money was to employ persons to do things for the department, make them send in exorbitant bills, and give receipts for far more than they received. M. Pouyer-Quertier, the Minister of Finance, was summoned in the trial as a witness for the defence, and he testified strongly in the prisoner's favor, maintained that his irregularities were justified by law and usage, and finally went so far as to denounce his colleague, the Minister of Justice, M. Dufaure, for instituting the prosecution. This was a little too much, and M. Pouyer-Quertier has had to resign.

There is perhaps nothing more curious in the administration of Republican government in France than its policy towards the press, which is simply the Imperial policy, but the Imperial policy aggravated and made somewhat more arbitrary; but then the accused enjoy trial by jury, which they did not under the Empire. The *Radical* was lately sentenced to pay a fine for some breach of the press law, and by way of raising the money issued a special number at ten sous, the ordinary price being two sous, thus affording its friends an opportunity of coming to its aid. For this it has been fined again one thousand francs, and what is most comical is that two other papers which called attention to this extra number have been fined five hundred francs each. Of course, anything like the healthy formation or free interchange of opinion is impossible under a régime of this sort. Our Paris correspondent gave last week some account of the law as it stands. Modifications are proposed in it by a bill now before the Assembly, one clause of which reserves the right of free discussion of constitutional questions, but this the Government opposes—in this, too, following the example of the Empire, who was always laboring to get people to accept free speech with this restriction—that is, take the constitution as an accomplished and unalterable fact. Perhaps nothing in French life impresses one more painfully than the enormous amount of labor the Government takes on itself. Besides seeing that the newspapers publish the right kind of articles and do not spread false news, it looks after the theatres as a schoolmaster looks after his school. An actor at Marseilles, who had been connected with the Commune, was recently loudly applauded, so loudly that the police concluded that it must be the Commune that caused it and not his acting, so they threatened to close the theatre.

The Prussian Upper House has, by a marked majority, agreed to the bill placing the superintendence of the public schools hereafter in the hands of the Government, instead of the priesthood, whether Protestant or Catholic. This event, of incalculable importance not only for education, but for religion itself, was preceded on the 29th of February by a decree of Minister Falk's, affecting one of his predecessor Von Mühler's, and which, while it tends to relegate religious instruction to the church and the family, shows the purpose of the Government to respect freedom of conscience. As it happens, the Ultramontane infallibilists are those in vindication of whose rights of conscience the decree was specially issued. Dr. Wollmann, religious instructor in the Gymnasium at Braunsberg, having taken sides with the Old Catholics against the syllabus and the dogma, was excommunicated, but, being retained by the Government in his position, petitions were addressed to it asking that the children of Roman Catholic parents, strictly so-called, might be excused from the teachings of such a heretic. Von Mühler, however, in a letter of 29th June of last year to the Bishop of Ermeland, refused to allow this privilege, although he could not legally have denied it to Jews or dissenters. Now comes his successor, and applies a general rule that religious instruction in the higher schools shall not be enforced if parents, on asking dispensation from it, can convince the proper authorities that their children are receiving instruction equivalent to that laid down in the school programme. In most cases, the certificate of the priest, pastor, or other qualified instructor will be deemed satisfactory on this point. Thus, all sects and even individuals not avowedly irreligious may have their preferences gratified and their scruples respected; but the Ultramontanists, doubtless, consider their local success to have been dearly purchased.

A great meeting was held in Rome on the evening of March 4, at the Teatro Argentina, to which people flocked, say the reports, as if to one of the regular entertainments of the place, about half the audience, however, consisting of foreigners—Germans, English, and Americans. The object was to assist in the formation of an Italian Bible Society, of which our Admiral Fishborne had consented to assume the presidency, only because, as he frankly informed the meeting, no Italian had been found who would accept the office. Father Gavazzi and Father Hyacinth, coming from the editorial sanctum of the *Espérance de Rome*, also made speeches, each after its kind, the Frenchman's being the best, it need not be said. With consummate tact, he made himself at home in a strictly Protestant movement, beginning with an allusion to the friendly debate which had just taken place, with the Pope's permission and almost blessing, as to the sojourn of St. Peter in Rome, and auguring from that the possible reconciliation of Christians of opposing sects. To this end, he regarded the diffusion of the Bible among all classes as of no slight value. His remarks seemed to the audience the natural termination of the meeting, and they accordingly dispersed without hearing the rest of the programme, and without paying much attention to the contribution-box which then began to be passed around. The impression made by this affair on the Italian public appears to have been extremely feeble, the newspapers making light of it, and the cultivated classes regarding it with that indifference with which they treat all serious efforts, direct or indirect, to combat the Papacy.

The Pope, who never forgets that he is an Italian, and who, left to himself, is always better than his advisers, has been doing an act of charity which has led the sanguine to believe a *modus vivendi* yet practicable. A Venetian deputy, Fambri, a part of whose constituents inhabit the island of Burano, and live by fishing, having paid them a visit and learned their wretched condition, owing to the unusual severity of the winter, bestirred himself in their behalf, first making known the facts in the columns of the *Rinnovamento*. This quickly brought in subscriptions amounting to $700, when one day there came $2,000, which Pius IX. had ordered Cardinal Antonelli to transmit in care of the Patriarch of Venice, for distribution among the most needy. Meantime, however, with the breaking up of the ice, the suffering had been greatly diminished, and municipal succor had intervened, so that it seemed best to use the Pope's contribution in providing permanent relief, in the form of a hospital, against a like calamity. The terms of the letter which accompanied it, however, were such as to make it proper to obtain permission so to dispose of it, and this gave occasion to Fambri to call upon Cardinal Antonelli, who received him with perfect courtesy and gave him to apprehend no difficulty in getting the Pope's consent to his request.

THE REPUBLICAN PARTY NOT A CHURCH.

THERE is no denying that the Republican party contains the greater part of the intelligence and morality of the nation. At all events, the Democratic party contains the greater part of its ignorance and depravity, for old Dr. Dwight's saying was almost literally true, "that though all Democrats are not horse-thieves, all horse-thieves are Democrats." From this state of things a great many people have deduced the conclusion that the Republican party is an engine which may be used at pleasure for the promotion of all forms of righteousness, that, in short, the organization is to all intents and purposes a church, and that the aim of its members is simply right living. Another conclusion of a somewhat similar character from these same premises is, that the Democratic party is an instrument of evil, and of evil only, and that its members are not opponents to be won over, but enemies to be fought. This feeling is, indeed, now carried to the point of wishing to prevent Democrats voting for a good ticket on an unexceptionable platform, very much as a church would refuse to rent a pew to Satan or admit him to membership, no matter what professions of penitence and piety he might make.

A party is, however, not a church, nor anything like a church. It may be composed of excellent men, but its object is never good in general, but the embodiment in legislation of some particular good embraced in two or three ideas. The reason of this is obvious enough. It is not possible to secure the general agreement of a large body of men of widely differing pursuits, habits, creeds, and training, upon a large number of subjects, much less to secure such strong and cordial agreement as is necessary to produce vigorous and united political action. A party always grows up on one great idea, and rallies to the support of a particular line of policy on one or two subjects. As long as this policy can be pursued, and has not been fully carried out, the party holds together. When the object of the policy has been obtained, however, and the members of the party begin to look about for new aims, they at once find themselves divided in sentiment. The Federal party flourished as long as the moulding of the States into a solid union, and the construction of a strong government for its preservation, was the work to be done. As soon as this was accomplished, and it sought to conduct the government on conservative principles, it died out. The Democratic party grew up on the idea that legislation ought to be made as far as possible to promote social equality and the destruction of privilege, and that all officials ought to be brought into close dependence on the people by elections at frequent intervals. It flourished and grew as long as there was any work of this kind to be done, until, in short, it had embodied its doctrines in the constitution of nearly every State in the Union. Relying on the perfection of its discipline and the powerful influence of its traditions, an attempt was then made by its leaders to use it for an entirely different purpose—the preservation of the Union against the disintegrating effect of the anti-slavery agitation, and, finally, the defence of the institution of slavery itself. No sooner had it entered on this path than it began to go to pieces, and finally lost all hold on power, and all hope of regaining it, the desertions from its ranks proving more than sufficient to counterbalance the enormous reinforcements it receives from foreign immigration. The same thing may be said, *mutatis mutandis*, of the Whigs.

The Republican party was created for the single object of resisting the spread of slavery over the national domain. In laboring for this object, it was saddled with the responsibility of conducting a bloody war for the preservation of the Government, and this led also to the responsibility of making peace, or, in other words, of destroying slavery and reconstructing slave society. A contest so simple, so direct, and so exciting naturally enlisted a great variety of persons under one banner, but the hearts of all were intent on one object—the preservation of the Union by any and all means. Everything else was in their eyes of secondary importance, and any means which plainly and directly contributed to this end became respectable. The character of public men, the expenditure of the public money, the amount of the public liabilities and the mode of contracting them, the independence of the courts, the liberty of the citizen, the proper interpretation of the Constitution, became all matters of little or no moment—matters on which no agreement among Republicans was expected. The one thing necessary to constitute a man a good Republican was, for seven years at least, loyalty to the Government as represented by the majority in Congress, and hatred of rebels. The Government is now out of danger, the rebels have disappeared, and slavery has perished. What we are now asked to believe is that the motley host which the crusade against slavery and rebellion brought together, and indoctrinated necessarily with loose notions on nearly all great questions of constitutional government, this crusade over, can be led against every other evil of the day, and can be used even to weed its own ranks of bad characters, some of them its most trusted leaders; to restore that reverence for the judiciary which it has been for years zealously destroying, that respect for the letter of the Constitution which it has found its own greatest hindrance; and to bring about the purification of the civil service by the use of a standard which, in the period of its greatest peril and glory, would have deprived it of its most valuable servants. This is asking too much of us. Peter the Hermit might as well have tried to get his hosts to go into the silk manufacture after the rescue of the Holy Sepulchre.

We do not say the Republican party cannot hold together long enough to re-elect General Grant, but it cannot be turned into a reform party, in the proper acceptation of the term, because a very large proportion of its members are not reformers, and do not believe in reform, and did not enter it or labor in it for the purpose of reform. Reforms will be effected by a party formed expressly for the purpose of making them, and even such a party will only effect such reforms as it deliberately sets its heart upon when it is organized. General Grant, we think, honestly intended to make reforms when he went into office, and a considerable portion of the party looked for them at his hands; but he found very soon that this was not what the party organization as a whole looked for at his hands, and he abandoned the attempt. The civil-service rules adopted in the last year of his term are simply a feeble effort to satisfy or quiet a section of the party which is in sympathy with the main body, but which does not control it. The real party leaders care nothing about the reform, and even oppose it, and they represent the Republican type, that is, are men devoted to keeping down the rebels and "securing the fruits of the war"—such as payment of the public debt, the protection of the negroes, and the rewarding of the soldiers and sailors.

The denunciation which is going on now of that portion of the party which does not believe you can put new wine into old bottles, or, to vary the simile, teach an old dog new tricks, and which wishes to construct a real reform organization, is the process which always precedes party transformation. One of the commonest fallacies in reasoning about matters of government is found in the assertion that the party in power would do very well if enemies and malcontents would keep quiet; but the problem before all governments and all parties is so to manage its affairs that enemies and malcontents shall be of no consequence. The test of success in government is ability to resist discontent and opposition. When the monarchists overthrow a republic, it is always amusing to be told, as we constantly are, that the republic would have done well if the monarchists had behaved themselves. The fact that the monarchists were able to overthrow it is the proof that the republic was a sham. The problem before all governments is to deprive opposition of its danger. So also it is amusing to be told that the Republican party would go on swimmingly if the opposition would cease from troubling. The fact that there *is* an opposition, and that it contains such men as Trumbull and Sumner and Schurz and Greeley and Cox, and a host of others of similar standing, is in itself a condemnation of the party organization, and a proof that the bond which kept it together is dissolving in the presence of new wants and dangers and aims and aspirations.

THE STATE OF THE SOUTH.

THE indolent excuse for our failure to understand the condition of the South is that nobody can very accurately comprehend it who has not been there to see for himself. With regard to troubles of a social character, this excuse is valid; but there are some plain statistical facts recently brought to light and published which it is our duty to recognize and confront. We must acknowledge that the condition of the South from almost every point of view is extremely wretched. The property of the eleven States in 1860, exclusive of slaves, was valued at $2,728,825,006. At the end of the war their increased liabilities and loss, exclusive of slaves, was $1,272,900,390, nearly one-half the assessed value of their property at the beginning of the war. This, however, was only the State loss. Secretary Belknap fixes the rebel debt, on the 1st of April, 1865, at $2,345,297,823. This estimate would make the total loss of the rebellious States by the war $5,262,303,554. This sum, it will be seen, is about twice the assessed value of all Southern property in 1860, exclusive of slaves. Five-eighths of Southern property is gone, and the taxes upon the remainder are four times that upon the original property before the war. How much of the money wrung from this impoverished country is expended upon public improvements, it is difficult to tell; but it is likely that most of it, and certain that much of it, goes to feed the vulgar and rapacious rogues who rob and rule a people helpless and utterly exhausted.

With the exception of Virginia and Tennessee, the debts of all the States have been increased since the end of the war. The near neighborhood of those communities to the Ohio may have had some influence in driving rogues further south. The real reason, however, is the comparative fewness of the negroes. The debt of Alabama in 1866 was $5,000,000; under the rule of the enlightened and disinterested economists who have undertaken to repair her finances, that debt has been increased to $24,000,000. In North Carolina the new government was established in 1868. In 1860, the State debt was $14,000,000; in 1865, $20,000,000; in 1868, $24,000,000; and in 1871, $34,000,000. Thus the increase of debt since the war has been more than twice the increase during the war—which looks as if war were a cheaper and more prosperous condition than peace. At any rate, reconstruction seems to be morally a more disastrous process than rebellion. Guile is the strength of the weak, and the carpet-baggers have taught the Southern people to meet rogues with trickery. The Ku-klux Committee, commenting upon their dreadful poverty at the close of the war, says that manifestly they must have at once succumbed under their loss of $5,000,000,000 had it not been for the benefactions of the North. It states that the Freedmen's Bureau has spent $13,000,000 upon Southern sufferers of both colors. This does not seem a considerable sum when we think that the increased debt since the war in North Carolina has been $14,000,000. Certainly, our charities have done less good than our carpet-baggers have done damage. The theory, of course, is that something remains from the enormous sums raised by taxation, that they have been expended upon needed public improvements. In North Carolina, it was alleged, the large subsidies given to railroads would encourage immigration. There has been no immigration, however; the bonds have been sold at a disadvantage; some of the money has been stolen, and a few of the rogues have been indicted. It is impossible to say how much of the sums raised remain to the States. The carpet-baggers have had it pretty much their own way. If they chose to rob, there was nothing to prevent them. Give men a chance to be tyrants or scamps, and there is no fear that some will not be found who will avail themselves of it. Here in New York, where we have all the rascals and all the plunderers within a radius of five miles, we know how long we have been in bringing the Ring to bay. The carpet-baggers have an immense extent of country to rifle; they do not buy the legislatures, they constitute them; they enact their own registration acts and vote their own supplies. The persons they rob are not of that apathetic and well-to-do class too indifferent to go to the polls, but people who could not go if they would.

All accounts agree as to the widespread misery and penury. In Mississippi, a large planter testified that it took all his cotton for the year 1871 to pay his taxes. It is South Carolina, however, that enjoys the unenviable eminence of being the worst-robbed State of the whole eleven. In the single county of Kershaw, possessing a population of only 11,000, there were 3,600 tax-executions issued. The taxation during 1870, $2,365,047, was more than the whole taxation on double the property for five years before the war. In order to change the fiscal year, they proposed to double this, and, in 1871, to levy a tax of $4,730,094; whether this law was executed we do not know, but the fact remains that it was enacted. Peculation and corruption are as universal as poverty and distress. In 1860, South Carolina paid for offices and salaries, $123,800; in 1871, the State expended on these $581,640. In two years, $1,208,577 67 have been paid out, for which no vouchers are to be found in the Treasury. According to the minority report of the Ku-klux Committee, the disbursements exceed the appropriations by $170,683. This report, though spoiled by some rather low allusions to "ebony legislators," "men and brothers," etc., brings to light some amusing facts. Money voted with which to fit up committee-rooms has been expended on the private apartments of the colored members of the legislatures. Their rooms were furnished with Brussels carpets, sofas, mirrors, etc. About seventy-five imported porcelain spittoons, bought for the South Carolina State-House, likewise adorned their private apartments. This fact seemed to affect the democratic minority of the committee even more profoundly than the vast robberies and excessive taxations. They remark, with rugged, Spartan simplicity, that they themselves, in "the splendid capital of the nation," had never had anything but "an article of common, plain, brown earthenware, of domestic manufacture." This striking disparity between fortune and desert does not excite in us any feeling of indignation against the negroes. Emerging from a long night of slavery and cruel bondage, who can grudge them their fantastic lease of liberty and luxury? Did not graver considerations check us, our humor would be to vote them State barbers and the most delightful of oriental baths. We suspect the truth to be that in the distribution of spoils the poor African gets the gilt and plush, the porcelain spittoons, the barbaric upholstery, while the astuter Caucasian clings to the solider and more durable advantages. The negroes by themselves would be but little to be feared; yet, in the hands of the carpet-baggers, they have been the unwitting instruments of most of the harm that has been done. The swindlers could not have so got the control of things without the help of the negroes. They have made numerically the largest part of the conventions and legislatures in South Carolina. The Convention of 1868, which drew up a State constitution, was composed of 72 negroes and 49 white men. This convention made provision for a levy of $2,230,950 upon the State, which would necessitate taxation at the rate of 6 per cent.; yet but 13 of the 72 negroes paid taxes. In the Legislature of 1869, there were twelve black and twenty white senators; eight of the twelve black senators paid no taxes. In the House, there were 86 black and 37 white members; 68 of the 86 black members paid no taxes. As things are at present, there seems to be no limit to the power of the carpet-baggers to plunder the South as they choose. The only ray of hope is in the passage of an act of universal amnesty. We have given the negro the ballot to protect him against his old master; we need now to give the white citizen the vote to protect him against the carpet-bagger.

Seven years have gone over us since the close of the war, and, instead of occupying this precious season with endeavors to re-establish prosperity and to sow the seeds of a peace which, in another generation, would ripen into good-will and forgetfulness, we have averted our eyes from the whole problem, refused to listen to the complaints of men whose hands we have tied, and have fallen back upon the lazy belief that in some way this great country is bound to go through. The unconscious syllogism working in the indolent

Northern mind seems to be: “Things are no doubt very bad—how bad, we haven't the time or the inclination to ascertain. Examination of such unpleasant matters, if a duty at all, is a disagreeable one. After all, the rebels have made their own bed, and they must lie in it.” Perhaps their sufferings are only the just punishment of their crimes; but at any rate, there can be no reason for giving over the criminals into the hands of the carpet-baggers. What services have these persons rendered the country that we should grant them the monopoly of robbing rebels? It would be better to levy tribute-money, and get some national advantage from the merciless exactions inflicted upon the Southern people. Let us make up our minds one way or the other—do we or do we not propose further to punish the rebel States for their rebellion? If we do, let us at once proceed to devise some intelligent means for that purpose. If we do not, let us make haste to protect society from the ravages of ignorance and rapacity, or give society the means to protect itself. We thought it worth four years of war to retain the Southern States in the Union, now we hardly deem it worth an act of Congress to preserve them.

WEALTH, DEBT, AND TAXATION IN THE SEVERAL UNITED STATES.

HITHERTO the official statements in respect to the wealth, industry, taxation, and debt of the several States of the Union, determined and published under the former authorities of the United States Census, have been received with great distrust by those most competent to judge of their value. When glaring errors are detected by a citizen of any State in respect to the points with which he is conversant, it destroys his confidence in the general summary. Such errors have often been noticed heretofore, but still the figures have been quoted by writers on finance and political economy, in official messages and in legislative assemblies, as if they “could not lie.” General Walker, the superintendent of the census of 1870, whose previous studies had led him to appreciate both the importance and the difficulty of getting at the truth, has bestowed an extraordinary amount of effort to secure, as the result of the ninth census, approximate accuracy on all these points.

As an illustration of the difficulty, let us take the estimate of property in the several States. Nothing is easier than to add up and publish the total of the grand lists or valuations upon which taxation is based in the several States. At first sight, this would seem to give us a true statement of the taxable property of the country. But a very little scrutiny indicates that in the different States these summaries are made up on totally different principles. In one State, the exempt property is different from that in another; again, it is usage in some States to put all property upon the taxable list at a very low rate, and then raise income by a comparatively high tax; while in others, property is estimated at nearly its real value, and so the apparent rate of taxation is lower; or, third, in some States moneyed corporations, like railroads, savings-banks, insurance companies, etc., are taxed by the State directly, and their property does not appear in the usual “grand list” of the State, while elsewhere it is thus included. Now, it will not do for the chief statistician at Washington “to doctor” the returns. It is his business to give us the facts as he finds them, and we are confident that no one could be more scrupulous than the present superintendent of the census to adhere with fidelity to this principle. But by an examination of the returns, the laws, and the usages, he can detect errors and inequalities of statement; he can refer these figures back to the States from which they come; he can gather reports more complete and accurate, from a national point of view, than those which are prepared to be read by the light of local tradition; and he can thus, if he will take the trouble, eliminate much which is deceptive, and approximate quite closely to the truth.

This effort, as we have said, has been made in the census of 1870, and the result is a table of the wealth, taxation, and public indebtedness of the United States, and of the several States and Territories, which is far more satisfactory than any which the country has ever received before. From an early impression of this table we propose to present some striking facts, with occasional comments, which may be of service to all who are studying the financial prosperity of the nation.

I.—THE PROPERTY.

It appears that the value of property in the several States and Territories (exclusive of that belonging to the United States) is almost exactly thirty thousand millions ($30,068,518,507), and that it is assessed at a little less than half that sum ($14,178,986,732). The real estate is somewhat more than double the personal property—the ratio being nearly that of 10 : 4·30. New York is the richest State, in the aggregate, having 6,500 millions of property; Pennsylvania comes next, with 3,808 millions; then Ohio, Massachusetts, and Illinois, which are nearly equal (each having over 2,000 millions). Only two other States come into the rank of “thousand-millionaires”—Indiana and Missouri; but New Jersey is close upon that figure. Nevada is returned as the State of least property; Oregon and Florida are not much richer.

But such aggregate figures are not all that we can desire. The relation of property to population is so interesting a question that we have taken the pains to compute from the tables of the census the following figures, which show the amount of property in each State (at its *true* and not its assessed valuation) in proportion to the number of inhabitants in each State. New York leads the list, but Massachusetts and Connecticut are in close company.

WEALTH, DISTRIBUTED AMONG THE WHOLE NUMBER OF INHABITANTS.

1. New York,	$1,483 27	20. Oregon,	$567 06
2. Massachusetts,	1,463 03	21. Nebraska,	563 26
3. Connecticut,	1,441 30	22. Maine,	555 35
4. Rhode Island,	1,366 28	23. Minnesota,	520 60
5. California,	1,140 15	24. Kansas,	518 36
6. Pennsylvania,	1,081 31	25. Kentucky,	457 46
7. New Jersey,	1,038 49	26. Louisiana,	444 51
8. Ohio,	838 73	27. West Virginia,	431 32
9. Illinois,	835 34	28. Tennessee,	395 89
10. Maryland,	824 37	29. Virginia,	334 31
11. New Hampshire,	793 66	30. Arkansas,	322 81
12. Delaware,	777 35	31. South Carolina,	294 99
13. Indiana,	754 58	32. Mississippi,	252 67
14. Missouri,	746 48	33. North Carolina,	243 39
15. Nevada,	732 72	34. Florida,	235 23
16. Vermont,	711 99	35. Georgia,	226 47
17. Wisconsin,	665 90	36. Alabama,	202 46
18. Michigan,	607 41	37. Texas,	194 30
19. Iowa,	601 03		

The reduction of the foregoing table to a map form is quite curious. The six wealthiest States (California excluded) are New York and its immediate neighbors—the three States of Southern New England, Pennsylvania, and New Jersey. In these six States and in California, the property per head amounts to over $1,000. This might be called “the metropolitan district.” Take the next twelve States, in all of which the property amounts to $600 and more to every inhabitant, and we have the contiguous States, Ohio, Indiana, Illinois, Missouri, Iowa, Wisconsin, and Michigan, which we may call the “old prairie district”; Maryland, Delaware, New Hampshire, and Vermont rank here, and so does Nevada, which stood so low in the rank of aggregate wealth. Take the thirteen States which stand at the lower end of the list, having less than $500 per inhabitant, and we find included the “old slave States,” Missouri, Maryland, and Delaware excepted. The five States which have not been mentioned (Oregon, Nebraska, Maine, Minnesota, and Kansas) rank between the old “slave States” and the old “prairie States,” having between $500 and $600 property for each inhabitant. Texas, which stands thirty-third in aggregate wealth, stands thirty-seventh, or last in wealth per head; and Florida, which stands last in aggregate wealth, stands three grades higher in wealth per head.

II.—RATE OF TAXATION.

The tables of the census give us also the aggregate amount raised in every State and Territory by State, town, city, and county taxation during the year previous to June, 1870. These amounts we have distributed through the number of inhabitants in every State, and also have ascertained its amount for every thousand dollars of property. It appears that Nevada is the State in which the taxation is highest per thousand dollars of property, and Illinois the one in which it is lowest. In the old “slave States” above referred to, where property is small in proportion to people, taxes are high in proportion to property, with the noteworthy exception of Texas and Tennessee. Texas has but a small debt, Tennessee has a very large one, and is doing but little, it would appear, to pay it off. The high rate of taxation in Massachusetts per thousand dollars of property and also per head seems to us noteworthy. It must be remembered by those who comment upon the figures, that by “every thousand dollars” we mean the real and not the assessed valuation.

RATE OF TAXATION (PER THOUSAND DOLLARS).

1. Nevada,	$26 34	20. Maryland,	$10 30
2. Louisiana,	21 85	21. Illinois,	10 28
3. Arkansas,	18 33	22. Georgia,	9 79
4. Mississippi,	17 86	23. Kentucky,	9 48
5. Maine,	15 36	24. Vermont,	9 07
6. Nebraska,	14 83	25. West Virginia,	9 03
7. Alabama,	14 77	26. North Carolina,	9 02
8. Kansas,	14 15	27. Indiana,	8 51
9. South Carolina,	13 30	28. New Jersey,	7 88
10. New Hampshire,	12 88	29. Connecticut,	7 83
11. Iowa,	12 62	30. Wisconsin,	7 67
12. California,	12 25	31. Michigan,	7 52
13. Massachusetts,	11 68	32. New York,	7 47
14. Minnesota,	11 57	33. Rhode Island,	7 31
15. Oregon,	11 26	34. Texas,	7 10
16. Virginia,	11 26	35. Tennessee,	6 79
17. Florida,	11 23	36. Pennsylvania,	6 44
18. Missouri,	10 82	37. Delaware,	4 30
19. Ohio,	10 52		

RATE OF TAXATION (PER HEAD).

1.	Nevada,	$19 30
2.	Massachusetts,	17 10
3.	California,	13 95
4.	Connecticut,	11 28
5.	New York,	11 07
6.	New Hampshire,	10 22
7.	Rhode Island,	9 98
8.	Louisiana,	9 71
9.	Ohio,	8 83
10.	Illinois,	8 59
11.	Maine,	8 53
12.	Maryland,	8 49
13.	Nebraska,	8 35
14.	New Jersey,	8 18
15.	Missouri,	8 08
16.	Iowa,	7 58
17.	Kansas,	7 33
18.	Pennsylvania,	6 96
19.	Vermont,	6 46
20.	Indiana,	$6 42
21.	Oregon,	6 39
22.	Minnesota,	6 02
23.	Arkansas,	5 91
24.	Wisconsin,	5 10
25.	Michigan,	4 57
26.	Mississippi,	4 51
27.	Kentucky,	4 34
28.	South Carolina,	3 92
29.	West Virginia,	3 89
30.	Virginia,	3 76
31.	Delaware,	3 34
32.	Alabama,	2 99
33.	Tennessee,	2 69
34.	Florida,	2 64
35.	Georgia,	2 21
36.	North Carolina,	2 20
37.	Texas,	1 38

III.—THE PUBLIC DEBT.

The census gives us the aggregate of State, county, town, and city debt in each member of the Union. This amount we have distributed over the population with the following results. In general, the difference between the older Northern States and the new Western and reconstructed Southern States is very remarkable. In Louisiana, at one extreme, the indebtedness is reported at $73 per inhabitant; in Texas, at the other extreme, the indebtedness is but $1 97 per head, but the Texan figures include only the indebtedness actually determined. The State is understood to be liable in a large undetermined amount. The indebtedness of Virginia includes the old debt of the State, no part of which is apportioned to the new State of West Virginia.

RATIO OF PUBLIC DEBT TO POPULATION.

1.	Louisiana,	$73 03
2.	Massachusetts,	47 49
3.	Nevada,	46 74
4.	Virginia,	45 64
5.	Tennessee,	38 80
6.	Maryland,	37 18
7.	New York,	36 46
8.	New Hampshire,	35 04
9.	California,	32 29
10.	Connecticut,	31 79
11.	North Carolina,	30 31
12.	Rhode Island,	27 32
13.	Missouri,	27 25
14.	Maine,	26 52
15.	Pennsylvania,	25 27
16.	New Jersey,	25 22
17.	South Carolina,	18 53
18.	Georgia,	18 37
19.	Kansas,	17 68
20.	Nebraska,	$16 98
21.	Illinois,	16 61

ENGLAND.

LONDON, March 8, 1872.

THE excitement produced by the misunderstanding as to the *Alabama* claims has to a great extent subsided. For some reason, or perhaps more probably for no reason, we seem to have made up our minds that there is no cause for anxiety. It may be that we are partly reassured by the apparent absence of any great excitement on your side of the water; or perhaps our calmness is due to the natural relapse from excessive tension and our absorption in matters of more immediate interest. When the American reply has been received, there may be a return of our earlier warmth. In any case, I fear that a more sanguine view of the probabilities of carrying out the treaty has had no share in calming our minds. Few people now expect that the arbitrators will be called upon to discharge their duties; though we should be exceedingly obliged to any one who would point out a satisfactory way of extricating both countries from the difficulty. The whole affair is melancholy and disheartening; but if both nations are as anxious as I believe them to be for a peaceful arrangement of the difficulty, it seems that only incredible stupidity on the part of their governments can avoid a satisfactory solution. But, then, governments are apt to be incredibly stupid.

Since I wrote to you last, the chief sensation has been produced by the Royal procession. British loyalty did its best to exhibit itself in the most brilliant colors. Britannia appears in all the comic newspapers in classical slimness of apparel, embracing the Royal family with immense effusion, and poor republicanism is symbolized by a clumsy low-browed ruffian, sitting in the sulks, and adorned with Bully Bottom's headpiece. The *Telegraph* surpassed itself in unctuous rhetoric, and declared (I quote from memory) that every Englishman would preserve as a sacred relic the gracious letter in which her Majesty thanked her people for their manifestations of loyalty, that in his last illness he would clasp it to his bosom, and, dying, would hand it on to his children as a priceless heirloom. I, too, was there! will be amongst his last words; and the London citizen will cherish the memory of the 27th of February as Henry V.'s followers observed the feast of St. Crispin Crispian. My own copy of the newspaper containing this burst of rhetoric has, I regret to say, mysteriously disappeared; so has the thrice-sacred document which occasioned it; and my posterity will therefore be compelled to get on as well as they can without their ancestor's copy. I hope they will be as happy as the circumstances will permit. Meanwhile, it is certainly true that the ceremony was as imposing as it could be made by all London turning out of doors on a fine day, and by a lavish display of cloth and red flags, and by very hearty acclamations. The effect of cramming all the movable part of a population of three millions into a couple of narrow streets is startling, and not altogether agreeable The correspondent of a French paper, for example, was able to telegraph that the success of the demonstration was undeniable—seventy people killed and wounded. Enthusiasm seems to be developed like heat by physical pressure, and round Temple Bar they were both at a very high pitch. A venerable ecclesiastic was heard to murmur that only one thing was there required to make the effect perfect: if, in the good old fashion, that historic monument had been ornamented by the heads of Sir Charles Dilke and Mr. Odger, nothing could have been added to the decorations. One of the most grotesque illustrations of the popular spirit at this point was a letter which appeared in the *Times* with the rather startling signature, "The Eye Above that sees all things." The writer, it seems, had remarked that at a momentary halt which took place on the Queen's reception by the city officials, Her Majesty had taken the hand of the Prince of Wales. He observed that this gesture might give rise to many reflections; and for his part, he considered it not impossible that the Queen was at the moment putting up a silent prayer to heaven—which he seemed to think was a touching instance of royal condescension. One really pities the poor mother exposed to this kind of million-eyed inquisition. However, the crowd cheered, and waved hats and handkerchiefs, and crushed ribs with abundant enthusiasm; and it is even stated by one observer—those who know the British officer may believe him if they please—that the "bronzed warriors" at a certain military club were affected to tears. One rather mean advantage was taken of the enthusiasm by an enterprising circus, with a real live lion and a couple of elephants, which drove solemnly through the streets in the wake of the royal procession, and received immense applause. What amount of sincerity underlies these demonstrations of rather noisy enthusiasm need not now be discussed. Conservatives say that Mr. Gladstone's blunders and the excessive use of petroleum at Paris have brought about a reaction in their favor, which has seized this opportunity for manifesting itself. We shall see in due time; but, meanwhile, it may certainly be said that for some reason or other recent elections have been going terribly against the Government. If the current of feeling does not change, and a dissolution takes place in a few months, it seems not impossible that we may witness what has not been seen for many years, a Conservative majority in the House of Commons, and perhaps, on the other hand, an increase of the thoroughgoing Radicals at the expense of the Whigs.

But I must not allow myself to lapse into politics. The American difficulty and the Royal procession have ceased to be in the order of the day. Once more we are entirely absorbed in the amusement provided for us by the lawyers. The great Tichborne case has come to an end, after lasting 103 days; and the conclusion has caused the flagging excitement to blaze up again for a moment. The catastrophe has indeed been expected for some time. The attorney-general has redeemed his reputation by his reply to the claimant's case. It was generally supposed, though the public are perhaps not qualified judges, that he had failed in his cross-examination, and the effect at the time was certainly to make people believe in the person who now appears to be demonstrably a perjured cheat. The story, however, when put together by the attorney-general with due attention to dates, explained so satisfactorily how Orton—which now appears to be the true name of the pretender—managed gradually to acquire scraps of knowledge from one set of people, and by using them judiciously to impose upon others, that very little doubt was left as to the real nature of the case. The finishing blow was put by the discovery that the true Sir Roger had been tattooed when at college, and that the claimant could produce no corresponding marks. The case is not absolutely finished yet, for, as Orton is committed to take his trial for perjury, we shall probably have a resurrection of it to some extent. It is said to have cost the defendants £100,000 or thereabouts. The estate can bear it, as there has been a long minority, and the present baronet, when he comes to years of discretion, will have some £25,000 a year or so (I speak a good deal at random), which will be enough to keep him out of the workhouse. This being so, I think that but for one circumstance the general feeling towards the claimant would almost amount to gratitude. He has provided us with small-talk for the last year, and owing to him the newspapers have been more interesting than most sensation novels. If Mr. Browning would make the story a foundation for one of his dramatic sketches, we should have a poem more interesting than "The Ring and the Book." Not only the principal but the subsidiary actors in the drama have been well deserving of careful study, and I am half inclined to expect that the trial will produce a visible influence upon the future of English fiction. It should increase our scanty stock of conventional characters by two or three admirable types. The archæologist, the governess, and the black servant, who appear to have crammed him with the necessary information—whether actually in the secret or not—were all of them studies in their way. And if the military witnesses who swore to his identity with extraordinary confidence were not intellectually brilliant, it is nevertheless curious to observe some of the laws of human gullibility. The one fact which prevents one from subscribing to an Orton testimonial in gratitude for the amusement we have received, is his atrocious attempt to take away the character of an innocent lady by swearing that he had seduced her. After all, when you have begun by elaborate fraud and forgery to secure the possession of an estate which does not belong to you, you are apt to be led into some decidedly dirty actions. I ought, I believe, to end by drawing some moral as to the defects of our system of jurisprudence, but I am not enough of a lawyer to enter into the matter fully, and I have a suspicion that if I did I should be a trifle dull.

I find that I have almost forgotten to mention an incident which has been thrilling to loyal bosoms. We were all shocked the other day by the news of the attempted assassination of the Queen. That at least was the name given to a burlesque proceeding by a youth who is too idiotic to be called mad. When a lad presents a petition to the Queen, holding in his hand at the same time a pistol which is not loaded, and which is so constructed that if it were loaded it could not by any possibility go off, it is perhaps rather a misuse of language to describe his performance as an attempt at assassination. In fact, it would have been very difficult to bring his action under any criminal designation were it not that, unluckily for him, an act was passed during the excitement produced by some of the earlier and rather more serious attempts on the Queen's life, making it punishable to put the Queen in terror by threatening her with a weapon. I forget the precise terms, but they are such as to include this preposterous youth. That he should be punished is, of course, very desirable ; but one is inclined to hope that the punishment will not be more severe than necessary. The incident is already nearly forgotten by every one but the person immediately concerned, and does not in fact deserve serious notice.

Correspondence.

THE REMEDY FOR LIBEL.

TO THE EDITOR OF THE NATION:

SIR: In your article in the issue of March 14, 1872, you show pretty conclusively that a man has practically no legal redress whatever for an assault made upon him by a newspaper, infamous and groundless though the charges may be. I am curious to know whether you do not overlook one method of redress which might, in some cases at least, be the means of punishing offences past, and deterring from similar ones in the future. I refer to what I confess is the most brutal, most uncivilized mode of redress—a sound personal castigation. When all legitimate means of resistance against an unjust and oppressive government fail, when regularly-constituted courts of justice are not to be had, men have always had recourse to revolution and lynch law, and the general voice of mankind has pronounced their course justifiable.

If, then, an editor "six times a week calls you a thief," and it is utterly impossible, as the law stands, to obtain redress in a legal way, would you consider it very unjustifiable to give him a severe practical illustration of the fact that "forbearance has ceased to be a virtue"?

The man who is mean enough to stab you in the dark by an anonymous newspaper charge, and then refuse either to prove it or produce his authority for making it, can only be reached through his coupons or his cuticle. If the former cannot be attacked, is it not fairly allowable to try the latter course? E. R. G.

FLUSHING, March 19, 1872.

[This is a very old and knotty question, but we think it has pretty generally been decided in the negative, for reasons somewhat analogous to those which make the lawfulness of attempts at revolution depend on their success. In other words, the great objection to the punishment of libels by personal violence is the great uncertainty which must in most cases prevail as to the issue of the struggle. If the person libelled is small, or weak, or unskilful, he will probably be pummelled instead of pummelling, and thus have the damage done to his reputation aggravated by the damage done to his body—a result which would be in the highest degree offensive to every one's sense of justice. If, on the other hand, he gets the better of the editor, and really castigates him, it seldom does any good as regards the libel, because it is nearly always the editor who acts as the historian of the encounter, and his version is pretty sure to represent the affair as at worst a drawn battle, which, to an assailant, is equivalent to a defeat. The libellee may perhaps get out one "card" containing his own view, but the editor's story, by much repetition, is pretty sure to triumph, and be generally accepted not only by the contemporaneous public but by posterity. Moreover, it is a very nice question in casuistry, whether a big man, of a pugilistic turn, is justified under any circumstances in attacking a little one with his fists or with a stick. It seems as if it was cowardly to do so, unless he could decide by it some point of public interest, which, of course, is not to be looked for. It may be also said, with tolerable certainty, that pummelling editors would not diminish libel; it would simply brutalize the libellers, or make muscle a necessary editorial qualification. In France, it is the custom to challenge editors for offensive language, and the result is that their language is nearly always offensive, and they are constantly ready to fight. We confess, however, that the subject is surrounded with difficulties; all we can say with any positiveness is, that nobody ought to attempt the corporal punishment of an editor without having previously seen him.—ED. NATION.]

Notes.

THE second part of the Third Annual Report of the Massachusetts Board of Railroad Commissioners deals with the Revere accident and its effect on the future management of railroads within the State. Reviewing the circumstances of that shocking disaster, the Commissioners clearly expose the culpability of the Eastern Railroad in a number of essential particulars of management, but they also connect the accident with the long-standing rivalry between that corporation and the Boston and Maine—a parallel road whose consolidation with the Eastern is forcibly urged in the Report. The Commissioners were led to examine the comparative safety of life and limb on Massachusetts railroads and those of England and the Continent, and the result of their enquiries is as satisfactory as the difficulty was great in procuring in this country any reliable statistics pertaining to casualties of the kind in question. One instance of this difficulty is worth remarking: no data could be obtained from the companies organized to ensure travellers against injury from accidents. "Either," says the Report, "these associations conducted their business on a very vague calculation of chances, or they were unwilling to impart their information." In Massachusetts, very imperfect statistics existed from 1847, and they were so suspicious as to be abandoned in favor of special returns from the railroad companies, showing "the whole number of cases in the ten years, 1861–70, in which any sum of money had been paid to passengers, as the result either of proceedings at law or of voluntary compromise on account of personal injuries received." These statistics, after some sifting for notoriously trivial cases, still afforded an adequate and rather severe test, applicable in fact with justice, as the Commissioners point out, only in comparison with the statistics of Great Britain; and it appeared that the number of persons killed and injured from causes beyond their own control was, on the railroads of

Great Britain, one in		430,000
Massachusetts,	"	1,475,000
Belgium,	"	1,600,000
Prussia,	"	3,000,000
France,	"	4,000,000

—the strictness with which the Continental roads are managed being such as would not be tolerated here or in England. Examination also showed that employees fare no worse in Massachusetts than abroad, and that the causes of accidents have been very similar on both sides of the Atlantic. From the practice of unlawfully walking on the track "more deaths and cases of personal injury have arisen than from all the train accidents which have ever occurred" in Massachusetts. Perhaps, now that the Commissioners and the railroad companies have agreed on certain improvements—some, to be sure, that can only very gradually be adopted—the Massachusetts roads are not far behind those of other States, as they unquestionably were at the time of the Revere disaster. The Report contains a classified tabular statement of accidents for the year ending September 30, 1871, which we suppose will be regularly continued.

—In considering the mischiefs and disgraces heaped upon this community by Hall, Tweed, Sweeny, and their allies and underlings, too little attention has been given to one of the most disgraceful and one of the most permanently injurious effects of our suffering ourselves to be bound, hand and foot, by our stupid masters. Stupid they were, for we must not forget that they were to all intents and purposes ordinary robbers, not half so clever as half the counterfeiters now in Sing Sing or still at large, and that they got their thirteen millions of New Court-House money, for example, because they and their confederates owned some judges whose official places, like Tweed's and Hall's, were the gifts of a horde of the most illiterate and degraded voters in the Northern States. A superstructure of simple robbery, with the corner "gin-mill" for its corner-stone, was the fabric which Tweed and Connolly reared, and that is not a fabric which demands extraordinary intelligence for its construction, but only cunning in the architect, dense ignorance in the artisan, and purchased impunity. But if we take a case in which real ability was demanded of them and their friends, and look at what Mr. Peter Sweeny and ex-Judge Henry Hilton have succeeded in doing with Central Park, we shall be able to estimate more accurately the mental calibre of our late rulers. We can all remember how long and hard was the struggle before the corner-grocery aldermen could be induced to permit the city to have the park at all. Years of the labor of our most public-spirited citizens were required to overcome their ignorant demurring, and when at last the plan succeeded, it seemed really no less than providential that not only had it succeeded, but that the work had been entrusted to men of ability and of educated taste as well as of probity. What the commissioners accomplished everybody knows who has visited the parks of the great cities of the world; we had in our park something to which the New Yorker might point with unalloyed pride as a worthy monument of the public spirit, the taste, and the beneficent charity of the chief among American cities. It afforded to many thousands their principal opportunity for the enjoyment of the beautiful; it brought the country into the city, and afforded a means of the most innocent enjoyment to countless families; it was a constant educator in taste; it was an admirably finished work of art; and its artistic plan had been carefully studied with a view to fitting the park for these ends which we have indicated. All this the Sweeny-Hilton management has marred; and some of the injury that has been inflicted upon the community by these men is for years irreparable. The money which the Ring has pillaged from the city we can make shift somehow, well or ill, to afford; but we shall have forgotten that we lost it, or we may even have got some of it back again, before we shall have repaired the consequences of entrusting a principal treasure of the city to the gentlemen who made over Washington Park, and dismissed Mr. Waterhouse Hawkins.

—The dismissal of Mr. Waterhouse Hawkins by the Park Commissioners fairly illustrates the competency of Mr. Sweeny and his friends for the office which they captured. Mr. Hawkins's skill in what may be called fossil zoölogy is very great, and has been thoroughly tested in England and in this country. Some remains of extinct species of animals having come into the possession of the old Board of Park Commissioners, whom the Sweeny-Hilton board superseded, Mr. Hawkins was employed to "restore" them—that is to say, to supply missing parts, and construct a complete skeleton of each animal. It need not be said how valuable these specimens would have been, and how appropriately they would have been placed in the Park museum, where daily, in pleasant weather, hundreds and thousands of bright-minded children indulge their inquisitive curiosity. But Mr. Sweeny, who, as an untutored Irish boy, had not learnt much about fossil zoölogy, and who, as we all know to our cost, has been employed during most of his maturer years on "live issues," "didn't believe there ever were any such animals," and, after ordering Mr. Hawkins's dismissal, he actually had the specimens destroyed! However, a very good park may be had without fossil remains, and the public may more easily forgive the Sweeny-Hilton board for this particular piece of ignorant barbarism than for the brute vulgarity and atrocious ignorance with which they have attacked other features of our beautiful "picture on the ground." Mr. Olmsted, in one of his reports on the condition of the Prospect Park in Brooklyn, or in some lecture in which he refers to that splendid public work, speaks of the numerous little picnic parties, composed of mothers and their children, who, in the summer-time, may be seen enjoying themselves on the grass; and he tells us, if we recollect right, that he has often known mothers to express, with tears in their eyes, their gratitude for the opportunity the Park gives them to escape with their children from the stifling heat and the unwholesome air of the city houses. It was with thoughts of these people, and indeed of all denizens of the dusty city, the rich as well as the poor, that Central Park was planned and carried to completion. It was designed to make a park in the English landscape-gardening fashion, as we may call it, to distinguish it from the French fashion of laying out grounds, which is what would seem to have been had in mind mainly by the Sweeny-Hilton board, so far as that board had any intelligent purpose at all. That is to say, instead of making paved places, and places with trees in formal rows, where people could sit on benches and look at equipages, the original architects of our Park meant to make it a spot of country in the heart of the city—for the heart of the city the region of the Park will one day be. Of necessity there were to be some strictly architectural effects, as distinguished from the effects of landscape-architecture proper. The reservoirs, for instance, which already were on the ground, had to be accepted, and perhaps the best way of blending their formality with the graceful beauties surrounding them was the constructing of buildings. So, too, at the lower entrances, it was designed that the spectator, as he left the city pavements behind him, should be somewhat gradually led into the rural scenery of the middle portion of the Park and on to the wildness of the upper portion. But, in general, the Park was to be in distinct contrast to the busy and noisy world outside, and our New York readers will all bear cheerful and grateful testimony to the skill with which this original design was carried out. But now this Sweeny-Hilton board have destroyed a great part of the work of years, and have done much to defeat and ruin the labor of the designers. Last summer, for example, one might almost any day see loads of boughs hauled out of the Park—the spoils which Judge Hilton's workmen had lopped from screening groves, from trees which had been studiously selected because of their being well feathered with lower boughs and adapted to the requirements of the site. The great defect of the Park grounds is that they are too narrow, extending only from the Fifth Avenue to the Eighth, and careful planting and fostering of the trees and shrubbery, in a soil not too well adapted for the growth of large trees, were necessary if the requisite seclusion was to be had. These trees, despoiled by the late Commissioners, are hurt beyond remedy, and it will be long before their place can be supplied. Vines, too, which had been set out to clothe bare rocks with green, have been stripped off and carted away; and the careful inspector of Judge Hilton's operations, after seeing the tasteless method of his plantings, the degradation of graceful wildness into gaudy flower-bed gardening suitable for Tweed's or Woodward's gardens at Greenwich, the Frenchifying of the main features of the landscape, might almost wonder that each boulder was not blasted and removed, all the paths straightened, and the tree-trunks whitewashed up to a certain height. Indeed, we recently noticed within the Park limits something like this, and it struck us as being not unfairly typical of the whole Sweeny-Hilton management on a rock in the Upper Park we noticed a painted invitation to the seeker of rural pleasures to buy Dr. So-and-So's "Golden Remedies." If this seems to any one unwarranted severity, we can only say that it does not seem so to us, and that the quack-medicine rock—which was indeed nearly outside the Park, but still within its limits—symbolizes very well, to our mind at least, the spirit in which the Park has latterly been managed. It is for its symbolical rather than its literal weight that we mention this fact. The difficulty in speaking about our late masters is to be severe enough. A literal description of them—let alone a satisfactory expression of the feelings which their sordid and vulgar tyranny inspires as one thinks of it—would have to be couched in language the violence of which would offend everybody and partly defeat its own object. What decent person can think with any composure of Hall's *Leader*, his mountebank impertinence, and his "perhaps exorbitant charges"; of Tweed's millions; or of Sweeny's "statesmanship" and "personal" honesty? However, so far as concerns the Park, we are now done with all these. There is no harm, though, in thinking of it now and again, and letting its injuries and defacements help to keep alive in us the contempt and indignation which are owed the late Park Commissioners by all who are fond of the Park.

—Senator Hannibal Hamlin will for some time to come bear a little watching from Mr. Sumner or any other of his fellow-senators who may have any knowledge of the fine arts, for he gives notice of an attack on the Treasury contemplated by him in the interest of Mr. Fisk Mills. In the interest, too, as we suspect, of Mr. Clark Mills, the father of Mr. Fisk Mills, and the author of some pieces of statuary for which Congress has paid out ten times or a hundred times more money than any private person, for example, would pay for them, unless it were some public-spirited private person who wished to remove them to the bed of the Potomac River, and there hide them away from the gaze of men. Mr. Fisk Mills is a young man who may, for anything we know, have made a portrait bust or two; but we are certain of his having as yet made nothing that justifies him in asking Congress for fifty or a hundred thousand dollars of public money as compensation for loading us with a group of statuary "to commemorate the late epoch in American history." And the senator from Maine has at no time given proof that he knows anything more about sculpture and sculptors than we know about log-rolling or tallow-rendering—industries as to which if we should speak with any show of authority we conceive that we should lay ourselves open to the charge of impudence. Suspicion is justified in being even extremely uneasy in this case, and we shall make bold to suggest that careful enquiry would probably inform us whether or not Mr. Clark Mills, whose work we all know, does not just at present feel a natural delicacy about asking for any more money from the United States Treasury, out of which he has already had a good deal; and whether or not, in the event of Mr. Fisk Mills getting the fifty thousand or hundred thousand, or whatever it is, Mr. Clark Mills is to have anything to do with designing the group which is to be; and whether or not Mr. Clark Mills is to get from Mr. Fisk Mills any of the money which we are to pay him for the same? In case these questions are all answered to the satisfaction of people who think Mr. Clark Mills one of the worst sculptors that this earth now contains—which is saying a good deal, because, for one thing, the world is wide, and, for another, sculpture is in rather a bad way and everywhere languishes—it will then be time to enquire if there is not too much reason to suspect that Mr. Fisk Mills is the true son of his father, and to demand of him some rebutting proof that he has any comprehension of the "late epoch in American history," and that he can embody his conception in any commemorative group which will not be another laughing-stock for the connoisseurs.

—The discussion of the principle and methods of proportional representation has advanced so far that it is seen that the adoption of it will not be opposed by the majority in power for the time being; and, secondly, that more attention should be bestowed on the method than on the principle by reformers who really seek the introduction of the system in any given place or country. The unscientific and uncertain method known as cumulative voting has made most headway thus far, owing principally to the simplicity of the voter's part in it, but also to ignorance of far better methods of equal or almost equal simplicity. For political purposes, in spite of the example of Denmark, the Hare system appears to be too complex for the popular understanding, and calculated to arouse suspicion, if not actually to increase the chances, of hocus-pocus in counting the votes. The Geneva Free List, in its latest modifications, has hitherto had most to recommend it as a practical and tolerably elastic measure. Mr. Walter Baily, however, author in 1869 of "A Scheme of Proportional Representation," not unlike the Swiss, has just published another pamphlet on "Proportional Representation in Large Constituencies" (London: William Ridgway), which perfects his scheme in the direction of Mr. Hare's, and leaves little to be desired. The fundamental difference between them is in the "quota"—the number of votes indispensable to elect a candidate. In Mr. Hare's system this number is obtained by dividing the total polling by the number of candidates to be chosen; in Mr. Baily's, by making the divisor one more than the number of candidates. Mr. Baily's quota is consequently the lesser of the two. That this will make a considerable difference in the result, any one may discover who will re-count, according to Mr. Hare, the polling tabulated on page 13. The other essential feature of Mr. Baily's plan is that only those tickets can be voted for at any election which have been publicly registered beforehand—by party managers or individuals. He also proposes that some expense (or at least a conditional deposit) shall attend the registration, in order to check frivolous nominations. The counting has this great advantage that, once the number of votes cast for tickets is ascertained, anybody can perform the rest of the process for himself, thus putting cheating at this stage out of the question. In like manner, in case of withdrawal of a candidate after election, the re-counting for his successor can be done by any one.

—One of the consequences of the Franco-German war most to be deplored, in a literary and scientific point of view, was the suspension of M. Vivien de Saint-Martin's admirable annual review, called "L'Année Géographique," in which the travels by land and sea, the explorations, and the geographical publications of the year were epitomized and recorded in the most lucid manner. Its publication was begun in 1863, and the eighth volume appeared in 1870. In his preface to the series, the editor recalls the conversation between Goethe and Napoleon at Erfurth in 1807, in which the former is reported to have said, apropos of the scientific genius of France: "What characterizes your nation, sire, is not only urbanity, *esprit*, and a sympathetic disposition, but an ignorance of geography." "In fact," remarks M. de Saint-Martin, we must admit that geography is not precisely the brilliant side of our national education"; but he adds a consideration, to the justice of which all must agree: "Ce qui nous manque, ce n'est pas la science, c'est la diffusion." This it is which all Captain Burton's translators, unaided by the primary school-teacher, have been unable to effect—"diffusion" in every branch of knowledge. We incline to think, too, that in the past decade, in spite of M. de Saint-Martin's efforts, even the "science" of his countrymen has retrograded. In the report which MM. Himly and Levasseur, as a special committee, have just submitted to M. Jules Simon, the Minister of Public Instruction, it is stated that professors of history in the faculties of letters seldom enter the domain of geography; and that at baccalaureate examinations the answers of the candidates in history are insufficient and in geography almost nil; while in secondary instruction there is a lack, sometimes total, of globes, maps, and text-books, and the professors are unprepared to teach geography, which therefore scarcely forms a part of the programme. The committee recommend reforms under fifty-five heads, prominent among which is the normal-school training of instructors of all grades in geography. The full text of the report will be found in the official bulletin of the Department of Instruction. M. Levasseur has also issued an independent brochure, setting forth the importance of the study of geography and the attractiveness which it might have if properly directed ("De l'Etude et de l'Enseignement de la Géographie." New York: F. W. Christern).

—Professor von Sybel has delivered at Bonn a lecture on "What we may learn from the French," which ought to be grateful reading to that people. He began by saying that this might seem a strange subject to his countrymen, whose armies had so effectually vanquished the French, but all the more was it necessary to enquire what causes had brought about the downfall of a great empire, and whether any of the same elements of weakness exist in Germany. The enquiry he proposed was still further necessary, in order that Germany might not acquire that contempt of her neighbors which had cost France so dear. To avoid future collisions, also, a mutual comprehension of each other's race-characteristics was indispensable, since "it is with man as with his language: one must learn French in order to understand the French"—an axiom, *mutatis mutandis*, which has not been accepted in France. The lecturer first pointed out the common error of opinion that people of the Latin race are less industrious and economic cultivators of the soil than the English and Germans, for example, and asserted that almost nowhere had such improvements in agriculture been made during the past century as in France in recent times. The same superiority was visible also in all kinds of handicraft; and the value of names in politics was curiously shown at the first World's Fair in London, in 1851, where it was remarked that aristocratic England was distinguished for its vast quantity of cheap goods designed for popular consumption, but democratic France for its splendid articles of luxury and adornment. The grand difference between French and Germans is in the stress they respectively lay on the outward form and on the substance of things. In social intercourse this is clear enough, and not wholly to the advantage of the Germans; in literature, it is equally visible, with this singular result: that in Germany every author of note writes in a style peculiar to himself, so that he can hardly fail to be detected by a person of any discernment, while in France this would be possible in the case of only a very few writers. On the whole, learning and science have reached about the same pitch of development in both countries, but in Germany popular education has been carried much further, and is far better grounded than in France. From a political point of view, the national trait of the Germans is the striving for personal independence and individuality; of the French, the demand for fixed and equal regulations: above all things, the former seek freedom, the latter equality. On this point alone do all Frenchmen agree; but the equality they insist upon is easily perverted into that bastard equality which demands that every man, without distinction, shall have an equal share in this world's goods—in riches, power, and happiness.

—A highly valuable contribution to the history of art in Italy is Demetrio Salazaro's "Studii sui Monumenti dell' Italia Meridionale dal iv. al xii. secolo." The author is the inspector of the Pinacoteca in the National Museum at Naples, and has made most diligent investigation of the remains, in painting, sculpture, and architecture, of the art of the period above-mentioned. The chief importance of his discoveries, as testified by the Chevalier De Rossi, is in establishing the unbroken continuity of Italian painting, and the falsity of the vulgar belief, which Vasari was the first to formulate, that from the fifth or sixth century to Cimabue and Giotto the art was dead. Two parts of Salazaro's work have thus far appeared, containing the introduction and the illustrations of Naples and Badia—chromolithographs, four in number, and admirably executed in all respects. Two of these are from fourth and sixth century frescoes in the Naples catacombs, a third from a fourth-century fresco in the church of St. Severo, and the last from a mural painting of the seventh century, in the cemetery of Badia, near Majori. The Government has given its support to this meritorious undertaking. Another work, having regard to Italian unity, we may briefly mention here as a sign of the times rather than as being, like the foregoing, of direct interest to artists and architects: a lecture delivered last year at the Venice Institute by Pietro Selvatico, and subsequently printed, on some necessary reforms in architectural instruction ("Di un migliore Avviamento necessario agl' Insegnamenti pubblici dell' Architettura in Italia").

STORY OF THE PLEBISCITE.*

IT is early to take the subject of the Franco-Prussian war out of the region of *études* and contributions to history, and try to fix it in the plane of permanent literature. It is but early for this, yet Messrs. Erckmann and Chatrian have succeeded, before the subsidence of the turmoil, in getting a quiet point of view, and their work has tone as a picture and charm as a story. It is, however, a pamphlet, and seeks influence as an enemy of submission to Prussian rule in the two ceded provinces. In addition to the ancient and effectual hate of its authors for the Bonaparte family, this little book plants a seed of bitter distrust of everything German, which may thrive beside the anti-Napoleonic feeling in the classes where its predecessors have been welcomed. The narrative moves through events still dripping with the most recent horror, and in several places only by a miracle escapes tragedy and fine writing; but our authors know the ground on which they are strong, and always by a dexterous turn evade issues that threaten to be catastrophic. The garrulous story is reeled off with a motion almost homely enough for Defoe, though it is more conscious than Defoe of its own simplicity. For my part, says the narrator simply, I was the maire of Rothalp, a fine large village near Phalsbourg in Alsace; my name, Christian Weber. "I had received the order from his honor the sub-prefect to give notice of the plébiscite, and to engage all well-disposed persons to vote *yes*, if they wished for the preservation of peace; for that all the riff-raff were going to vote *no*, in order to have a war." The 7,500,000 *oui* confirmed the dynasty. Prussia selected a Hohenzollern for the Spanish throne, and in a turn of the hand our provincials, who had meant to roar with the sucking-dove, found that they were victims, and that their voices formed the clamor of the brazen bull of war. On this, the rustic allegiance to the "honest man," which was nothing but the selfishness unalloyed and unfathomable of the French peasantry, was disturbed, and it yielded at the first levy for troops.

Our good mayor (as we may for the moment translate his style of office) spares his son to the army, while he loses his assistant in the mill which gives a basis of worldly prosperity to his civic honors. Jacob dons uniform and is off. "Come, father, I am going. Don't forget to let up the sluice in half-an-hour from this, for the water will be rising." The apprentice, a likely young German from across the border, who has served with punctuality and reticence, appears with his knapsack strapped on, announcing for the first time that he is in the landwehr. Our worthy Christian begins to perceive the cloven feet under these expressionless German faces, so silent and so deep. "The young clerks go about our country. You may say anything to them; they never answer an employer back. They are good hands, and not dear. But at the first sign, they go home yonder to be kicked, and it is nothing for them to shoot their old shopfellows with whom they have been breaking bread for years." Before his tale is ended, indeed, good Christian Weber becomes entirely hallucinated on the subject of these German domiciliaries, giving them the dignity of organized spies, who shadowlike plant themselves in French confidence, learn French arts, overrun the land like myrmidons, and report to the warrior-policeman, Von Moltke. The father mourns the absence of his son and the recusancy of his servant with feelings kept lively by his own added labors in the mill. The French conscripts are delayed long at their reporting stations, waiting for muskets, without pay, plunging their hands in their pockets, and eating their heads off at the expense of their relatives. It is just the state of things to sow in the rustic mind grave misgivings of the military efficiency of government. "I thought that an emperor who sends for the young lads in harvest-time ought at least to support them, and not leave them at the charge of their parents." Money, however, is doled out to Jacob, to keep him in idleness, while "I, at my age, was forced to carry the sacks, and nobody to help me but the old journeyman miller Donadieu, with his two ruptures."

The war follows, told with the same circumstantial garrulity. The view is that of the distracted little magistrate of a Bœotian village, blamed by his neighbors, who turn on him for misdirecting their votes; hectored by the invaders, who force him to publish the most exhausting requisitions; and getting his news through the Belgian journals, the narrative of a fugitive Turco, or the boasts of the Prussians. There is a good scene of the burial of his savings under the mill-sluice, at dead of night, his old wife assisting. Other scenes are entirely too morbid in tone, too palpably painted with an animus, to carry weight with impartial minds. There are incidents in the long journey of the wretched mayor—forced to drive his own team with the enemy's forage as far as Montmédy; starved, insulted, cuffed, and shaken by his gray beard; and afterwards, in his escape at Jametz, and spectral reappearance among his friends, incidents quite overstepping that modesty of nature which the authors, when not in a passion, know so well how to preserve. Details of the behavior of the Prussians while in occupation are also given, which, even if they may have occurred in a single case here or there, should undoubtedly have been rejected from a representative picture, according to the most indulgent rule for selecting specimen instances. The work finally etches out such an image of the German soldier as hardly a sickly Roman parasite of the basest ages could have drawn after a sound whipping by the Goths. We are made to see a creature of hideous blank face, and flat, silent foot, servile in discipline, intolerable in oppression, educated into finished stupidity, scattering suffering without knowing it and insult without enjoying it, befouling churches, overriding dignities, and wantonly ruining all it cannot steal. It is a strong figure, but it is bitten in with an acid that overdoes its work. Charges are made which, put as they are into the mouth of a personage elaborately dull, are seen to be the very foolishness of venom.

The figures of the novel which are not meant to take on such phantom significance are far better, as they are more human. The poor old hero himself, the shuttle of such an intricate adversity, whose woes include even his deposition by a time-serving, Prussian-wheedling rival, makes a stronger picture. There is a cousin Georges, who has been to Paris, and represents a man of the world, whose portrayal is less to be admired, as he makes no use of his wisdom except to utter, in the form of prophecies, the bits that Messrs. Erckmann and Chatrian have been taking from the newspapers. But the daughter, Gredel, is a type of which we could have borne a fuller display. She is a distracting union of the French and German characters, and, doubtless, a real live Alsatian girl. From the moment when Gredel finds the old wardrobe thrown open, and the jealously-watched receptacle of savings gone, she begins to pester her parents for the locality where her dowry is hidden. She "nags" them about this without a moment's weariness to the end of the story. She tyrannizes like a shrew over the soldiers billeted in the house, making their lives an anguish, and, on one piquant occasion, discharges a hatchet across the room at a Prussian who has been rude to her father. When anything frightens her, she takes to the woods, with a cow or two, on whose bounty she lives comfortably for any length of time. She never ceases to slave for her father, to tend his house like a genius of order, to tease and outrage him, to embrace her distasteful lover before his eyes, and generally to override him so dreadfully that he is always running at her, or running away, or looking for his *nerf-de-bœuf* with a theory of correction. But there is all too little of Gredel, and there is a plethora of proclamations by the idolized Gambetta, newspaper slips, anti-Prussian tirades, and such impedimenta. It is unfortunately the case, however, that these interruptions to the work of art will be the active power in the work of propagandism. Here is a battle-story, not at all dissimilar in verisimilitude and homely strength to the "Battle of Dorking," which, instead of being, like that work, an incentive to action and reform, is but one long strain of baffled hate. This fluent tale will be read in every bourgeois family of Alsace and of Lorraine, and will fall like virus into thousands of festering wounds. The vindictiveness of it, its bad blood, the uselessness of it, are inconceivable. It has no constructing or suggestive power, it can develop no social change, except a refinement of subtle and intellectual hate against the great country with which the fortunes of its world of readers are politically linked. It will sink into the hearts of ladies, it will color the dreams of children, and it may have at last the barren boast of having delayed for a generation the cordial adoption by two brave peoples of German culture and German progress.

"A BOOK OF NO ORDINARY CHARACTER."*

SOME three or four years ago the *Iron Age*, a high-tariff journal of this city, published a long series of two or three-column articles in defence of its specialty which struck us at the time as something remarkable for their ponderosity (a good English word, by the way), disregard of historical truth, and contempt for any opinions in reference to political or social economy other than those emanating from what may be termed the Pennsylvania school of thinkers and writers. The authorship at that time of these productions was not revealed; but we now find them collected—entire or in substance—into book-form, and sent forth afresh into the world, with the title given below. With the work thus originating comes also a circular from the publisher, Mr. Henry Carey Baird, of Philadelphia, from which we make the following extract: "This is a book of no ordinary character; a fact of which, I believe, you will be more than satisfied when you shall have carefully examined it." Mr. Baird excels in circulars—in fact, he may be said to have a genius for circulars; and always when we receive one from him, especially if the subject treated of pertains to economic or social science, we anticipate something startling. He has recently published another remarkable work, "Speeches and Letters of Hon. William D. Kelley, M.C." See how he heralds it: "Judge Kelley has shown himself to be more thoroughly master of the problems which underlie the advancement of states in power and their people in comfort, happiness, and civilization, than any statesman who has occupied a prominent position in public life in this country since the days of Alexander Hamilton. Indeed, his knowledge of such questions surpasses that of Hamilton, hence the commanding position which he this day occupies before the country. Price, in advance of publication, two dollars and twenty-five cents per copy." When, therefore, Mr. Baird's circular informed us that the work of Dr. Elder was of no ordinary character, we were prepared to believe it; and having, in accordance with his request, carefully examined it, we are now further prepared to unite heartily with him in affirming that it is most extraordinary—more so, perhaps, than any work of similar character, emanating from any man of reputed intelligence, that we have ever had occasion to notice.

---

* "Histoire du Plébiscite, racontée par un des 7,000,000 Oui. Par Erckmann-Chatrian." Paris: J. Hetzel; New York: F. W. Christern. 1872.

* "Questions of the Day, Economic and Social. By Dr. William Elder." Philadelphia: H. C. Baird. 1871.

In support of Mr. Baird's averment, and our own agreement with it, we think we shall need but a single illustration or example, and this we are, as it were, challenged by the author to take; for, in what may be regarded as the principal chapter of the book in question, "Protection in National History," after summing up his previous reasoning, he says: "Our whole case" —*i. e.*, the defence of the protective policy—"might be safely rested upon the facts of the industrial and commercial history of the little kingdom of Belgium alone." Then, after noticing the limited territory, dense population, and flourishing industry of Belgium, he continues:

> "Her customs system shows how wisely she has guarded all these interests. She secures a home-market by defending her manufactures adequately; she fosters her skilled industries by barring out all competition with these products; her foreign commerce grew, after it was liberated from the dominion of Holland *and Spain by the French in* 1830, at double the proportion of the United States; and Belgium is now about ready for free trade.
>
> "I must not detain the reader with a statement of the tariff rates which have secured all these results. A specimen or two will give the spirit of the whole. Raw tobacco is admitted at nine-tenths of one cent per pound—the manufactured is charged three cents; raw sugar at two cents *per ton;* the manufactured, or refined, must carry $185 68 per ton; raw wool, free; woollen manufactures charged ten, twelve, twenty-one, twenty-six, and thirty-two cents per pound. There is not an item in all the schedules of the Belgian tariff that gives any more countenance to free trade or any of its maxims than those which are here quoted.
>
> "The differential duties charged upon imports in *foreign* vessels in favor of her own are, on the average, quite one hundred per cent., which have had the effect of preserving for her own mercantile navy her whole trade in domestic exports and foreign imports for consumption.
>
> "It is worth noting here that Belgium increased her population sixteen per cent. between the years 1840 and 1850, while Great Britain grew but a scant eight per cent. in the same time—protection against free-trade in the matter of population, with all the odds of density against Belgium under the trial."

Now, extraordinary as it may seem, it is yet nevertheless strictly true, that not only are each and all of these statements of Dr. Elder which we have quoted, with the single exception of those relative to raw wool and tobacco, false, but they have not even the semblance of truth. Passing by, as errors of proof-reading, the absurd statements that Belgium was liberated from the dominion of Holland and Spain by the French in 1830, and that the present duty on raw sugar is *two cents per ton,* we assert that so far from the tariff of Belgium being an example of the protective system, the whole policy of protection was practically abandoned as far back as 1855; that with the exception of Great Britain, the tariff of Belgium is now, and for years has been, the most liberal in Europe; and that, if Dr. Elder had taken the trouble to consult any standard authority, it would not have been possible for him to have stated anything to the contrary. Thus, while in the case of tobacco and spirits duties are levied in Belgium with a view to revenue, the duties in question are extremely low: those, for example, on tobacco being about eight-tenths of a cent per pound on the unmanufactured leaf, and less than four cents per pound on-manufactured, other than cigars, as compared with an import duty of thirty-five cents per pound on the leaf in the United States and one dollar in Great Britain. Sugar is practically free under the Belgian tariff, only candy and highly-refined and loaf sugars, above No. 18 Dutch standard, paying a duty, which is $112 per ton of 2,240 pounds, in place of $185, according to Dr. Elder. There are no duties of "ten, twelve, twenty-one, twenty-six, and thirty-two cents per pound" on woollen manufactures, or anything approximative thereto; but wool—carded, combed, dyed, and waste—is admitted free; yarns not twisted or dyed, $3 90 per 220 pounds; twisted or dyed, $5 86 per 220 pounds; while all other manufactures of wool pay only five per cent. *ad valorem.* Most of the articles imported into Belgium are entirely free, and on only a very few is there any duty levied in excess of ten per cent.; and in all cases where this limit is attained or exceeded, the articles taxed are pure luxuries, and the object of taxation is purely revenue. There are, furthermore, no differential duties whatever charged upon imports in foreign vessels into Belgium, as Dr. Elder asserts; and, instead of "her whole trade in domestic exports and foreign imports" being preserved for her own mercantile navy, Belgium has comparatively no marine; only 87,358 tons out of the 794,596 tons which entered her ports in the year 1864 being under the Belgian flag, while the return of the merchant marine for all the ports of Belgium, made December, 1867, shows only 90 vessels, with an aggregate of 37,555 tons.

Again, so far from Belgium showing an increase of population under protection, from 1840 to 1850, of sixteen per cent., while Great Britain, under free trade, grew but a "scant eight per cent.," the official returns show the population of Belgium to have been 4,073,162 in 1840, and 4,380,239 at the close of 1849—an increase of not quite seven per cent. for the period; while the population of the Kingdom of Great Britain, exclusive of Ireland, which was devastated in 1847 by famine, increased during the same decade from 18,331,505 to 20,413,265, or an excess of 11 per cent. Did our available space and the patience of our readers warrant, we might go further and serve up other choice extracts from this book; but we think we have said enough to substantiate fully our preliminary allegation, that the whole work is most extraordinary, and almost without a parallel among modern publications purporting to be serious for its exhibition of gross ignorance in respect to facts and absurdity in respect to conclusions. Dr. Elder may consider it a good joke to mislead his readers and serve the objects of his party by giving, as the present state of commercial law in a leading country of Europe, the record of a legislation that has been for years effaced from the statute-book, and pretending to ignore the real facts; but we consider it a very grave outrage.

THE MAGAZINES FOR APRIL.

AFTER all, "knowledge is good to direct," as the Scriptures say; and though probably it may be true that M. Henri Taine's recent work on the literature of England is the fruit of "an extremely powerful, vivacious, and observant mind," it certainly is true that the *Catholic World* does no harm in pointing out to our clever French critic, who, at his comparatively early age, has given us so much teaching about architecture, about the art of the ancients, about modern art in nearly all its branches, about religions, ancient and modern, and about various other matters, that he is a writer who may with profit to himself and his readers look much more sharply to the foundations of his numerous theories. That M. Taine is possessed, in its fulness, by "the light Gaul's" alleged eagerness to generalize, and his national repugnance to face all the facts, the writer in the *Catholic World* is entirely persuaded; and he makes the reader much of his own mind. For example, M. Taine sets himself the task of proving that the Anglo-Saxon, as a pagan, was of a certain moral character, which M. Taine describes, and that, after he became christianized, he was in character pretty much the same person as before. This is probably more or less true; but, clearly, the Roman Catholic critic has the advantage of M. Taine when the latter, in proof of his position, cites the case of Aldhelm, and asserts of him that, though tonsured and shorn, he was nevertheless at bottom still "a servant of Odin." For did he not turn himself into a gleeman and chant to his fellow-townsmen warlike and profane odes alternately with religious poetry? M. Taine's critic points out to him that *carmen triviale* is not correctly rendered by the term "warlike and profane odes," and informs him that Aldhelm, though a learned and pious priest, who wrote much in Latin, also composed canticles and ballads in his native tongue, and that, observing the haste with which too many of the peasants left the church directly after mass was over, so as to avoid the sermon, he was accustomed to station himself at the bridge-head, and by his singing beguile them to listen in the fascination of bardic song to the religious truths which they would not wait to hear from the pulpit. Furthermore, M. Taine is informed that he makes a mistake when he assigns to the pagan period a poem which celebrates a battle fought after England had been for three centuries Christian. So the reviewer goes on.
